By the Legislation Branch

Legal Decisions Affecting Labour

The Supreme Court of Canada has ruled that direct appeal to that Court from a decision of the Labour Relations Board is not permissible

The Alberta Supreme Court has ruled that a certification order issued by the Canada Labour Relations Board is not subject to review on *certiorari*

On March 14, 1966 the Supreme Court of Canada ruled that a decision of a provincial Labour Relations Board rendered final by legislation cannot be appealed directly to the Supreme Court of Canada with leave of that Court pursuant to Sec. 41(1) of the Supreme Court Act.

Summary of Facts

The company, *J. R. Théberge Ltée*, applied to the Supreme Court of Canada for leave to appeal to that Court from a decision of the Quebec Labour Relations Board of September 14, 1965. The unusual thing about this case was that the decision in question had not been previously submitted to a Court of Justice in the Province of Quebec or to a Judge thereof.

Company's Submission

The issue before the Court was whether the Supreme Court of Canada has jurisdication to entertain such an application and to deal with it on its merits. The company admitted that the provisions of Chapter VII of the Quebec Labour Code prohibit recourse to the Courts in respect of the acts, proceedings, and decisions of the Quebec Labour Relations Board acting in the performance of its functions. It was argued, however, that the order of the Board represented the decision of the highest court of last resort in the Province, thus giving the Supreme Court jurisdiction under Sec. 41(1) of the Supreme Court Act to consider the application and to deal with it on the merits.

Sec. 41(1) of the Supreme Court Act reads as follows:

> Subject to Subsec. (3), an appeal lies to the Supreme Court with leave of that Court from any final or other judgment of the highest court of final resort in a province, or a judge thereof, in which judgment can be had in the particular case sought to be appealed to the Supreme Court, whether or not leave to appeal to the Supreme Court has been refused by any other Court.

Not a Court of Justice

In rendering the judgment of the Court, Mr. Justice Fauteux noted that the decision from which an appeal lies by virtue of this section must be the decision of a ". . . court . . . or a judge thereof . . ." These expressions are the same as those appearing in the language of the other sections dealing with the general appellate jurisdiction of the Supreme Court, and grouped along with Sec. 41(1) under the heading "Appellate Jurisdiction" in the Act.

In the opinion of Mr. Justice Fauteux, there is no reason to assign to these expressions, in the context of Sec. 41(1), a meaning different from the only possible meaning which has always been ascribed to them—namely, Court of Justice, and Judges of a Court of Justice—and this does not include administrative tribunals or the members comprising an administrative tribunal or body.

Mr. Justice Fauteux referred also to the origins of the present Sec. 41. By Sec. 2 of an Act to amend the Supreme Court Act, 1949, Parliament broadened considerably the jurisdiction of the Supreme Court by adopting the language of Sec. 41(1); and by Sec. 3 of the same Act, appeals to the Privy Council were abolished.

By abolishing appeals to the Judicial Committee, the Supreme Court became the Court of final resort, and Parliament conferred upon the Supreme Court of Canada some of the appeal jurisdiction previously exercised by the Judicial Committee. The general appellate jurisdiction of the Privy Council, however, was exercised with respect to decisions of the Judiciary, and not with respect to decisions of the Executive or of administrative bodies.

Nature of the Board

Summarizing his views, Mr. Justice Fauteux stated that the expression ". . . court . . . or a judge thereof . . ." as used in Sec. 41(1) as well as in the sections with which it appears under the heading "Appellate Jurisdiction" in the Supreme Court Act, means the Courts and the Judges comprising that branch of government represented by the Judiciary. Not included are administrative bodies such as administrative boards, professional associations and their disciplinary committees, notwithstanding the fact that certain judicial functions may be accorded to them purely as a necessary complement or accessory

in the execution of their administrative functions.

He stated that the Labour Relations Board is one of these administrative bodies. There is no provision in the Quebec Labour Code which requires, as a qualification, that any one of the persons forming the Board shall be a lawyer. The provisions of the Labour Code stipulate that:

- –sessions of the Board will be presided over by the president or by one of the vice-presidents;
- –members representing the employers, and those representing the employees must sit in equal number;
- –several sessions of the Board may be held simultaneously;
- –a quorum shall comprise three members, one of whom shall be the president, or one of the vice-presidents, together with a member representing the employers and another representing the employees;
- –the Board and its members shall have all the powers, immunities and privileges of Commissioners appointed pursuant to the Public Inquiry Commission Act; and
- –the Board may, with cause, amend or revoke any decision, order, or certificate that it may issue.

Jurisdiction Lacking

In these provisions, as in those dealing with the powers of the Board and its members, the traditional characteristics of administrative bodies established to promote industrial peace can be recognized; but the characteristics of Courts of Justice, or of Judges of Courts of Justice as envisaged by Sec. 41(1) of the Supreme Court Act, cannot be found.

Further, Mr. Justice Fauteux added, the Quebec Courts of Justice Act does not make any mention of the Labour Relations Board in the list of Courts having jurisdiction in the Province.

This reasoning led him to the conclusion that the Supreme Court of Canada has no jurisdiction to hear, and consequently to allow, a direct appeal from a decision of the Labour Relations Board. This conclusion, however, would not rule out an appeal from a judgment of a Court within the meaning of Sec. 41(1), or of one of its judges, concerning a decision of the Labour Relations Board.

Application Dismissed

The Supreme Court of Canada, in a unanimous decision, dismissed the company's application to allow a direct appeal to that Court from a decision of the Labour Relations Board. *J. R. Théberge Ltée v. Le Syndicat National des Employés de L'Aluminum D'Arvida Inc.* (1966) 58 D.L.R. (2nd) Part 8, P. 764; 66 C.L.L.C., para 14, 131.

ALBERTA SUPREME COURT

On March 3, 1967 Mr. Justice Riley of the Alberta Supreme Court, in dismissing an application for *certiorari* to quash a certification order issued by the Canada Labour Relations Board, ruled that determination by the Board of the employer and employee relationship is within exclusive jurisdiction of the Board and not open to review by the Court.

Summary of Facts

On February 2, 1966 the Canada Labour Relations Board conducted a hearing on the application for certification by Truckers, Cartagemen, Construction and Building Material Employees, Local 362, and General Drivers, Warehousemen and Helpers, Local 979, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, for a group of employees of Midland Superior Express Ltd., described in part as "line drivers, spare drivers, leased equipment operators classified as line drivers and spare drivers." On May 11, 1966 the Board certified Locals 979 and 362 as a bargaining agent of the employees in question. Following this decision, the company applied for *certiorari* to quash the Board's decision.

Employer – Employee Relationships

Mr Justice Riley stated in his reasons for judgment that the issue before the Court was one of the identity of the employer and employee relationship. The company alleged that the employees in question were not really the company's employees; the company hired independent trucker-contractors and these were hiring their own employees.

Mr. Justice Riley was of the opinion that, in law, the employees in question were not those of Midland Superior Express Limited. He was, however, bound to follow a statement made by Mr Justice Judson of the Supreme Court of Canada in *Labour Relations Board et al v. Traders Service Ltd.* (L.G. 1959, p. 58):

> There is no difference in principal between a determination of the capacity in which a person is employed, and a determination of the question of the relation of the employer and employee. Neither question is a collateral issue. There are no two issues here before the Board, the first whether the man is an employer and the second whether he is the employer of a particular employee. The issue is a single one and entirely within the Board's jurisdiction. It was for the Board, and for the Board alone, to make the finding on the one issue, and this finding is not open to review by the Court.

Mr. Justice Judson said that the issue of whether or not a man is the employer of a particular employee is a question of fact.

Mr. Justice Riley noted that, in the case at bar, there was evidence that the company had complete control over the choice of drivers, made all assignments, did all the dispatching, assigned the routes, disciplined or reprimanded the drivers, and dismissed any recalcitrant driver. In his view, however, the Canada Labour Relations Board might have been wrong in deciding that the line drivers were employees of Midland Superior Express Limited, within the meaning of and for the purposes of the Industrial Relations and Disputes Investigation Act. But he could not correct that error on *certiorari*, as he was bound to follow the principle of law laid down by Mr. Justice Judson in the *Traders Service* case.

Application Refused

The Court refused the application for *certiorari* and upheld the certification order. *Midland Superior Express Limited v. Truckers, Cartagemen, Construction and Building Material Employees, Local 362, and General Drivers, Warehousemen and Helpers, Local 979, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America.* Alberta Supreme Court, March 3, 1967, (unreported).

New magazine issued for high school students

A new magazine for Canadian high school students called *Science Affairs*, published in Montreal for the Youth Science Foundation, is directed toward:

- –stimulating an interest among high school science students in continuing their studies through university and beyond;
- –encouraging Canadian scientists to seek employment in Canada; and
- –fostering a wider and more enlightened interest in scientific subjects.

One of the contributors to the first issue, Miss Dorothy Harper, who is in charge of a group of analytical scientists studying chemical compounds and structures at Domtar's new research laboratory at Senneville, Que., says, "The traditional horizons of science are changing. New fields, such as biophysics, biochemistry and geophysics, are opening up and are creating unlimited opportunities for women scientists."

Miss Harper is chairman of the Montreal section of the Canadian Association of Applied Spectroscopy and is helping to organize an international conference on spectroscopy to be held at Carleton University, Ottawa, in June 1967.

For further information, write: Science Affairs, 1255 University Street, Room 224, Montreal 2, Que.

Recent Regulations Under Provincial Legislation

British Columbia has raised the minimum wages of employees in offices, shops and manufacturing

Ontario has issued new safety rules for complex falsework on construction projects

In British Columbia, new minimum wage orders for office workers and employees in the mercantile and manufacturing industries have increased the minimum wage from $1 to $1.10 an hour, effective May 1, with provision for a further increase to $1.25 an hour on November 1.

Ontario has amended regulations under the Construction Safety Act establishing new requirements with respect to the design and erection of multi-tiered falsework on construction projects.

In Alberta the first regulations under the Pension Benefits Act have been issued.

Other new regulations dealt with private vocational schools in Quebec, hairdressers and hairdressing schools in Ontario, and apprentices in the sheet metal mechanics trade in Alberta.

ALBERTA

Apprenticeship Act

In Alberta, apprenticeship regulations for the sheet metal mechanics trade have been re-issued with a few changes. The ratio of apprentices to journeymen is now one to two instead of one to three.

The minimum wage now payable for registered employment prior to first year technical training is 50 per cent of the prevailing journeyman's wage. This rate must be increased to 60 per cent after successful completion of first year technical training, with increases to 70 per cent, 80 per cent and 90 per cent after the apprentice passes each additional year of training.

Pension Benefits Act, 1966

The first regulations to be issued under the Alberta Pension Benefits Act were published on January 14. They went into force on January 1, as did the Act.

The Act, which is similar to the pension benefits legislation in effect in Ontario and Quebec, is designed to protect members of private pension plans by ensuring that the plans are solvent and that members are supplied with adequate information about the plan, and to provide for the portability of pension rights when employees change jobs.

The regulations stipulate that every pension plan submitted for registration must include a provision for funding which "will set forth the obligation of the employer to contribute both in respect of the current service cost of the plan and in respect of any initial unfunded liabilities and experience deficiencies." The regulations define the different kinds of liability that may arise in a plan, and the maximum time in which such liabilities must be liquidated by the employer. The regulations also specify the classes of investments and loans in which pension fund money may be invested.

A conflict-of-interest clause is included, disqualifying certain persons from receiving loans from the funds of a pension plan or from receiving, either directly or indirectly, any fees or other benefits on account of transactions of the fund.

Other matters dealt with in the regulations include discontinuance of plans, calculation of annuity, and transfer of pension benefit credits.

BRITISH COLUMBIA

Minimum Wage Acts

New orders of the British Columbia Board of Industrial Relations, effective May 1, have increased the minimum wage of employees in offices, and in the manufacturing and mercantile industries, from $1 to $1.10 an hour, with provision for a further increase to $1.25 an hour on November 1. British Columbia is thus the first province to provide for a minimum wage of $1.25 an hour for employees in these industries and occupations. This is the minimum wage set for employees in federal industries under the Canada Labour (Standards) Code.

The new rates apply to all employees except: (1) persons employed in a managerial, supervisory or confidential capacity; and (2) apprentices or part-time or handicapped persons working under special permits from the Board, and who must be paid at the rates specified in the permit. Lower minimums are no longer set for employees with less than three months experience.

The overtime requirement is unchanged. Employees, as before, must be paid time and one half their regular rate for all hours worked in excess of 8 in a day or 40 in a week, or in excess of a weekly average of 40 hours where, by agreement, hours are averaged over a fixed period.

Another regulation exempts from the minimum wage legislation students enrolled in an occupational training program in the hotel and catering industry, under the direction of a Department of Education.

MANITOBA

Construction Industry Wages Act

A new wage schedule fixing minimum wages and standard weekly hours for workers in the heavy construction industry in Manitoba went into force on May 1.

The new schedule (Man. Reg. 26/67) again fixes rates for only five categories of employees. Rates for four categories have been increased by 15 cents an hour and that of the fifth (watchmen and flagmen) by 20 cents. The hourly wage rates are:

- crane operators hoisting on building construction and demolition, $2.65;
- dragline, shovel, backhoe, clamshell, gradall, piledriver operators and mechanics, and welders working on heavy equipment, $2.20;

- operators of equ pment not otherwise specified, including truck drivers working exclusively on the site, or those hauling earth, spoil and rubble from the site; but not those hauling materials to the site, except those hauling granular materials to highway road, bridge, dam and drainage contracts, $1.90;
- labourers, and any person working on heavy construction and not otherwise classified, $1.70; and
- watchmen and flagmen, $1.25.

These minimum rates are again based on a standard work week of 60 hours, and time and one half the regular rate must be paid for all hours worked in excess of the weekly limit. During the period November 1 to April 30, however, the standard work week in Metropolitan Winnipeg will be 48 hours instead of 60.

NEW BRUNSWICK

Workmen's Compensation Act

The New Brunswick Workmen's Compensation Board has revised the list of industries within the scope of the Workmen's Compensation Act. As before, these industries are divided into five classes for assessment purposes, but some of the definitions have been expanded and new industries and occupations added.

The new provisions were gazetted as Reg. 67-13 on February 15.

ONTARIO

Apprenticeship and Tradesmen's Qualification Act, 1964.

Regulations under the Ontario Apprenticeship and Tradesmen's Qualification Act governing hairdressers and hairdressing schools have been revised.

The apprenticeship training program for hairdressers comprises three periods of 1,500 hours each, compared with the former 1,800 hours.

Graduates of a licensed hairdressing school will be issued an interim certificate of qualification upon passing the prescribed examination. The same rule applies to a student, in a school under the jurisdiction of the Department of Education, who has completed Grade 10 or its equivalent and has finished an approved hairdressing course of at least 1,500 hours.

The interim certificate, valid for 24 months from the date of issue, may be renewed if the applicant passes the prescribed examination. The holder of this certificate may not be employed as a hairdresser unless he is working with a person who holds a subsisting certificate of qualification in the trade and is employed by the same employer.

A person with an interim certificate may be granted a subsisting certificate of qualification if he satisfies the Director of Apprenticeship that he has been working full time as a hairdresser for at least 12 months.

The maximum number of hours of training and instruction given to any student in a hairdressing school must not exceed 40 in any week. Daily hours are more flexible. Classes may now start earlier—8 a.m. instead of 9 a.m.—and may now be given in the evenings between the hours of 6 p.m. and 10 p.m.—except on Saturdays, when classes must end by 6 p.m. As before, no training or instruction may be given on a holiday.

Construction Safety Act, 1961-62

Amendments to the general regulations under Ontario's Construction Safety Act are designed to provide greater protection to construction workers employed on projects where falsework of a complex nature is used.

The new regulations (O. Reg. 42/67) were made after consultation with senior official of major engineering firms, construction associations in Ontario, and the Association of Professional Engineers. They incorporate recommendations of the coroner's jury that investigated the deaths of nine men in the collapse of the Heron Road Bridge in Ottawa in August 1966.

The new provisions make it compulsory for the multi-tiered falsework on construction projects to be designed by a professional engineer. The plans must bear the signature of the engineer and must be available at the project at all times. The designs must also provide detailed specifications for all materials to be used.

The contractor will be responsible for ensuring that the falsework is constructed in accordance with the drawings and specifications.

In a statement to the Ontario Legislature, the Minister of Labour said that the amendments would help to ensure that:
- falsework is designed by professionally competent persons;
- adequate materials are used;
- contractors follow safe procedures in the erection and use of falsework; and
- responsibility for falsework design and specifications be pinpointed.

QUEBEC

Private Vocational Schools Act

The Department of Education has amended its regulations governing private vocational schools. After government officials had received reports of abuses, a special committee was set up in March 1966 to study the legislation relating to such institutions.

In the new regulations (O.C. 1828 gazetted February 4 and effective April 1), the coverage of the legislation has been extended and clarified. Fifteen classes of vocational schools are now recognized, among which are schools offering courses in:

(1) administration (automation, data processing and programming, etc.);

(2) construction trades;

(3) real estate valuation; and

(4) various services, including hotel trades and those of claims adjuster, travel agent, insurance appraiser and air hostess.

The minimum security to be posted by the operator of a school when applying for a permit is now $1,000, or five times the total cash price of the most expensive course given by the school.

As before, the fee for a permit is $10 for every type of course offered, with the exception that day, night and correspondence courses are now considered as distinct courses for purposes of calculating fees.

If a school is offering courses in a trade or profession governed by a federal or provincial act, or a decree under the Collective Agreement Decrees Act, the owner, director or canvasser must inform the student upon his enrolment, in writing, of the existence of this legislation and of any provisions affecting him.

SASKATCHEWAN

Trade Union Act

New conciliation board regulations set out by the Saskatchewan Minister of Labour were published on February 10 as Sask. Reg. 20/67 and went into force on March 1.

Under the amended regulations, some of the time limits have been changed. If the Minister decides to appoint a conciliation board after one has been requested, he must immediately ask the parties to submit their nominations within seven days of notice. The representatives of the parties must select the chairman within five days after the appointment of the second member (previously seven).

A conflict-of-interest clause has also been added to prohibit the appointment of any person who has any pecuniary interest in the matter before the conciliation board, or who is currently acting, or who, within the past six months, has acted as the solicitor, legal adviser, counsel or paid agent of either of the parties.

By the Unemployment Insurance, Pensions and Manpower Section, Dominion Bureau of Statistics

Number of January Claimants

25 Per Cent Higher Than December Total

Claimants for unemployment insurance benefit totalled 531,900 on January 31, which was 25 percent higher than the total of 423,400 at the end of December, and about 4 per cent higher than the total of 511,800 on January 31, 1966. More than 80 per cent of the month-to-month increase was due to the larger number of male claimants. But this was substantially less than at the same time last year, when almost 90 per cent of the increase was among males. Females accounted for 60 per cent of the increase, compared with a year ago.

Seasonal benefit claimants numbered 102,500 on January 31, compared with 110,000 a year ago. This decline in the number of seasonal benefit claimants was accounted for by a drop in the number of males. There were 429,400 claimants for regular benefit at the end of January, an increase of almost 28,000 since last year. Males and females contributed to the increase.

Initial and Renewal Claims

A total of 254,400 initial and renewal claims were filed during January, which was slightly higher than the December total of 251,500 and some 29,000 above the January 1966 total of 225,000. Claims arising out of separations from employment during the month accounted for 219,000 of the total, the remaining 36,000 being requests for re-establishment of credits, most of which were transfers from regular to seasonal benefit.

A claimant's unemployment register is placed in the "live file" at the local office as soon as the claim is made. As a result, the count of claimants at any given time inevitably includes some whose claims are in process. "Claimants" should not be interpreted either as "total number of beneficiaries" or "total job applicants."

Beneficiaries and Benefit Payments

The average weekly number of beneficiaries during January was estimated at 354,200, compared with 226,000 in December and 361,200 a year earlier. Benefit payments during the month totalled $41,400,000 compared with $22,400,000 in December and $35,900,000 in January 1966. The average weekly payment was $25.96 in January, $24.81 in December, and $24.86 in January 1966.

Unemployment Insurance in 1966

On October 6, 1966 the Minister of Labour announced in the House of Commons that unemployment insurance coverage was being extended to certain farm workers, effective April 1, 1967. The main exclusions are: workers who are members of the employer's family, or who are themselves operators of farms and hence are employed only casually as paid workers. Although board, lodging or other non-pecuniary remuneration is taken into account in determining total wages for purposes of contribution, no contributions are required for any week in which cash wages are less than $9.

The insured population averaged 4,526,000 in 1966, 4 per cent above the 1965 average of 4,338,000. The increase occurred among those employed, the claimants having declined from 322,000 in 1965 to 315,000 in the current year. Similar changes were observed in the labour force,* where the non-agricultural paid workers increased by 6 per cent and average unemployment declined.

The improved employment conditions in 1966 were reflected in a lower volume of claims, i.e., 1,548,000—about 80,000 less than 1965. Claims filed for every 100 insured persons in 1966 averaged 34, compared with 38 in 1965. Benefit payments, totalling $295,000,000, were $17,000,000 less than in 1965. The average weekly payment in 1966 was $24.52—almost unchanged from $24.54 in the previous year.

Summary Table

Activity	*January 1967*	*December 1966*	*January 1966*
		000's	
Insured population as at month-end	—	4,733	4,482
Initial and renewal claims filed			
Total	254†	251†	225
Initial	201	196	181
Renewal	54	56	44
Claimants currently reporting to local offices	532†	423†	512
Regular benefit	429	364	402
Seasonal benefit	102	60	110
Beneficiaries (weekly average)	354	226	361
Weeks compensated	1,594	904	1,445
Benefit paid	$41,383	22,427	35,910
Average weekly benefit	$25.96	24.81	24.86

†Discrepancy between totals and sub-totals is due to rounding.

Correction

In our April issue, a line of type was inadvertently dropped from the Unemployment Insurance Report on p. 252. The second sentence in para. 1 under the subhead "Initial and Renewal Claims" should have read: "As in the previous year, 95 per cent of the claims were filed by persons separating from employment during the month; the remainder were from persons whose benefit terms had been exhausted and who were seeking an extension of such rights."

**The Labour Force*, prepared in the Special Surveys Division.

Decisions of the Umpire

Under the Unemployment Insurance Act

CUB-2639

The claimant, 64, had been employed at a colliery until February 4, 1966. A number of collieries in the district were being closed down, and in order to relieve the severe unemployment resulting from these closures, the Government of Nova Scotia had instituted the Miners' Voluntary Pension Plan.

The purpose of this plan was to enable and encourage older miners to retire before the compulsory retirement age of 65, thereby leaving the remaining jobs to the younger miners with families. The plan had the further object of retaining in the industry the younger men who, under the existing contract of employment, would have been "bumped" by older men laid off from closed collieries, thus gradually depriving the industry of replacements.

Under these circumstances, the claimant voluntarily retired on February 4, 1966. On quitting his employment, he received three weeks' vacation pay. The employer confirmed the statement that the claimant had left voluntarily.

The insurance officer ruled that because, with three weeks' vacation pay, the claimant had received his usual remuneration until the end of the week beginning February 20, he was not considered to be unemployed during that time, within the meaning of the Act (CUB-2193A).

Because the claimant had retired voluntarily with no promise of other work, the insurance officer considered that he had not shown just cause, within the meaning of the Act, for leaving his employment. The period of disqualification prescribed by the Act under these circumstances was six weeks, But, considering that the miners' having been encouraged to retire was an extenuating circumstance, the insurance officer imposed a disqualification of only three weeks, from February 27 to March 19.

The claimant appealed to the board of referees against this disqualification. At the hearing, the claimant was represented by an official of the United Mine Workers, who pointed out that claimants in similar circumstances in 1962 had been disqualified by another board of referees for only one week.

Although the board considered that the claimant had not shown just cause for leaving his employment, the board unanimously decided, on the strength of the decision of the previous board, to reduce the period of disqualification to one week, saying that "there should be continuity in the decisions handed down by the boards of referees."

The board also ruled that its decision was a test case, not only for the claimant and 66 other persons who were listed as being in a position similar to that of the claimant, but also "for all men who have and will apply for Miners' Voluntary Pension."

In appealing to the Umpire against the decision of the board of referees to further reduce the period of disqualification, the insurance officer said that in several previous decisions, the Umpire held that the normal period of disqualification under [the Act] is six weeks, unless there are extenuating circumstances (CUBs 56 –L. G., 1946, p. 957 –and 755), which the claimant has the onus of establishing (CUB 2105 –L. G. 1963, p. 242). He did not agree with the opinion that the period of disqualification should be less than six weeks when there were no extenuating circumstances (CUBs 42 –L. G. 1946, p. 510 –593, 1300, 1637).

The insurance officer submitted that the board's decision was in error, particularly in view of its finding that the only evidence submitted to explain the voluntary separation in this case was the statement that the claimant left to go on pension. The board noted that there were no extenuating circumstances, and that the fact that the insurance officer may have been overly liberal in reducing the period of disqualification to three weeks did not justify a further reduction to one week, in the absence of identifiable extenuating circumstances (CUB-1300).

He also stated that, by reducing the period of disqualification only on the basis of a previous board's decision, the board had failed to exercise its own jurisdiction, and had merely endorsed a decision made some years ago by another board, only on the ground that this previous decision also involved a miner who had voluntarily retired on pension.

He further said it was quite clear that a board of referees cannot determine future disqualifications on claims that are not yet existing, as it is not in order to predetermine possible future disqualifications (CUBs 930, 945).

In May 1966 the claimant's union submitted a statement in which it said that, in the years 1962-63, some 485 miners had elected to retire on pension, and that this had saved expense for the town in which they were living, besides helping the industry to retain the younger men. In 1966 again, 160 men had elected to go on pension. The first men who had gone on pension had been disqualified for six weeks—later reduced to three weeks and then to one week.

The union representative said that "these older men were under terrific pressure from all sides to accept this pension, as meagre as it was . . . , and many times, I'm sorry to say were taunted, insulted and even shunned by their fellow workers and the unemployed. All this because they wouldn't leave their work to provide jobs for others who had no income of any kind . . . !"

During the hearing by the Umpire, the Unemployment Insurance Commission's legal adviser said that, in view of the information contained in the union's statement, it might now be recognized that there had been extenuating circumstances at the time of the claimant's separation from employment. The union representative said that the information was not new, as he had given the same information orally to the board of referees,

although the board had not recorded it in its decision.

Considerations and Conclusions

The record shows that the claimant retired from his employment before the compulsory retirement age of 65, and that there was no obligation on him to retire when he did. In such circumstances, the claimant must be held to have voluntarily left his employment.

In so far as the reason for leaving is concerned, the claimant has failed to discharge the burden of proving that he had "just cause" as required by . . . the Act. It is not enough for him to have shown, as I think he did, that his retirement was reasonable and proper in his particular circumstances; he should also have proved that, before abandoning his job, he had taken steps to secure other regular employment and had a definite prospect of obtaining such employment at the time of his retirement (CUBs 422, 1854).

As there is no evidence that the claimant had found alternative employment, either by registering at his local office or approaching potential employers well in advance of the date of his voluntary separation, I consider that both the insurance officer and the board of referees were right in maintaining the principle that a claimant who, as in this case, has quit his employment for reasons of a purely personal nature ought to be disqualified. . . .

The remaining question—and not the easiest one—to be determined is whether the claimant has proved that in his case there are circumstances which justify a reduction in the period of disqualification . . . the Act provides that where an insured person is disqualified from receiving benefit . . . , "the period of disqualification shall be for such period, not exceeding six weeks, as is determined by the insurance officer, board of referees or umpire."

According to established jurisprudence, "a person is disqualified for the maximum period specified under the Act if his unemployment is brought about by his own actions" (CUB-56) and such period may be reduced only when there are mitigating or extenuating circumstances (CUB-1637). The burden of proving such circumstances rests on the claimant (CUB-2105).

In his submission to the board of referees, the insurance officer explained his decision to impose a period of disqualification of three weeks only, by saying that "the fact the miners have been encouraged to accept this pension was considered extenuating." The insurance officer, however, omitted to reveal what specific evidence, if any, was used as the basis for his statement that the miners had been encouraged to accept the pension.

The action taken by the board of referees in further reducing the period of disqualification would be less difficult to exp ain if, instead of doing so on the ground—erroneous in law—that a previous decision of another board of referees had created an obligatory precedent, the board had reduced the period on the basis of the information contained in the union's statement of observations. If, as alleged by [the union representative] during the hearing before me, and I have no reason to doubt his word, he gave that information orally to the board of referees, it certainly was a determining factor in the board's decision; but here again, as in the case of the insurance officer, and contrary to the provisions . . . of the Act, that most important information was not recorded in the decision.

Considering that, according to the evidence now on record, there are strong extenuating circumstances in the instant case, I decide, after taking into account the shortcomings of the reasons given by both the insurance officer and the board of referees, that the disqualification to be imposed on the claimant shall be for the period February 27, 1966, to March 12, 1966, inclusive—that is, two weeks.

This decision shall apply, *mutatis mutandis*, to the 66 other persons covered by this appeal, but not, as most erroneously decided by the board of referees, to "all men who have and will apply for Miners' Voluntary Pension."

CUB-2659

This case arose out of a strike by 132 members of a local of the Oil, Chemical and Atomic Workers' Union against the British American Oil Co. at one of its refineries. The claim was made by one of the employees affected, but it was recognized that any decision in the matter would apply to all.

As a result of the failure of negotiations for a collective agreement, the 132 workers went on strike on September 20, 1965. At first, operations were brought to a stop—with the exception of the steam and water plants, which were kept running in order to prevent petroleum products from hardening in the pipes and lines. It was reported that four non-union workers entered the refinery after the strike deadline to help in the operation of the plants.

The employer brought in supervisory personnel from his other plants in Canada in order to start the refinery again. Supervisory and technical personnel belonging to the refinery were also employed, and some operations resumed work on September 25.

On October 13, the claimant made his first application for benefit, giving September 19 as the date of his last day worked. He said that the work stoppage was due to a labour dispute, but that his employer had filled his position with a non-union person at midnight on September 19. He contended that his loss of employment was then no longer due to a work stoppage resulting from a labour dispute, but was rather a temporary layoff.

The claimant asked to have his claim antedated on the ground that he had waited until October 13 before making his claim because he and the others involved were waiting for instructions from the union.

On December 8, the insurance officer notified the claimant that he was not entitled to have his claim antedated, because he had not shown that throughout the whole period he had had good cause for delay. On the same date, the insurance officer notified the claimant that he was disqualified and that benefit was suspended from October 10 until the termination of the stoppage of work at the employer's premises, on the ground that the claimant had lost his employment by reason of a stoppage of work attributable to a labour dispute.

On January 10, 1966, the claimant appealed to the board of refereees against the insurance officer's two decisions.

The case turned on the question of when the work stoppage should legally be considered to have terminated. The claimant and the union cited facts and arguments in support of their contention that the company, by bringing in some non-union labour and a number of supervisory personnel, had been able to bring the refinery into normal operation soon after the stoppage began.

The employer then submitted a long and detailed statement in support of his contention that "the operation of this refinery has been far from normal during the entire strike period." On February 17, the employer reported the end of the strike. He said that a new contract had been signed on January 21, but that it had not been possible to bring all the strikers back on January 22. "All operating units were taken over by hourly personnel on... January 23 . . . and about 50 per cent of the maintenance personnel were also brought in on the same day. The balance came in on normal hours on . . . January 24 . . .," he said.

The board of referees unanimously upheld the insurance officer on both questions. On March 31 the union appealed to the Umpire. The Umpire heard the appeal on June 3, 1966.

Considerations and Conclusions

The record shows that, on September 20, 1965, more than 88 per cent of the entire working personnel of the . . . plant of the B.A. Oil Company, including the

claimant and those represented by him for the purpose of this appeal, went on strike. In consequence, they lost their employment by reason of a stoppage of work at the premises at which they were employed, and that stoppage was due to a labour dispute.

It is also established that the aforementioned claimants were directly interested in the labour dispute in that their working conditions stood to be affected by the outcome of the dispute. As a consequence, they were subject to a disqualification under Section 63 of the Act.

As all the units in the refining process of the plant were shut down as a result of the strike, which began on September 20, 1965, it is obvious that the stoppage was an appreciable one. For this reason, the only issue open to question is the determination of when did the stoppage cease to be appreciable; or, in other words, when did "the termination of the stoppage of work" occur; which resolves itself into a mixed question of fact and law.

In regard to the legal aspect of the case, it is necessary to select appropriate criteria in ascertaining the date on which the stoppage of work came to an end.

The appellant, in support of his case, relies heavily on the criterion of production (that is the output of the employer's product). Thus, it has been contended that by December 10, 1965 production had reached its pre-strike level, and that, even as early as November 4, 1965, production had become sufficient to justify a finding that the stoppage of work had ceased. Consequently, the contention of the appellant is that the stoppage of work should be considered as having ended not later than November 4, 1965 rather than on the date set by the insurance officer, i.e., January 28, 1966 a week after the strike had been settled.

The reasons in support of the appellant's contention that the stoppage should be considered as having terminated on November 4, 1965, while they are cogent, are not necessarily conclusive. Section 63 of the Act uses the phrase "stoppage of work," not the phrase "stoppage of production," and in CUB-1035 (L.G. 1954, p. 1031), the Umpire said:

> The work referred to in the expression "stoppage of work" is not the particular worker's labour but the work carried out at the factory or other premises at which the worker is employed.

This must obviously include all of the work "normally" done at the premises involved, as can be seen by the following quotation from Umpire's decision CUB-1961:

> ... a stoppage of work refers to the stoppage of the work normally carried on at the factory, workshop or other premises at which a worker is employed, and not necessarily to the cessation of the worker's labour; and the stoppage is deemed to terminate the day on which the operations normally carried on at the employer's establishment are substantially resumed.

Furthermore, according to established jurisprudence, the stoppage of a single operation in a plant may constitute a stoppage of work within the meaning of the Act, such as in the cases dealt with by the Umpire in decision CUB-540 (a weavers' strike at a textile factory) and decision CUB-2145 (a plumbers' strike at a construction site). In each of these cases a stoppage of work was found to have taken place because an appreciable amount of the normal work was not performed.

In determining when, after a stoppage of work has taken place, such stoppage can be considered to have ceased, it should be recalled that each particular case must be adjudicated on its own facts. In the present instance, apart from the volume of production, among other factors which require consideration are the following: The number of employees on strike and character of the personnel who replaced them; whether such replacements were of a temporary or permanent character, and the normalcy or otherwise of the hours which such replacements worked; whether the production was achieved at the expense of other work, such as maintenance and repairs, and if so, whether such neglected work was not unsubstantial.

In certain circumstances, the criterion of production may weigh more heavily than in others (CUB-1158) (L.G. 1955, p. 969). Thus, in an average factory, if production had substantially reached pre-stoppage levels, it might reasonably be assumed that the amount of work being done at the factory had also reached its pre-stoppage level. However, this is not necessarily so because the two terms "work" and "production" cannot be equated in all cases, as a look at the facts of the instant case will show.

The plant in question here is a highly-automated oil refinery. Its total staff consisted of 175 employees. Of these, 80 (less than half) were involved in the actual operation of the refinery.... Of the remainder, 19 worked in management and supervising capacities, 12 in a technical capacity, 12 in a clerical capacity, and 52 in maintenance. This latter category covered not only making repairs as the necessity arose, but also a large amount of what is termed "preventative maintenance work"; that is, keeping the plant in good running order at all times with a view to preventing any breakdowns or interruptions in production.

The "work" at this plant includes all of the work being done by all of those employees. It is apparent that the employer could, by entirely or partly abandoning technical, clerical and preventative maintenance work, and by concentrating solely on filling the 80 operational positions with the employees removed from their normal duties and the other workers temporarily taken from other plants of the company, maintain output with a greatly reduced staff, more particularly if the aforesaid replacements were required to work abnormally long hours. A stoppage of work still exist, however, by reason of the very fact that a considerable amount of the technical, clerical and preventative maintenance work normally done at the plant was not being done. The question to be examined, therefore, is whether that was the situation in the case before me, and this is a question of fact.

The record shows that throughout the strike, the total number of employees at the premises seems to have varied between 99 and 110. At the maximum figure the number amounted to only 63 per cent of the pre-strike level. While the strike lasted, none of the technical work usually done by 12 employees was done, the clerical staff was reduced from 12 to 7, and the maintenance staff from 52 to 30. Even if some of the slack in operations was taken up by overtime work, it is apparent, on these figures, that a considerable reduction took place in the amount of work normally done by these non-operational categories and, as a consequence, that there was a more than appreciable reduction in the total amount of work which, but for the strike, would normally have been done at the premises.

The evidence indicates also that this abnormal situation existed throughout the strike, and could be maintained only by improvising other unusual and obviously temporary arrangements, such as providing a catering service and living-in accommodations, requiring unskilled staff to work abnormally long hours, making use of products not usually utilized, and modifying planned and scheduled production. Therefore, it cannot be said that a substantial amount of the normal work and normal working conditions had been achieved when the strike was settled on January 21, 1966.

I am not satisfied, however, that the evidence is such as to sustain the finding of the board of referees to the effect that the stoppage of work lasted until January 28, 1966. Just as the occurrence of a strike raises a presumption that a stoppage of work is attributable to a labour dispute, the settlement of the dispute also raises a presumption that any delay in resuming normal operations after the date of the settlement is not due to the dispute. Hence,

the onus in this case was on the insurance officer to prove beyond a reasonable doubt not only that normal operations were not substantially resumed immediately following the settlement of the dispute on January 21, 1966, but also to establish that it was because of strike conditions that it was impossible to complete the repairs to the catalytic cracking unit until January 28, 1966. In my opinion, the insurance officer has failed to discharge the burden of proving that the aforesaid breakdown was not attributable to a *force majeure* (irresistible force) occurrence, particularly as it is established that extreme cold weather was at least a contributory factor in delaying the necessary repairs. I consider that because on Sunday, January 23, 1966 the first recall of the hourly paid employees to perform their normal work took place, and that because on the following day a similar recall took place, the stoppage of work came to an end on January 23, 1966 that is, when the hourly paid employees began to be normally recalled to perform their normal work.

I might here add that the results of the above-mentioned finding in other circumstances might have had serious consequences, but, in the present instance, it would only inure to the benefit of the few, if any, of the strikers who, through inadvertence or otherwise, might have only been recalled subsequent to January 24, 1966, and for that reason could be regarded as unemployed during the week commencing January 23, 1966.

I agree with that portion of the finding of the Board which begins as follows:

> It was evident that the products produced during the strike were quite different from planned and scheduled production. That the operation was carried on by temporary arrangements and improvised operations. . . .

I cannot say the same with respect to the remaining part of the decision, which goes on to say:

> . . . at least until January 28, 1966. . . . In view of all the facts of this particular case, we must hold that the stoppage of work terminated at the plant on January 28, 1966.

As a consequence, I decide to remove the disqualification imposed under Section 63 of the Act, as from January 23, 1966.

But for this modification, the union's appeal is disallowed.

Because of the above-mentioned decision, it becomes unnecessary for me to deal with the antedating of the claimant's application for benefit.

As requested by the union, this decision shall apply, *mutatis mutandis*, to all the claimants in the same grade or class as the representative claimant.

CUB-2662

The claimant had filed a claim on September 22, 1965 stating that he had worked as a pastry cook from September 1961 to September 21, 1965. Although his services had been found satisfactory, and he had never been reproached for anything, the claimant said he had been replaced by another employee at a lower salary.

The claimant later declared that he had lost this employment because he was engaged in organizing a local of the Hotel and Restaurant Employees' and Bartenders' International Union, and that he had received $50 a week from the union, but in order not to harm his former employer, had not divulged these facts when he filed his claim. He did, however, notify the union that he had lost his employment for this reason, and his allowance was increased to $70 a week.

The claimant filed a renewal claim for benefit on December 2, 1965, claiming that he had worked as a watchman, at $1.30 an hour, from November 2, 1965 to November 28, 1965, and that he had been dismissed because he was not suited for the work. In a subsequent statement he admitted that he had lost this employment after having requested leave to attend a union meeting.

The claimant later declared on a Postal Claimant's Report that he had worked from January 11 to January 20, 1966 and had earned $60. He explained that this was temporary employment. On April 3, 1966 he further stated that he had worked for a hospital, on a trial basis, from March 31 to April 1, and had earned $30.

The claimant also stated that, since July 1965, he had been engaged in organizing a local of the Hotel and Restaurant Employees' and Bartenders' International Union in the establishments of his community. Before his dismissal from the hotel, he said, he had been devoting about six hours a day to this work; but he was now devoting from 10 to 12 hours a day, six to seven days a week—working mostly in the afternoon and evening. The union paid him $70 a week up to March 26, 1966 and his local paid him an additional $10 a week. He could have earned a reasonable salary had he succeeded in recruiting a sufficient number of members.

Although he at first declared himself available for work, and looking for work as a full-time or part-time pastry cook, the claimant stated that it would be very difficult for him to work and to organize the local at the same time, and that he would prefer part-time employment.

The insurance officer considered that the claimant was in a position to control his working hours, and that his engagement in this employment was so considerable that he was not deemed to be unemployed. He therefore disqualified him from receiving benefit from September 19, 1965 for as long as these circumstances existed.

In his appeal to the board of referees, the claimant alleged that he was not in the employ of the union local of which he was the president, that he was not paid a salary, and that the subsidies granted by the international union and the local were used to organize the union at the local level. He added that he had devoted much time to this task and had now left it to somebody else. On this occasion, he also filed a renewal claim effective July 3, 1966. The insurance officer terminated the disqualification on July 2, 1966.

The board noted the other short-term jobs the claimant had held during the period referred to in the question at issue, and it concluded that the claimant had thus shown that he was available for work and unemployed in spite of the fact that he devoted a considerable amount of time to his union work.

The insurance officer's appeal read, in part:

> The board of referees attached too much importance to the fact that the claimant had declared himself available for other employment during the period in question. To be available for work, and to be unemployed, are two separate requirements of the Act (CUB-677 and CUB-1785).
>
> On the other hand, the time devoted to this occupation is an important factor (CUB-1919), and the claimant—who was devoting 60 to 70 hours a week to this work—cannot contend that his engagement . . . was minor in extent. . . .
>
> It follows that the claimant did not meet the requirements for proving unemployment, and that the board of referees, who acknowledged that the claimant was devoting a considerable amount of time to his union work, should therefore have upheld the disqualification.

Considerations and Conclusions

The insurance officer's grounds for appeal are well founded in fact and in law. It is clearly evident that the claimant's recruitment work constituted "employment" within the meaning of [the Act] and that, by devoting so much time to it, he could not invoke the protection of the provisions of paragraph (2) of Regulation 154.

I have consequently decided to set aside the decision of the board of referees and to allow the appeal of the insurance officer.

Canadian Railway Office of Arbitration Releases Decisions in Seven Disputes

Seven separate disputes were dealt with by the Canadian Railway Office of Arbitration at a hearing in Montreal on March 13 and March 14. They concerned: a trainman's claim for general holiday pay; a conductor's responsibility in an emergency situation involving a collision with a gravel train; the claim of a yardman for eight hours pay at pro rata rates; 43 time claims by yard crews for wyeing trains; a trainman's claim for mileage at way freight rate; a head-end brakeman's responsibility in a rear-end collision; and a conductor and crew's complaint of inadequate payment.

The arbitrator, J. A. Hanrahan, allowed two claims and disallowed five.

Summaries of the seven cases, Nos. 55, 56, 57, 58, 59, 60, and 61, follow:

CASE NO. 55

Dispute between the Canadian National Railway Company (Prairie Division) and the Brotherhood of Railroad Trainmen concerning the claim of a yardman for eight hours pay at pro rata rates for a runaround.

On October 28, 1965 a railiner arrived at Winnipeg and was coupled to an engine and moved to the diesel shop by an outside hostler. A yardman submitted a runaround claim for eight hours pay at yard foreman's rate on the ground that the company, by not requiring yardmen to accompany the movement, violated the article of the collective agreement that stipulated that yardmen will do transfer work. The company rejected the claim.

Railiners are motive power units and are operated by engine service employees. When used in train service, they are manned by conductors and, where required, trainmen.

The representative for the brotherhood maintained that the failure to call the yardman was a violation of the collective agreement clause that stipulates: "A spare yardman standing first out and available for service, not called in his turn, will be paid eight hours straight time and will be placed at the bottom of the spare board."

There was no need, however, to tap the yard helper's spare board, because there were four yard crews on duty at the time.

Both sides wanted the arbitrator to determine whether moving the railiner was properly within the scope of hostlers' or yardmen's duties.

The brotherhood's spokesman argued that the movement was a transfer service, dealing with equipment moved within a terminal, because the railiner was not moved under its own motive power to the yard, and yardmen should have been employed.

The company's spokesman argued that the movement was a hostling service, dealing with motive power units moved within a terminal, because a railiner is a type of motive power. Therefore, yardmen have no contractual rights over this service, he contended.

The arbitrator ruled that the movement of a railiner, or any form of motive power, could not be handled by yard crews without their ignoring the differences between a railiner and the equipment normally handled by yard crews. To change the provisions concerning such movements is a matter for negotiation, not arbitration, he said.

The grievance was dismissed.

CASE NO. 56

Dispute between the Canadian National Railway Company (Mountain Region) and the Brotherhood of Railway Trainmen concerning 43 time claims submitted by yard crews at Vancouver, B.C. between July 16 and November 22, 1965 for wyeing trains.

En route to the passenger depot at Vancouver, road crews operating passenger trains turned them on the wye track and backed them into the depot. Regularly assigned yardmen submitted 43 claims for a total of 228 runaround payments of eight hours each for various dates between July and November on the ground that yard crews should have been required to do the work, as they had done previously. The representative for the brotherhood maintained that the wyeing of trains by road crews within Vancouver switching limits constituted a violation of an article of the collective agreement which stipulates: "Yardmen will do all transfer, construction, maintenance of way, and work train service exclusively within switching limits, and will be paid yard rates for such service. Switching limits cover all transfer and industrial work in connection with the terminal."

The representative for the brotherhood stated that in the period between July 16 and November 22 the company required train crews to turn their trains on the wye at Vancouver and then back them into the depot. This work was performed within switching limits and was work normally handled by yardmen in line with the above rule, he said.

He contended that at Vancouver there was no physical situation that would require passenger trains to be turned before arrival at Vancouver station by road crews. Therefore, it was not a condition of assignment for road crews on such trains.

The representative for the company outlined the reason for the change made in 1965 concerning incoming trains at the Vancouver terminal. In the interest of efficiency, the practice of having them head into the station tracks "engine first" was changed to having them backed into the station tracks by road crews utilizing wye tracks. This procedure saved more than an hour in passenger-detraining service at the station platform.

The company spokesman argued that the work performed in taking the train through this wye by the road crew was done as part of a road trip. Yardmen would not be needed to do the work because it was performed as part of a road trip and not exclusively within switching limits.

The arbitrator was convinced that the

operation was not a "transfer service," which would require that road crews be changed off with yard crews upon entering switching limits. Therefore, the grievance was dismissed.

CASE NO. 57

Dispute between the Canadian National Railway Company (Mountain Region) and the Brotherhood of Railroad Trainmen concerning the claim of a trainman for 100 miles at the way freight rate for a runaround.

The collective agreement applying to the mountain region states that: "Spare trainmen will be run first-in first-out in their respective classes, and will be paid 100 miles for each time run around and will maintain their standing on the spare board."

In this case, however, when a spare trainman was required to fill a vacancy as brakeman on a way freight train, the man listed fourth on the spare board was called in error. The first spare trainman submitted a runaround claim for 100 miles, which was paid by the company. Similarly, the trainman who stood third out on the spare board submitted a runaround claim for 100 miles at way freight rates. This claim was rejected, and submitted to arbitration

The representative for the brotherhood maintained that the collective agreement provided for payment of 100 miles to all trainmen on the spare board who are available for service and who are run around by a spare man who stands behind them on the spare board.

The company's spokesman argued that the clause that was correctly applicable to this claim referred to men entitled to work, in their turn, as individuals, not as a crew, as the brotherhood maintained. The spokesman argued that the trainman listed first-out on the spare board was the only one entitled to the runaround claim for 100 miles, which was paid.

It was the arbitrator's opinion that, if more employees than the immediate employee required were recognized as having been overlooked and therefore entitled to compensation, it would bring about an absurd result. In this case, one trainman was required, not two. The wrong one was picked and that error was corrected when payment was made to the one who should have been called. Therefore, the claim was not allowed.

CASE NO. 58

Dispute between the Canadian National Railway Company (Prairie Region) and the Brotherhood of Railroad Trainmen concerning the claim of a trainman for general holiday pay for January 1, 1966.

A trainman, who was in unassigned chain gang service, was ordered for 9:20 p.m. on December 31, 1965 to work on a freight train. He went off duty at 2:25 a.m. on January 1, 1966 and booked 16 hours rest, until 6:25 p.m. At 11:15 p.m., when called to work on a train that was to leave at 1:15 a.m., January 2, he booked unfit for duty. He subsequently submitted a time claim for 161¾ through-freight miles for general holiday pay. The company rejected the claim.

The Canada Labour (Standards) Code, which applied to railway employees, effective on July 1, 1965. It confers entitlement to eight general holidays annually with pay. On September 15, 1965, a memorandum of agreement was signed and incorporated in the collective agreement governing trainmen in western Canada.

A qualifying requirement in the agreement states that an employee must be available for duty on such a holiday if it occurs on one of his work days (vacation days excluded). A further section stipulates that shifts or tours of duty on a general holiday shall be considered as work on that holiday.

The representative for the brotherhood pointed out that the employee booked rest until 6:25 p m., after which time he was available for duty. The fact that at 11:15 he was called for service commencing at 1:15 next morning, and booked unfit for duty could not be taken to mean he would not have taken advantage of a call that would give him holiday pay for January 1.

The representative for the company admitted that January 1 was a regular work day for the trainman. He claimed that the trainman had demonstrated on two separate occasions by booking rest and by booking unfit that he was not available for duty.

The arbitrator ruled that the fact that the trainman had booked unfit five hours after finishing his rest period could not serve as a test of his availability for work on the holiday. At that time, there was no limitation on the length of the rest period. The arbitrator could not find that it had been established that the grievor was not available for duty at the time discussed, and he found that the appropriate sum due him as holiday pay should be paid.

CASE NO. 59

Dispute between the Canadian National Railway Company (Mountain Region) and the Brotherhood of Railroad Trainmen over the discipline meted out to a trainman for his responsibility in a rear-end collision between the train and a way freight.

A train travelling within yard limits collided with the rear of a way freight that was stopped on the main track. Following an investigation, the head-end brakeman of the train received a 90-day suspension for violating an operating rule.

The brotherhood requested the removal of the discipline on the grounds that nothing in the company statement at the time of the accident indicated a violation of the rule, but this request was rejected by the company.

The brotherhood contended that the company violated an article of the collective agreement by not properly advising the brakeman prior to the investigation that he was charged with a violation.

The arbitrator read the article that the company allegedly violated and he came to the conclusion that it was confusing and should be redrafted. It states in part: "No trainman will be disciplined or dismissed until the charges against him have been investigated . . ." Here the arbitrator believed that it was not clear from the bare use of the word "charge" whether the result of the complete investigation should be embodied in a formal statement, comparable to an indictment, charging "That Trainman . . ., at the time and place in question, did violate Rule 93 by failing to warn the engineer that he was operating . . . at a speed 'preventing stopping within one half of the range of vision'." This formal charge would then have to be implemented in a manner that would provide the trainman with "an opportunity through the presiding officer to ask questions of witnesses whose evidence may have a bearing on his responsibility."

The arbitrator became convinced that there was nothing in the rule to limit investigation to a time when only the employee could be present to make his statement. He said that there is even a protection in the provision that "the general chairman will be shown all evidence in the case." If such a request were made, and the evidence produced had contained statements from witnesses that the employee had not had an opportunity to question, a refusal by the company to permit such a cross-examination would create a revokable injustice. There was no evidence, however, to indicate that the general chairman had requested a review of the evidence, and the brotherhood had not made any request concerning witnesses.

The brotherhood had pointed out that, since there was no reference made to specific miles per hour in Rule 93, the onus was on the company to prove that the brakeman believed that the speed was excessive. Otherwise, there was no necessity for his taking action to have the speed reduced.

In his statement, the brakeman had said that the train was going six miles

an hour when the automatic brake valve was placed in full emergency. This was substantiated by the other crew members, who said that the train was travelling between four and seven miles an hour.

As the train rounded a right-hand curve, the view of the engineer was obscured by the framework of an overpass bridge. The engineer could see the tail end of the way freight 290 feet south of the point of collision. The brakeman had been seated on the left side of the engine, and had estimated the range of vision at 200 feet. When asked if he considered it possible for a train of 17 cars to stop in 100 feet, he had answered in the affirmative.

The company contended that, if the train had been travelling at six miles an hour, as stated, 17 seconds would have had to elapse before any effort was made to apply the brake—despite the fact that the caboose was in full view. If the brake had been applied at the overpass, as claimed, the engine should have stopped 40 feet south of the freight But it travelled 155 feet beyond the overpass before it came to a stop; and the last 15 feet were travelled after the collision, in spite of the fact that, in the crew's own estimate, they had had three times the distance needed to bring the train to a full stop. From this it was concluded that the train was travelling "far in excess of restricted speed." In addition to this reasoning, the speed recorder tape had indicated a speed of 17 miles an hour at the time the brakes were applied.

The total estimated expense was over $16,000, not including costly delays to traffic. The brakeman and the fireman-helper were suspended for 90 days, the conductor and another trainman were assessed 20 demerits, and the locomotive engineer was discharged, but was returned to service on compassionate grounds nine months later.

The case against the brakeman was summarized by the company, which stated that, although he had been seated on the left-hand side of the cab, with his view of the track limited by the right-hand curve and the nose of the engine, he was a highly qualified trainman with considerable experience, and was conversant with the requirements of the Code.

He was also fully familiar with the physical terrain of the area, and he knew that a train unprotected by a flag could be standing just around the bend. By his own admission, he knew the range of vision from the engineer's position, and he was well qualified to judge whether the train was travelling at "restricted speed." It was claimed that his primary obligation was to ask the engineer whether he thought the speed of the train excessive—and this he failed to do.

The arbitrator also pointed out that had the conductor and rear trainman of the freight not been away at the time, loss of life would probably have occurred.

In view of the inherent serious consequences of the case, and to underline the necessity for rigid adherence to the rule governing "restricted speed", the arbitrator found the brakeman guilty of failing to carry out his duty. His grievance was therefore disallowed.

CASE NO. 60

Ex-parte dispute between the Canadian Pacific Railway Company (Prairie Region) and the Brotherhood of Railroad Trainmen over a conductor and crew's complaint of inadequate payment.

A conductor and crew submitted a claim for an 11-mile run and return, and also for 35 minutes at a turn-around point, but the company paid only for time on the spur.

The brotherhood contended that the company had violated two rules of the collective agreement by placing the claim under the wrong article in the first place, and by misinterpreting the article on which it had based its claim.

At the opening of the hearing, the company made a preliminary objection to the jurisdiction of the arbitrator, because the claimants were not within the requirements of an article that states: "The decision by the highest officer designated by the Railway to handle complaints shall be final and binding unless, within 60 days [of] date of decision, such claim is disposed of... by the employee or his accredited representative, and such officer is so notified. It is understood, however, that the parties may, by agreement in any particular case, extend the 60-day period herein referred to."

The company maintained that a letter written on May 24 by their general manager clearly specified that the claim that had been disallowed had set in operation the 60-day period provided for in the article. But it was not until October 17, 86 days beyond the limit, that the brotherhood requested that the claim be handled by arbitration.

The arbitrator considered that the article was straightforward and that there was no doubt as to its meaning. Only a mutual agreement, which did not exist in this case, could extend the 60-day period. For this reason, he said, he had no jurisdiction to deal with the claim.

CASE NO. 61

Dispute between the Canadian Pacific Railway Company (Prairie Region) and the Brotherhood of Railroad Trainmen over: (a) 35 demerits imposed on a conductor for failing to do his duty to prevent an accident; and (b) the same conductor's claim for time lost during the investigation.

A main track at a subdivision had been washed out, and a train of gravel was dispatched to repair the track. The job was still incomplete after many hours of work, and the crew had to leave the gravel cars where they stood. A new conductor and crew were sent to complete the unloading. The two diesel units carrying the second crew crashed into the rear end of the gravel train. Subsequently the conductor was given 35 demerits for failing to take proper action to prevent the accident.

The brotherhood requested a removal of the demerits, and compensation for 1,937 miles for time lost during the investigation. The company rejected both the request and the claim.

The liability of the conductor was based on his failure to actuate an emergency brake that was within reach of all crew members. This responsibility is outlined in a general rule that states: "Conductors and Trainmen must familiarize themselves with the location of the emergency valve on each car so equipped." A second article states: "Trains will run under the direction of their conductors.... Conductors... are responsible for the safety of their trains...."

The brotherhood contended that this was not in fact a train, but an engine, and the arbitrator's attention was directed to the definition of "Engineman" in the Code. It states: "The employee in charge of, and responsible for the operation of an engine."

It was disclosed that an acting superintendent was closer to the emergency valve, but that he had not used the emergency brake either. His position was lowered to its former classification of trainman and conductor.

Before dealing with the disciplinary action against the conductor, the brotherhood pointed to the fact that, although the grievor had not been present when the witnesses were giving their statements, the local chairman had requested copies of all statements. The company sent those made by the engineman and fireman, but refused to send the statement made by the acting assistant superintendent. When the brotherhood made a special request for it, they were refused on the grounds that the statement had no bearing on the conductor's responsibility.

This ruling, the arbitrator said, was contrary to Article 32—and the words, "... whose evidence may have a bearing upon the employee's responsibility... and to receive a copy of the statement of such witness," also include any requested statement that might clear the conductor of responsibility.

By the Library Staff

Publications Received in Department of Labour Library

In order to publish the three-part series, "Manpower Studies: A Selected Bibliography for Policy and Research," in the March, April and May issues of the GAZETTE, *we had to suspend "Publications Received in the Department of Labour Library," which usually appears in this space. List No. 218 was published in February. This regular feature re-commences in the current issue with the appearance of List No. 219. — Ed.*

———

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed by making application to the Librarian, Department of Labour, Ottawa. Students must apply through the library of their institution. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the LABOUR GAZETTE.

Annual Reports

1. ATLANTIC DEVELOPMENT BOARD. *Annual Report for the Fiscal Year, 1965-66.* Ottawa, Queen's Printer, 1966. Pp. 44.

Published by authority of the Minister of Transport, Ottawa.

2. AUSTRALIAN STEVEDORING INDUSTRY AUTHORITY. *Report and Financial Statements for Year ended 30th June, 1965.* Sydney, 1966. Pp. 83.

3. CANADA, DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH BRANCH. *Strikes and Lockouts in Canada, 1965.* Ottawa, Queen's Printer, 1966. Pp. 59.

"Prepared . . . on the basis of reports from the National Employment Service."

4. ECONOMIC COUNCIL OF CANADA. *Annual Report, Fiscal Year 1965-66.* [Ottawa, Queen's Printer, 1966] Pp. 27.

English and French text.

5. ECONOMIC COUNCIL OF CANADA. *Third Annual Review: Prices, Productivity and Employment, November 1966.* Ottawa, Queen's Printer, 1966. Pp. 276.

Contents: Canada and the world economy. Price stability and high employment: the fundamental challenge. Canadian price and cost experience in the post-war period. Policies for reasonable price stability at high employment. The performance of the economy. Economic expansion and regional development.

6. NATIONAL COUNCIL OF WOMEN OF CANADA. *Year Book, 1966.* Ottawa, 1966. Pp. 116.

7. NEWFOUNDLAND. CIVIL SERVICE COMMISSION. *Annual Report for the Fiscal Year ended March 31, 1965.* St. John's 1966. Pp. 4, [4].

Automation—Labour Aspects

8. ARONSON, ROBERT LOUIS. *Jobs, Wages, and Changing Technology: Recent Experience.* Ithaca, New York State School of Industrial and Labor Relations, Cornell University, 1965. Pp. v, 74.

Contents: Perspective on automation. Achieving job and income security. Skill and wage adjustments. Labor relations and adjustment to change. Some conclusions and implications.

9. CALIFORNIA. COMMISSION ON MANPOWER, AUTOMATION AND TECHNOLOGY. *Report to the Governor and the Legislature, 1964.* [San Francisco, 1966?] 1 volume (various pagings).

This is the first report of the Commission. It covers the work of the Commission during 1964 and outlines the plans for 1965.

Business

10. NATIONAL INDUSTRIAL CONFERENCE BOARD. *Mergers and Markets; an Economic Analysis of the First Fifteen Years under the Merger Act of 1950*, by Betty Bock. 5th ed. New York, 1966. Pp. 299.

This study examines "economic factors taken into account by the courts in appraising the competitive consequences of different forms of mergers." It covers the 15-year period between January 1, 1951 and January 1, 1966.

11. NATIONAL INDUSTRIAL CONFERENCE BOARD. *U.S. Production Abroad and the Balance of Payments: a Survey of Corporate Investment Experience*, by Judd Polk, Irene W. Meister, and Lawrence A. Veit. New York, c1966. Pp. 200.

This study of the relation between company operations and the national balance of payments was based on an examination of the corporate balance of payments of 100 manufacturing firms in the U.S.

Canadian Tax Foundation

12. CANADIAN TAX FOUNDATION. *Corporate Management Tax Conference, Toronto, 1966.* Toronto, 1966. Pp. 92.

Contents: 1966 tax changes. Tax treatment of business insurance proceeds. Review of Canada pension tax questions. Provincial taxes and non-residents. Records retention for tax purposes.

13. CANADIAN TAX FOUNDATION. *Essays in Taxation*, by A. Kenneth Eaton. Toronto, 1966. Pp. 179.

Dr. Kenneth Eaton (1894-1965), a taxation expert, spent 25 years in the federal Department of Finance, many of them as Assistant Deputy Minister and chief tax adviser to Ministers of Finance. This book contains nine essays on various aspects of taxation — federal, provincial, and municipal.

14. CANADIAN TAX FOUNDATION. *The Financing of Canadian Federation, the First Hundred Years*, by A. Milton Moore and J. Harvey Perry (1867 to 1953) and Donald I. Beach. Toronto, 1966. Pp. 148, 164.

English and French text.

Contents: Historical background, 1867-1941. The tax rental agreements, 1941-57. The tax-sharing arrangements, 1957-62. Federal-Provincial fiscal arrangements, 1962-67. Summary and prospects.

Collective Bargaining

15. BERTRAM, GORDON WILLIAM. *Consolidated Bargaining in California Construction: an Appraisal of Twenty-five Years' Experience*. Los Angeles, Institute of Industrial Relations, University of California, 1966. Pp. 259.

Partial Contents: The structure of consolidated bargaining, basic trades. Specialty trade bargaining. Concurrence in regional bargaining. The hiring hall and the new legal environment. The wage structure and its determinants. Mobility and allocation of the labor force. Wages, unemployment and productivity. Wage determination in collective bargaining.

16. CRISPO, JOHN H. G., ed. *Collective Bargaining and the Professional Employee; Conference Proceedings, December 15-17, 1965*. Toronto, Centre for Industrial Relations, University of Toronto, 1966. Pp. 122.

Contents: Collective bargaining and the professional employee. Arguments for and against collective bargaining by professionals. Current collective bargaining practices in the world of the professions. Collective bargaining and the professional employee in Quebec. Problems and pitfalls from the legal point of view. Summary.

17. DOHERTY, ROBERT EMMETT. *Labor Relations Primer; the Story of a Union-Management Agreement*. Ithaca, New York State School of Industrial and Labor Relations, Cornell University, 1965. Pp. 50.

In this bulletin, intended for use in introductory economics and current history courses, the author creates a fictitious company, union, individuals, and imaginary documents to show how a collective bargaining agreement is reached. There is also a sample arbitration award.

Conferences

18. CONFERENCE ON INTERNATIONAL TRADE AND CANADIAN AGRICULTURE, BANFF, ALTA., 1966. [*Report*. Ottawa, Queen's Printer, 1966] Pp. 486.

Conference sponsored by Economic Council of Canada and Agricultural Economics Research Council of Canada and held January 10-12, 1966.

Examines Canadian international policy and problems with particular reference to agricultural trade, Canadian agricultural policy, and problems related to agricultural trade policy, and other matters.

19. EUROPEAN PARLIAMENTARY AND SCIENTIFIC CONFERENCE. 2d, VIENNA, 1965. *Science and Parliament; Second Parliamentary and Scientific Conference organized jointly by the Council of Europe and the Organization for Economic Cooperation and Development, Vienna, May 23-27, 1965. Final Report presented by M. Pierre Piganiol*. Paris, Organization for Economic Co-operation and Development, 1965. Pp. 177.

Provides an account of debates and conclusions of the Conference and contains five reports on science policy of governments.

20. INTERNATIONAL MANAGEMENT SEMINAR ON THE PUBLIC EMPLOYMENT SERVICES AND MANAGEMENT, MADRID, 1965. *The Public Employment Services and Management; International Management Seminar, Madrid, 23rd-26th March 1965. Final Report*. Paris, Organization for Economic Co-operation and Development, Manpower and Social Affairs Directorate, Social Affairs Division, 1966. Pp. 160.

At head of title: International seminars 1965-1. *Supplement to the Final Report*. Pp. 295.

This management seminar was organized "to discuss management's experience and views on the function and operation of . . . the Public Employment Service." The final report contains a review of the discussions and two papers. The supplemental volume contains papers on which the discussions were based.

Economic Conditions

21. CONFERENCE ON RESEARCH IN INCOME AND WEALTH. *Output, Employment, and Productivity in the United States after 1800*. New York, National Bureau of Economic Research; distributed by Columbia University Press, 1966. Pp. xiv, 660.

"Contains most of the papers presented at the joint sessions of the Economic History Association and the Conference on Research in Income and Wealth, held at Chapel Hill, North Carolina, in September 1963."

This volume comments on 13 papers presented at a joint meeting of the Conference on Research in Income and Wealth and the Economic History Association. The discussion of sources of output growth is divided into five sections: (1) consumption, investment, and employment, (2) output of final products, (3) minerals and fuels, (4) power and machines, and (5) sources of productivity change.

22. ORGANIZATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT. *Economic Surveys: Austria*. May 1966. Paris, 1966. Pp. 31.

". . . Discusses recent trends and short-term prospects for demand, output, prices and wages . . . . Considers economic policy action over the past year . . . [Analyzes] the movement towards a better balance in foreign payments and the outlook for the balance of payments in 1966."

23. ORGANIZATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT. WORKING PARTY ON COSTS OF PRODUCTION AND PRICES. *Policies for Price Stability; a Report to the Economic Policy Committee*. Paris, 1962. Pp. 47.

Economic Council of Canada

24. ANDERSON, ISABEL BEATRICE. *Internal Migration in Canada, 1921-1961*. Ottawa, Queen's Printer, 1966. Pp. 90.

Partial contents: General view of population growth and distribution. Natural increase and net migration. Internal migration and economic growth.

25. BERTRAM, GORDON WILLIAM. *The Contribution of Education to Economic Growth*. Ottawa, Queen's Printer, 1966. Pp. 150.

"This study has emphasized mainly the role of education as a factor influencing the quality of the labour force, and as a significant source of past and future productivity growth." Comparisons are made with the United States. A large number of statistical tables are included.

26. DENTON, FRANK. *An Analysis of Interregional Differences in Manpower Utilization and Earnings*. Ottawa, Queen's Printer, 1966. Pp. 65.

"This study is concerned with interregional differences in levels of income, especially earned income, and with differences in employment levels, population characteristics, composition of industry, and other factors bearing on these income differences."

Income

27. CORINA, JOHN. *Incomes Policy — Problems and Prospects*. London, Institute of Personnel Management [c1966]. Two volumes.

Contents: Pt. 1. The labour market. Pt. 2. The development of incomes policy.

Part 1 examines worker and employer organizations in Great Britain and the collective bargaining process. Part 2 examines the need for an incomes policy, the content of policy, and problems and prospects.

28. WAISGLASS, HARRY J. *Toward Equitable Income Distribution; Some Social and Economic Considerations for Union Wage Policy*. Toronto, United Steelworkers of America National Office for Canada, 1966. Pp. 54.

Contents: The challenges for collective bargaining in 1966. What do unions want? What does society want? Proposed guideposts — five principles. The U.S. wage guidelines for collective bargaining. Productivity guidelines for Canada. The Canadian-American wage parity issue.

Labour Supply

29. CALIFORNIA FARM LABOR PANEL. *Final Report*. December 1, 1965. Los Angeles [1966?] Pp. 52.

The panel was appointed by the U.S. Secretary of Labor by Secretary's Order 11-65 dated April 15, 1965.

A report on the farm labour force, both domestic and foreign, in California.

30. COMEAU, ROBERT LYONS. *Manpower Requirements in the Construction Industry in Nova Scotia*. Halifax, Economics and Research Division, Department of Labour, 1966. Pp. 88.

"This study has been financed in accordance with Schedule 10 of the Federal-Provincial Technical and Vocational Training Agreement."

Contains information about employment, wages, output and productivity with a forecast of manpower requirements in the construction industry.

31. ISRAEL. MANPOWER PLANNING AUTHORITY. *Manpower Surveys: Women in the Labour Force*. [Jerusalem] 1966. Pp. 95.

Title on first page: Manpower Research: Women in the Labour Force. March 1965.

32. KEYS, B. ALLAN. *Manpower Planning in Industry, a Case Study*, by B. A. Keys and H. H. Wright. Ottawa, Queen's Printer, 1966. Pp. 43.

English and French text.

Reports the results of a survey "undertaken during 1965 to obtain information on educational and skill requirements and manpower planning within a group of leading Canadian business firms."

33. MONTAGUE, JOHN TAIT. *The British Columbia Labour Force; a Study in Labour Market Adjustment* [by] J. T. Montague [and] J. Vanderkamp. [Vancouver] University of British Columbia, 1966. Pp. 134.

Partial Contents: Forecasting the B.C. population. Forecasts of the labour force. Labour mobility. Forecasting labour demands. Sources of increase in labour supplies. Some principles for regional manpower policy. Policy implications.

Labouring Classes

34. AANONSEN, ANTHON. *Shift Work and Health*. [Oslo] Universitetsforlaget [1964] Pp. 96.

Between 1948 and 1953 the author, a doctor, undertook some studies of health problems of shift workers in the electrochemical industry located in and around Odda on the western coast of Norway. This report includes his findings.

35. INTERNATIONAL CONFEDERATION OF FREE TRADE UNIONS. *International Trade Secretariats*. [2d rev. ptg.] Brussels [1965] Pp. 90.

Describes the structure, objectives and activities of 17 International Trade Secretariats.

36. INTERNATIONAL LABOUR OFFICE. *Report of the Director-General*. First item on the agenda. Geneva, 1966. Two volumes.

At head of title: Report 1 (Part 1-2). International Labour Conference. Fiftieth session, Geneva, 1966.

Contents: Pt. 1. Industrialisation and labour. Pt. 2. Activities of the I.L.O., 1965; twentieth report of the International Labour Organisation to the United Nations.

37. JUPP, JAMES. *Australian Labour and the World*. London, Fabian Society, 1965. Pp. 32.

A brief history of the Australian Labour Party.

38. QUEBEC (PROVINCE). PUBLIC INQUIRY COMMISSION CONCERNING SUNDAY OBSERVANCE IN QUEBEC PULP & PAPER MILLS. [*Report*. Québec] 1966. Pp. [80]-145.

Bound with its French translation.

Commissioners: Richard Alleyn, Jean-Paul Geoffroy [and] Robert M. Fowler.

The Commission was set up to study the question of the necessity for Sunday work in the pulp and paper mills of Quebec.

Minimum Wage

39. KAUN, DAVID EVAN. *Economics of the Minimum Wage; the Effects of the Fair Labor Standards Act, 1945-1960*. Ann Arbor, Mich., University Microfilms, 1964.

Microfilm copy (positive) of typescript. Collation of original: x, 333p. Thesis (Ph.D.)—Stanford University, 1963.

40. U.S. CONGRESS. HOUSE COMMITTEE ON EDUCATION AND LABOR. *Fair Labor Standards Amendments of 1966; Report to accompany H.R. 13712*. Washington, GPO, 1966. Pp. 83.

89th Cong., 2d sess. House of Representatives. Report no. 1366.

This report concerns the extension of minimum wage to some employees not already covered by the Fair Labor Standard Act, and other matters.

41. U.S. DEPARTMENT OF LABOR. WAGE AND HOUR AND PUBLIC CONTRACTS DIVISIONS. *Agriculture and the Child Labor Requirements of the Fair Labor Standards Act*. 1966 ed. Washington, 1966. Pp. [4].

Pensions

42. CANADA. DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH BRANCH. *A Study of Pension Plans in Sixty-Six Companies in Canada organized by Three Large Unions, as at June, 1964*. Ottawa, 1966. Pp. 26.

43. U.S. OFFICE OF LABOR-MANAGEMENT AND WELFARE PENSION REPORTS. *Welfare and Pension Plan Statistics: Characteristics of 163,500 Plans filed as of July 1, 1965*. Washington, U.S. Dept. of Labor, Labor-Management Services Administration, 1966. Pp. 26.

Social Security

44. MURRAY, MERRILL GARVER. *Proposed Federal Unemployment Insurance Amendments*. Kalamazoo, Mich., W. E. Upjohn Institute for Employment Research, 1966. Pp. 49.

An explanation of proposed amendments to federal unemployment insurance legislation in the U.S.

45. NORWAY. NATIONAL INSURANCE INSTITU-

TION. *The Norwegian System of Social Insurance; a Survey.* Oslo, 1966. Pp. 65.

A brief outline of the various social security laws in Norway.

46. GREAT BRITAIN. REVIEW BODY ON DOCTORS' AND DENTISTS' REMUNERATION. *Seventh Report.* London, HMSO, 1966. Pp. 95.

The Review Body held meetings between October 1965 and March 1966 to receive and to hear evidence on doctors' and dentists' remuneration. This report contains recommendations for changes in fees.

47. HUGH-JONES, EDWARD MAURICE, Ed. *Wage-Structure in Theory and Practice; Three Studies* by Mark W. Leiserson, Jacques Lecaillon and Jean Marchal [and] J. R. Crossley. Amsterdam, North-Holland Publishing Co., 1966. Pp. 242.

Contents: Wage decisions and wage-structure in the United States [by] Mark W. Leiserson. Wage-structure and the theory of the distribution of income: the French pattern [by] Jacques Lecaillon and Jean Marchal. Collective bargaining, wage-structure and the labour market in the United Kingdom [by] J. R. Crossley.

48. U.S. BUREAU OF LABOR STATISTICS. [*Employee Earnings and Hours in Retail Trade, June 1965*] Washington, GPO, 1966. 7 volumes.

Contents: 1. Retail building materials, hardware, and farm equipment dealers. 2. Retail general merchandise stores. 3. Retail food stores. 4. Retail automotive dealers and in gasoline service stations. 5. Retail apparel and accessory stores. 6. Retail furniture, home furnishings, and household appliance stores. 7. Miscellaneous retail stores.

49. U.S. BUREAU OF LABOR STATISTICS. *How to establish Current Reporting of Employment, Hours, and Earnings in Developing Countries.* Washington, GPO, 1966. Pp. 150.

"Prepared for Agency for International Development."

"This manual describes the method of establishing a current reporting system based on statistics of establishments concerning the number of workers employed, hours of work, and earnings. Also included is a chapter on labour turnover statistics."

Women

50. CANADA. WOMEN'S BUREAU. *Changing Patterns in Women's Employment; Report of a Consultation held March 18, 1966, Sir Wilfrid Laurier Building, Ottawa.* Ottawa, Canada Dept. of Labour, 1966.

Miss Marion V. Royce, former Director of the Women's Bureau, was chairman of the Consultation.

"The Consultation was based on papers given by Dr. Sylvia Ostry, Assistant Director of the Labour Division of the Dominion Bureau of Statistics and Consultant to the Economic Council of Canada, and by Professor Noah Meltz of the University of Toronto at Scarborough College and the Department of Political Economy." Dr. Ostry's talk was titled, "The Female Worker: Labour Force", and Dr. Meltz's talk was titled, "The Female Worker: Occupational Trends." Questions addressed to the speakers and their replies are included.

51. CANADIAN NURSES' ASSOCIATION. *National Inventory of Nurses, Canada 1965, based on 85% Return of the Nurse Population.* Ottawa, 1966. Pp. 33.

52. NATIONAL CONFERENCE OF GOVERNOR'S COMMISSIONS ON THE STATUS OF WOMEN. 2d, WASHINGTON, D.C., 1965. *Progress and Prospects; the Report of the Second National Conference of Governors' Commissions on the Status of Women, Washington, D.C., July 28-30, 1965.* Washington, GPO, 1966. Pp. 80.

Conference co-sponsored by the Interdepartmental Committee on the Status of Women and the Citizens' Advisory Council on the Status of Women.

Over 300 participants representing 43 of the 44 Commissions on the Status of Women and about 100 invited guests and representatives of Federal agencies attended the conference.

53. U.S. WOMEN'S BUREAU. *International Co-operation Programs Advancing the Status of Women; Reports of U.S. Government Agencies.* Washington, 1966. Pp. 50.

The reports in this document were prepared for the International Co-operation Year Citizens' Committee on Women.

"Reports of United States Government agencies concerning their programs of international co-operation that advance the status of women . . . were prepared for the International Co-operation Year Citizens' Committees on Women." These reports are included in this volume.

Miscellaneous

54. LANGROD, JERZY STEFAN. *Reorganisation of Public Administration in Greece; a Report by Georges Langrod, Consultant.* [Paris] Organization for Economic Co-operation and Development [1965] Pp. 111.

55. MORRIS, J. WALKER. *Job Evaluation.* 2d ed. rev. Birmingham, Institute of Industrial Supervisors, 1966. Pp. 48.

A brief introduction to the subject.

56. ORNATI, OSCAR A. *Poverty Amid Affluence; a Report on a Research Project Carried Out at the New School for Social Research.* Prepared with the editorial assistance of J. Stouder Sweet. New York, Twentieth Century Fund, 1966. Pp. xvi, 208.

Examines the characteristics of poverty and its connection with education, housing, health, and unemployment. The concluding part of the study considers possible remedies for the problem.

57. REGIONAL SCIENCE ASSOCIATION. *Papers. Volume 15, 1965.* Edited by Morgan D. Thomas. Philadelphia, Wharton School, University of Pennsylvania, 1966. Pp. 215.

Contents: Regional systems. Regional development and planning. Spatial patterns — measurement and analysis. Decision making. Population distributions — analysis and simulation. Transportation demand relationships.

58. SHEPPARD, HAROLD L. *Civil Rights, Employment, and the Social Status of American Negroes,* by Harold L. Sheppard and Herbert E. Striner. Based on a report for the U.S. Commission on Civil Rights (Contract number CCR-66-5). Kalamazoo, Mich., W. E. Upjohn Institute for Employment Research, 1966. Pp. 85.

Discusses the relationship of employment, income, and family structure to civil rights and suggests research which government agencies can carry out to help Negroes.

59. SIDERS, R. A. *Computer Graphics, A Revolution in Design* [by] R. A. Siders [and others] New York, American Management, c1966. Pp. 160.

"This book was originally prepared as a research report submitted in partial fulfillment of the requirements for the Manufacturing Course at the Harvard University Graduate School of Business Administration."

"Communication with a computer has traditionally been limited to punched cards or tape and typewriter input, with some kind of printing device being the normal output . . . Computer graphics now adds the dimension of sketching and drawing for both input to and output from the computer." Partial contents: The power and potential of computer graphics.

The engineering design cycle. The evolution of computer aids to design. The role of passive computer graphics. The role of active computer graphics. Who can best use computer graphics? The economics of the computer graphics decision. Conditions for success. The impact of computer graphics on the company. A look at the future of computer graphics.

60. U.S. BUREAU OF LABOR STATISTICS. *National Emergency Disputes Under the Labor Management Relations (Taft-Hartley) Act, 1947-65*. Washington, GPO, 1966. Pp. 68.

Covers the actions of all 24 Taft-Hartley emergency boards appointed between 1947 and 1965.

Industrial Inquiry Commission

Continued from page 354

aggrieved foreman or foremen in relation to the employment conditions of other foremen in the employment of the employer or employers concerned.

(e) The cost of the arbitration will be paid by the employer or employers concerned, if the arbitration board or the arbitrator finds that the grievance of the foreman or foremen is justified, and by the foreman or foremen if the grievance is found to be without merit. However, if the arbitrator or board of arbitrators is of the opinion that, in the circumstances of the grievance and the nature of the award, the costs of the arbitration should be divided, the costs may be ordered to be paid by the parties in such proportions as the arbitrator or board of arbitrators shall decide.

(f) The award of a majority of a board of arbitrators shall be the award of the board.

(g) The award of the arbitrator or board of arbitrators shall be binding on the parties concerned, and shall be given effect by them or their representatives.

The commission also noted that any procedure adopted in a tense situation—such as the one prevailing in the industry that was the subject of the inquiry—be allowed to operate for a reasonable time to see to what extent it will remove the causes of friction and tension.

It was recommended by the commission that, "during such period, no action should be taken by either side that will rouse any new animosities or occasion any new distrust; that 12 months from the adoption of the procedure should afford sufficient time to make some real progress, and that any shorter period would be unrealistic."

The commission further recommended that, during such 12-month period, "energetic efforts be made to arrive at a satisfactory solution of some of the grievances which in the eyes of the foremen concerned are most urgently in need of attention."

It was also recommended that, during the period, no new pressures be brought to bear on the companies in respect of foremen by the union or by Local 514; and that, for at least the same period, no changes be instituted in the status or conditions of employment of foremen, except with the consent of the foremen as a group.

Finally, after discussion with the parties involved, the commission recommended that "for a period of 12 months after the adoption of the grievance procedure, no officer of the ILWU, or of the British Columbia Maritime Employers Association, shall take part in the processing of any grievance, except in a case where he personally, or the company of which he is an officer, is a party."

Office of Arbitration

Continued from page 377

"In my opinion," the arbitrator said, "a proper assessment was not made of the conductor's responsibility in the light of what was occurring in the cab just prior to the collision."

The conductor's statement had said, in part: "While the units were moving around the right-hand curve, I heard the fireman remark, 'There are the cars.' I looked across and noted [that] the engineman had his hand on the independent brake valve handle . . . I then looked on the left side of the cab . . . and when I realized our speed was not reducing I hollered to the engineman to apply the emergency brake. He replied, 'She's got everything,' and I took this to mean that it was applied." When the conductor did not feel any braking action, he knew a collision was imminent.

"It is to be remembered [that] there are seconds involved," the arbitrator said. Accepting the conductor's statement that when he called for an emergency application, the engineman had replied, "She's got everything," the conductor was justified in believing that everything had been done.

"I cannot find [anything] that would justify disciplinary action. He was alert. He called out for action by the engineman. To require more, particularly in view of the answer he received, would, in my opinion, be quite unreasonable."

For these reasons the arbitrator asked that the demerits be expunged from the conductor's work record.

Caribbean area workers coming to Canada again

Seasonal workers from the Caribbean area will be admitted to Canada again this summer to assist Ontario farmers in the growing, harvesting and canning of fruits and vegetables, according to the Department of Manpower and Immigration.

Hon. Jean Marchand recalled, in a press release issued at the end of March, that last year, as an experiment, 264 seasonal workers from Jamaica were admitted to Canada. Employers were reported well satisfied with their performance, said the Minister. He had said last year that, if the 1966 movement from Jamaica were successful, the Canadian Government would negotiate a broader agreement with other Caribbean countries interested in supplying temporary workers.

It is expected that, this year, workers will be recruited in Barbados, Trinidad and Tobago, as well as Jamaica. If the 1967 movement warrants it, and there is a continuing need for seasonal labour in 1968, a further extension of the source countries will be considered.

The main conditions that will apply to all seasonal workers from the Caribbean are:

- employers will be required to pay a minimum wage of $1.30 an hour, or the prevailing piecework rate, if higher. (Minimum wages are five cents an hour higher than last year). They will also provide a minimum average weekly salary of $50 during the employment period, and adequate accommodation;
- transportation costs, based on the economy return air fare from Kingston, Jamaica, to Toronto, will be paid by the employer. The extra fare from the more distant islands over and above the return fare, Jamaica to Toronto, will be borne either by the workers themselves or by their governments; and
- between May 1 and October 31, 1967 employers may bring in workers for periods of not less than six weeks, and not more than four calendar months. All workers will be required to leave Canada by November 1.

Labour-Management Relations

Continued from page 348

several years, the pace of technological change has increased, if anything; but unemployment has fallen to the lowest level in 10 years. In spite of an extraordinarily large increase in the labour force, we have encountered during the past year shortages in many categories of manpower. The explanation for this is quite simple. The slack in our economy has been taken up by the elimination of the over-all deficiency in the general demand for goods and services."

He underscored the idea that technology eliminates jobs, not work. We must still rebuild cities, provide sufficient housing, clean up rivers and develop many economic and social projects.

Dr. Deutsch stressed the need for labour and management to co-operate to ensure that technological change is brought about in an orderly way. He then described briefly the proposals and suggestions of the Council's declaration.

Declaration

On the subject of communications, he warned that the mere setting up of joint labour-management committees will not automatically guarantee more effective communications. Representatives from both groups must be able to deal competently and responsibly with objective information.

In summary, he invited the delegates to participate in the discussions by offering concrete suggestions and comments on the proposals at hand. "Our concern is to find improvements and new approaches that will make the institution of free collective bargaining work better, with the least amount of friction in this era of accelerating change."

The Deputy Minister of the Department of Manpower and Immigration, Tom Kent, spoke about the role of the Government in relation to manpower adjustment problems. He discussed the policies and programs through which the Government helps provide a suitable environment for the solution of problems, the services that Government can provide, the achievement of effective relationships and co-ordination of private and public measures, and the requirements of Government to change the legislative framework in which labour-management action takes place.

Mr. Kent said that "job security cannot be reduced unless we replace it effectively by greater employment security." A feeling of confidence must be present in the environment to show that the Government is not just negatively committed to fighting unemployment, but is positively committed to fostering the kind of economy in which rapid growth takes into account continuing opportunity for the individual.

About an active manpower policy, Mr. Kent said: "The need for this arises from the impact on the world of work that comes from rapid technological and economic change." The principal need, he said, is job counselling. A service for manpower information and advice is essential to guide workers in job placement or job transfer, and to foresee manpower adjustments that arise from impending industrial change.

Government Undertakings

In line with this basic task, Mr. Kent outlined four related activities the Government has undertaken:

- –an adult training and training allowance program—contained in new legislation now before Parliament;
- –assistance for workers moving away from areas of little or no prospect of adequate employment;
- –employer recruitment through an immigration program matched to manpower requirements; and
- –a stabilization program co-ordinated with other public agencies for effective manpower utilization.

The speaker cautioned against the idea that the Government should play a "big-brother" role. He said that a "big-servant" role would best accomplish the task, if management and labour groups were thought of as partners, and Government as providing important services to the partnership. One such provision is the Manpower Consultative Service, a part of which is now being developed as a specialized activity for objective research and assessment of facts related to manpower adjustments. The second service relates to training. Mr. Kent said that the federal Government will be prepared to foot the bill for teaching employees additional occupational skills. "Public financing of this kind of training seems entirely sound economics."

Mr. Kent's fourth point, concerning the legislative framework for labour-management action, was the subject of a speech delivered by Hon. Jean Marchand, Minister of Manpower and Immigration. Mr. Marchand pointed out that, because the federal Government is limited in its direct influence upon Canadian industry, the matter is more provincial than federal, although it cannot be ignored from a federal viewpoint.

The Minister said that management should give advance notice of any sizable technological innovation or other major change in production methods, and he emphasized that no flexibility would be allowed on this point. Management's notice must give specific details about who will be affected, and how. Of course, he said, there will be difficult problems of definition, but these should not deter the Government from designing such legislation.

Mr. Marchand referred to a suggestion in the Freedman Report (L.G., Jan. 1966, p. 4) that consultation must be directed to formal agreement. Management should be required to postpone a material change in working conditions until a new collective agreement is negotiated. The objective of manpower policy is to see that change occurs without hurting people, the Minister said.

The procedure must accommodate a right of appeal to an arbitrator. Consultation will lead to understanding and acceptance of a reasonable plan of manpower adjustment, but, to be meaningful, must provide for right of redress if the results of consultation are unacceptable to the workers. Government should not rush into new legislation, the Minister added, if adequate consultation develops without it.

Hon. John R. Nicholson, Minister of Labour, reminded the delegates that the Department of Labour is charged with the administration of labour legislation that is national in scope.

He said that manpower adjustments depend upon communication. "Today", he said, "most communication between labour and management is limited to the period of negotiation of a new contract . . . and there is little opportunity for meaningful communication on many issues."

The Minister then briefly described improvements in labour-management communications. In the past, employer-employee joint committees at the plant level have had limited success. In recent years, a fundamental change in emphasis stresses the concept of "labour-management" committees. A second step has been to expand field operations, and to form the Labour-Management Consultation Branch within the Department of Labour (L.G., Apr. 1966, p. 142).

Discussants

Following each of the principal speeches delivered to conference delegates, formal reply was given by selected representatives of labour or management. These discussants commented on the topics under consideration and offered suggestions for improvements or solutions to problems in manpower adjustment and communications. The chairman then opened the session to general discussion so that the delegates at large could raise or clarify issues arising from the speeches.

Productivity as a factor in incomes determination was discussed by William Dodge, Executive Vice-President of the Canadian Labour Congress. He said that

the judgment and economic strength of groups participating in collective bargaining will have to continue to serve as the key factor in decision-making until complete and accurate data on productivity is made available. No single group in the community is responsible for productivity gains, he said, and no single group must be permitted to establish a disproportionate claim to its proceeds.

Larry Sefton, director of District 6, United Steelworkers of America, welcomed the ECC's *A Declaration on Manpower Adjustments to Technological and Other Change* (L.G., Apr., p. 234), "because it clearly states that Canada has a manpower problem." He used the example of the closing of a Toronto company "to point out the flaw in the 'labour-management co-operation' concept of handling manpower displacement and replacement policies when management will not co-operate." To meet the problem, he urged that a fully integrated and portable public social security system be initiated by the Government. He called also for some type of obligation and responsibility to be placed on management in order to establish an effective program to cope with automation and technological change.

Some delegates spoke about their attitudes toward, and experiences with the labour-management consultation groups, which are encouraged by the Canada Department of Labour. Although some delegates attested to effective communications in many areas such as health or safety standards in the industry, others criticized the groups for being ineffective in dealing with conflicts connected with collective bargaining. Ken DeWitt, of the Labour-Management Consultation Branch of the Department, explained that the committees were not structured to deal with such matters, but that each committee is free to design its own terms of consultation.

Reports of the working groups given at the final plenary session indicated that most delegates agreed with the general theme of the topics discussed during the conference. One representative reported that his working group discussed the use of legislative compulsion in adjusting to technological change.

The consensus indicated that there will be opposition to such action unless it were absolutely necessary. All agreed that prenotification of impending or proposed change must be required, although several felt that a three-month warning is too short a period. Delegates stressed that there must be sincere interest in joint labour-management committees if they are to succeed, and that they must not be confused with negotiating committees.

Dr. Deutsch concluded the discussion by repeating that it was not the objective of the conference to come to a resolution. He reiterated that the solutions to problems connected with technological change and labour-management communications must be approached by rational discussion, not by power plays. The next step, he stated, is to gather together all material collected at the conference, summarize it, and use it as a basis for the solution of social problems and for the achievement of Canada's economic and social goals.

The Economic Council of Canada issued two booklets prior to the Ottawa conference. The first, *A Declaration on Manpower Adjustments to Technological and Other Change*, contains recommendations for a range of adjustment methods and procedures that have been successfully tested in many situations dealing with change.

The second booklet, *Toward Better Communication Between Labour and Management*, sets out a number of principles that should be accepted by labour and management if they are to achieve better relations. The Council claims that improvements in consultation and co-operation could be made if the two parties would enlarge their understanding of each other, and reduce unnecessary industrial strife. Although there is a natural conflict of interests between labour and management in bargaining over wages, it is the purpose of collective bargaining to resolve this issue, the authors point out.

Good communications helps to promote interest and participation among employees. Traditionally, the channel of communications was regarded as a management function, operating through the "line" system of command. Today, however, joint consultation committees are a better device for promoting effective communication and consultation at the plant level.

The Council warns that the mere establishment of joint committees will not automatically ensure better communications. The prerequisite is a two-way feedback system that keeps both labour and management fully informed of each other's interests and problems. Union representatives must report back to the workers on management plans and policies; management representatives must keep the union representatives continuously informed on their plans and policies; and union representatives must keep management informed of employee reaction.

The Council admits its awareness of the fact that continuing consultation and communication poses a great challenge, and presents serious difficulties for both labour and management. But it contends that the system would bring great benefits to both groups, as well as to the economy as a whole.

B.C. Legislature considers consumer protection

Protection of the consumer is the intent of certain legislation that is in passage through the British Columbia Legislature. The legislation will require uniform disclosure of interest charges in borrowing and buying on credit. It will provide a "cooling-off" period of three days on certain door-to-door sales, and will also give the courts more power to grant relief from contracts.

The section of the measure on disclosures of interest rates will apply to mortgages as well as to purchases on credit. "The new law," says Attorney-General Bonner, "will make credit, as a commodity, readily comparable anywhere in the province, because borrowers and credit buyers will be able to compare costs in both actual amounts and nominal annual interest rates."

Mr. Bonner said that although the practical value of these provisions might be debatable, they would at least give fair warning to those seeking credit.

The legislation is also intended to give more protection with reference to high-pressure, door-to-door sales. It will enable a buyer to cancel a sales contract within three days after the sale is made. The sale may also be rescinded within a year if the merchandise sold is not delivered within 30 days of the promised date. The period during which sales may be cancelled applies only to what is known as executory contracts that is, agreements regarding goods or services not delivered or paid for in full at the time the contract is made.

Exemptions under the bill are: wholesale purchases made for or by a business; purchases not made in person; and sales of foodstuffs and other perishable goods.

The courts will be given the power to intervene in cases where the cost of the transaction is deemed excessive and the transaction is "harsh and unconscionable."

The maximum penalty under the new legislation is a fine of $2,000 or a jail term of one year for individuals, and a fine of $25,000 for corporations.

C—Employment, Hours and Earnings

Tables C-1, C-2, and C-4 are based on reports from employers having 20 or more employees in any month of the year; at October 1966, employers in the principal non-agricultural industries reported a total employment of 3,644,590. At November 1966, total employment was reported at 3,634,-921. Table C-3 gives estimates of total employment, by industry divisions, for the provinces and Canada, derived from the survey of establishments employing 20 or more persons and from a sample survey of establishments employing less than 20 persons. Tables C-5 to C-7 are based on reports from a somewhat smaller number of firms than Tables C-1, C-2 and C-4. They relate only to wage-earners for whom statistics of hours of work are also available, whereas Tables C-1, C-2 and C-4 relate to salaried employees as well as to all wage-earners in the reporting firms.

Due to a speed-up in the processing of data at the Dominion Bureau of Statistics, this issue carries C Tables covering both October and November.

D—Manpower Division

The reorganization of manpower activities under the Department of Manpower and Immigration has led to a number of administrative changes which have, in turn, altered the significance of D Table statistics that relate to employment placements and unfilled job vacancies.

The result is that valid comparisons with previous periods are not possible on the basis of these statistics. Accordingly, their publication is being suspended.

New statistical series are being developed to give more significant information about persons using the services of Canada Manpower Centres. The results will be published as they become available.

E—Unemployment Insurance

Unemployment insurance statistics emanate from the operations of the Unemployment Insurance Act, and relate to persons in contact with the Unemployment Insurance Commission, either as contributors or claimants. The data are compiled in the Unemployment Insurance, Pensions and Manpower Section, DBS, from information supplied by the UIC. The source for Tables E-1 to E-4 is *The Statistical Report on the Operation of the Unemployment Insurance Act*. For further information regarding the nature of the data see Technical Note, page 404.

TABLE E-1—Estimates of the Insured Population under the Unemployment Insurance Act

*St. John's index on the base June 1951 = 100.

NOTE: Indexes above measure percentage changes in prices over time in each city and should not be used to compare actual levels of prices as between cities.

G—Strikes and Lockouts

Statistical information on work stoppages in Canada is compiled by the Economics and Research Branch of the Canada Department of Labour on the basis of reports from the Manpower Division, Department of Manpower and Immigration. The first three tables in this section cover strikes and lockouts that amount to ten or more man-days. The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the union directly involved in the disputes leading to the work stoppages. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included. For further notes on the series, see page 336, May issue.

TABLE G-1—Strikes and Lockouts, 1962-1967

Month or Year	*Strikes and Lockouts Beginning During Month or Year*	*Strikes and Lockouts in Existence During Month or Year*			
		Strikes and Lockouts	*Workers Involved*	*Duration in Man-Days*	
				Man-Days	*Per Cent of Estimated Working Time*

Industry, Employer — *Location*	*Union*	*Workers Involved*	*Duration in Man-Days* — *March*	*Duration in Man-Days* — *Accumulated*	*Starting Date* — *Termination Date*	*Major Issues* — *Result*
MINES						
Metal						
Solbec Copper Mines Ltd., Stratford Centre, Cté Mégantic, Que.	Steelworkers Loc. 6256 (AFL-CIO/CLC)	160	960	7,520	Sept. 9 Mar. 9	Wages—27% general wage increases over a 3-yr. contract; other improved benefits.
Mineral Fuels						
Crowsnest Industries Ltd., Fernie & Michel, B.C.	Mine Workers Locs. 7292 & 7310 (Ind.)	500	1,500	5,000	Feb. 20 Mar. 6	Wages—22% wage increases over a 2-yr. contract.
MANUFACTURING						
Food and Beverages						
Stokely-Van Camp of Canada Ltd., Whitby, Ont.	Packinghouse Workers Locs. 582 & 598 (AFL-CIO/CLC)	106	640	640	Mar. 2 Mar. 13	Wages—Return of workers.
Weston Bakeries Ltd., Ville Jacques-Cartier, Que.	Bakery Workers Loc. 55 (CLC)	747	4,730	4,730	Mar. 20 Mar. 30	Wages—Return of workers.
Hiram Walker and Sons Ltd., Walkerville, Ont.	Distillery Workers Loc. 61 (AFL-CIO/CLC)	100	400	400	Mar. 28 —	Protesting a company decision—
Rubber						
Uniroyal (1966) Ltd., Montreal, Que.	Distillery Workers Loc. 78 (AFL-CIO/CLC)	540	1,080	1,080	Mar. 30 —	Wages—
Textiles						
Spinrite Yarns & Dyers Ltd., Listowel, Ont.	Textile Workers' Union (AFL-CIO/CLC)	158	3,480	15,760	Nov. 21 —	Wages, union security, bonding of employees—
Glendale Spinning Mills Ltd., Hamilton, Ont.	Textile Workers' Union Loc. 1070 (AFL-CIO/CLC)	340	6,350	6,350	Mar. 6 —	Signing a new agreement—
Printing and Publishing						
The Star, Telegram & Globe & Mail, Toronto, Ont.	Typographical Union Loc. 91 (AFL-CIO/CLC)	349	7,680	299,060	July 9 1964	Working conditions as affected by computers, job security, union membership of foremen—
Canadian Government Printing Bureau,* Hull, Que.	Unorganized	170	90	90	Mar. 8 Mar. 8	Alleged grievances—Return of workers.
Primary Metals						
Lake Ontario Steel Co. Ltd., Whitby, Ont.	Steelworkers Loc. 6571 (AFL-CIO/CLC)	350	350	350	Mar. 6 Mar. 7	Dismissal of a union steward—Return of workers.
Metal Fabricating						
American Standard Products Ltd., Windsor Ont.	Auto Workers Loc. 195 (AFL-CIO/CLC)	125	1,880	6,620	Jan. 5 Mar. 22	Wages— 20¢ an hr. increase immediately, 12¢ an hr. Mar. 1968; other improved benefits.
Continental Can Co. of Canada, Toronto, Ont.	Steelworkers Loc. 4025 (AFL-CIO/CLC)	175	90	90	Mar. 8 Mar. 8	Grievances—Return of workers, grievance procedure would follow.

TABLE G-4—Strikes and Lockouts Involving 100 or More Workers, March 1967 (Preliminary) (Continued)

Industry, Employer — *Location*	*Union*	*Workers Involved*	*Duration in Man-Days* — *March*	*Duration in Man-Days* — *Accumulated*	*Starting Date* — *Termination Date*	*Major Issues* — *Result*
Machinery						
Otis Elevator Co. Ltd., Hamilton, Ont.	Steelworkers Loc. 7062 (AFL-CIO/CLC)	636	640	640	Mar. 1 Mar. 1	Wages in a first agreement—38¢ an hr. increase over a 2-yr. contract.
Smith Corona Machines, Scarborough, Ont.	U.E. Loc. 514 (Ind.)	270	4,590	4,590	Mar. 8 —	Wages in a new agreement—
Transportation Equipment						
Collingwood Shipyards Ltd., Collingwood, Ont.	Steelworkers Loc. 6320 (AFL-CIO/CLC)	200	700	700	Mar. 6 Mar. 10	Not clear—Return of workers.
Eaton Springs Canada Ltd, Chatham, Ont.	Auto Workers Loc. 127 (AFL-CIO/CLC)	205	3,630	3,630	Mar. 7 —	Wages, fringe benefits in a first agreement—
Ontario Steel Products, Milton, Ont.	Auto Workers Loc. 127 (AFL-CIO/CLC)	125	130	130	Mar. 8 Mar. 8	Respecting picket lines of U.A.W. —Return of workers when pickets withdrawn.
Electrical Products						
The Canadian Coleman Co. Ltd., Toronto, Ont.	CLC—directly chartered	227	4,990	27,830	Oct. 18 —	Wages in new agreement—
Non-Metallic Mineral Products						
Dominion Glass Co. Ltd., Montreal, Que.	Glass and Ceramic Workers Loc. 206 (AFL-CIO/CLC)	1,500	3,000	3,000	Mar. 13 Mar. 15	Objection to reduction of personnel—Return of workers
CONSTRUCTION						
Rust Associated Ltd., Portage du Fort, Que.	Various unions	1,425	5,800	5,800	Mar. 6 Mar. 13	Jurisdictional dispute—Return of workers.
Various bricklayers contractors, Hamilton, Ont.	Bricklayers Loc. 1 (AFL-CIO/CLC)	156	2,180	2,180	Mar. 6 Mar. 27	Wages, travel allowances, working conditions—Wage increases; other improved benefits.
Several construction contractors, Millhaven, Ont.	Various unions	251	1,000	1,000	Mar. 14 Mar. 20	Sub-contractor hiring non-union operators—Return of workers, when agreement reached.
Canadian Bechtel Co., Temagami, Ont.	Various unions	510	4,850	4,850	Mar. 15 Mar. 30	Workers seeking an increased board allowance—Return of workers, board allowance raised from $7. to $10.
Canadian Comstock Ltd., Gold River, Vancouver Island, B.C.	I.B.E.W. Loc. 230 (AFL-CIO/CLC)	1,000	1,000	1,000	Mar. 30 Mar. 31	Jurisdictional dispute between unions—Return of workers.
Canadian Bechtel Ltd., Tar Island, Alta.	I.B.E.W. Loc. 424 (AFL-CIO/CLC)	198	100	100	Mar. 31 —	Misunderstanding interpretation of existing agreement—
Fraser Brace Engineering Co. Ltd., Frood-Stobie Mine, Sudbury, Ont.	Labourers Loc. 493 (AFL-CIO/CLC)	236	240	240	Mar. 31 —	Dismissal of five union stewards—

Quebec-Telephone, Various locations, Quebec.	I.B.E.W. Loc. 2200 (AFL-CIO/CLC)	525	1,580	1,580	Mar. 6 Mar. 10	Wages—34¢ an hr. increase over a 2-yr. agreement.
PUBLIC ADMINISTRATION						
Local Administration						
City of Montreal, Montreal, Que.	Public Service Employees Federation (CNTU)	4,486	13,460	112,460	Jan. 30 Mar. 6	Wages—12% wage increases over a 2-yr. contract.

*Federal Jurisdiction.

Technical Note to "E" Tables

Under the Unemployment Insurance Act, contact between the claimant and the Unemployment Insurance Commission is achieved by means of a network of local offices. Tables E-2 to E-4 relate to local office operations, though Table E-3 includes data on regional office processing.

Upon separation from employment, a person wishing to file a claim for benefit applies either in person or by mail to the nearest local office of the Commission. The claim will be either an "initial" or a "renewall" depending upon whether or not it is necessary to compute benefit rights. On an initial claim, the claimant's benefit entitlement is calculated, and this will be available for compensation of spells of proved unemployment during a period of one year,* unless used up prior to that time. When a claimant misses two successive scheduled reporting dates and subsequently files a claim, a renewal claim will serve to re-activate the claim, provided that there is still benefit available.

The total of initial and renewal claims (Table E-3) thus approximates the number of recorded separations from employment during a month. However, to the extent that an initial claim is taken from a person who has just exhausted benefit and seeks re-establishment of credits, the total would constitute an overstatement of the new cases of recorded unemployment. Claims in the category "entitled to benefit" include initial claims on which the contribution requirements were fulfilled and no disqualification was imposed, and renewal claims allowed, with no disqualification. Claims "not entitled to benefit" consist of failures on initial claims due to insufficient contributions, an in addition, disqualifications imposed on either initial or renewal claims. Claims not completely processed at the end of the month are shown as "pending."

Claimants are required to report every two weeks by mail to the local office. Information on the number of claimants currently reporting to local offices is obtained by a count of individual unemployment registers in the currently active file at the month-end (Table E-2). Once a claim is taken, the document on which the record of activity is maintained (the unemployment register) is placed in the active file, and it becomes dormant only after the scheduled reporting pattern has been broken twice in succession or the claimant finds work. The count of weeks on claim represents the number of weeks of proved unemployment since the most recent separation from employment. When a new unemployment register is prepared, because the previous claim has terminated and a new entitlement has been computed, the number of weeks is calculated from the date of actual separation from employment. Information on the number of weeks on claim is based on examination of a 20-per-cent sample of unemployment registers.

Payment data are provided by Treasury Offices of the Unemployment Insurance Commission and relate to transactions during a month. In some cases, the compensated unemployment would have occurred in a prior month. Data cover partial as well as complete weeks.

Estimates of the insured population (Table E-1) are based on an estimate of persons either working in insured employment or on claim at June 1 each year. Monthly estimates of insured employment are projected from the June 1 figure, using employment indexes, for individual industry divisions as published in "Employment and Average Weekly Wages and Salaries" (Employment Section, Labour Division, DBS). The number of claimants recorded at the month-end, as described above, is added to provide the total estimate.

*When the "Training Allowance Act—1966" becomes operative, the benefit period may be as long as three years.

Government
Publications

labour gazette

Canada Department of Labour/July 1967

Canada Department of Labour Publications

Annual Report of the Department of Labour (Covers fiscal year ending March 31). (English or French). Cat. No. L1-1966.

Report of the Industrial Inquiry Commission on Canadian National Railways "Run-Throughs." Report of Hon. Mr. Justice Samuel Freedman, Commissioner. (English or French). Price $1.50, Cat. No. L35-965/1.

Supplements to Labour Gazette

Collective Bargaining Review. Prepared by the Collective Bargaining Section, Economics and Research Branch, Canada Department of Labour. Obtainable from the Canada Department of Labour. Free to LABOUR GAZETTE subscribers.

Reports of Boards of Conciliation established under the Industrial Relations and Disputes Investigation Act together with reasons for judgment of the Canada Labour Relations Board. Obtainable from the Canada Department of Labour. Free to LABOUR GAZETTE subscribers.

Economics and Research Branch

Labour Organizations in Canada (annual). Contains a brief commentary, the latest statistical data on union membership, and a directory of labour organizations with names of their principal officers, publications, and the geographic distribution of their local branches in Canada. (English or French). Price 50 cents, Cat. No. L2-2/1966.

Industrial and Geographical Distribution of Union Membership in Canada, 1966 (English or French). Price 15 cents, Cat. No. L31-766.

Strikes and Lockouts in Canada (annual). Furnishes a record of strikes and lockouts occurring in Canada during a year. Tables and related texts showing strikes and lockouts by years, by areas, by industries, including time lost, number of workers involved, duration, etc. Price 35 cents, Cat. No. L2-1/1965.

Wage Rates, Salaries and Hours of Labour, 1965. An annual report published in loose-leaf form and followed later by a paper-bound volume. Contains the results of an annual survey at October 1 of occupational wage rates and standard hours of work in most industries. Averages and predominant ranges of wage rates for selected occupations are tabulated separately on a regional basis for some 90 industries including logging, mining, manufacturing, construction, transportation, trade and service groups. Weekly salaries for office occupations and hourly wage rates for maintenance of service occupations and for labourer for several broad industry groups are shown, on a community basis, in 52 communities. Trends in wage rates are included in tables of index numbers by industry. First year service including attractive binder with index tabs and paper-bound volume, $9.50; service without indexed binder, $7.00; individual tables, 15 cents. Paper-bound volume, $2.50. (Bilingual). Cat. No. L2-548.

Working Conditions in Canadian Industry, 1965. Price 75 cents, Cat. No. L2-15/1965.

Répertoire de termes et expressions utilisés en relations industrielles et dans des domaines connexes. A catalogue, in French, of terms currently in use in the labour relations field. Prepared by the Economics and Research Branch. Price $4.50, Cat. No. L31-967F.

Labour-Management Research Series

Shiftwork and Shift Differentials in Canadian Manufacturing Industries. Price 35 cents, Cat. No. L2-22/2.

Vacations with Pay, 1951-61: An Examination of Vacation Practices in Canadian Industries (English or French). Price 35 cents, Cat. No. L2-22/4.

Collective Agreement Provisions in Major Manufacturing Establishments, 1964. Price 35 cents, Cat. No. L2-22/5.

CORRESPONDENCE—Address letters dealing with editorial matters to the Editor, those dealing with subscriptions to the Circulation Manager. SUBSCRIPTIONS—Canada: $3 per year, single copies 50 cents each; all other countries: $5 per year, single copies 50 cents each. Send remittance by cheque or post office money order, payable to the Receiver General of Canada, to The Queen's Printer, c/o Superintendent of Government Publications, Ottawa. All subscriptions payable in advance. SPECIAL GROUP SUBSCRIPTION OFFER—Five or more annual subscriptions, $1.50 per subscription (Canada only). Send remittance, payable to the Receiver General of Canada, to the Circulation Manager. BOUND VOLUMES—$5 per copy delivered in Canada, $7 per copy to other countries. CHANGE OF ADDRESS—Attach previous address label.

50 Years Ago

A shortage of anthracite coal caused the Government to appoint a fuel controller to investigate the coal situation and to advise on demand, output and need for imports. A food controller also was appointed.

A serious shortage of anthracite coal was referred to in the July 1917 issue. This shortage was being felt in the United States and in Canada, and this journal published an interim report on the coal situation that had been issued by the U.S. Federal Trade Commission in May. The Commission found that a "buying panic," which had developed in the autumn of 1916 and had resulted in "enormous increases" in retail prices, was "unwarranted."

The Commission said that symptoms of the same kind of panic were again appearing, and that a repetition of the same conditions that had prevailed during the previous winter was imminent. The Commission insisted that there was no good reason for the panic in the anthracite market, or for any increase in the present selling price of coal. "On the contrary, the retail prices generally obtaining today are unwarranted."

A wage increase agreed upon in April would involve an increase in the cost of production of between 24 and 30 cents a ton, and the price at which the leading operators had announced they were willing to sell would not exceed that increase. The Commission was of the opinion that the usual discounts allowed during the summer months should be followed by the whole trade. But "If the public is again so deceived as to indulge in a scramble for coal such as occurred last winter, the favourable situation above reported may be nullified. A demand for four months' coal in the single month of May will be most deplorable. If, on the other hand, purchases are made as usual, there will be no disturbance and small chance for speculators to fleece the public."

The report gave what it said were the fair prices at the mine, plus a reasonable dealer's profit and cost of local delivery. These, allowing for the usual 40-cent discount in May, were given as approximately: $3.61 a ton of 2,000 lbs for egg coal; $3.84 for stove; and $3.93 for chestnut. These were, of course, U.S. prices.

In Canada, the coal industry was in difficulties. Miners in the coal fields of southeastern British Columbia and southwestern Alberta had been "striking intermittently" since November, the last cessation of work having begun on April 2. The Government had appointed a director of coal operations for these fields, and his duty was "to make inquiries respecting wages and hours of labour, and labour conditions generally, and other matters affecting the cost of production of coal and coke, and the resumption of such production during the war, and for three months after the conclusion of peace."

This official had directed that the mines should be re-opened and operated under a tentative agreement arranged between the operators and the miners in March, with certain wage increases in addition. These included an increase of 7½ per cent, "which really means an increase of 22½ per cent over the wages paid before the strike. It was further added that the penalty clause, which was the point that the operators had refused to consider, should be omitted from the agreement, and that a commission should be appointed to investigate the cost of living. It was expected that the mines would be re-opened July 3."

In the eastern coalfields, as a result of the recommendations of a Royal Commission that had been appointed to inquire into the causes of industrial unrest in the Nova Scotia coal mining districts, the Provincial Workmen's Association and the United Mine Workers of Nova Scotia had merged into one body, the LABOUR GAZETTE reported. The Commission had found that much of the unrest referred to was due to the presence of the two rival labour organizations. After several days of negotiations, it had succeeded in getting them to agree to form a new union, which was to be known as the Amalgamated Mine Workers of Nova Scotia. The headquarters of the new union were to be in Glace Bay.

In connection with the shortage of anthracite coal, the Government appointed a fuel controller whose duty was to investigate the coal situation and "advise the Government as to the probable demand, the probable output of Canadian coal, and the likelihood of securing the necessary quantities outside of Canada." He was also to "endeavour to bring about co-operation between producers, carriers and consumers, and . . . to make recommendations as to measures that may be adopted to increase the output, and to ensure sufficient coal for Canadian requirements during the coming season."

The Government appointed a food controller also. "He is directed and empowered," this journal said, to "investigate the quantities, location, ownership and sources of supply of food commodities, the prices of same, and the causes of such prices. He is to ascertain the food requirements of the country and to facilitate the export of the surplus to Great Britain and her allies, and he is empowered to make regulations as to prices, storage, distribution and conservation of food, the consumption of food in hotels, restaurants, cafes, private houses, clubs and other places.

"The Food Controller may also make regulations respecting the manufacture, storage and transportation of food, and may purchase, requisition, store, sell and deliver food. The Food Controller's regulations are subject to the approval of the Governor in Council."

The Attitudes of Labour and Management

The unrest in industrial relations, and the general public's "growing irritability" with the way management and labour resolve their mutual problems, were emphasized by Hon. John R. Nicholson, Minister of Labour, in a speech delivered to the first annual convention of the Mechanical Contractors' Association of Ontario, held in Ottawa on April 28.

"If there is any one stumbling block . . . in the field of industrial relations, it is our natural proclivity to cling desperately to the comforting shibboleths of the past far beyond the point where they have any realistic affinity for existing environments," said Mr. Nicholson.

He pointed out that one of Canada's older institutions—free collective bargaining—was severely tested in 1966. That year, described by the Minister as the toughest in Canada's history, started off with several work stoppages already in progress. "During the year, 594 new stoppages occurred; and as we turned the corner into '67, some 25 were still in force." About 411,000 workers were directly involved, resulting in a time-loss of well over 5,000,000 man-days, he said.

The Minister noted that this troublesome labour period had arrived when the escalating economy had reached a new crescendo, when the demand for skilled labour greatly exceeded the supply, when the hard-core unemployed were at an all-time low, and when the labour force exceeded 7,000,000—an increase of 250,000 over employment in the previous record year, 1965.

Many of the crises between labour and management were precipitated by poor communications, said the Minister. He stated his belief that, although the worker should benefit in relation to the economic success of the business into which he has invested his energy and skills, the voices of those labour and management spokesmen who are striving to find a more responsible way to meet their joint problems should not be ignored. "The one factor that comes through from our 1966 experience with shattering clarity is that labour and management must change their fundamental attitude to collective bargaining," he said.

He urged labour and management to develop an acceptable system of effective, periodic consultation during the course of their agreements "while the initiative is still theirs to take." Criticism that such a plan would undermine the bargaining positions of the two parties was "nonsense," he said, and could only stem from fear of change, and from those with questionable leadership qualities.

As an example of a practical and mutually beneficial labour-management relationship, he cited a Quebec-based, nation-wide, diversified forest industry whose industrial relations are centrally operated and whose negotiations are made through 120 local unions representing 27 national and international unions. These two parties "got to know each other outside the distorting influence of crisis, and the meetings took on the nature of two equally involved partners," thus rejecting the age-old and outdated "master and servant" concept in the process.

The "more or less modern phenomena" of labour-management consultation committees, task forces, special commissions, university research grants and Economic Council meetings on labour-management communications were encouraging. "I firmly believe that in properly constituted committees, set up in the right environment, and honestly supported by progressive labour and management, are to be found the essential elements for the survival of our free collective bargaining procedure," the Minister said.

The Department of Labour, he continued, believes that expenditures of time and money to make people into more effective workers is paying off in positive results, and can no longer be considered passively as a humanitarian concept.

"There must and will be a new and vital Department of Labour generating new energies and programs to meet the needs of this day and age. There must and will be more action in the area of the Canada Labour (Standards) Code; in the promotion of fair employment practices; in the development, with provincial cooperation, of our new Safety Code for federal industries; in the development of a better information system to improve Canadians' understanding of the industrial relations community and the purposes of the Department's programs."

Mr. Nicholson declared that the Government of Canada believes that the great majority of Canadians support the free collective bargaining concept. "Thus it is the Government's duty to do all in its power to preserve that concept," he said. "The ultimate responsibility for the preservation of free collective bargaining, however, rests squarely on the shoulders of management and labour, and in direct ratio to their ability to demonstrate that the system works with justice and without the foisting of a distressing burden of dislocation on society as a whole."

International union events scheduled for Montreal

Montreal will be the scene of two international trade union events, with the First World Conference on Education in the Labour Movement of the International Confederation of Free Trade Unions, August 16 to 25, preceded by the Fifth International Labour Film Festival, August 11 to 15. During the film festival, trade union training experts will converge for a symposium on the use of audio-visual aids in the developing countries.

The conference on education will review the socio-economic and legal aspects of labour education in various countries, with special emphasis on new subject material to be taught to trade unionists. It will also explore new problems such as the economic theory of co-determination in industry, manpower planning, social and economic incentives, education, the introduction of co-operatives, automation, re-training, job classification, and harmonization of economic and social legislation.

Expectations are that about 150 delegates will attend, representing organizations affiliated with the ICFTU, trade union organizations co-operating with them on educational matters, and other bodies closely connected with the labour movement in the field of workers' education. Delegates will be welcomed by leaders of the Canadian Labour Congress and the ICFTU, and by Montreal and Quebec authorities.

The conference has a twofold purpose. It will spark the initiative of trade union educators and teachers, and emphasize the necessity of education for effective trade union action. It will serve also to inform interested circles outside the trade union movement of trade union achievements in the field of education and the need to keep abreast of new training and teaching methods being perfected by the unions.

Married Women Workers in France

Every third worker in France is a woman, according to the last General Census, in 1962—a proportion that has remained unchanged since 1954. The significant change for the period, however, occurred in the number of women who moved from farming, commerce and handicrafts to the wage and salary-earning category of employment.

During the eight years, about half a million of these family workers acquired the status of employees enjoying benefits of social legislation, protection against unemployment, and individual remuneration received personally. Despite this improvement in the over-all situation, however, the skill discrepancy between male and female employees remains considerable. For example, 40 per cent of the male manual workers were skilled, but only 16 per cent of their female counterparts were in that category.

Equal Pay

Notwithstanding a government decree in 1946 that made provision for equal pay, ratification of the ILO Equal Remuneration Convention in 1953, and the fact that France was a party to the Rome Treaty of 1957—in which Article 119 calls for the equalization of wages for men and women, and complete elimination of wage differentials in member countries by 1964—there exist discrepancies between men's and women's remuneration at the same level of skill or qualification. And they are even more evident at the level of higher management. The provision for equal remuneration applies only to workers covered by collective agreements, thus leaving workers in unorganized employment unprotected.

In addition to these general difficulties, married women workers, who account for more than half of the female labour force, must face the problems arising from family responsibilities. The matter of combining participation in the labour market with household duties was investigated in a survey on the family group,* financed by the National Scientific Research Centre of France and the Public Health Service of the United States.

**International Labour Review, July 1966,* Needs and Aspirations of Married Women Workers in France, by Andrée Michel.

The two following questions were posed to 550 married women, 450 from the Paris area and 100 from Bordeaux:

(1) Among all the following measures, which do you consider most likely to improve the position of working women: creches and nurseries; learning a well-paid occupation; a shorter working week for all; easier access to work; cooked meals and canteens; cheap laundry facilities ?

Respondents were asked to list the two most important measures after their first choice. They were invited also to suggest any measures not specifically mentioned.

(2) If you have (or had) a daughter, would you prefer her to learn an occupation and to work when married, or to rely entirely on her husband for a livelihood ?

In 82 per cent of the replies, top priority was accorded to three measures in the following order: creches and nurseries; learning a well-paid occupation, and a shorter work week. The largest group giving top priority to any one measure was in the Paris area, where 38 per cent of the respondents designated creches and nurseries. In the Bordeaux group, learning a well-paid occupation rated highest with 32 per cent of the respondents; and 28 per cent gave top priority to creches and nurseries.

Giving top priority to the question of child care was influenced by personal factors and family situations. Top priority was given more often by women:

–with two, three and four children, than by those with one or none;

–in the lower income brackets;

–with "no help" than by those with "full-time help";

–with primary and technical education than by those with secondary or higher education;

–in manual occupations, semi-skilled and unskilled, and unskilled non-manual occupations, than by those in skilled. supervisory, middle and higher management positions;

–living in rented premises, than by those occupying owned accommodation.

"Learning a well-paid occupation" was given top priority by 157 respondents in the sample. Again, the priority afforded this measure was influenced by personal and social factors. Greater importance was attached to this measure by women:

–without children; and the greater the number of children, the less likely that top priority would be given to this measure;

–with a family monthly income of over 3,000 francs;

–with "no help" as opposed to those with "full-time help";

–with secondary education, followed by those with higher education and in semi-skilled manual occupations;

–occupying owned accommodation.

Top priority for "a shorter working week for all" was put forward by 17 per cent of the total sample. Top priority for this measure was afforded by a greater number of respondents:

–with no children—though this is not to imply that a shorter work week was not important to women with children; merely that there was a greater incidence of top priority afforded child care facilities and learning a well-paid occupation;

–with family monthly incomes ranging from 1,500 to 2,000 francs;

–with "no help" than by those with "full-time help",

–with "higher education";

–in supervisory and middle-management occupations;

–occupying "rented unfurnished" premises.

Daughters' Futures

Half of the respondents gave preference to their daughters' learning an occupation and working when married. One in three gave preference to learning an occupation and deciding freely to work when married. Seventeen per cent expressed preference for having their daughters rely entirely on their husbands for a livelihood.

In Paris, only 13 per cent of the respondents expressed preference for such a future for their daughters; almost 40 per cent of the Bordeaux respondents

Careers for Disabled Persons

Opportunities for the handicapped in medical technology

The National Committee for Careers in Medical Technology in the United States undertook, in 1965, a three-year project to study the opportunities available to disabled persons in the field of medical technology. They were particularly interested in the experience of those disabled persons already employed in this field, and in the prospect of using the abilities and skills of disabled persons to fill an ever-growing need for personnel in medical laboratories.

The study was sponsored by the Vocational Rehabilitation Administration, U.S. Department of Health, Education and Welfare.

Hospital Survey

In the first phase of the project, a survey of hospital laboratories throughout the country was made to discover which hospitals employed disabled persons as laboratory workers and to get an assessment of them as employees. Replies were received from 1,984 hospitals, of which 443 hospitals reported a total of 693 disabled workers.

Ninety-one per cent of the disabled employees were rated as satisfactory by their laboratory directors. Seventy-two per cent of the total had received their training after they became disabled. Their disabilities were of all types: ambulatory, 40 per cent; manipulative, 15 per cent; recovered mental illness, 11 per cent; auditory, 8 per cent; cardio-pulmonary, 7½ percent; convulsive seizures, 5 per cent; visual, 3½ per cent; and a variety of others.

Individuals with every type of disability were employed in all sections of the laboratories and were working at all staff levels. Twenty per cent were supervisors, 50 per cent held staff positions, and 30 per cent were laboratory assistants.

A postcard survey of hospital administrators brought in 1,157 replies indicating "satisfactory" experience in employing disabled persons. On the returns, 48 hospital administrators and 59 laboratory directors commented that they had never had job applications from disabled persons.

An intensive study was then made of 54 disabled individuals employed in hospital laboratories in the area between New York City and Philadelphia. These employees, their immediate supervisors and their laboratory directors were interviewed in detail.

Training

Only 6 of the 54 had received training assistance from vocational rehabilitation agencies. Some of those interviewed had encountered difficulties and rejections in trying to get into the laboratory field. All were agreed, however, that once they had been trained and had a recommendation from a pathologist, there was no problem finding employment. Twenty-six had college or graduate degrees, and most had also taken a year's training in schools approved by the American Medical Association. Laboratory directors suggested that the disabled needed to have more than the minimum qualifications to compete with the non-disabled.

The survey found also that disabilities were more severe than the written questionnaires had indicated, yet few employees felt themselves to be handicapped in their jobs.

Disabilities included: ambulatory, 25, with half of these requiring braces, crutches or wheelchairs; manipulative, 6; cardio-pulmonary, 4; auditory, 4, including two totally deaf since infancy; cerebral palsy, 3; epilepsy, 3; and dwarfs, 3.

Employment Records

The 54 employees were scattered throughout the various departments of the laboratory, usually in jobs that did not require night calls or weekend work. They were more likely to have specialized in a particular type of laboratory work than were their non-disabled fellow employees. Only one employee was found whose work was unsatisfactory because of his disability.

Their records for attendance, punctuality and sick leave were equal to, and in many cases superior to, those of the non-disabled. Nearly every employer reported that the disabled tend to stay longer on the job. Of the group, 21 had been employed more than six years, and eight of these had been in the same job more than 15 years.

Only six were earning less than $5,000 a year; 42 earned between $5,000 and $8,000, and six earned over $8,000. The three highest salaries ($10,000 to $12,000) were paid to workers who had to get around the laboratory on crutches. They had Master's degrees and had been in their jobs 15 years or more.

Among the severely disabled were several bacteriologists—one was a paraplegic confined to a wheelchair; one who used underarm crutches had been 16 years on the job, and the third, who had also been 16 years on the job, used leg braces. A man whose left arm was amputated below the elbow had been employed as a chemist for ten years. Another chemist suffered from rheumatoid arthritis, but had been on the job for six years; and another person afflicted with the same disease had been working as a histologic technician for six years.

An epileptic whose seizures were controlled by medication had been employed for three years as an electroencephalograph technician. And a deaf mute had been employed with satisfaction as a histologic technician for five years. All of these persons were trained after becoming disabled, and all were satisfactory employees.

The study concluded that, properly trained, disabled persons could help alleviate the persistent shortage at all levels of medical laboratory personnel, a shortage steadily growing more acute as new techniques in medical diagnosis and treatment are added to the myriad tests and procedures already required by modern medical practice.

Demonstration Project

Since this study was made, a demonstration project has been started. Sponsored by the Vocational Rehabilitation Administration, the project is being carried out by the National Committee for Careers in Medical Technology, with the co-operation of the Pennsylvania, New York

Training and Retraining Older Manpower

Dr. R. M. Belbin, the author of an OECD publication, *Employment of Older Workers, Training Methods** (L.G., Jan., p. 37) was among those who presented papers at a regional seminar on the employment of older workers, sponsored by the Organization for Economic Co-operation and Development.

Dr. Belbin said it was quite true that jobs were available for older and middle-aged workers; but he stated that these jobs often entailed a down-grading in wages and status, which was detrimental to the interests of first, the individual, because the result was reduced earnings and loss of self-confidence; and second, society, because the result was loss of experienced workers and a gain of nothing more than the removal of an occupational bottleneck.

Dr. Belbin stressed that the training of older workers was a sound investment for both industry and the community as a whole, although its primary aim was to help the individual. He also endeavoured to show that all three interests could be provided for if older and middle-aged workers were trained for new jobs demanding greater experience. If sufficient attention were paid to their problems and if it were recognized that special training measures were essential, then their aptitude for training could be substantially improved. This, he said, is the best way of refuting the preconceived idea that older workers could rarely learn anything new.

Training Inducements

One of the seminar participants had stated that older workers were often reluctant to participate in training courses, but another pointed out that the solution was to gain the workers' confidence, and offer opportunities for promotion. Dr. Belbin cited two examples to show how older workers could be induced to take a course of further training:

(1) In a factory in Birmingham, England, an agreement was concluded between the trade unions and the screw and bolt manufacturing industry. This agreement offered a guarantee against dismissal for the duration of the company's changeover to automation. It also involved the training of unskilled workers for skilled operations. The inducement of a job with better pay and the offer of security did much to ensure the successful training of a large number of older workers, who would normally have been considered unsuited for such jobs.

(2) An automobile plant in Wales was staffed by ex-miners, most of them older persons who had contracted pneumonoultramicroscopicsilicovolcanoniosis. When the factory was first established, the miners were afraid that they would not be able to cope with the work; but once the factory had become part of the community, and friends and relatives had found jobs there, the reluctance to accept an unfamiliar occupation was largely overcome. Since then the workers have participated readily in the special training programs.

Sensory Handicaps

In Dr. Belbin's view, people are inclined to over-emphasize the effects of many of the disabilities associated with ageing. He cited an instance of this in the Yorkshire textile industry, in which many experiments had been carried out. Plaiting or threading—one of the multitude of operations involved—is precision work, and it had been the practice to recruit only young persons for the job. Nevertheless, many of the older women were doing the work well, despite poor eyesight. Here was evidence that "good vision" was more a function of special practice than of actual visual acuity—a facility, as these experiments showed, that could be imparted by training.

Fast reflexes have always been considered a basic requirement for the operation of sewing machines, so it has been generally believed that only young persons are sufficiently quick to attain the necessary dexterity. But experimental studies have established that, despite the over-all marked slowing down of reflexes with advancing age, the reflex times for arm movements increase only slightly.

Additional experiments, to determine whether older trainees could be trained to react quickly in complex operations without making many mistakes, have been fairly successful. The findings are currently being evaluated with a view to developing new training methods for the clothing industry. Imperceptible sources of error are being eliminated by a method described as "training by slow movement." As trainees learn a series of movements, special machines are introduced; and after the learning phase has been successfully completed, the pace of movement is progressively increased.

Main Difficulties

According to Dr. Belbin, four difficulties are encountered most frequently by older trainees:

(1) Susceptibility to distracting influences in learning and memorizing. Experiments in short-term retention—e.g., remembering a series of items—revealed only a slight decrease with advancing age; but forgetfulness was more pronounced if other factors intruded. Excitement and anxiety were typical of such factors and were most likely to cause forgetfulness when older trainees went from training to actual work.

(2) Repetition of mistakes. The poor performance of older trainees has sometimes been attributed to repetition of the same mistakes. At the *Berufsforderungswerk*, the largest and the most modern institution in Western Germany for the vocational rehabilitation of older handicapped persons, researchers observed that workers who had experience in electrotechnics often had greater difficulty in completing training courses in electronics than did ex-miners. Their problems were those of relearning rather than of learning, which clearly shows how important it is to organize training along the appropriate lines from the outset.

(3) Arousing interest and curiosity. Psychological tests have shown that the success or failure of retraining often depends on the degree of active co-operation by the trainee. To overcome a notice-

The Expanding Services of the Labour-Management Consultation Branch

A further step in the expansion of the work of the Labour-Management Consultation Branch of the Department has been taken with the appointment of three LMC field representatives to the positions of LMC regional supervisors.

Re-organization of the industrial relations officers working in the labour-management field has established three separate regions, each with a head office and new field offices. Prior to this expansion, there were nine field representatives situated in eight offices across Canada. There will now be 18 field representatives in 14 offices.

Hon. John R. Nicholson, when he first announced the expansion of the Labour-Management Consultation Branch, said: "Because joint consultation has become so important, this service is shortly to become a full and separate branch of the department, responsible for the development, in co-operation with labour, management and other branches or units of government, of an expanded program of promotion and activity."

Kenneth P. DeWitt, Assistant Director of the Labour-Management Consultation Branch, termed this expansion "a most progressive program to assist labour and management in meeting the ever-increasing complex problems of this technological age."

Mr. DeWitt noted further: "Improved communications between management and labour is the key to most problems facing these two groups. Their mutual problems could be centered on prior notification of pending change, or upgrading and retraining of employees, or feedback of general information. It could be different production or work techniques. The name of the problem is not as important as the fact that each side must have some regular channel of communication with the other side, away from the crisis of bargaining.

"That is why we are here and why we are expanding our service. The Labour-Management Consultation Branch offers free guidance and assistance to management and labour to help them to equitably seek solutions to these and other problems."

Those appointed as regional supervisors under the expanded program are: J. G. (Gil) Seguin, Eastern Region; S. J. (Stan) Walton, Central Region; A. C. (Alf) Candline, Western Region.

Industrial safety, an essential requirement for every conscientious firm, is a highly respected subject at Hussmann Refrigeration Company Ltd., Brantford, Ont.

And this respect has paid off, for the Hussmann safety record is breaking records: from November 25, 1965 to November 29, 1966 Hussmann employees set a record of 836,000 man-hours without a single lost-time injury—the first firm in Brantford's industrial area to reach such a figure. In the process, Hussmann has won a series of highly coveted safety awards.

"This safety record is the result of a joint effort by management and employees," said Personnel Manager Frank A. Kovrig. "We have attained a cherished goal in industry—safe, efficient production." The next safety goal for Hussmann is a million accident-free man-hours.

The company, with nearly 300 employees (members of Local 397, United Auto Workers, AFL-CIO/CLC) has an active labour-management joint consultation committee that meets monthly. The labour committee members are also the members of the union bargaining committee. Topics discussed include safety, sales, production, manpower requirements and over-all company policy. An important feature is that employees are always informed of changes before they happen—with a full explanation of the reasons—and of the expected results. This has been of great help in preventing ill-founded rumours, particularly during the company's recent expansion of facilities.

Knowledge of pending change is also given to the committee members prior to any public press release.

All information about committee activities is relayed back to the employees each month when the union bargaining committee chairman, Charles L. MacKay reports to the union membership on joint consultation.

In addition, the company operates training schemes under government Technical and Vocational Programs 4 and 5 for training and upgrading. To date, about 50 men have qualified in such skills as power brake and punch press operation, welding, spray painting, refrigeration assembly, and polishing and buffing. These training programs also cover junior draftsmen, production control employees, and cost and payroll clerks. Wherever possible the company promotes foremen and supervisors from within the organization.

Said Mr. Kovrig: "The union committee and company are pleased with the results of their monthly meetings. Both parties have developed a mutual trust in each other over the years, to the benefit of everyone in the organization."

Speaking for the union, Mr. MacKay said that the employees "are free to ask questions and discuss any problems that will help create better management-employee relations." The one exception is written grievances. The union members refer to their joint consultation as "progress-report meetings."

Consumer, April 1967

The consumer price index (1949 = 100) increased 0.9 per cent to 147.8 at the beginning of April from 146.5 in March. It was 3.2 per cent higher than the April 1966 figure of 143.2.

In the current period all components showed increases.

The food index increased 0.5 per cent to 144.0 from 143.3. Higher prices were reported for butter, eggs, carrots, tomatoes, celery, lettuce, canned and frozen vegetables, canned fruits, beef roasts and weiners; decreases were recorded for coffee, tea, lard, shortening, citrus fruits, bananas, fruit juices, round steak, most pork cuts, lamb, veal and poultry.

The housing index advanced 1.1 per cent to 150.1 from 148.4 as a result of general increases in the shelter and household operation components. Higher rents, home-ownership costs and electricity rates contributed to the rise.

The clothing index rose 0.8 per cent to 131.9 from 130.8. Increased prices were reported for most items of men's, women's, and children's clothing, as well as for footwear and piece goods.

The transportation index moved up 0.9 per cent to 157.0 from 155.6; higher prices were recorded for new automobiles and for automobile operation items.

The health and personal care index rose 2.6 per cent to 190.0 from 185.2, reflecting higher fees for medical, dental, and optical services, pharmaceutical and personal care items. The recreation and reading index advanced 0.3 per cent to 164.2 from 163.7. Small increases in prices for sporting equipment, bicycles, toys and newspapers outweighed decreases in the price of radios and television sets. The tobacco and alcohol index rose 0.2 per cent to 127.7 from 127.5.

Group indexes a year ago in April were: food 143.7, housing (shelter and household operation) 143.8, clothing 125.3, transportation 150.7, health and personal care 179.2, recreation and reading 157.6, and tobacco and alcohol 125.0.

City Consumer, April 1967

The consumer price indexes (1949 = 100) advanced between March and April in all ten regional cities. The rising price movements ranged from 1.2 per cent in Montreal to 0.3 per cent in Ottawa and Saint John.

Food indexes remained unchanged in St. John's and Montreal and rose in the remaining eight cities. Increases ranged from 1.6 per cent in Edmonton-Calgary to 0.2 per cent in Ottawa and Toronto. Housing indexes rose in all cities except Ottawa, which remained unchanged. The clothing indexes of all ten cities advanced. Transportation index movements were higher in four cities, lower in four, and constant in two. There were increases in the health and personal care indexes in all cities, ranging from 4.7 per cent in St. John's and Vancouver to 0.6 per cent in Edmonton-Calgary. Recreation and reading index movements were higher in four cities, lower in three, and unchanged in three. Tobacco and alcohol indexes were higher in four cities and unchanged in six.

Regional consumer price index point changes between March and April were: Montreal +1.7 to 147.0; Vancouver +1.3 to 142.5; Toronto +1.2 to 149.6; Edmonton-Calgary +1.0 to 137.9; St. John's* +0.9 to 128.7; Saskatoon-Regina +0.9 to 138.5; Halifax +0.6 to 140.2; Saint John +0.5 to 144.0; Winnipeg +0.5 to 141.6; Ottawa +0.4 to 145.7.

Wholesale, March 1967

The general wholesale index (1935-39 = 100) declined 0.2 per cent in March to 262.0 from the February index of 262.6, but was 1.3 per cent higher than the March 1966 index of 258.6. Four of the eight major group indexes were lower, and four advanced.

The animal products group index declined 1.3 per cent to 290.6 from the February index of 294.5. The chemical products group index moved down 0.4 per cent to 209.9 from 210.7 as a result of price decreases for soaps and detergents.

A decrease of 0.3 per cent to 230.1 from 230.8 in the vegetable products group index reflected lower prices for sugar and its products, fresh fruits, tobacco and potatoes. The iron products group index declined slightly to 272.5 from 272.9. Increases for miscellaneous cotton products, and woollen hosiery and knit goods, were responsible for a rise of 0.6 per cent in the textile products group index to 251.4 from 249.8. The non-metallic minerals products group index advanced 0.4 per cent to 197.7 from 197.0.

Increases of 0.2 per cent or less occurred in two major group indexes—wood products to 343.0 from 342.2, and non-ferrous metals products to 236.6 from 236.5.

*On base June 1951 = 100.

Farm Products Prices

The index of Canadian farm products at terminal markets (1935-39 = 100) increased 0.8 per cent to 243.9 from 241.9 in the three-week period March 31 to April 21. The animal products index moved up 2.1 per cent to 317.7 from 311.3 and the field products index declined 1.4 per cent to 170.1 from 172.5.

U.S. Consumer, March 1967

The United States consumer price index (1957-59 = 100) rose by 0.2 per cent between February and March. The index in March was 115.0; for February it was 114.8.

More than half of the increase in March was accounted for by the continued rise in the prices of most services.

In the five-month period ended in March, the index rose an average of one tenth of a point a month, which was less than in the year ended last November, when the increase averaged a little more than three tenths of a point a month.

British Retail, March 1967

The British index of retail prices (Jan. 16, 1962 = 100) was 118.6 at March 21, 1967, the same figure as at February 21. At March 22, 1966 it was 114.6.

Reduction in the prices of eggs were offset by increases in the average prices of some fresh vegetables, fruit and meat. The index for the food group as a whole was unchanged at 117.5.

In the transport and vehicles group as a whole, the index fell by nearly one half of 1 per cent to 110.8, compared with 111.2 in February. The services group for the index rose by nearly one half of 1 per cent to 125.4, compared with 124.9 in February.

*Estimates of the labour force, the employed and the unemployed, are from *The Labour Force*, a monthly publication of the Dominion Bureau of Statistics which also contains additional details of the characteristics of the labour force, together with definitions and explanatory notes.

†Centres of 5,000 population or more.

Employment and Unemployment in April

Employment increased by 36,000 to 7,125,000 between March and April, a less-than-normal increase for this time of year. The labour force, at 7,490,000 in April, was 242,000, or 3.3 per cent, higher than a year earlier. Employment was 175,000 higher than in April 1966.

Unemployment declined seasonally by 35,000 during the month from 400,000 to 365,000, but was 67,000 higher than a year earlier.

Unemployment in April represented 4.9 per cent of the labour force, compared with 4.1 per cent in April 1966 and 5.3 per cent in April 1965. The seasonally adjusted unemployment rate in April 1967 was 3.9 per cent.

Employment

Employment, at 7,125,000, increased by 36,000 from March to April. The decline of 21,000 during the month in the Prairie region was mainly among part-time workers. Increases occurred in all other regions except British Columbia, where there was little change.

Compared with a year earlier, substantial increases were recorded in community, business and personal service, transportation, communication and other utilities, and manufacturing. There were relatively small employment declines in farming and construction.

The number of employed women rose from 2,119,000 to 2,221,000, or 4.8 per cent, from April 1966 to April 1967. The increase in the employment of men in the same period was 1.5 per cent—from 4,831,000 to 4,904,000.

NOTE: The classification of labour market areas, and the summary table titled "Labour Market Conditions", are not included in this issue because the statistical basis for these tables is not comparable with a year ago. Beginning September 1, 1966, all registered applicants were asked to contact Canada Manpower Centres every 30 days—instead of the previously requested period of 14 days—to keep their registrations active. Another factor influencing the comparability of registered applicants is the extension of provisions, such as temporary layoffs, for exempting certain classes of unemployment insurance beneficiaries from registration.

Unemployment

Unemployment, at 365,000, was 35,000 lower than a month ago and 67,000 higher than in April 1966.

Of the total unemployed, 245,000, or about two-thirds, had been unemployed for less than four months. Of the remainder, 85,000 had been unemployed for four to six months and 35,000 for seven months or more.

Wage Schedules Prepared In March

During March, the Department of Labour prepared 316 wage schedules for inclusion in contracts proposed to be undertaken by departments of the federal Government and its Crown corporations in various areas of Canada for works of construction, remodelling, repair or demolition, and other services. In the same period, 86 contracts in these categories were awarded. In addition, 70 contracts containing the General Fair Wages Clause were awarded by Central Mortgage and Housing Corporation, Defence Construction (1951) Limited, The St. Lawrence Seaway Authority and the Departments of Defence Production, Post Office, Public Works and Transport.

A copy of the wage schedule issued for each contract is available on request to trade unions concerned, or to others who have a bona fide interest in the execution of the contract.

Contracts awarded in March for the manufacture of supplies and equipment were:

Department	*No. of Contracts*	*Aggregate Amount*
DDP	179	$1,771,604.00
Post Office	7	394,163.40
RCMP	18	855,802.46
Dot	6	35,477.45

During March, the sum of $12,855.18 was collected from 35 contractors for wage arrears owing their employees as a result of the failure of the contractors, or their subcontractors, to apply the wage rates and other conditions of employment required by the schedule of labour conditions forming part of their contract. This amount is for distribution to the 442 workers concerned.

Insurance Registrations And Other UIC Statistics

On February 28, insurance books or contribution cards had been issued to 5,283,684 employees who had made contributions to the Unemployment Insurance Fund since April 1, 1966.

By month-end, 352,967 employers were registered, an increase of 6,673 since last January.

Enforcement Statistics

During February, 10,440 investigations were conducted by enforcement officers across Canada. Of these, 7,837 were spot checks of claims to verify the fulfilment of statutory conditions, and 922 were miscellaneous investigations. The remaining 1,681 were investigations in connection with claimants suspected of making false statements to obtain benefits.

Prosecutions were began in 347 cases, 146 against employers and 201 against claimants.*

Punitive disqualifications as a result of claimants making false statements or misrepresentations numbered 617.*

Unemployment Insurance Fund

Revenue received by the Unemployment Insurance Fund in February totalled $32,967,532.32 compared with $38,399,-278.92 in January and $32,517,818.40 in February 1966.

Benefits paid in February totalled $43,530,943.67 compared with $41,322,-511.33 during the previous month and $44,299,219.43 during February 1966.

The balance in the Fund on February 28 was $273,465,842.69. On January 31 it was $284,029,253.84; and on January 31, 1966 it was $150,138,385.98.

*These do not necessarily relate to the investigations conducted during this period.

Certification and Other Proceedings Before the Canada Labour Relations Board

By the Employee Representation Branch

The Canada Labour Relations Board met for three days during April. The Board granted 10 applications for certification, rejected five, and ordered three representation votes. The Board granted one request for a review of an earlier decision and denied one similar request. During the month, the Board received, 15 applications for certification and one application for revocation of certification.

Applications for Certification Granted

1. International Association of Machinists and Aerospace Workers on behalf of a unit of traffic department employees of TransAir Ltd., St. James, Man. (L.G., Apr., p. 246).

2. *Syndicat des employés de Transport de St. Rémi* on behalf of a unit of employees of *Houle Express Ltée.*, St. Rémi, Que. (L.G., Apr., p. 246).

3. Atomic Energy-Draftsmen Local 1645, CLC, on behalf of a unit of certain technical employees of Atomic Energy of Canada Limited employed at its Sheridan Park Research Centre, Clarkson, Ont. (L.G., Apr., p. 246).

4. National Association of Broadcast Employees and Technicians on behalf of a unit of employees of Calgary Television Ltd. employed at Television Station CHCT-TV, Calgary, Alta. (L.G., Apr., p. 246).

5. Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on behalf of a unit of office employees employed at Port Arthur, Ont. by Manitoba Pool Elevators of Winnipeg, Man. (L.G., Apr., p. 246).

6. Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on behalf of a unit of office employees employed at Port Arthur, Ont. by Richardson Terminals Limited of Winnipeg, Man. (L.G., Apr., p. 247).

7. *Syndicat National des Employés des Minoteries Phenix (CSN)* on behalf of a unit of employees of Eastern Canada Flour Mills Ltd., Montreal, Que. (L.G., May, p. 308).

8. United Brotherhood of Carpenters and Joiners of America, Local 2736, on behalf of a unit of millwrights employed at Whitehorse, Y.T. by G.M. Gest, Contractors Limited, Calgary, Alta. (L.G., June, p. 364).

9. International Union of Operating Engineers, Local 115, on behalf of a unit of employees of Humphrey Construction Ltd., North Vancouver, B.C. comprising employees classified as crane operator, mechanic, welder and shop helper employed at Clinton Creek, Y.T. (L.G., June, p. 364).

10. International Association of Machinists and Aerospace Workers, Lodge No. 692, on behalf of a unit of machinists employed by Humphrey Construction Ltd., North Vancouver, B.C., in the Clinton Creek area of the Yukon Territory (L.G., June, p. 364).

Applications for Certification Rejected

1. Seafarers' International Union of Canada, applicant, *Les Messageries de la Côte Nord Ltée* (North Shore Shipping Lines Ltd.), Duvernay, Que., respondent (unlicensed personnel), and International Union of District 50, United Mine Workers of America, intervener (L.G., Apr., p. 246). The application was rejected for the reason that the Board found that the respondent had sold the *M. V. Prince Ungava* and was no longer the employer of the employees aboard the said vessel.

2. *Syndicat National des Employés de la Banque Canadienne Nationale (CSN)*, applicant, and *Banque Canadienne Nationale*, Montreal, Que., respondent (L.G., Feb., p. 128) (Reasons for Judgment issued).

3. Canadian Air Line Pilots' Association, applicant, and Central Airways/Wong Aviation Limited, Toronto, Ont., respondent (L.G., May, p. 308). The application was rejected for the reason that it was not supported by a majority of employees eligible to cast ballots in the representation vote conducted by the Board.

4. Seafarers' International Union of Canada, applicant, and the Pelee Shipping Company, Limited, St. Thomas, Ont., respondent (L.G., Apr., p. 246). The application was rejected after the Board denied a request for its withdrawal.

5. Miscellaneous Workers, Wholesale and Retail Delivery Drivers and Helpers, Local 351, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, applicant, Canadian Pacific Railway Company (Communications Department, Vancouver, B.C.), respondent, and the Commercial Telegraphers' Union, Canadian Pacific Division No. 1, intervener (L.G., Apr., p. 247). The application was rejected for the reason that the proposed unit was not appropriate for collective bargaining.

Representation Votes Ordered

1. Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, applicant, and McCabe Grain Company Limited, Winnipeg, Man., respondent (office employees at Port Arthur, Ont.) (L.G., Apr., p. 246) (Returning Officer: A. E. Koppel).

2. Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, applicant, United Grain Growers Limited, Winnipeg, Man., respondent (office employees at Port Arthur, Ont.) (L.G., Apr., p. 247) and Walter T. Biggar, *et al.*, interveners (Returning Officer: A. E. Koppel).

3. Chauffeurs, Teamsters, and Helpers, Local 395, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, applicant, and Smeed's Moving & Storage Ltd., Regina, Sask., respondent (L.G., May, p. 309) (Returning Officer: A. E. Koppel).

Requests for Review

1. The Board refused a request by the Association of Radio and Television Employees of Canada for review of the certificate issued by the Board on June 25, 1953, which certified it as bargaining agent for a unit of certain employees of the Canadian Broadcasting Corporation (L.G., Feb., p. 129). The request was denied for the reason that the incumbent of the affected classification of International Service representative was not, in the opinion of the Board, an employee within the meaning of the Industrial Relations and Disputes Investigation Act.

2. The Board granted a request by the Canadian Brotherhood of Railway, Transport and General Workers for a review of a certificate issued on July 27, 1964 covering certain employees of the St. Lawrence Seaway Authority (L.G., June, p. 364) and varied the existing bargaining

This section covers proceedings under the Industrial Relations and Disputes Investigation Act involving the functions of the Canada Labour Relations Board, for which the Employee Representation Branch of the Department is the administrative agency.

unit to cover the Construction Branch of the Seaway Authority instead of the Twinning Project at the Welland Ship Canal, pursuant to an organizational change in the operation.

Applications for Certification Received

1. National Association of Broadcast Employees and Technicians on behalf of a unit of employees of Radio 1540 Limited, Toronto, Ont. (CHIN) (Investigating Officer: S. Emmerson).

2. *Syndicat des employés de la Banque d'Épargne de la Cité et du District de Montréal* on behalf of a unit of employees of *la Banque d'Épargne de la Cité et du District de Montréal* (Investigating Officer: R. L. Fournier).

3. International Association of Machinists and Aerospace Workers on behalf of a unit of traffic employees of Eastern Provincial Airways (1963) Limited, Gander, Nfld. (Investigating Officer: W. J. Gillies).

4. International Longshoremen's Association on behalf of a unit of employees of Eastern Canada Stevedoring (1963) Limited, Montreal, Que., comprising workers classified as maritime clerks and timekeepers employed at docks in Montreal (Investigating Officer: R. L. Fournier).

5. International Longshoremen's Association on behalf of a unit of employees of Brown & Ryan Limited, Montreal, Que., comprising workers classified as maritime clerks and timekeepers employed at docks in Montreal (Investigating Officer: R. L. Fournier).

6. Chauffeurs, Teamsters and Helpers' Union Local 395, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America on behalf of a unit of employees of Deruth Transport Ltd., Regina, Sask. (Investigating Officer: A. E. Koppel).

7. Chauffeurs, Teamsters and Helpers' Union Local 395, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America on behalf of a unit of employees of J. Kearns Transport Ltd., Regina, Sask. (Investigating Officer: A. E. Koppel).

8. Chauffeurs, Teamsters and Helpers' Union Local 395, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America on behalf of a unit of employees of Walco Trucking Ltd., Regina, Sask. (Investigation Officer: A. E. Koppel).

9. Canadian Marine Officers' Union on behalf of a unit of licensed engineers employed by Transit Tankers and Terminals Ltd., Montreal Que. (Investigating Officer: R. L. Fournier).

10. *Syndicat des Employés du Transport d'Anjou* on behalf of a unit of employees of *Transport d'Anjou Inc.*, Rivière-du-Loup, Que. (Investigating Officer: R. L. Fournier).

11. International Union of Operating Engineers, Local 115, on behalf of a unit of crane operators employed on a log barge by Island Tug and Barge Limited, Vancouver, B.C. (Investigating Officer: D. H. Cameron).

12. Letter Carriers' Union of Canada on behalf of a unit of employees of J. Dykes, Mail Contractor, Winnipeg, Man. (Investigating Officer: A. E. Koppel).

13. Letter Carriers' Union of Canada on behalf of a unit of employees of Jessiman Brothers Cartage, St. James, Man. (Investigating Officer: A. E. Koppel).

14. International Longshoremen's Association, Local 1930, on behalf of a unit of employees of Three Rivers Elevators Ltd., Trois-Rivières, Que. (Investigating Officer: R. L. Fournier).

15. International Union of Mine, Mill and Smelter Workers (Canada) on behalf of a unit of employees of Anvil Mining Corporation, Whitehorse, Y. T. (Investigating Officer: D. H. Cameron).

Application for Revocation Received

Piette Transport Inc., Joliette, Que., applicant, and Transport Drivers, Warehousemen and Helpers' Union, Local 106, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, respondent. The application is for the revocation of the Board's order of April 12, 1962 certifying the respondent union as bargaining agent for a unit of truck drivers and labourers employed by the company (L.G. 1962, p. 653).

Scope and Administration of Industrial Relations and Disputes Investigation Act

Conciliation services under the Industrial Relations and Disputes Investigation Act are provided by the Minister of Labour through the Conciliation and Arbitration Branch. The Employee Representation Branch acts as the administrative arm of the Canada Labour Relations Board in matters under the Act involving the board.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944 and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until superseded by the Wartime Regulations in 1944. Decisions, orders and certificates given under the Wartime Regulations by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the Act.

The Act applies to industries within federal jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the federal Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of conciliation officers, conciliation boards, and Industrial Inquiry Commissions concerning complaints that the Act has been violated or that a party has failed to bargain collectively, and for controlling applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents; the writing of provisions—for incorporation into collective agreements—that fix a procedure for the final settlement of disputes concerning the meaning or violation of such agreements; and the investigation of complaints referred to it by the Minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act, the Regulations made under the Act, and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported here under two headings: (1) Certification and Other Proceedings Before the Canada Labour Relations Board and (2) Conciliation and Other Proceedings Before the Minister of Labour.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, Halifax and St. John's, Newfoundland. The territory of the officers resident in Vancouver comprises British Columbia, Alberta and the Yukon and Northwest Territories; officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; officers resident in Toronto confine their activities to Ontario; officers in Montreal are assigned to the province of Quebec; and officers resident in Fredericton, Halifax and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Conciliation and Arbitration Branch and the Employee Representation Branch are in Ottawa.

Conciliation and Other Proceedings

Before the Minister of Labour

By the Conciliation and Arbitration Branch

During April, the Minister of Labour appointed conciliation officers to deal with the following disputes:

1. Reimer Express Lines Limited (Toronto Terminal) and Local 938, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Conciliation Officer: T. B. McRae).

2. Canadian Pacific Air Lines, Limited, Vancouver, and Lodge 3016, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (Conciliation Officer: D. S. Tysoe).

3. Canadian Pacific Railway Company (British Columbia Coast Steamship Service) Vancouver, and Seafarers' International Union of Canada (Conciliation Officer: D. S. Tysoe).

4. Bristol Aviation Services, Montreal International Airport, and Lodge 869, International Association of Machinists and Aerospace Workers (Conciliation Officer: C. E. Poirier).

5. Canadian National Railways (Canadian National Newfoundland Steamship Service and Yarmouth-Bar Harbour Ferry Service) and Canadian Brotherhood of Railway, Transport and General Workers (Conciliation Officers: H. R. Pettigrove and D. T. Cochrane).

6. National Harbours Board (Prescott Elevator — casual employees) and Public Service Alliance of Canada (Conciliation Officer: T. B. McRae).

7. Northern Industrial Carriers Ltd., Edmonton, Alta., and Locals 362 and 31, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Conciliation Officer: J. D. Meredith).

This section covers proceedings under the Industrial Relations and Disputes Investigation Act involving the administrative services of the Minister of Labour and the Conciliation and Arbitration Branch of the Department.

By the Legislation Branch

Legal Decision Affecting Labour

The Manitoba court of Queen's Bench has assumed jurisdiction to review, on notice of motion, the decision of a non-statutory arbitration board to protect property and civil rights

The Manitoba Court of Queen's Bench has assumed jurisdiction to review, on notice of motion, the decision of a non-statutory arbitration board to protect property and civil rights.

On November 17, 1966 Mr. Justice Dickson of the Manitoba Court of Queen's Bench, in dismissing an application to set aside an award of arbitrators under a collective agreement that prevented the integration of a company's retirement pension plan with the Canada Pension Plan, held that the court may assume jurisdiction to review, on a notice of motion under the Queen's Bench Act, an award of an ordinary private arbitration board set up by the parties to a collective agreement in order to protect property and civil rights.

Circumstances of Dispute

The Hudson Bay Mining and Smelting Company Limited had a collective agreement with Flin Flon Base Metal Workers' Federal Union 172 effective on September 16, 1965 for a period of two years.

Art. XXIII of the agreement dealt in Sec. 1 with grievance procedure and arbitration. Regarding arbitration, the agreement provided that the decision of a majority of the arbitration board shall be final and binding on the parties, "subject to the condition that the decision shall not, without the consent and approval of the parties hereto, rescind or amend any of the terms or conditions of this collective bargaining agreement, but shall be in general accord with the scope and terms thereof" (Art. XXIII, Sec. 3).

Art. XIV of the agreement read:

> The Company agrees to continue, in accordance with the terms of the present agreements, its support to the welfare plan now available to the employees, namely:

Then followed a list of plans including "Retirement Pension Plan." Under the pension plan, the company was allowed to change or discontinue its retirement pension plan at any time if, in the company's opinion, conditions required it.

The company's pension plan, as revised on January 1, 1964, required employees to contribute 3 per cent of their earnings, and the company to pay the balance necessary to provide an annual pension equal to 45 per cent of the employees' total contributions. With the inception of the Canada Pension Plan (effective January 1, 1966), the company proposed to integrate its plan with the Government's.

As the Canada Pension Plan required the contribution of 1.8 per cent of each employee's earnings, the company proposed to take the government pension contributions out of the contributions deducted for the company plan, rather than deduct extra contributions from the employees. The result was that, instead of 3 per cent of an employee's salary going to the company plan, 1.2 per cent would go to that plan, while 1.8 per cent went to the Canada Pension Plan. Consequently an employee would receive under the new arrangement a reduced pension under the company plan, but he would also receive in due course a pension under the Canada Pension Plan.

Arbitration Award

The unions concerned objected to the company's proposals, and the dispute went to arbitration under the provisions of the collective agreement dealing with "grievances other than a personal grievance that concern the interpretation, application or administration of the contract." In particular, the unions alleged that the company violated the collective agreement by discontinuing its support to the company's pension plan under the terms provided in the agreement.

The majority of the arbitration board interpreted Art. XIV of the collective agreement as agreement by the company to continue its support of the company's welfare plans as they were—effective September 16, 1965, the effective date of the agreement. The board therefore directed that the company retirement plan be reinstated as it was before the introduction of the Canada Pension Plan.

Application to Quash Award

The company brought a motion before the court to set aside the arbitration award on the ground of excess of jurisdiction. The issue before the court was whether, under the terms of collective agreement, the company was entitled to "integrate" its retirement pension plan with the Canada Pension Plan, or whether both plans should be "stacked."

The company claimed that the arbitration board failed to construe certain words in Art. XIV—"in accordance with the terms of the present agreements"—as being one of the terms that permitted the company to change or discontinue its pension plan at any time if, in the sole opinion of the company, conditions required. It was alleged that the board's award amended Art. XIV by deleting the words "in accordance with the terms of the present agreements" and substituting "without change", contrary to Art. XXIII, Sec. 3, which stipulates that a decision of the arbitration board shall not "rescind or amend any of the terms of this collective agreement." Consequently, the company argued that, because the arbitration award constituted an error in law and was in excess of the board's jurisdiction, therefore the award was invalid.

Arbitration Award Valid

Mr. Justice Dickson upheld the validity of the arbitration award that the company's pension plan should be reinstated. In his view, the board of arbitration was properly constituted. The members of the board had been directed to deal with the question of the interpretation of Art. XIV.

In Mr. Justice Dickson's opinion, the award did not go beyond that question, and the interpretation given by the board was one that the language of Art. XIV might reasonably bear.

Certiorari and Non-statutory Tribunal

Mr. Justice Dickson noted that the Parliament of Canada had declared that the works and undertakings of the Hudson Bay Mining and Smelting Co. Limited, in the Flin Flon mineral area located on both sides of the boundary between Manitoba and Saskatchewan, were works for the advantage of two or more of the provinces (Statutes of Canada, 1947, c. 62). The Federal Industrial Relations and Disputes Investigation Act therefore applied to the labour-management relations of the company in question, he said. Under Sec. 19(1) of that Act, every collective agreement must contain a provision for final settlement, without stoppage of work, by arbitration or otherwise, of all differences between the parties concerning its meaning or violation.

Mr. Justice Dickson stated that, since the judgment of the Supreme Court of Canada, in *Re Crown Office Rules Act, Certiorari Proceedings (B.C.); Howe Sound Co. v. Int. Union of Mine, Mill and Smelter Workers (Canada) Local 663* (L.G. 1962, p. 952), it is clear that *certiorari* is not available against ordinary private arbitration boards set up, as in the case at bar, by agreement of the parties. Further, the Ontario Court of Appeal, in *Re Etmanski and Taggart Service Ltd.* (L.G. 1966, p. 378), held that parties subject to the Industrial Relations and Disputes Investigation Act are precluded from invoking the relief afforded by a provincial arbitration Act.

The company, in applying for a motion to quash the award, relied upon sec. 62(8) of the Queen's Bench Act and upon Q.B. R.R. 536 and 537.

Mr. Justice Dickson referred to *Barnard v. National Dock Labour Board* (1953) 2 Q.B. 18, (1953) 2 WLR 995 and quoted the following statement by Denning, L.J. at p. 41:

> I know of no limit to the power of the court to grant a declaration except such limit as it may in its discretion impose upon itself; and the court should not, I think, tie its hands in this matter of statutory tribunals. It is axiomatic that when a statutory tribunal sits to administer justice, it must act in accordance with the law. Parliament clearly so intended. It the tribunal does not observe the law, what is to be done? This remedy by *certiorari* is hedged round by limitations and may not be available. Why, then, should not the court intervene by declaration and injunction? If it cannot so intervene, it would mean that the tribunal could disregard the law, which is a thing no one can do in this country.

Mr. Justice Dickson held that "where injustice is done by a non-statutory arbitration board, there must be some means whereby an aggrieved party can reach the courts and obtain redress. The power of the court to intervene in a proper case is founded on its jurisdiction to protect property and civil rights." He added further that, where the rights of the parties (as in the case at bar) depend on the construction of an agreement, and there are no material facts in dispute, the procedure under R. 537 may be adopted, instead of an action for declaratory judgment.

Mr. Justice Dickson held that the application, by originating a notice of motion to bring the matter before the court, was available to the company. For the reasons stated above, however, the company's motion was dismissed. *Hudson Bay Mining and Smelting Co. Limited v. Flin Flon Base Metal Workers' Federal Union No. 172 et al.* (1967) 58 W.W.R., Part 3, p. 165; 66 CLLC, para. 14, 166.

Recent Regulations under Provincial Legislation

Three minimum wage orders were revised in British Columbia and a new wage schedule was issued for building construction workers in rural Manitoba

Ontario issued apprenticeship regulations for ironworkers, and Quebec established new grievance procedures for civil servants

In British Columbia, three new orders for the hotel and catering industry, elevator operators and starters, and employees in the laundry, cleaning and dyeing industries, increased the minimum wage from $1 to $1.25 an hour

An interim rate of $1.10 an hour was set for hotel workers, effective May 1, and for elevator operators and starters, and employees in the laundry, cleaning and dyeing industries, effective June 5. This interim rate will be increased to $1.25 an hour on November 1, 1967.

MANITOBA

Construction Industry Wages Act

A new wage schedule for building construction employees in rural Manitoba, Brandon, Portage la Prairie and Flin Flon, went into force on May 1.

In rural Manitoba, hourly rates for journeymen, helpers and labourers were increased by 15 cents to $2, $1.70 and $1.50. A minimum of $1.25 an hour was set for employees under the age of 18.

For building construction employees in Brandon, Portage la Prairie and Flin Flon, rates are again fixed on an occupational basis. They have been increased by varying amounts, and now range from $3.70 an hour for journeymen electricians to $1.25 an hour for watchmen, flagmen, and employees under 18. The minimum for building labourers was increased from $1.50 to $1.80 an hour. Men whose jobs are unclassified must now be paid at least $1.65 an hour.

All rates in this schedule are again based on a standard work week of 48 hours, and time and one half the regular rate must be paid for overtime. As formerly, upon the application of the project manager, and with the consent of the employees concerned, the Department of Labour may permit employees in a work camp to work up to 60 hours a week at straight-time rates.

ONTARIO

Apprenticeship and Tradesmen's Act, 1964

The first apprenticeship regulations issued in Ontario for the trade of ironworker, O. Reg. 122/67, were gazetted April 15.

The apprenticeship training program established for this trade consists of three periods of 2,000 hours each.

The minimum age, 17 years, is higher than that in most apprenticeable trades. Applicants must also submit medical certificates stating that they are in good physical condition. They must also be capable of working at heights commonly experienced in the trade.

An apprentice ironworker must enter into a contract of apprenticeship with the local apprenticeship committee for the

trade. This committee will be responsible for a periodic review of his progress. The Department of Labour will give every registered apprentice a progress record book in which he must record his work experience and related training time for submission to the local committee.

The ratio of apprentices to journeymen is one to seven, unless the employer is engaged solely in curtain wall or ornamental or miscellaneous ironwork, in which case the ratio is one to five.

During the first 1,000 hours of his apprenticeship, the basic rate of wages payable to an apprentice ironworker is 60 per cent of the basic rate of wages, or its equivalent, for a journeyman employed by the same employer in the trade and with whom the apprentice is working. The rate must be increased to 70 per cent of the journeyman's wage during the second 1,000 hours, and to 75 per cent during the third. The rates for the three remaining periods of 1,000 hours each are 80, 85 and 90 per cent.

QUEBEC

Civil Service Act

New regulations under the Quebec Civil Service Act have established a two-stage grievance procedure to hear complaints regarding classification. The new provisions (O.C. 733), gazetted April 15 went into force on March 23.

The provisions apply to employees covered by collective agreements entered into by the Quebec Government and the *Syndicat des Fonctionnaires provinciaux du Québec* and the *Syndicat des agents de la paix*, as well as persons who would normally be part of these units if not excluded by the Labour Code.

The first stage in the appeal procedure is an *ad hoc* fact-finding committee composed of a government representative and a representative of the employee's union. If the employee is in an exempted category, he may name his own representative. This committee must submit a report to the Civil Service Commission.

The second stage in the procedure concerns the Commission. If the committee's report is unanimous, the Commission will render a decision based on this report. If the committee's decision is not unanimous, a member of the Commission, or another authorized person, will make a further inquiry into the complaint before a final decision is made by the Commission.

According to press reports, the new procedure was established because the *Syndicat des Fonctionnaires provinciaux du Québec*, which complained that the former method of handling such grievances was not adequate, had threatened to stage a general strike in May if the process was not improved.

Decision of the Umpire Under the Unemployment Insurance Act

CUB 2665

The claimant filed an initial claim for benefit on December 20, 1965 and registered for employment as a cook. He stated that he had last worked as a maintenance man at a salary of $2 an hour from June 1964 to December 15, 1965, when he was dismissed because of a "reduction of personnel." He added that he was "capable of, and available for, work."

On April 1, 1966 the claimant refused to apply for employment as head cook at a hotel to which he was directed by the local office. This was permanent daytime employment at "usual kitchen" hours. According to the employment officer, the salary offered, $425 a month, including board and room, was the prevailing rate in the area. The place of employment was 500 miles from the claimant's home and accessible by plane. Transportation cost $45 one way.

The reasons given by the claimant for refusing were that the place of employment was too remote and the salary offered was not high enough.

The local office commented that the employment seemed appropriate and that the claimant did not seem "anxious to work."

In reply to a letter sent to him by the local office concerning his refusal of this offer of employment, the claimant stated that he was still ready to work as a cook nearer home, that he would accept a minimum salary of $100 a week, and that a "cook's normal" salary was $135 a week, including board."

The employment officer added the information that the claimant had owned a restaurant for about 15 years and that the only time he had worked as an employee he had earned $100 a week.

The insurance officer informed the claimant that he was disqualified from receiving benefit from April 3 to May 14, 1966 because he had, without good cause, refused to apply for suitable employment in accordance with the Act.

On April 25, 1966, the claimant appealed to the board of referees on the grounds that the employment offered him was 500 miles from his home; that the means of transportation was by plane at a cost of $90 for the round trip; that the salary offered was not sufficient; and that he had a family and was a property owner in the place where he lived.

The board of referees heard the case, unanimously upheld the insurance officer's decision, and dismissed the claimant's appeal on the grounds that:

- –the claimant's period of unemployment had been long;
- –the employment was permanent, and the salary of $425 a month including board and room was a normal salary in the area;
- –the claimant had had sufficient time to adapt to the labour market and there was no evidence that he had made personal efforts to find employment while unemployed;
- –the claimant had 15 years of experience as a cook and the employment was therefore appropriate.

The claimant then asked the chairman of the board of referees for leave to appeal to the Umpire on the ground that the board of referees had failed to take into consideration the reasons he had given for refusing the employment offered. The chairman of the board of referees granted him leave to appeal "in view of the contention . . . that the board . . . erred in its appraisal of the facts."

Considerations and Conclusions

The unanimous decision of the board of referees is in accordance with the jurisprudence established by the Umpire's decisions in several similar cases, in particular in decision CUB-1680, which concerns a married woman who refused employment that would have forced her to live elsewhere than at the couple's home.

In this decision, the Umpire substantially declared that the grounds for refusal were of a purely personal nature, and that the undeniable right she had of refusing the employment could not in fairness be exercised at the expense of the Unemployment Insurance Fund.

The facts of the present case justify, up to a certain point, the application of the same principles. However, the distance, the price of the plane ticket, as well as the other inconveniences which would have resulted had the claimant accepted permanent employment . . ., such as the obligation of moving there and of interrupting the regular course of his children's studies, are extenuating circumstances of major importance and which I must take into consideration.

For these reasons, I decide to dismiss the claimant's appeal, but also to limit the disqualification from benefit to one week beginning April 3, 1966.

February Claimants 20,000 Higher than Total in January

By the Unemployment Insurance, Pensions and Manpower Section, Dominion Bureau of Statistics

Claimants for unemployment insurance benefit at the end of February 1967 totalled 552,000, an increase of 4 per cent or 20,000 more than the total of 532,000 claimants in the month of January 1967, and 22,000 more than the February 1966 total of 530,000.

While the number of regular claimants in February 1967 remained stationary, the month-to-month increase was due to an increase in seasonal benefit claimants. There were approximately 34,000 more regular benefit claimants in February 1967 than in February 1966, while claimants for seasonal benefit declined by 12,000.

Although there was a general increase in the number of both male and female claimants, compared with claimants in the month of February 1966, the rise in female claimants showed a sharp increase of 10 per cent, compared with 2 per cent in the number of male claimants. There was an average decline of 9 per cent in the number of claimants in the Prairie Provinces that was offset by an average rise of 10 per cent in the Provinces of British Columbia, Ontario, and Nova Scotia. With the exception of the Prairie Provinces, the number of female claimants showed an increase in all provinces.

Male claimants in February 1967 increased 4 per cent and female claimants 2 per cent more than the total for January 1967. There was an increase of female claimants in all provinces except Quebec, which showed a decrease of approximately 6 per cent. There was a general increase of claimants in all provinces except British Columbia, which had a decrease of 4 per cent.

A total of 169,700 initial and renewal claims were filed in local offices across Canada during February, almost 85,000 fewer than the January total of 254,400. In February 1966 the total was 150,300. Claims arising out of separations from employment during the month accounted for 140,000 of the total, the balance of 29,000 being requests for re-establishment of credits, most of which are transitional from regular to seasonal benefit.

The average weekly number of beneficiaries during February was estimated to be 420,400 compared with 354,200 in January and 440,600 a year ago. Benefit payments during the month totalled $43.5 million, compared with $41.4 million in January and $44.3 million in February 1966. The average weekly payment was $25.89 in February, $25.96 in January and $25.14 in February 1966.

A claimant's unemployment register is placed in the "live file" at the local office as soon as the claim is made. As a result, the count of claimants at any given time inevitably includes some whose claims are in process. "Claimants" should not be interpreted either as "total number of beneficiaries" or "total job applicants."

Summary Table

Activity	Feb. 1967	Jan. 1967	Feb. 1966	Cumulative Data 1967: Jan. to Feb.	Cumulative Data 1967: 12 months ending Feb.

Manitoba offers courses for married women

To accommodate married women with diminishing family responsibilities who wish to continue their education, the University of Manitoba is offering a two-day-a-week course leading to a master's degree in social work. The course starts in September, and may take as long as five years to complete.

Women's Bureau

Continued from page 408

wanted their daughters to depend on their husbands for a livelihood—an indication of how the French provinces differ from the Capital.

The *International Labour Review* survey concludes:

"So in France, as in most industrialized countries where the employment of women is an accepted fact, there can be no increase in the frequency of their employment, no greater prospects of advancement for them, unless priority attention is given to the development of collective services which will take charge of the children daily during the mother's whole period of work. Though attention should also be directed to other measures which French women consider urgent, as they themselves have pointed out (vocational training, a shorter working week, for example), the provision of public nurseries would much reduce fatigue among mothers who go out to work, and also give their children a better chance of development in a setting outside the family which would supplement but not replace the traditional family background."

Canadian Railway Office of Arbitration Releases Decisions in Four Disputes

Four disputes were dealt by the Canadian Railway Office of Arbitration at hearings in Montreal on April 10, 1967. They concerned disciplinary action against an engineer for ignoring radio instructions; disciplinary action against another engineer for overshooting the distance needed for back-up, causing two collisions; a crew's claim for additional miles at through-freight rates; and another crew's claim for guarantee payment for 100 miles at through-freight rates.

J. A. Hanrahan, the arbitrator, disallowed the four claims. Summaries of the four cases, Nos. 62, 63, 64 and 65, follow:

CASE No. 62

Dispute between the Canadian Pacific Railway Company (Prairie Region) and the Brotherhood of Locomotive Engineers over 20 demerits imposed on an engineer for failing to acknowledge radio instructions concerning distance thereby causing a collision.

An engine had to be moved from a westward track to an eastward track by way of a crossover. After the proper switches on the eastward and westward tracks were set, the signalman, with a clear view of about 700 feet, radioed the engineman that he had a good ten car lengths for the back-up movement. At the start of the movement, a crew member saw another yard engine coming towards the eastward track, but his manual stop signals were not observed by either of the two engines, or by the radio signalman whose view was obstructed by the engine on the crossover. The two engines proceeded slowly towards each other until they collided 431 feet west of the crossover.

The company contended that when the trainman's hand signals could no longer be seen, the radio signalman should have ordered the engine stopped on the basis of a rule in the *Uniform Code of Operating Rules* that states:

> When cars are being pushed by an engine under control of hand signals, the disappearance from view of the member of the crew or lights by which signals controlling the movement are being given must be regarded as a stop signal.

The brotherhood protested the occasional replacement of the hand signal by the radio signal. They said that hand signals could convey immediately the presence of an emergency, but that radio signals depended on the evaluation of distance made by the person giving the signal.

The brotherhood pointed out that the engineer's estimate of a car length was closer to 55 feet. They contended that the instruction, "a good ten car lengths," was vague and misleading and came close to being "indecisive instruction."

Although the company conceded that the length of cars varies to some degree, they said that, for many years, train and engine crews have generally equated a car length with 45 to 50 feet, and that because of modern construction of longer cars, the latter figure was more generally accepted.

This rule-of-thumb measurement, however, was not relied on by the engineman, who stated that he had moved only eight car lengths before setting up the brake. In his own statement, he claimed to have made a comparison count from cars standing on an adjacent track. On analyzing this statement, the company pointed out that the crossover is 182.2 feet in length. When the car count was started at the point indicated in the engineman's statement, the engine had already backed up the equivalent of three car lengths, making a total of eleven car lengths. This indicated that the engineman had made no attempt to stop his engine within the maximum space specified by radio.

The arbitrator did not believe that the engineman had an adequate explanation for failing to carry out the radio instructions. His own statement, indicating the point at which the brakes were set, demonstrated his failure to consider the distance, thus indicating a lack of care in controlling the movement of his engine. For these reasons the grievance was dismissed.

CASE No. 63

Dispute between the Canadian Pacific Railway Company (Prairie Region) and the Brotherhood of Locomotive Engineers over 10 demerits imposed on an engineer for overshooting the distance specified by radio for back-up movement.

During switching movement at a subdivision, a train crew was instructed to set out 55 cars in a 60-car storage track parallel to a main track. One of the cars, slated for through handling to a city, was located somewhere in the middle, making it necessary for the crew to handle 56 cars. To further complicate matters, a curvature from one main track to another made it necessary to signal all instructions by radio.

After the trainman riding the leading car asked a trainman on the ground how much room was needed to complete the set-out, he instructed the engineman to back up two car lengths. At the time, there was approximately four car lengths between the leading car and a derail at the storage track. When the movement had gone one car length, the leading car trainman radioed the engineman to stop; but when he realized that the movement was not going to stop in time, he called for emergency braking. There was no

response, and the movement continued for about four and one half car lengths, causing derailment of the leading car and the leading truck of the following car.

During the investigation, the engineman acknowledged receiving radio signals to back up two car lengths, but he said that he needed more power to keep the movement going. Immediately after opening the throttle, he heard the instruction to stop, he applied the brakes but the movement continued—"for not more than three car lengths," he recalled.

The brotherhood's spokesman contended that if hand signals had been used, the derailment might have been avoided. He pointed out that the engineman, in a practice condoned by the company, always repeated signals given to him by radio, but that when the emergency braking signal was given, he could not hear it because he was repeating the previous stop signal.

The company contended that the engineman had not adequately fulfilled his responsibility.

The arbitrator believed that the instruction to move two car lengths should have alerted the engineman to the necessity for caution; but in his own statement he claimed that he "did not realize that two car lengths were so critical." The arbitrator said that this could hardly be accepted as a reasonable excuse from someone with more than 20 years experience. He concluded that the company was right in its assessment of the trainman's lack of responsibility, and therefore dismissed the grievance.

CASE No. 64

Dispute between the Canadian National Railways (Great Lakes Region) and the Brotherhood of Railway Trainmen concerning the claim of a conductor and crew for an additional 17 miles at through freight rates.

On January 17, 1966 a conductor and crew manned a train that, on arrival at a station 2.7 miles from the main track switch connecting with the terminal yard track, entered a siding in order to clear an outgoing train. The train then proceeded to the terminal.

For the service performed, the conductor and crew submitted a time return of 164 miles at through-freight rates and six miles at way-freight rates, showing final terminal time as the time of arrival at 2335 hours to the off-duty time at 0135 hours. In making payment, the company reduced the miles to 147 at through-freight rates and six miles at way-freight rates, allowing final terminal time from 0100 hours, the time of arrival at the main track switch, to 0135 hours, the off-duty time.

The employees subsequently submitted claims for payment at 17 miles each at through freight rates of pay, which was the difference between the miles claimed and the miles paid. The payment of these claims was denied.

The principal matter to be determined in this claim is whether the station should be considered as part of the terminal.

The facts established that, on approaching the signal at the station, the crew was contacted by radio-telephone by both the yardmaster and the train despatcher, and advised to take the siding at the station because of congestion in the yard. Their instructions also stated that the outgoing train would not be ready to leave the terminal for an hour or more, during which time the train and crew were held at the station.

An article of the collective agreement states:

> Final arrival time will be paid for on the minute basis at pro rata rates (each 4.8 minutes to count as one mile) computed from the time engine reaches designated main track switch connecting with the yard track . . . Should train be delayed, time shall be computed from the time the engine reaches that point until time conductor registers off duty.

The brotherhood contended that the home signal at the station is a semaphore within the meaning of the word as contained in the article. Therefore, if the crew was unduly delayed at the objective terminal of the run, they should be paid a penalty or premium in the form of final terminal delay. The brotherhood argued that, when the terminal is congested, the penalty time payment is involved because the crew is not permitted to take the train into the yard.

The company contended that switching limits are related to yard service only, whereas terminals are concerned with road service only. It was stated that switching limits are established at points where yard engines are assigned, and these may or may not be terminal points.

The company argued that the article states that final terminal time will commence from the time the train begins to enter the yard at the final terminal. It was argued that the facts showed that the train had not reached a semaphore within the terminal yard, nor the yard limit board at the terminal, nor was it behind another train similarly delayed.

The company suggested that in this dispute, the brotherhood was attempting to have the extremities of a relatively small terminal extended one station beyond the terminal because that station happened to be within the same switching limits. If the brotherhood were successful in the attempt, it was maintained, there would be no criterion to apply at a terminal where switching limits did not exist.

The company stated that crews arriving at the terminal are paid on the minute basis from the time the engine reaches the main track switch connecting with the yard track. If the train should be delayed at the signal at that point, final terminal time is paid from the time the engine reaches the signal.

The brotherhood's principal position at the joint conference was that, because the station was within the switching limits of the terminal, it was within the terminal itself. The brotherhood's principal position at the hearing, however, was based on the fact that congestion in the yard was the important factor to be considered in interpreting the intention of the article of the collective agreement.

The arbitrator stated that the language of the article would have to be changed considerably before the interpretation placed upon it by the brotherhood could be made. As it exists, he said, there is nothing in it contemplating the reason for a delay. Final terminal time is computed from the time that the train reaches the point at which the designated main track switch connects with the yard track.

For these reasons, the claim was denied.

CASE No. 65

Dispute between Canadian National Railways (St. Lawrence Region) and the Brotherhood of Railway Trainmen concerning the claims of a conductor and crew for 100 miles at through freight rates.

When a conductor and crew were assigned to work train service, their assignment was cancelled for Thanksgiving Day, October 11, 1965. Each employee received a holiday, with payment for 100 miles at through freight rates. In addition to the general holiday payment received, each employee claimed guarantee payment for 100 miles at through freight rates. Payment of the guarantee claims was denied.

The claim for the crew is based on an article of the collective agreement, which reads:

> Regularly assigned way freight, work and construction trainmen who are ready for service the entire month, and who do not lay off of their own accord, will be guaranteed not less than one hundred (100) miles, or eight (8) hours, for each calendar working day, exclusive of overtime (this to include legal holidays). The guarantee is predicated on the men being both ready for service the entire month, and entitled to the assignment the entire month, or for the portion of the month the assignment is in effect . . .

The reference to "holidays" at the end of the first sentence was said to be present in the 1929 edition of the collective agreement, although trainmen did not receive

holiday-with-pay benefits until 1965, when the general holiday article provided for eight paid holidays, including Thanksgiving Day.

The brotherhood contended that the general holiday article does not indicate that general holiday payments will replace the daily guarantee payment provided by the article cited above.

Anticipating that management would suggest that, because the general holiday article states that payments under this rule will be in addition to the monthly guarantee to employees in suburban service, and therefore implies it will not be paid elsewhere, the brotherhood quoted a statement made in Case No. 38 (L.G., Aug. 1966, p. 467). It stated: "It is the language that was inserted in the agreement that must govern."

Because, it was claimed, there is no specific language forbidding payment to other classes of road service, the available language must govern. Again quoting from Case No. 38, this portion was cited:

> . . . to read anything additional into this provision would be using arbitration as a means for extending the agreement [that] the parties have made, rather than interpreting and applying its existing provisions.

The company argued that the reference to holidays in the train guarantee rule was for the purpose of emphasizing that the guarantee provided cannot be reduced because one of the "calendar working days" is a general holiday on which no work was required to be performed. Therefore, it was claimed, the guarantee provision was not nullified merely by the fact that this holiday, one of the working days of the assignment, was a general holiday.

An analysis of the guarantee rule shows that one element of pay is to be excluded, namely, overtime. The minimum stipulated by the guarantee rule is to be in addition to any overtime earnings.

With reference to the general holiday Article 94, it was claimed that two sections only are concerned with guarantee provisions. They are:

> 9. Holiday payments under this article to employees in suburban services shall be in addition to the monthly guarantee. Further,
>
> 10. The provisions of this article will not result in a duplicate payment as a result of the application of Article 94.

The first of these two stipulates that holiday pay will be in addition to the guarantee to trainmen in suburban service alone. The latter provides that it will not be in addition to the guarantee for yardmen. From this, the company argued that, if holiday pay is not to be applied to the guarantee for work trainmen, either the work train guarantee rule or the general holiday article would have specifically made such an exception.

Because the train guarantee rule came into effect long before the general holiday article, the parties are presumed to have been aware of it when they wrote the later article. By providing only that holiday payments should be in addition to the monthly guarantee for those in suburban services, the principle *expressio unius est exclusio alterius* (the express mention of one thing implies the exclusion of another), in the arbitrator's opinion, had singular application to the interpretation to be placed upon the contents of the later article.

The arbitrator added that what was sought at the hearing was a type of pyramiding of benefits. In this respect, although the subject matter was overtime rather than a holiday premium, this portion of the judgment of His Honour, Judge Anderson, in a matter concerning Ault Milk Products and Retail, Wholesale Workers is of interest:

> If a contract is open to two interpretations, and one interpretation involves pyramiding of overtime and the other interpretation does not involve pyramiding of overtime, a Board of Arbitration, in the absence of specific wording in the contract, should accept the interpretation that does not provide for the additional penalty payment by reason of pyramiding overtime.

In the arbitrator's opinion, the basic principle stated in the foregoing judgment had application in the present case, because the parties had not indicated in the general holiday article any intention that a pyramiding of benefits flowing from its applicability should occur, over and above the monthly guarantee to other than those in suburban services.

For these reasons the claim was denied.

Civilian Rehabilitation

Continued from page 409

and New Jersey state vocational rehabilitation offices.

The plan is to make rehabilitation counsellors more aware of the opportunities in this field of work, and to overcome the lack of understanding by some laboratory directors of the potential ability of the handicapped. Better communication between hospital-based schools, and vocational rehabilitation offices should help achieve this aim.

The approved laboratory training schools are all located in hospitals, thus enabling students to observe and have access to real patients. Hospitals can provide the quantity and variety of pathological specimens needed to develop the laboratory skill and judgment so essential to the patients' treatment. The work requires honesty, patience, tact, and the ability to co-operate with others. The student must be able to organize work in a systematic and orderly fashion and to be painstakingly accurate.

Further reports will be issued as the project progresses, but it has already demonstrated the feasibility of employing disabled persons. In addition to increasing employment opportunities for the disabled, the study has unearthed a source of manpower to help relieve the shortages in the field of medical technology.

Information about opportunities and training programs in this work in Canada may be obtained from the Canadian Society of Laboratory Technologists, 99 Wentworth Street South, Hamilton, Ont.

Older Workers

Continued from page 410

able lack of interest on the part of older trainees in learning something new, the use of discovery methods in retraining has been introduced. Trainees are required to find solutions for problem situations of gradually increasing difficulty, and this has the effect of encouraging them to learn and to retain more effectively. Case studies have shown that older trainees learn best if they can use prior experience and knowledge.

(4) Adjustment to training. Investigations have shown that the outcome of training often depends on the help trainees received during critical adjustment periods. These occur at the start of training and at the changeover from training to the new job. Their importance was illustrated by an example taken from an Adult Training Centre in Roubaix, on the Franco-Belgian frontier. Older workers who had been unemployed for a long time were trained in a 12-week course as journeymen. Great difficulty was experienced during the first two weeks, but once the trainees surmounted this obstacle, they made almost the same progress as did younger workers.

Dr. Belbin added that the careful planning and organization of training programs is an important factor in the successful training of older workers. There was every reason to believe that investment in such facilities would show positive returns, although training programs still suffer from inadequate resources and public support.

CENTENNIAL YEAR

The Informal Views of the Federal Minister of Labour

Hon. John R. Nicholson

— Photo by Dominion Wide

Perhaps the most fundamental of the issues which have been raised during the past year or so involves our continued reliance on the principle of free collective bargaining as the foundation for our industrial relations system.

In my view, no system for the settlement of the inevitable differences of opinion which arise between workers and their employers has been found that is better than genuine collective bargaining, which, of course, includes the right to strike. This last right is labour's only ultimate resort, its only effective tool when its members are subjected to injustice.

Undoubtedly there are some situations where employees clearly should not have the right to strike. I cannot conceive for instance of any situation where our national police force, the Royal Canadian Mounted Police, or the armed services should be allowed to strike.

The situation is more complicated in that larger area of so-called essential services—such as those in the fields of transportation and communication—where there is not a clear case of safety or security of the nation, but where national well-being is involved. We must have clearer guidelines to cope with this type of situation.

Technological Change

By and large Canadians accept the fact that technological advancement must not be hindered, if Canada is to maintain and improve its economic position in the world. But major change inevitably involves the dislocation of workers and heavy responsibilities on Government, Management and Labour to prevent hardships.

The Federal Government believes that, together with the Provinces, it shares a responsibility to assist the individual Canadian worker through retaining and relocation programs. In addition, in cases such as the Auto Pact where, in the national interest, government action contributes directly to dislocation within an industry, the Government assumes responsibility—through Transitional Assistance Benefits—for the results of its own actions.

At the same time, in such situations management must play its part. It cannot assume that Government programs will bear the total burden of change and that it has no responsibilities for its own employees. Foremost among these responsibilities must be the provision of adequate warning of impending changes.

What about the unions themselves? More and more union jobs are going to require increasing skills. At the same time, the unionized labour force is expanding to include white collar workers—a whole new profile of membership.

This increased sophistication places heavy burdens on labour leaders. Bargaining issues are even now becoming enormously complicated and the new type of union member is going to be asking very different questions of his leaders than did the traditional unionist.

The end result must inevitably be better communication and a more sophisticated approach to collective bargaining at all levels, but the adjustment will be difficult. Hopefully, Government can assist in such ways as by supporting the growth of new Labour Colleges.

The Freedman Report

Possibly the most important result of Mr. Justice Freedman's report has been the free agreement on matters of technological change, negotiated within large sections of the Canadian railway industry under the mediation of Dr. Carl Goldenberg.

It has been suggested that the Government should legislate in the areas dealt with by the Freedman report. Apart from the obvious difficulty of drafting workable legislation to cover diverse industries, in my view this would be unnecessary, and therefore, unwarranted, action on the part of the federal Government. To date, the only case where we have had serious problems arising out of technological change has been the railways and they now seem to have found their own solution. Why cannot others do the same?

I look forward to the Prime Minister's Labour Task Force coming up with constructive proposals upon which the government can base a White Paper and possible legislation.

Among the areas which will certainly receive attention will be the border-line cases which I mentioned earlier involving the national "well-being". I hope to see some very useful suggestions as to how prolonged stoppages at least can be avoided in this type of dispute.

It is most fortunate that there has been a re-allocation of duties between Labour and Manpower. Recent events have shown that, with the manpower burden removed, the Department is now in a position both to conduct its ongoing responsibilities—including emergency situations—and to plan a positive and coherent set of policies in the industrial relations field.

Among the immediate priorities of the Department is the development of trained personnel to serve in the field as conciliators and mediators. To be effective, the Department of Labour must have just as many and just as highly trained experts as those representing union and management.

Another area where there is room for improvement is in the administration of the legislation that settles the conditions of employment. We must build up our capabilities to properly supervise and work with the Provinces in the intelligent administration of both the Labour Standards Code and the new Safety Code.

The Future

In looking forward to the future, I see changes, but not a wholesale dismantling of our present structures. We are going to need more, and not lesss, collective bargaining to cope with the needs of a sophisticated work force in a time of rapid change. Union and management leaders must take over the initiative in fostering continuous communication, co-operation, and negotiation between the parties to collective agreements. This, to my mind, is the look of the future, and its acceptance by unions and management will be of enormous benefit to all Canadians.

A Greater Degree of Understanding

Claude Jodoin

President, Canadian Labour Congress

Claude Jodoin

—Photo by Thomas Studio

Canada is entering not only its second century, but a completely new era. We already have clear evidence of this; and the momentum of change is going to increase in the years immediately ahead.

We are experiencing major revisions in the nature of work and, at the same time, witnessing important changes in the nature of the labour force. Exactly where these developments are going to lead us, no one knows at this point. Certainly major adjustments are going to be required. The experience we now have in this regard makes it obvious that improved labour-management relationships and the development of new techniques and better communications are essential.

We feel that organized labour has a very vital role to play. Trade union membership in Canada is now at an all-time high and is growing rapidly. At the same time, many professional and semi-professional groups are turning to collective bargaining and adopting tactics which are traditionally those of unions.

Corporations are growing and becoming more complex, and this is being reflected in employer-employee relationships. We in the labour movement are well aware of the urgent necessity, not only of improved industrial relations, but also of possible changes within our own movement to keep pace with the period of change we are going through. The Canadian Labour Congress has demonstrated its desire to keep pace by undertaking a major study of the present structure of the labour movement.

We look to the future with confidence; but with the full knowledge that it will call for a much greater degree of understanding and co-operation between all sectors of society than has existed in the past.

Peace Among Nations

Charles Smith

Chairman, Canadian Railway Labour Executives' Association

Charles Smith

—Federal Photos, Montreal

Canada's Centennial provides an occasion for a special celebration of this historic event by every individual citizen, and collectively by every village, town and city joining together in a re-dedication to the promise of 100 years ago to weld together a strong, united nation, and to preserve the rights of freedom and democracy in a land of opportunity for all.

We as railwaymen are probably in a unique position in participating in this celebration; our railway lines operate from the Atlantic to the Pacific, bringing together in a spirit of camaraderie and fraternity Canadians of many ethnic groups as members of a great railway family, proud of the traditions of the early pioneers whose efforts did so much to open up the far-flung stretches of our country, and tying together by a ribbon of steel the ten provinces that are Canada.

It is appropriate at this time to recall the early struggles for railway union recognition, the perseverance and sacrifice of leaders at a time when a member of a union was considered to be but one step above a criminal, whereas today he is a highly respected member of his community.

Railway unions are very proud of their reputation for responsibility, honesty and integrity, painstakingly built into the complex and difficult field of railroading.

As we stand on the threshold of a second century, we must be ready to capitalize on new ideas and new approaches to joint problems of labour relations. We have the machinery available, and it is my earnest hope that, during the forthcoming years, consultative services will be expanded at all levels so that the great benefits of technology and science may assist in a continuing program of greater richness of life for all people, and the banishment of insecurity and fear—as this is the true road to the establishment of perpetual peace among nations.

Too Great A Price

Henri Joly

President, Canadian Manufacturers' Association

Henri Joly

The past 50 years have seen many changes in the law and in our technology. In the final analysis, however, the most important change has been with respect to attitudes.

From an atmosphere characterized by much misunderstanding, mistrust and consequent fear, managements and unions have matured to a relationship that more frequently is characterized by mutual respect. I use the term advisedly because it does not imply illusory concepts of a rose-strewn path ahead. It does reflect however, a growing appreciation of the rights, interests and responsibilities of the parties each represents. Labour and management are very much aware of the adverse effect their disputes can have upon the public and the economy as a whole, because we are indeed a part of that economy and members of that public.

But, at a time when we are asked to reflect on what has happened over the past 50 years and speculate as to what may happen in the next 50, it is surely proper that we take note of the fact that 95 per cent of our agreements are renegotiated, and lived with, without any interruption of the flow of goods and services, and without the intervention of government or other third parties.

It is those remaining problems, that 5 per cent, to which we must address our efforts during the coming years. Both parties will discharge their responsibilities in terms of vigorously representing the interests of those they serve. Both will continue to seek changes in the industrial relations system. Both will experiment with change within their institutions. Both will experience gains and setbacks. But hopefully, and most importantly, both will continue to mature in their attitudes toward one another and their mutual responsibilities to the community at large.

Failure of management and labour to meet their responsibilities in these respects will inevitably result in further limitations on the freedom of the parties to resolve their own problems. This could lead to destruction of the very basis of the economic system that has made Canada the great country that it is. Labour and management must recognize that this is too great a price to pay.

Wage Rates

During the industrial depression, the lack of building construction work, and consequent lack of employment opportunities, resulted in the wage rates in the building industry throughout the county developing into a most unsettled condition. Comparatively few wage agreements were in effect for several years between the building construction associations and the building trades unions in the various cities, and consequently a great variation existed in the hourly rates paid, even in the same city, to the different trades. A generally current rate for any one trade was practically unknown.

Annual report for year ended March 31, 1935.

Safety in Industry

During each of the last three years the financial appropriation of the Department of Labour has contained a grant to the Canadian National Safety League, a private association maintaining a "safety first" campaign throughout the Dominion . . . In Canada the pioneer associated effort to reduce accidents was undertaken in the province of Ontario, where a safety league has been in existence for a period of about 12 years and has been doing effective work in teaching safety principles from the schools up, and in all branches of industry.

Annual report for year ended March 31, 1926.

Roger DeSerres

—Batten Ltd., Montreal

Future Of Labour Relations

Roger DeSerres

President, The Canadian Chamber of Commerce

Both management and organized labour have had a great deal of experience in collective bargaining during the past 20 years. Governments, through their various Departments of Labour, have also accumulated a great body of experience. All parties involved have, in the process, developed a much greater degree of sophistication in this field. Many problems that preoccupied the participants in the past have been solved and in many respects there has been an improvement both in the structure and in the relationships of collective bargaining.

Yet even the most casual observer would be blind if he did not perceive that many of the same problems still exist and other new ones have come to the fore. Many of these urgently require remedial action, but both organized labour and management seem to be basically agreed that such remedial action by government in the form of legislation should be avoided if at all possible.

Everyone still seems to believe in the importance of maintaining free collective bargaining. This will require an increasing amount of restraint and self-regulation by the principals. Governments must resist the temptation of legislating on collective bargaining problems. They should also be concerned with the preservation of collective bargaining and should not attempt to control it unless the public interest is substantially affected and if no alternate remedy is available.

Nevertheless, if the economic waste resulting from an undue number of strikes and threats of strikes continues to increase, and if the collective bargaining power of the principals is not exercised with greater restraint and with an increased regard for the public interest, it is probably inevitable that free collective bargaining processes will be curbed. This would be detrimental to all concerned.

The Chamber of Commerce and its members pledge themselves to continue to strive for constructive solutions to these problems. This is essential for the preservation and growth of a viable private enterprise economy.

W. L. Mackenzie King

W. L. Mackenzie King, Canada's first Deputy Minister of Labour, became the first full-time Minister of Labour on June 2, 1909. His term as Deputy Minister had come to an end in 1908, when he resigned in order to run for Parliament.

Immediately on his entry into Parliament, he was taken into the Cabinet as Minister of Labour. He retained the portfolio until he was personally defeated in the general election of 1911. He returned to the House of Commons in the general election of 1921, and began his long career as Prime Minister of Canada.

Senior Posts

When the Dominion Bureau of Statistics was established by the Statistics Act, 1918, R. H. Coats, Associate Editor of the LABOUR GAZETTE from 1902 to 1915, was appointed Dominion Statistician. Dr. Coats was the officer in charge of the statistics compiled by the Department.

In September 1923, F. A. Acland, who had been Deputy Minister of Labour since October 1, 1908, vacated the position in order to devote full time to the duties of the King's Printer, an office that he had held since June 15, 1921.

A Look Back . . .

And a Look Ahead

On July 1, Canada started its second hundred years, and the Canada Department of Labour entered its 67th year. In the following pages, the Labour Gazette looks back at the Department's past, examines its present, and ventures a glance into the future.

AS Canada embarks on its second century, the Canada Department of Labour is entering the final third of its first hundred years. In this 67th year of its existence, having only recently contributed its manpower-related programs and functions to the creation of the Department of Manpower and Immigration, it is looking to the future from a new posture. It has given "a new look" to one of its original functions, and a growing emphasis to more recently acquired duties.

By releasing to another department its responsibility for manpower, which was beginning to overshadow responsibilities of much longer standing, the Department of Labour is again able to concentrate on its original purpose: to improve the environment of Canadians who work for a living by providing leadership in questions of remuneration and labour standards, employee-employer relations, safety on the job, and workers' individual human rights.

In this Centennial Year, the LABOUR GAZETTE in these pages is taking a look back at the Department's yesterdays, a brief examination of its present stance, and a probing glance into its future.

What was the Department like yesterday?

YESTERDAY

WHEN the Department of Labour was established in 1900 it was not thought to be entitled to a minister of its own; and it might be supposed that the then prime minister decided to add it to the Post Office Department because he thought the Postmaster General appeared to be not very busy. But whether or not Sir Wilfrid Laurier had any thought of the kind, the main reason he placed the infant department under the care of the Postmaster General seems to have been that it was the Postmaster General who persuaded the Cabinet to set up the Department of Labour.

A story lies behind this not-immediately understandable connection between the Post Office and the interests of labour. It happened that a young man, after leaving Harvard on a travelling scholarship, was engaged in a roving reporting assignment for a Toronto newspaper. In the course of an inquiry of his own into the condition of workers in the garment trades, this young man discovered that women engaged in making uniforms for letter carriers, and employed by firms that had contracts awarded by the Post Office Department,

were working under conditions and for rates of pay that scandalized him. The young man was William Lyon Mackenzie King.

Mackenzie King took his story to Hon. William (later Sir William) Mulock, the Postmaster General, and succeeded in winning him over to the idea of setting up a Department of Labour to deal with such matters. Mulock in turn won over the Cabinet.

Touchy Venture

According to an article on Sir William Mulock in the Fiftieth Anniversary Edition of the LABOUR GAZETTE, published in September 1950 (p. 1285), the setting up of the new department "was a touchy venture. Both politicians and the general public were suspicious of anything that looked like 'class legislation' and any extra expense involved in setting up a federal labour portfolio was certain to arouse criticism. For these reasons, the title of the bill introduced in Parliament in 1900 read: 'An Act to Aid in the Prevention and Settlement of Trade Disputes, and to Provide for the Publication of Statistics and Industrial Information.' It became known as 'The Conciliation Act.' "

The Department was thus established under cover of an act whose title sounded as though it had nothing at all to do with such a thing. The contents of the Act, however, did make clear its purpose. Section 10 read:

> With a view to the dissemination of accurate statistical and other information relating to the conditions of labour, the Minister shall establish and have charge of a Department of Labour, which shall collect, digest and publish in suitable form statistical and other information relating to the conditions of labour, shall institute and conduct inquiries into important industrial questions upon which adequate information may not at present be available, and issue at least once in every month a publication to be known as the LABOUR GAZETTE, which shall contain information regarding conditions of the labour market and kindred subjects, and shall be distributed or procurable in accordance with terms and conditions in that behalf prescribed by the Minister.

First Issue

As soon as the Act was passed, Mulock appointed Mackenzie King Deputy Minister of Labour and Editor of the LABOUR GAZETTE, and provided him with office equipment and a small clerical staff. The first issue of the LABOUR GAZETTE appeared in September 1900.

Besides the publication of the LABOUR GAZETTE, the Department during its first year dealt with the conciliation and arbitration of labour disputes, and the preparation of fair wage schedules for inclusion in government contracts. Action by the Department under the Conciliation Act of 1900 took place only when its "friendly intervention" had been sought by "one of the parties to the dispute, from some responsible individual or body on its own behalf," according to the Department's first annual report.

When the Fair Wages Resolution of 1900 was passed in March of that year, a fair wages officer was appointed whose duty it was to prepare fair wage schedules for inclusion in government contracts, and to investigate complaints of non-compliance with the schedules. When the Department was established, this officer was transferred to it, and before long a second officer was appointed.

Another part of the Department's work during its first year dealt with investigations of alleged violations of the Alien Labour Act, and the formation of a library of books, publications and reports concerning labour.

Expenditures, 1902 and 1966

During the Department's first full fiscal year, the 12-month period that ended June 30, 1902 (the first annual report covered only the nine months from September 1900 to June 30, 1901) total expenditure amounted to $31,963.62.

During the fiscal year that ended March 31, 1963, the year in which the federal contribution to the expanding capital and operating programs under the Technical and Vocational Training Assistance Act reached its apex—$207,915,439—the Department's expenditures amounted to $242,858,534.

During fiscal 1964-65, the last full fiscal year prior to the transfer of manpower programs to the department that became the Department of Manpower and Immigration, spending totalled $167,277,567.

During the fiscal year that ended March 31, 1966—the latest for which figures are available—the Department spent $23,993,711.

Compulsory Investigation

A bill known by the short name of the Railway Arbitratiou Act, 1902 was introduced but never passed after it was given an unfavourable reception by most labour bodies.

The Minister dropped the bill, and at the session of 1903 introduced instead a watered-down measure that substituted for compulsory arbitration what was called compulsory investigation, the purpose of which was to bring an informed public opinion to bear on the disputes it was designed to deal with. This measure, known as the Railway Labour Disputes Act, was passed in May 1903, and the administration of it became the responsibility of the Department. According to its annual report for 1904, the Department's belief was that the existence of such a measure would give the parties to a dispute a strong reason for settling their differences between themselves, "without allowing them to reach a point where the public might be given [an] opportunity of probing into the private or business affairs of either. The success of the measure as a means of preserving industrial peace is to be estimated, therefore, by the absence of any reference under it, quite as much as by the number of cases which may be referred and the awards given." Only one application under the Act was received during the first year of its operation.

Industrial Relations Developments

A permanent and important addition to the responsibilities of the Department came with the passing of the Industrial Disputes Investigation Act, 1907 in March of that year. Commenting on the first year's experience of the operation of the Act, the Department's annual report for the year ending March 31, 1908 said in part:

> The Act was the means of eliminating from the category of strikes and lockouts during that period practically the whole of the most important class of industrial disputes. Owing mainly, no doubt, to the conditions described above, numerous differences with regard to wages and conditions of labour arose between employers and employees in the case of railway corporations, coal mining companies and other concerns in the nature of public utilities. In many of these cases the most serious outcome was threatened,

Staff Expansion

At the outbreak of World War II there were some 210 persons on the staff, whereas on April 15, 1944, there were 3,157.

After the war the staff dropped by March 31, 1946, to 1,403 from 2,745 persons a year earlier. By March 31, 1947, it had dropped again, to 860.

Immediately before the National Employment Service was taken over by the Department on April 1, 1965, the establishment was one of 758 positions. This was swelled to 6,021 positions by the addition of the National Employment Service. After the transfer to the Department of Citizenship and Immigration had been completed, the establishment of the Department had shrunk to 623 positions.

and the influence or operation of the Industrial Disputes Investigation Act wherever the dispute was brought under its provisions served to avert a strike or lockout in every instance save that at Springhill, N.S. It is to be noted, too, that the strike records of the year are without the more distressing and deplorable features which too often accompany industrial strife .... The results of the year's operation of the Act are therefore believed to have been, on the whole, as satisfactory as could be expected; indeed they are more satisfactory than it was generally anticipated they would be ....

There is evidence, moreover, that, apart from the active operation or apparent influence of the Industrial Disputes Investigation Act, the fact of its existence on the statutes of the Dominion has had in many cases a strongly compelling effect on employers and employees and has secured the settlement of many disputes in their incipient stages. ...

Amendments to the Act

In January 1925, the Judicial Committee of the Privy Council, reversing a ruling of the First Appellate Division of the Ontario Supreme Court, pronounced the Industrial Disputes Investigation Act of 1907 to be beyond the competence of the federal Government. The decision did not impugn the principle of the Act, but only the right of Parliament to legislate in fields that the Privy Council declared to belong, under the British North America Act, to the provincial legislatures.

The result was that, at the next session of Parliament, amendments to the Act were passed that asserted the authority of the federal Government in cases where its jurisdiction applied, and excluded works that lay exclusively within the legislative competence of the provinces. The amending measure, in enumerating the works and undertakings to which the provisions of the Act applied, included disputes within the exclusive control of the provinces that were brought within the scope of the Act by provincial legislation.

The effect of this upsetting decision of the Privy Council was mitigated when, between 1925 and 1932, all the provinces except Prince Edward Island passed enabling legislation so that works that came within the provincial jurisdiction might be placed under the provisions of the Act.

New Legislation

The Industrial Disputes Investigation Act, 1907 was largely suspended by the passing in February 1944 of the Wartime Labour Relations Regulations under order in council. This order substituted for the Act specific regulations governing labour relations in war industries, although the Regulations did not cover disputes over wage questions.

The Regulations were administered, at the national level, by a Wartime Labour Relations Board (National); and in seven provinces, under Dominion-provincial agreements, by provincial boards or administrative agencies. The Director of Industrial Relations of the Department acted as the chief executive officer of the national board.

During the fiscal year 1948-49, Parliament enacted the Industrial Relations and Disputes Investigation Act, which came into force on September 1, 1948, and revoked the Wartime Labour Relations Regulations that had been in effect since March 20, 1944. It also repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until it was suspended by the operation of the Regulations.

The Canada Labour Relations Board, established under the Act, also came into being on September 1, succeeding the Wartime Labour Relations Board and being composed of exactly the same members.

Work Expands

After 1904, there was a gradual expansion in the work of the Department. During the fiscal year ended June 30, 1905 its duties increased when two Royal Commissions were appointed to inquire into the employment of "aliens" (mainly, if not entirely, Americans) on the Grand Trunk Pacific and Père Marquette railways, and when a third was appointed to examine "the influx of Italian labourers to the city of Montreal."

During 1907-08, the Deputy Minister spent a good deal of time, as a Royal Commissioner or in the capacity of his office, investigating hostile demonstrations against Orientals in Vancouver, and other matters connected with Oriental immigrants or immigration. The Minister of Labour, accompanied by the Under Secretary of State, made a trip to Japan as special envoy to the Emperor to discuss these matters with the British Ambassador and various Japanese officials. While in Japan, he made arrangements for restricting Japanese immigration to Canada. The Canadian Government paid a certain sum in compensation for losses suffered by Japanese residents during the riots in Vancouver.

The Deputy Minister went to Great Britain in March 1908 to confer with members of the British Government about the immigration of East Indians (that is, inhabitants of India) to Canada, with the object of restricting such immigration.

The Department's 1908-09 report again contained extracts from the Deputy Minister's report as Royal Commissioner inquiring into Oriental immigration, and also of a special report on the traffic in opium in Canada, the existence of which had been brought to light in the course of his inquiries into anti-Oriental riots in Vancouver in 1907.

On May 19, 1909 the Labour Department Act received the Royal Assent. This Act established the Department as a separate portfolio under its own Minister.

New Responsibility

A new responsibility was laid upon the Department when, in May 1910, the Combines Investigation Act became law, and its administration was placed under the Minister of Labour. But the Department's annual report for the year ending March 31, 1912 said that during its first year of operation the administration of the Act did not call for active departmental work. One board of investigation was set up to inquire into the case of a Canadian firm engaged in the manufacture of boot and shoe making machinery. It delivered its report in October 1912.

No further proceedings under this Act were reported by the Department, and it was finally repealed by the Combines and

Fair Prices Act, 1919. But a new act, the Combines Investigation Act, 1923 came into effect in June of that year, and was also placed under the administration of the Minister of Labour. It continued to be administered by the Department until the 1945-46 fiscal year, when it was transferred to the Department of Justice.

Old Age Pensions

Two measures of importance to labour were introduced in the Commons by the Minister of Labour during the parliamentary session of 1927 and were passed. They were: an act providing for the establishment of a system of old age pensions for Canada, and an amendment to the Trade Mark and Design Act providing for the registration of union labels.

By an order in council in July 1927, the administration of the Old Age Pensions Act, and regulations in connection with it, was placed under the Minister of Labour. Although the amendment to the Trade Mark and Design Act was piloted through the Commons by the Minister of Labour, the Act was under the administration of the Minister of Trade and Commerce.

The Old Age Pensions Act provided that the federal Government might enter into an agreement with any of the provinces for the payment to the province of half the net sum paid out by the province for pensions under a provincial statute to such persons and under such conditions as were specified in the federal Act and its regulations.

British Columbia was the first province to take advantage of the Act in 1927, followed in 1928 by Manitoba and Saskatchewan, and in 1929 by Alberta and Ontario. An Old Age Pensions Act was passed by Prince Edward Island in 1931. The Nova Scotia Old Age Pensions Act was also passed in 1931.

The administration of the Old Age Pensions Act was, by order in council dated March 1, 1935, transferred to the Department of Finance on April 1, 1935.

Royal Commission

The Royal Commission on Industrial Relations, which held its sittings in 1919, made certain recommendations regarding shop committees and industrial councils, and urged the adoption by Canada of the principles underlying the Whitley Councils in Britain and other kindred systems. It also recommended that "a commencement should be made with joint plant councils, and the more extensive organization of district and national councils evolved therefrom as their necessity and practicability become apparent."

A National Industrial Conference composed of representatives of the Dominion and provincial governments, employers and labour, held in Ottawa in September 1919 on the invitation of the Government of Canada, reported unanimously that greater co-operation between employer and employee was an urgent necessity, and that such co-operation could be furthered by the establishment of joint industrial councils.

A recommendation that the Department set up a bureau "to gather data and furnish information" to employers and employees, or to organizations of employers or employees who wished to establish such councils was not acted upon. But the Department asserted that it had "entered heartily into the spirit of the resolution and has continued and extended its study of joint industrial councils and kindred systems, and has done much to advance the movement . . ."

The first joint council to be established was the National Joint Conference Board of the Building and Construction Industries of Canada (L.G. 1941, p. 117), composed of joint representatives elected or chosen by the Association of Canadian Building and Construction Industries and five members elected or chosen by representatives of the international building trades unions.

In May 1922, the administration of the Government Annuities Act, 1908 was transferred from the Postmaster General to the Minister of Labour, and the Annuities Branch was established. A Bill introduced in the Commons in March 1908 had been titled, "An Act to authorize the issue of Government Annuities for Old Age," and its purpose, according to the Department's annual report for 1922-23, was to promote "habits of thrift and to afford facilities whereby provision might be made for old age by the purchase of annuities." At first, the Act was administered by the Minister of Trade and Commerce; but it was transferred to the Post Office Department in 1912.

Winter Employment

"A conference was held in Ottawa on September 3 and 4, 1924 on the initiative of the Government of Canada, for the purpose of devising means for the regularization of industrial employment, having regard particularly to building and other out-of-door work during the winter season," the 1924-25 annual report said.

The conference was attended by representatives of federal and provincial governments, the principal municipalities, the Canadian Manufacturers' Association, the Association of Canadian Building and Construction Industries, the two transcontinental railways, the Trades and Labour Congress, and important union organizations in the building trades.

The conference issued a statement favouring the encouragement of work of some description in every locality, with special consideration being given to work of a permanent nature, such as building and other construction.

"It was also the view of the conference," in the words of the annual report, "that certain classes of work, which in the past had been discouraged during the winter season, could with perfect safety and economy be undertaken throughout Canada."

Fair Wages

In 1930, Parliament passed the Fair Wages and Eight-Hour Day Act. Until then, the fair wages policy of the Government had been administered under the Fair Wages Resolution of 1900. This Resolution, however, related to wages only; the new Act added the provision that working hours for labour employed on public works of the Dominion must not exceed eight a day, except in special cases as the Governor in Council might otherwise provide, or in cases of emergency.

At a conference of Dominion and provincial officials held in Ottawa in May 1938, the Canadian Association of Adminis-

Training Facilities

Expansion of technical and vocational training facilities continued at a high level during the fiscal year... When the year began, there were 376 projects already approved for federal sharing. The estimated total cost of these projects was about $333,000,000 and the estimated federal share about $216,000,000. Upon completion these projects would provide 105,000 new student places. By year's end the number of approved projects had reached 513. The estimated total cost had grown to nearly $508,000,000, the federal share to about $323,000,000 and the number of new student places to 138,000. Last year the federal contribution for construction completed and equipment delivered was about $18,000,000; this year's contribution was almost $180,000,000, bringing the total contribution over the two years of the new Agreement to nearly $198,000,000.

Annual report for the year ended March 31, 1963.

trators of Labour Legislation was formed as a permanent organization of federal and provincial government officers responsible for the administration and enforcement of labour laws in Canada. The Association was established to provide a medium for the exchange of information and to encourage co-operation among its members, and to promote uniformity of legislation and high standards of law enforcement and administration.

At present, the membership of the Association, which meets annually, comprises the deputy ministers and other senior officers of the Department and the 10 provincial Departments of Labour. An officer of the Department is a permanent member of the executive board in the capacity of secretary-treasurer.

Unemployment Insurance and NES

World War I did not impose on the Department any important new responsibilities until near the end of the conflict. In May 1918, however, the Employment Offices Co-ordination Act received Royal Assent.

This Act authorized the Minister of Labour "to aid and encourage the organization and co-ordination of employment offices and to promote uniformity of methods among them; to establish one or more clearing houses for the interchange of information between employment offices concerning the transfer of labour and other matters; to compile and distribute information received from employment offices and from other sources regarding prevailing conditions of employment."

The Act set aside the sum of $50,000 for the fiscal year 1918-19, $100,000 for the year 1919-20, and $150,000 for each succeeding fiscal year, for distribution among the provinces in proportion to their expenditure for the maintenance of employment offices. Agreements under the Act between the Minister and the provincial governments were completed in several of the provinces before the end of the year, and a conference of the employment officials of the Department and the provincial governments was held in Ottawa in November.

"Agreement was reached as to the measure of co-ordination necessary to enable the provincial systems of employment offices to function as units in a national employment service, and a standard system of forms and records was decided upon," the Department's annual report for 1918-19 said.

"The regulations agreed upon were passed as an order in council . . . under date of December 17, 1918. The order in council makes provision for the establishment of a council, the Employment Service Council of Canada, to advise the Minister of Labour in the administration of the Act, and sets forth the duties of the Department of Labour, the provincial governments and the local employment offices, in the administration of the law. . . ."

At the end of the 1924-25 fiscal year, there were 65 Employment Service centres in Canada, the number having been reduced from 69 at the beginning of 1923-24, and there were 278 employees, of whom 32 were federal Government, and 246 provincial government employees.

The work of administering the Employment Offices Co-ordination Act was done by the Employment Service Branch of the Department from the time the Act came into force in 1918 until it was repealed by order in council on January 19, 1943 under authority of the Unemployment Insurance Act, 1940.

Under the Unemployment Insurance Act, the Unemployment Insurance Commission had begun, on August 1, 1941, to administer a national system of employment offices, and after that date the work of the Employment Service Branch was confined to winding up financial arrangements between the federal Government and the provinces under the old act. By September 1942, when the Commission was placed at the disposal of the Minister of Labour for the duration of the war, it had regional offices in five cities, district offices in four urban centres, and local offices in about 200 towns and cities.

In the annual report for the year ending March 31, 1914 an interim statement of a Royal Commission on Industrial Training and Technical Education said in part:

> Briefly, the Commission advises an annual appropriation by the Dominion Parliament for each year during the period of 10 years for the various aspects of industrial training and technical education, of the sum of $3,350,000, this amount to be distributed among the various provinces of Canada proportionately to population and subject to certain suggested requirements and conditions. Of the sum named, the Commission recommends that $350,000 should apply particularly to the development and furtherance of elementary education in relation to industrial training and technical education, the larger sum of $3,000,000 becoming a Dominion development fund to be applied more generally for the purposes of industrial training. . . .

The Technical Education Act, the first federal legislation of its type, was passed in 1919, and toward the end of the year, a Director of Technical Education was appointed to the staff of the Department. The Act did not provide for any specific education or training; the type was determined by federal-provincial agreement.

Under the Act, federal grants amounting in the aggregate to $10,000,000 were to be provided over a period of 10 years. This Act was extended four times for five-year periods to allow the provinces that had not used their full allotments to do so. The last time it was extended was in 1944, when Manitoba was the only province that had not used all the money it was entitled to.

Youth Training Program

In 1937, following recommendations of the National Employment Commission, Parliament voted a sum of $1,000,000 for the purpose of initiating training and development projects for unemployed young people. Under this program, in agreements with the provinces, the federal Government might pay 50 per cent of the province's expenditures, up to a maximum amount provided in each agreement.

This Dominion-Provincial Youth Training Program, which was carried on during the fiscal years 1937-38 and 1938-39 under relief legislation then in force, was continued during 1939-40 and the rest of the three-year period ending March 31, 1942 under the Youth Training Act, 1939 passed by Parliament during the 1939 session.

The Youth Training Act expired on March 31, 1942 and the Vocational Training Co-ordination Act was passed in August of the same year. This Act provided for the carrying-on of whatever types of training were needed for the war effort, and for the continuation of approved projects formerly in effect under the Youth Training Act, 1939. It also provided for various types of training that might be desirable in the postwar period. A Dominion-Provincial War Emergency Training Program was started in 1940-41.

During the 1961-62 fiscal year and subsequent years there was a great expansion of facilities for technical and vocational training undertaken by the provinces in co-operation with the federal Government. This expansion was the result of the passing of the Technical and Vocational Training Assistance Act of 1961, under which the federal Government greatly increased the scale of its financial assistance to the provinces for the construction, expansion and equipping of vocational schools and technical institutes. Programs for the training of the unemployed and other training programs also developed rapidly after the passing of the new Act.

This Act superseded the Vocational Training Co-ordination Act of 1942, and responsibility of administering it was given to the Technical and Vocational Training Branch, formerly the Canadian Vocational Training Branch.

The policy of the Dominion Government during the winter of 1925-26 in the matter of unemployment relief was set forth in an order in council issued in March 1926. The order stated the contention of the federal Government that such relief was primarily the responsibility, first of the local authorities and secondly of the province. But the federal Government indicated its willingness, in cases in which distress was caused by unemployment, and when the cost was beyond the capacity of the municipality, to co-operate with the local and provincial authorities in bearing a share of the cost of relief of the unemployed.

Referring to a Dominion-Provincial conference held in Ottawa in November 1927, the 1927-28 annual report said, "The question of unemployment relief was dealt with briefly. With the possible exception of Manitoba, no speaker urged the granting of federal aid in this direction."

Under the impact of heavy unemployment, Parliament passed the Unemployment Relief Act, 1930 in September of that year. The administration of the Act was assigned to the Minister of Labour, and a new branch of the Department was organized for this purpose. The next year, another act, the Unemployment and Farm Relief Act, 1931 was passed to supplement that passed in 1930; and this measure was also administered by the Department.

The Relief Act

The Relief Act, 1932 was, like the earlier two, administered by the Department. Relief Acts were passed again in 1933, 1934 and 1935.

The Unemployment Relief and Assistance Act, 1936 was described as "An Act to assist in the relief of Unemployment, the promoting of Agricultural Settlement and Rehabilitation, and in the Development, Conservation and Improvement of certain natural and other resources." Besides providing financial help in the cost of relief work and for direct relief, its purpose was to help in placing families on the land, where it was supposed that they would be self-supporting. Subsidies were also paid to farmers to induce or enable them to employ single persons who were without work.

A similar act, the Unemployment and Agricultural Assistance Act, 1937 was directed toward relief of the unemployed and toward helping farmers in the drought areas and elsewhere. Acts of the same kind were repeated every year up to and including 1940. Relief legislation expired on March 31, 1941.

World War II and After

"With the introduction of the National Selective Service Civilian Regulations, it became obvious that the Regulations tied in so closely with the work of public employment offices that the Department was faced with the alternatives of duplicating offices inaugurated under the Unemployment Insurance Commission, or of utilizing those offices for the administration of National Selective Service Civilian Regulations," said the annual report for the fiscal year ended March 31, 1943.

"Accordingly . . . with the approval of the Unemployment Insurance Commission, control of the officers and other staff of the ... Commission was placed at the disposal of the Minister of Labour for the duration of the war . . . to utilize for administrative purposes the field organization of the Unemployment Insurance Commission to carry into effect National Selective Service Civilian Regulations." The UIC offices thus transferred temporarily to the Department were known as the Employment Service and Unemployment Insurance Branch.

The Minister of Labour also became responsible for the administration and enforcement of the Re-instatement in Civil Employment Act, 1942. This Act required employers of persons accepted for certain war services to reinstate such persons in employment at discharge, as far as possible under conditions not less favourable than those that would have applied to them had they remained in their employment.

With the expansion of the responsibilities of the Department of Labour resulting from the war and the necessary control of manpower, the Research and Statistics Branch extended its work. In addition to being responsible for the Occupational History Survey of the Armed Forces to ascertain the educational status, industrial experience and occupational preference of members of the forces, the Branch conducted, as of January 30, 1943, the most complete survey of employment ever made in the Dominion of Canada. As a result of this survey, the distribution of Canada's human resources was calculated with reasonable accuracy.

The War Labour Boards, both national and regional, which were set up by order in council in October 1941, were part of the machinery for carrying out the Government's wage stabilization policy. Although these boards were not under the administration of the Department, their operations were covered in the Department's annual reports. In March 1942, National Registration with its records and personnel was transferred from the Department of National War Services to the Department of Labour.

The Wartime Bureau of Technical Personnel was established under authority of an order in council in February 1941; and another order in council, passed in March 1942, facilitated the work of the Bureau by providing that scientific and technical personnel could not be employed otherwise than through, or with the approval of, the Minister of Labour.

In January 1943, the Department set up an Information Division (later Branch) to prepare and issue press releases on the policies and activities of the Department, to conduct publicity campaigns and to supervise publication of official announcements.

Another new activity of the Department was the fostering of labour-management production committees. In January 1944 an order in council, sponsored jointly by the Department of Munitions and Supply and the Department of Labour, created the Industrial Production Co-operation Board, which replaced the former Interdepartmental Committee on Labour-Management Committees. To assist the Board, an advisory committee was set up, on which employers and employees were equally represented.

What was originally called the Dominion-Provincial (later Federal-Provincial) Farm Labour Program began in 1942 as a joint arrangement between the federal and provincial governments to ensure an adequate supply of labour for agriculture and the allied industries of forestry and fishing. This program was operated under agreements from year to year with each of the provinces except Newfoundland, which never took part in it. A Dominion-Provincial (later called Federal-Provincial) Farm Labour Conference was held in December each year for many years.

The Federal-Provincial Farm Labour Program was one of those transferred on January 1, 1966 to the Department of Citizenship and Immigration.

Demobilization

The return of peace brought about a reduction in the work of the Department. Manpower controls under National Selective Service were mainly revoked or cancelled during the 1945-46 fiscal year. Special stress was placed by the Department on the re-establishment of ex-service personnel and on the transfer of workers in war industries to peacetime industries and services.

The chief functions of the Department in helping persons discharged from the armed forces included the administration of the Re-instatement in Civil Employment Act; the administration of special facilities within the National Employment

Service for the placement of ex-service personnel; and provision of vocational and pre-matriculation training for ex-service personnel, as distinct from university training.

Between 175,000 and 190,000 men and women were discharged from the armed forces during the 1946-47 fiscal year. The Department of Labour helped veterans attending universities to obtain summer employment, and co-operated with the Department of Veterans Affairs in placing older veterans in suitable employment.

The details of administration of the Re-instatement in Civil Employment Act, 1942 were performed by the staff of the Unemployment Insurance Commission and the National Employment Service, and re-instatement officers were stationed in regional offices and in many local offices of the Commission. Of the total number of persons discharged from the forces during the year, about 57,000 were re-instated in their pre-enlistment employment.

By 1945, Department officials had been appointed in communities across the country to act as counsellors and to provide a rehabilitation service for all ex-members of the armed forces. The duties of the Canadian Vocational Training Branch were expanded to include rehabilitation vocational training for ex-service persons.

The provisions of the Re-instatement in Civil Employment Act were extended by the Veterans Benefit Acts of 1951 and 1954.

On January 1, 1966 the administration of this Act was transferred from the Department of Labour to the Department of Citizenship and Immigration.

Wage control, which was administered by the National War Labour Board and the Regional Boards, was terminated by order in council effective December 1, 1946. National registration was discontinued from August 15, 1946.

Re-establishment of Japanese

Another of the responsibilities of the Department that continued for some time after the end of the war was the re-establishment of the Japanese who had been evacuated from "strategic" areas of British Columbia under orders in council in 1942. According to the annual report for 1946-47, the number of persons of Japanese origin in Canada decreased during the year from 24,177 to 20,645 as a result of the "voluntary" return of 3,964 of these persons to Japan.

At the beginning of the 1946-47 fiscal year, 60 per cent of the Japanese were still in British Columbia, 20 per cent on the Prairies and 20 per cent in Eastern Canada. By March 31, 1947, only 32 per cent (6,618) were still in British Columbia, 28 per cent (5,796) on the Prairies, and 40 per cent (8,195) in Eastern Canada. With the movement east of the Rockies of approximately 4,800 persons during 1946-47, the resettlement program was largely completed.

From the beginning of the fiscal year 1948-49, the Department was made responsible for administering agreements entered into by the federal Government with each of the provinces of British Columbia, Alberta and Manitoba under the terms of which the federal Government agreed to reimburse the provinces for one half of the expenditures incurred by the provinces in the period April 1, 1948 to March 31, 1950 in making necessary provisions for the welfare of persons of the Japanese race resident in the province who had been evacuated from the coastal area of British Columbia as a war emergency measure in the period 1941-42.

On March 31, 1948 "all orders made under wartime emergency legislation giving authority for the exercise of controls over the movement and placement of persons of the Japanese race in Canada" had been revoked. It was not until March 31, 1951, however, that the field office of the Department in Vancouver that administered the resettlement project was finally closed.

On March 31, 1947 the regional offices of the Bureau of Technical Personnel were closed, and although the Bureau continued to be responsible for the national roster of scientific personnel and associated activities, it partly changed from being an operating, to being an advisory agency.

Increasing Responsibilities

The Labour-Management Co-operation Service was established on May 15, 1947, as a section of the Industrial Relations Branch, to continue the work of promoting labour-management production committees formerly carried on by the Industrial Production Co-operation Board, which had been created in January 1944. A committee was appointed to act in an advisory capacity to the Minister on matters concerning the Service.

In the 1949-50 annual report, for the first time, there was a reference to the Legislation Branch, although the Department had published annual reports on Labour Legislation in Canada since 1915, and the annual reports of the Department had almost from the first mentioned the publication in the LABOUR GAZETTE of summaries and reports on Legislation in Canada. In 1915, and in 1920, 1928, 1937, and 1948 the annual report of labour legislation had taken the form of a consolidation of all labour laws on the Dominion and provincial statute books.

During the 1950's, the research work of the Department took on a new significance, as research and operational programs became more closely inter-related. Originally developed to provide factual information for labour and management and as a basis for dispute settlement activities, the Department's research work began to include basic studies designed to appraise the functioning and needs of the labour market in Canada and to point the way to new operational programs. In particular, the Department's research work led to the formulation of what became known as an "active manpower policy".

During the 1950-51 fiscal year, the Department acquired new responsibilities when the administration of the Government Employees Compensation Act of 1947, and the Merchant Seamen Compensation Act of 1946 was transferred to it from the Department of Transport.

The Government Employees Compensation Act came into force on April 1, 1947, when the Government Employees Compensation Act of 1927 was repealed. It provided for compensation when employees of the Government were killed or injured or contracted industrial diseases in the performance of their duties. Its administration now came under the Government Employees Compensation Branch.

This Branch also took over the work arising out of the administration of the Merchant Seamen Compensation Act of 1946. The Act was, and is, administered by the Merchant Seamen Compensation Board, of which the secretary was the Director, Government Employees Compensation Branch.

Special Services Branch

The Special Services Branch was formed in 1950 to handle the work of the Department in connection with farm labour requirements, Dominion-Provincial Farm Labour Agreements, placement of Polish immigrants, and forestry workers.

In February 1951 the National Advisory Council on Manpower was established by order in council on the recommendation of the Minister of Labour "to consider various aspects of manpower questions, to advise on plans under review, and to suggest plans which should be developed so as to make for the most efficient utilization in the national interest of the present and potential work force of Canada."

The Council was made up of representatives of labour, employers, agriculture, women's organizations, the veterans

of Canada, and of a number of Government departments. The Clerk of the Privy Council and the Deputy Minister of Labour were joint chairmen.

This Advisory Council was mentioned for the last time in the 1953-54 annual report, and after that it fell into abeyance. Its last recorded meeting was in November 1953.

The Great Lakes Seamen's Security Regulations came into effect on March 22, 1951 by order in council passed under the Emergency Powers Act. These Regulations, amended from time to time, were administered by the Department through the National Employment Service. The Regulations were intended to ensure by means of a screening process that only persons who were trustworthy with regard to national security were allowed to sail on vessels plying the Great Lakes and the Upper St. Lawrence River. They were renewed in June 1954 for a period of three years.

Civilian Rehabilitation

For years it had become increasingly apparent that the great need in the field of civilian rehabilitation was co-ordination of planning and effort, and on December 29, 1951 a National Advisory Committee on the Rehabilitation of Disabled Persons was established by order in council. In June 1952 the Government appointed a National Co-ordinator of Civilian Rehabilitation to head the Civilian Rehabilitation Branch, whose functions were to maintain close liaison with the Canadian Vocational Training Branch, the National Employment Service, and the Departments of National Health and Welfare and Veterans Affairs, to ensure that the contributions of each to the rehabilitation process are properly co-ordinated.

The Women's Bureau was established in 1954 and began to function in September of that year. Its purpose was twofold: first, to promote a wider understanding of the particular problens of women workers and of the employment of women; and second, to advance their opportunities in employment and enable them to make a more effective contribution to the labour force.

The Canada Fair Employment Practices Act, which went into effect on July 1, 1953, prohibited discrimination in any employment that came under federal jurdisdiction on the ground of race, religion, colour or national origin. The Industrial Relations Branch of the Department was responsible for its administration. This responsibility has since been entrusted to a Fair Employment Practices Branch, set up earlier this year.

Stimulation of Winter Employment

A working committee, composed of officials of the Department and the Unemployment Insurance Commission, was set up in 1954 to explore ways of putting into effect the recommendations contained in a report on seasonal unemployment presented to the National Advisory Committee on Manpower.

The Interdepartmental Committee on Winter Employment was constituted as a result of a Cabinet directive issued to all federal departments and agencies in July 1955. This committee was composed of senior officials of six departments and the Unemployment Insurance Commission, Central Mortgage and Housing Corporation, and Defence Construction (1951) Ltd. Its work was to promote winter employment through the adjustment of government building, repair and maintenance programs.

The Special Services Branch provided the secretariat for the Winter Employment Working Committee and the Interdepartmental Committee. It was also active in promoting winter employment by encouraging provincial governments, municipalities and various non-governmental national organizations to carry out, during the winter, construction and other work that had generally been performed during other times of the year.

The encouragement of winter work and the administration of several government programs to provide incentives to this kind of work continued to be an important part of the responsibilities of the Branch until nearly all of this work was transferred to the Department of Citizenship and Immigration in 1966.

The Female Employees Equal Pay Act came into force on October 1, 1956. The administration of the Act, which applied to employers and employees engaged in works, undertakings and businesses coming within federal jurisdiction, became the responsibility of the Industrial Relations Branch, but has since been entrusted to the Labour Standards Branch.

The Maritime Transportation Unions Trustees Act was passed in October 1963 and a board of three trustees appointed six days later.

The trusteeship had been proposed in the report of the Norris Industrial Inquiry Commission on the Disruption of Shipping, made public in July 1963, as a means to establish law and order in an industry long plagued by strikes, labour violence and union rivalry that had at times approached a state of war.

The Act was to expire on December 31, 1966, but was extended for another year.

Labour (Standards) Code

Just before the close of the fiscal year that ended on March 31, 1965, the Canada Labour (Standards) Code received the Royal Assent, and a new Labour Standards Branch was carved from the Industrial Relations Branch to administer it. The Code established standards for hours of work, minimum wages, annual vacations with pay, and holidays with pay, in employment within federal jurisdiction. The new branch also took over the administration of the Department's fair wages policy on government contracts.

Another new branch established during the same year was the Manpower Consultative Service, which was set up to develop and administer the Government's program of Manpower Assessment Incentives.

This program provided for financial assistance to industry and labour in carrying out programs of research at the plant level into the effects of industrial change, particularly technological change, on the work force, and into the various ways and means by which manpower adjustments to such changes could be made in such a way as to minimize the displacement of labour.

To emphasize the positive work of accident prevention in the Public Service, the Government Employees Compensation Branch, in the 1962-63 fiscal year, was renamed the Accident Prevention and Compensation Branch.

In addition, the Branch became responsible for administering the Canada Labour (Safety) Code when it was passed at the end of 1966. The purpose of this law was to provide for safe working conditions for all employees in industries and undertakings under federal jurisdiction.

The passage of the Canada Labour (Safety) Code completed the Canada Labour Code, which is a consolidation of five acts, the other enacted earlier: the Canada Labour (Standards) Code, the Canada Labour (Safety) Code, the Female Employees Equal Pay Act, the Canada Fair Employment Practices Act, and the Industrial Relations and Disputes Investigation Act.

On January 1, 1966, as part of an extensive re-organization of federal government departments, the Department of Labour was divided, and a large part of its work and staff transferred to the Department of Citizenship and Immigration (L.G., Jan.-Feb. 1966, p. 2; May 1966, p. 214), which was itself re-organized and renamed the Department of Manpower and Immigration.

And where does the Department of Labour stand today?

TODAY

AFTER the transfer of its manpower-related programs and responsibilities to the new Department of Manpower and Immigration, the Canada Department of Labour was left free to concentrate on its more basic functions, both traditional and modern. It was able to place increased emphasis on the promotion of harmonious relations between workers and employers, on assisting in the resolution of differences between them, on setting and enforcing labour standards, and on encouraging industrial safety and fair employment practices.

To fufil these responsibilities, the Department undertook a major structural re-organization, now nearing completion. In the re-organization, related functions were grouped in three arms, each directed by an Assistant Deputy Minister.

Under the Assistant Deputy Minister for Labour Relations were placed four branches: Conciliation and Arbitration, Labour-Management Consultation, Employee Representation and Fair Employment Practices.

Under the Director General of Research and Development were grouped five branches: Economics and Research, Legislation, International Labour Affairs, Special Services and Library Services.

Under the Assistant Deputy Minister for Labour Standards and Benefits, four branches were placed: Labour Standards, Women's Bureau, Industrial Pensions and Annuities, and Accident Prevention and Compensation.

Positive Policy

In the 18 months since the separation of its manpower programs, the Department has been directing its efforts to the development of a positive industrial relations policy. The objectives of the policy—to promote effective labour-management relations and to improve the standard of living of Canadians—are not new. What is new is the approach.

Canada has had labour programs for many years, but these have not before been brought together into an over-all comprehensive policy. As in other countries, the tendency has been to deal with particular problems as they arose. This rather hit-and-miss approach was adequate when labour and industrial problems were not as complex as they are today. It was encouraged by the way society, until quite recently, regarded social action programs.

Canada's attitude, and we were not alone in this, was that expenditure on such programs represented an absolute cost, that it reduced the money available for other investment. Support for social programs was provided largely on humanitarian grounds.

But now society is coming to the realization that spending money to make people more effective as workers, consumers and citizens is a form of investment that will pay off. The new economic goals for Canada, defined in 1964 by the Economic Council of Canada, called attention to the need for a new and more active labour policy. The emphasis in the industrial relations policy that the Department is working toward will be on free collective bargaining in which the Government's role would be to help make collective bargaining work more efficiently.

The Department believes that a major objective of a positive industrial relations policy is to ensure that the end product of Canada's industrial relations system conforms with generally accepted national goals.

The Department is fully aware that Canada urgently needs a more positive industrial relations policy. Events of 1966 provide sufficient proof. And it is fully aware that collective action in the determination of wages and working conditions is being employed by an ever-larger proportion of the work force.

Clearer Understanding

Canada's growing international commitments, and the expansion in the nation's essential services, dictate that private collective decisions be based on a clearer understanding of the larger public issues and of the impact of such decisions on national objectives.

Believing that compulsion as a means of resolving industrial problems is not the only alternative to free collective bargaining, the Department is putting its greatest effort into the task of making collective bargaining work.

The Department realizes that research must precede the adoption of any constructive program of action. Therefore, it is mobilizing its research resources for an examination of the industrial relations system, seeking answers to such questions as: Why do the parties to collective bargaining behave the way they do? What are the factors that change their behaviour from time to time? What factors produce conflict, and what factors and conditions lead to peaceful industrial relations? What is the cost of, and the benefits that can be expected from promoting industrial safety, and maintaining and promoting minimum wage provisions? The Department is also seeking answers to questions related to the internal workings of the free collective bargaining system, and to the impact on the system of external factors such as technological change.

The Department will, of course, continue to carry out economic studies and research into the nature of the labour-management relationship, the functions of wages, the response to technological change and the way in which our industrial relations system contributes to the attainment of economic and social goals. Work done in this Branch is supplemented by the Labour Department-University Research Program, which provides funds on a modest scale for research workers in universities.

The Department has other programs in the planning stage, among them training programs for mediators and arbitrators in labour disputes and for administrators of labour legislation.

Joint Consultation

One of the Department's long-standing programs that is receiving increased attention and emphasis is the encouragement of labour-management consultation. The Labour-Management Co-operation Service last year was transformed into the Labour-Management Consultation Branch and its personnel considerably augmented. The Branch is encouraging unions and management to settle some of their mutual problems through continuing labour-management consultation apart from the periodic negotiations.

The Department believes that regular meetings of employer and employee representatives to discuss such things as future changes and their effect on the plant and its workers stand a better chance of attaining mutually satisfactory answers to problems before they reach crisis proportions, and a better chance of holding off conflict.

And because the Department believes that at a time when

Canada cannot afford not to use the skills of all its citizens, it is steadily increasing its efforts to combat discrimination in employment on the grounds of race, colour, religion or national origin. A Fair Employment Practices Branch was established early this year to conduct the strengthened anti-discrimination campaign.

Now that the Government has appointed a Royal Commission on the Status of Women, the Department's Women's Bureau, which was established to bring about a wider understanding of the role of women in the labour force, will be increasingly called upon for information about women workers.

Although the act has yet to be proclaimed, the Department is already making preparations to encourage and promote safety in industries under federal jurisdiction, a responsibility put on it at the end of 1966 by the Canada Labour (Safety) Code. The Department is now busy drafting regulations to cover safety practices in the wide variety of industries under federal jurisdiction.

It is also strengthening its contacts with other countries by increasing the number of Labour Counsellors abroad, and through its continued participation in the ILO, OECD and other international bodies.

That is the posture held by the Canada Department of Labour mid-way through Centennial Year. What does the future likely hold for it? What's in store for the Department tomorrow?

TOMORROW

CANADA, and with it the Canada Department of Labour, has already entered a period of rapid change. In such a period, experience of things past is of little help in predicting things to come. But officials of the Department have accepted the LABOUR GAZETTE's invitation to cast their eyes ahead, even to prophesy what the Canada Department of Labour could conceivably be like and what its functions could become in the future.

Naturally, changes in the structure, make-up and activities of a government department normally result from changes in legislation. The Department's major piece of legislation, the Industrial Relations and Disputes Investigation Act, is likely to be closely reviewed by the Task Force on Industrial Relations headed by Dean H. D. Woods of McGill University.

Services Sector

As the proportion of the labour force employed in the services sector increases (it has been estimated that by the year 2000 Canada's service industries will provide work for about two-thirds of the labour force), it is entirely within the realm of possibility that the impact of disputes in essential services will intensify. And because the public is highly sensitive to such disputes, it is likely to demand more effective procedures for their settlement. In industries that may be said to possess a high degree of public interest—industries in which wage settlements might run counter to the public interest—more sophisticated machinery may have to be developed to assist the collective bargaining process, or a modified form of collective bargaining may have to be considered.

Could it be that what will emerge for use in such disputes will be the creation of several choices of action that the Government could take—in other words, an arsenal of alternatives? There are those who theorize that the presence of such an arsenal, because it keeps the disputing parties in doubt as to what action the Government intends to take, would spur them to reach agreement.

Because an ever-larger part of the work force is turning to collective action in the determination of wages and working conditions, collective bargaining will assume greater importance. There was a time when the Department of Labour could watch collective bargaining activities with some measure of detachment; but it will no longer be able to do so when more and more of the country's workers are resorting to the collective approach to wage determination.

And if the Government holds to the belief that its role in labour disputes should be only to assist the parties in reaching settlements, then enlarged corps of conciliators and arbitrators will be needed. The Department of Labour of the future, one can speculate, may operate training programs or schools with the object of producing a highly qualified and competent staff of conciliators.

But could it be, as the Presidents of Canada's two major employer organizations have said in the messages they prepared for this special Centennial section (see p. 427), that the condition of perpetual opposition in which labour and management have traditionally existed is fast disappearing? Is it unlikely that a country that has declared war on poverty, and has already won a few opening skirmishes, will be unable to come up with a plan to eliminate labour-management strife?

"The one factor that comes through to us from our 1966 experience," the Minister of Labour said at the end of April in an address to a convention in Ottawa, "is that the fundamental attitudes of labour and management in their approach to and use of the collective bargaining machinery must change. While the initiative is still theirs to take, labour and management must develop an acceptable system of effective, periodic consultation during the course of their agreements, and they must do this soon."

The two opposing parties themselves will likely find that they will have to work closely together as they face up to the fact that a worker will likely change his occupation—with the consequent need for retraining—as many as ten times during his working life. In addition, as the workload becomes lighter and working hours shorter, labour and management will have to engage in joint consultation in order to plan for employees' leisure hours. Labour-management consultation was held to be essential in the early 1940s to meet wartime needs. Is there not justification to predict that by the 1990s it will have become universally accepted to meet the needs of a country in a period of continual change?

Industrial Safety Program

Now that the passage of the Canada Labour (Safety) Code has placed on the Department the responsibility for administering a comprehensive industrial safety program, it is certain that, within the next few years, all places of employment within federal jurisdiction will be subject to regulation in the interest of the safety and health of the worker. Can it be contemplated that the standards and practices likely to develop under the Safety Code will be given uniform application throughout the country? An efficient accident prevention program conducted from coast to coast in Canada would make a positive contribution to substantial reductions in manpower losses from on-the-job accidents, and to real savings in the money costs resulting from such accidents.

It is possible, even likely, that employees of industries within federal jurisdiction, who are not protected under provincial workmen's compensation law, will be covered at some future time by a system along the lines of that now relating to merchant seamen. It is also conceivable that a uniform system will be introduced to apply to all employees of federal agencies regardless of the province in which they may be employed. This would achieve uniformity in monetary benefits, as well as more consistency in general administration and other related services.

Social security measures are proliferating. Is it probable that within the next several years there will be some integration of a number of these now-separate measures, including workmen's compensation? If this comes to pass, there will be a reconstruction of the present workmen's compensation system, which has served Canada very well for more than 50 years, but which is now beginning to be directly affected by other legislation that provides income benefits in cases of disability or death.

As the introduction of technological change and automation spreads throughout Canadian industry, some disruption of employment will occur, and some workers will be displaced. In order to make the period between a worker's displacement and his ultimate reaping of the benefits of technological change as painless as possible, programs similar to the Transitional Assistance Benefit Program could conceivably be instituted.

The Department's programs gain strength from an understanding of the way similar problems are dealt with in other countries. The international activities of the Canada Department of Labour are certain to continue to garner such knowledge. But the Department's international activities will no doubt increasingly be devoted to helping countries in the less-developed regions of the world. In not too many years, one can envisage the exchange of international experience through computer storage and closed circuit television, and through labour counsellors' reporting by visual telephone and recording equipment in contrast to the old-fashioned and laborious writing of despatches.

The Department's own survey work will undoubtedly be improved by the transfer of survey operations to computers. The future may indeed produce survey and computer operations and communications efficient enough to enable workers to pursue high-paying jobs on the basis of instant information; a smoothly functioning labour market depends, among other things, on the availability of swift and accurate information on job opportunities and on wage rates and other conditions of employment.

Computer systems are likely to find a place also in the Canada Department of Labour Library. Such systems are already in service in many larger libraries for bibliographic and circulation purposes, and have proved their worth.

The Canada Department of Labour pioneered in portable pensions; the Canadian Government annuities that it handles may not be surrendered, unless the annuity is a very small one. Because the Department would not underwrite a pension plan unless it met the Department's standards of vesting, it pioneered, too, in encouraging vesting of employer money in the employees. In the future the Department can see considerable expansion in pension plans for small businesses. The effect of the Canada Pension Plan will likely be to stimulate interest in pensions and the desire to add privately a "second deck" of coverage so that the worker's total retirement income will preserve his standard of living.

It is unlikely that Canadians will consider the labour standards now established by federal legislation to be exhaustive. The needs of a developing economy and society will undoubtedly bring about a need for more benefits, and higher minimum benefits for employees than are now provided. The Department intends to remain abreast of legislative developments in other jurisdictions, and sensitive to the needs of employees and employers for changes in existing standards. The Department will continue to bring up-to-date thinking to the solution of any problem that may confront it.

EPILOGUE

IN this review of the Department of Labour, one factor stands out: continuity. Throughout the 67 years of its existence, the Department has continued to face much the same problems. It has varied its methods of dealing with them; but the variation has been mainly in emphasis, intensity and scale. Fundamentally, there has been little real change.

One of the main concerns of the Department from the first has been how to deal with industrial disputes that affect the public interest. The very act by which the Department was established was called the Conciliation Act. The Railway Labour Disputes Act of 1903 and the Industrial Disputes Investigation Act of 1907 were attempts to deal with the difficult problem of leaving employers and employees free to settle the conditions on which they would agree to work together, while at the same time protecting the public from becoming the victim of that freedom. That this problem is as much alive as ever has been made abundantly clear by the events of the past few years.

The Royal Commission on Industrial Relations of 1919 was set up with the object of finding ways of encouraging labour and management to co-operate to their mutual advantage, and this aim is still being pursued by the Department.

Even what may be regarded as a modern development, the attention that is now given to the place of women in the labour force, has its roots in the past. It was Mackenzie King's solicitude for the women working under sweatshop conditions making goods for the Post Office that led to the establishment of the Department.

The campaign that the Department carried on in recent years to stimulate winter employment is not an entirely new idea either. Remember that a conference was held in Ottawa in 1924 "for the purpose of devising means for the regularization of industrial employment, having regard particularly to building and other out-of-door work during the winter season."

The Department's story is another illustration of the truth of the saying that the more things change the more they are the same: labour problems are always with us.

I Remember . . .

Ronald Hooper

Former Editor, LABOUR GAZETTE

The following reminiscence is by Ronald Hooper, who was Editor of the LABOUR GAZETTE from 1917 to 1923. Now 82, Mr. Hooper is living in Richmond, B.C.

When I was appointed editor of the LABOUR GAZETTE in 1917 the Minister made quite a point of telling me that my three predecessors were making important contributions to Canadian industrial life. They were W. L. Mackenzie King, R. H. Coats and Bryce M. Stewart. This put me on my mettle.

Mr. King, as is well known, founded the GAZETTE and was its first editor. He left it to become the first deputy minister of the newly created Department of Labour. Mr. Coats then took over and carried on until he was appointed chief of the Dominion Bureau of Statistics.

Bryce Stewart, in addition to editing the GAZETTE, was also the guiding spirit in creating and setting up what was then known as the Dominion-Provincial Employment Service. He left the GAZETTE to take charge of this service. Later he retired from the government service and went to the United States. When World War II broke out, Mr. King, then Prime Minister, brought him back to Canada to head the Labour Department as its deputy minister.

When I took over the LABOUR GAZETTE, the nature and style had been clearly defined, as were the general monthly articles and the format. My general instructions were to keep it that way. The staff consisted of W. W. Edgar, J. H. McGee and two typist-stenographers. We wrote articles of general industrial interest; but the statistical articles, dealing with such subjects as wage rates and the cost of living, were supplied by workers in these special fields. Our responsibility was to edit the accompanying script and to see that the findings contained no obvious errors. For example, any noticeable variation in figures from one month to the next had to be inquired into.

We introduced one new feature: a monthly record of fatal industrial accidents and their causes. We also recorded non-fatal accidents serious enough to require action by the several provincial Workmen's Compensation Boards. We also watched newspaper reports. Having learned that the Gazette's monthly article, "Legal Decisions Affecting Labour," was appreciated by both management and labour, we extended this as well as we could; but in those days, judicial decisions on such matters were not very plentiful.

In connection with our work on an annual index of all articles and items appearing in the GAZETTE, an amusing thing happened. The young lady assigned to this task had to learn by experience. Looking over some of her copy, I noticed under the name of a certain judge the words "His great mind." Without any intention of casting reflections on the learned judge I looked up the page indicated. I found an item quoting verbatim a legal decision in which the judge had said that he had "a great mind" to commit a witness for contempt of court.

When I left the Labour Department in 1923 to join the editorial staff of the Winnipeg Tribune, I found the experience and general knowledge gained while on the staff of the LABOUR GAZETTE of real value when writing editorial and special articles on industrial matters.

This is a typical interior of the railway cars that carried Canadians across the country in the 1880s.

CHRONOLOGY

1900—Conciliation Act created Department of Labour.
1900—Administration of Fair Wages Resolution of (March) 1900 turned over to the Department on its organization.
1900—Department of Labour Library established.
1900—LABOUR GAZETTE first published in September.
1903—Railway Labour Disputes Act enacted; administration placed under Minister of Labour.
1906—Conciliation and Labour Act enacted, consolidating Railway Labour Disputes Act and Conciliation Act.
1907—Industrial Disputes Investigation Act enacted.
1909—Labour Department Act created separate Labour portfolio.
1910—Combines Investigation Act passed; administration placed under Minister of Labour.
1911—Labour Statistics Branch established.
1911—First edition of *Labour Organizations in Canada* published (1967 edition will be number 56).
1915—First annual report on *Labour Legislation in Canada* issued.
1918—Employment Offices Co-ordination Act passed; Employment Service Branch formed to administer it.
1919—First International Labour Conference, Washington D.C. Canadian delegation was "one of the most complete representations."
1919—Combines and Fair Prices Act repealed Combines Investigation Act.
1919—National Industrial Conference held in Ottawa after issue of Report of Royal Commission on Industrial Relations.
1919—Technical Education Act enacted; Director of Technical Education named to the Department.
1921—First of the annual reports on wage rates and hours of labour published.
1922—Administration of the Government Annuities Act (1908) transferred to the Minister of Labour from the Postmaster General; Annuities Branch established.
1923—New Combines Investigation Act enacted and placed under the Minister of Labour.
1927—Administration of the Old Age Pension Act placed under the Minister of Labour.
1927—Labour Intelligence Branch formed.
1930—Fair Wages and Eight-Hour Day Act enacted.
1930—Unemployment Relief Act passed; administration assigned to the Minister of Labour.
1931—Unemployment and Farm Relief Act passed; administration given to the Minister of Labour.
1932, 1933, 1934, 1935—Relief Acts passed.
1935—Administration of Old Age Pensions Act transferred to Department of Finance.
1936—Unemployment Relief and Assistance Act passed.
1937, 1938, 1939, 1940—Unemployment and Agricultural Assistance Acts passed.
1938—Formation of Canadian Association of Administrators of Labour Legislation.
1939—Youth Training Act passed.
1940—Unemployment Insurance Act passed; Unemployment Insurance Commission takes over the Employment Offices in 1941; Employment Services Branch closed.
1941—Wartime Bureau of Technical Personnel established.
1942—Industrial Relations Branch formed.
1942—Vocational Training Co-ordination Act passed; Canadian Vocational Training Branch formed; Youth Training Act of 1939 expired.
1942—Control of Unemployment Insurance Offices transferred temporarily to Minister of Labour to handle the administration of National Selective Service Civilian Regulations.
1942—Re-instatement in Civilian Employment Act made the responsibility of the Minister of Labour.
1942—Research and Statistics Branch formed.
1942—Labour Intelligence Branch disbanded.
1942—National Registration transferred from the Department of National War Services to the Department of Labour.
1942—Legislation Branch formed.
1943—Dominion-Provincial Farm Labour Program began.
1943—Information Branch formed.
1944—Industrial Production Co-operation Board established.
1945—National Selective Service Manpower Controls revoked September 17, control of men in agriculture ended November 15.
1946—Wage Controls terminated December 1, 1946; National Registration ended August 15.
1946—International Labour Organization Branch formed.
1946—Polish veterans arrive in Canada for placement on farms, and first of "displaced persons" resettled in Canada.
1947—National Selective Service Civilian Regulations revoked March 31.
1947—Regional Offices of the Bureau of Technical Personnel closed March 31.
1947—Labour-Management Co-operation Service established May 15, 1947.
1947—Department's Office in Vancouver, administering the settlement of Japanese, closed.

—Centennial Commission Photo by Malak, Ottawa

Ten canoes will mark Canada's 100th birthday with a 100-day, cross-country race from British Columbia to Expo 67, Montreal.

1948—Industrial Relations and Disputes Investigation Act enacted; Canada Labour Relations Board established by the Act.

1948—Control of the Movement of Japanese in Canada revoked March 31.

1949—Economics and Research Branch superseded Research and Statistics Branch.

1950—Government Employees' Compensation Act and Merchant Seamen's Compensation Act transferred to the Department.

1950—Special Services Branch formed.

1950—Department inaugurated plan to assist women to come from United Kingdom for employment in domestic service in Canada.

1951—National Advisory Council on Manpower established February 1951.

1951—Great Lakes Seamen's Security Regulations issued, effective March 22, 1951.

1951—National Advisory Committee on the Rehabilitation of Disabled Persons established December 29, 1951.

1952—National Co-ordinator of Civilian Rehabilitation appointed; Civilian Rehabilitation Branch formed.

1953—Canada Fair Employment Practices Act came into effect July 1, 1953.

1954—Women's Bureau established.

1954—Special Services Branch given responsibility for program to stimulate winter employment.

1955-56—Interdepartmental Committee on Winter Employment constituted.

1956—"Do It Now—Why Wait for Spring" campaign organized.

1956-57—Female Employees' Equal Pay Act came into effect October 1, 1956.

1957—Great Lakes Seamen's Security Regulations expired.

1958—Annual Vacations Act enacted.

1958—Municipal Winter Works Incentive Program launched.

1959—Department of Labour hostel at St. Paul L'Ermite for newly arrived immigrants closed December 31. Similar hostel at Ajax, Ont., closed in 1953.

1961—Technical and Vocational Training Assistance Act superseded Vocational Training Co-ordination Act.

1962—Vocational Rehabilitation of Disabled Persons' Act came into effect April 1, 1962.

1963—Maritime Transportation Unions Trustees Act passed.

1963—Winter House Building Incentive Program and Supplementary Federal Government Winter Construction Program introduced.

1963—Government Employees' Compensation Branch renamed Accident Prevention and Compensation Branch.

1964—Labour Standards Branch formed, August 1964.

1964—Manpower Consultative Service formed.

1964—Information Branch and Labour Gazette Branch merged to form Information and Labour Gazette Branch.

1965—Canada Labour (Standards) Code passed (to take effect July 1, 1966).

1965—Transitional Assistance Benefit Program introduced.

1966—Manpower programs of the Department transferred to the Department of Citizenship and Immigration to become nucleus of Department of Manpower and Immigration (January 1, 1966).

1966—Canada Labour (Safety) Code passed.

1966—Task Force on Labour Relations set up.

1966—Labour-Management Co-operation Service became Labour-Management Consultation Branch.

1966—Department of Labour Library became Library Services Branch.

1966—Annuities Branch renamed Industrial Pensions and Annuities Branch.

1967—Information and Labour Gazette Branch renamed Public Relations and Information Services Branch.

1967—Fair Employment Practices Branch established to assume responsibility from Industrial Relations Branch for administration of Canada Fair Employment Practices Act.

1967—Creation of Conciliation and Arbitration Branch and Employee Representation Branch from the Industrial Relations Branch.

100 Years of Labour Organization

A survey of the growth of the Canadian labour movement in the past century. From modest beginnings, membership has expanded until today it is close to 1,750,000. About one in every four members of the labour force, and about one in every three non-agricultural paid workers belongs to the movement.

A century ago, when the Canadian economy was largely agricultural, and concentrations of population and industry were few, labour organization extended little beyond local units, despite the fact that a few labour unions were in existence in Canada as early as the 1820s. Today, the locals number more than 7,600, and most of their unions are affiliated with one of the two central labour congresses—the Canadian Labour Congress, the larger, and the Confederation of National Trade Unions, which operates almost exclusively in Quebec.

Union membership is nearing 1¾ million and is widely dispersed industrially, occupationally and geographically. About one in every four members of the labour force and, about one in every three non-agricultural paid workers belongs to the union movement.

A unique feature of the Canadian labour movement is its international character; the growth of the union movement in this country has been greatly influenced by events and developments in the United States. Although there have been several attempts in the past 100 years to "nationalize" the labour movement in Canada, only that part in the CNTU, a few national unions in the CLC, and a few independent unions have no international connection.

International Unionism

International unionism in this country began in the decade preceding Confederation, when unions operating in the U.S. began to form locals in Upper Canada. Not until 1873, after Confederation, was an attempt made to form a national federation of unions. In that year, 30 local unions in Ontario formed the Canadian Labour Union. The CLU held conventions for several successive years, but the organization failed to thrive. But a Canadian Assembly organized in 1881 by the Knights of Labour, which had been established in the U.S. in 1869, was able to claim a membership of 16,000 by the end of the 1880s; the Knights organized workers regardless of trade or occupation. At a convention, the second, of trade unions and Knights of Labour Assemblies in 1886, the Dominion Trades and Labour Congress was founded. In 1893 this became the Trades and Labour Congress of Canada, a body that existed under that name for the next 63 years.

Just after the turn of the century, international unions in the TLC that were affiliated with the American Federation of Labor in the U.S. gained control of the Congress, amended the Constitution to eliminate "dual unionism," and brought about the expulsion in 1902 of the District Trade Assemblies of the Knights of Labour, together with a number of purely Canadian unions. The expelled unions joined with others to form the National Trades and Labour Congress, which, in 1908, became the Canadian Federation of Labour, a direct forerunner of the Canadian Congress of Labour, second partner to the merger that produced the CLC. In the same year, a group of Canadian railway unionists, dissatisfied with the treatment they were receiving from their international union, organized the Canadian Brotherhood of Railway Employees.

One Big Union

Another separation from the mainstream of organized labour occurred in 1919 when a group objecting to the emphasis on craft unionism in the TLC, and advocating more direct action in preference to legislative submissions, formed the One Big Union. This union group sought to organize by industry rather than by trade. It gained prominence after the Winnipeg General Strike of 1919, at which time it claimed a membership of 41,500. But it soon began to decline, and at the time of its entry into the Canadian Labour Congress in 1956 had only 6,000 members.

In 1927, dissidents from the Canadian Federation of Labour joined with the Canadian Brotherhood of Railway Employees and the now-shrunken One Big Union to form the All-Canadian Congress of Labour. The ACCL objective was the achievement of the complete independence of the Canadian labour movement. But the Depression arrived soon after the birth of the ACCL. Its membership went into a decline, as did that of the TLC, and union membership did not pick up again until after 1935.

In that year, the Wagner Act was passed in the United

States. The Act protected labour's right to join unions and to bargain with employers; and six leading industrial unions in the AFL formed the Committee for Industrial Organization to organize workers in mass production industries. In Canada, agitation grew for legislation similar to the Wagner Act, and unions belonging to the Committee for Industrial Organization lent assistance to Canadian organizing efforts. On the grounds that they were fostering dual unionism, in 1936 the AFL suspended, and the following year expelled the unions forming the Committee. They then set up a new central organization, the Congress of Industrial Organizations. The TLC avoided a similar split in its ranks until 1939, when its executive came to the conclusion that it could no longer ignore the dual unionism advocated by the CIO unions; the Canadian branches of the CIO unions were expelled from the TLC.

The All-Canadian Congress of Labour, its strength weakened after the general decline in union membership during the Depression, and after the defection in 1936 of a group of unions who left to form a new Canadian Federation of Labour, saw new hope for its policy of industrial unionism. It joined with the CIO unions in 1940 to form the Canadian Congress of Labour.

Labour Unity

In the early 1950s, sentiment favouring labour unity grew in both the TLC and the CCL, and at a joint convention in Toronto in April 1956, the two organizations merged to form the Canadian Labour Congress. The merger convention was the largest-ever labour gathering in Canada to that time (L.G. 1956, p. 634) with 1,619 delegates representing 1,380 organizations and more than one million members. The convention invited the Canadian and Catholic Confederation of Labour to join the merged federation, but the invitation has never been accepted.

The CCCL, a forerunner of the Confederation of National Trade Unions, Canada's other central labour organization, had its beginning in a lockout of boot and shoe workers in Quebec City in 1900; all 22 members of a recently organized employers' association had locked out their workers after employees of one member had gone on strike. The award of the Archbishop of Quebec, appointed to arbitrate the dispute, was in accordance with the directives contained in Pope Leo XIII's 1891 encyclical, *Rerum Novarum*. One of the principles set forth in the encyclical was that the Church must give moral guidance to workers in their attempts to gain economic improvements, and the Archbishop recommended, and the unions accepted the appointment of chaplains.

But not until 1912 was a purely Catholic union set up, among pulp and paper workers. Soon others followed, and in 1918, these *syndicats* united under the name National Central Trades Council. Conventions were held in 1918, 1919 and 1920. At the 1921 convention in Hull, the Canadian and Catholic Confederation of Labour was formed. The CCCL was organized mainly on craft lines, but in some cases, as among asbestos and clothing workers, organization was along industrial lines.

After World War II, the CCCL shared in organized labour's membership gains, and at the same time underwent significant changes in policy and viewpoint. For a time in the late 1950s it appeared that merger with the CLC might take place. But it has not yet come to pass. At its 1960 convention the CCCL changed its name to Confederation of National Trade Unions, and adopted a new statement of principles that contained no allusion to the social doctrine of the Church—merely a reference to adherence to "Christian principles" (L.G. 1960, p. 1264).

In this year of Canada's Centennial, about 85 per cent of all union members in Canada are in unions affiliated with one of the two central labour organizations; the CLC has about 74 per cent, the CNTU about 11 per cent. Of the remaining members, about 1 per cent are in unions affiliated with the AFL-CIO only, about 7 per cent in unaffiliated international unions, and about 7 per cent in unaffiliated national unions and independent local organizations.

The Centennial Caravan carries the message of Canada's first 100 years into the remotest corners of the country.

100 Years of Labour Legislation

Legislation prescribing minimum labour standards in Canada has been enacted almost from the start of our 100-year history. It ranges from the Trade Unions Act of 1872 to the Canada Labour Code, which was completed with the passing of the Canada Labour (Safety) Code in December 1966.

THE development of the legislative framework within which collective bargaining functions in Canada and of the legislation prescribing minimum labour standards has been under way almost from the beginning of the nation's 100-year history. It began with the Trade Unions Act of 1872, the law that bestowed legality upon trade unions.

This Act, which declared that unions were not to be regarded as criminal conspiracies subject to prosecution on the ground that they were in restraint of trade, gave unions the freedom to develop and pursue their goals. And this led to the enactment of further legislation, so that today the employer-employee relationship in most employment in Canada is carried on under a large body of labour laws that has been growing up over many years. This article is the story of that growth.

Labour Relations Acts (1) guarantee both workers and employers freedom of association and the right to organize; (2) provide for the certification of a trade union as the exclusive bargaining agent of an appropriate bargaining unit of employees of an employer; and (3) make it mandatory on both the employer and the union to negotiate with the object of reaching a collective agreement. The Acts provide also for government intervention when negotiations break down, and prohibit strikes or lockouts until the conciliation procedure is completed. Strikes or lockouts are forbidden also during the life of a collective agreement, the administration of which is left to the parties themselves.

The Conciliation Act

Government intervention in industrial disputes dates from the Conciliation Act of 1900, the law that provided for a federal Department of Labour and for publication of the LABOUR GAZETTE. This Act made government conciliation services available to the parties to a dispute. Compulsory conciliation was introduced in 1907, with the passage of the Industrial Disputes Investigation Act (L.G. 1907, p. 1108, 1147). It was this Act that introduced the prohibition of both strikes and lockouts until the legal requirements regarding conciliation had been complied with. The I.D.I. Act, which provided for the appointment of a conciliation board in labour disputes, applied at first to mines, transport, communication and public utilities, but a court decision later restricted its scope. With the aim of bringing the force of public opinion to bear on the settlement of the dispute, reports of conciliation boards were made public. This Act, and provincial laws embodying similar principles, regulated the settlement of industrial disputes until World War II.

During the war, a milestone in Canadian labour relations legislation was reached: the enactment by the federal Government of P.C. 1003, the Wartime Labour Relations Regulations. This legislation, which was influenced by the Wagner Act (National Labor Relations Act) (L.G. 1935, p. 343, 605) in the United States, guaranteed workers the right to organize, provided for compulsory collective bargaining, and set up a Labour Relations Board to determine questions of union recognition. Under wartime emergency powers, P.C. 1003 was made applicable in all provinces. After the war, when the provinces resumed their normal jurisdiction in labour matters, new legislation was enacted, by Parliament and the provincial legislatures, that embodied with certain modifications the national labour policy established during the war.

Protection of Workers

Laws designed to protect workers against the hazards of their working environment had their beginning 17 years after Confederation. In 1884 Ontario, and in 1885 Quebec enacted factory Acts; five other provinces passed similar laws before 1910. These laws not only fixed age limits for child workers, and reduced working hours of women and children, but also provided other safeguards for the health and safety of all workers in the factory. Modernized and expanded, these laws now cover many aspects of employee safety. In some provinces, general industrial safety laws have replaced the factory Acts, and most provinces now have special legislation to promote safe working conditions in the construction industry. Other legislation provides for inspection by specialized staffs of boiler, elevator, electrical, gas and oil and other types of mechanical installations.

Workers in most industries are protected against loss of earnings resulting from employment injury by workmen's compensation laws, which had their origin in Ontario in 1915, when that province enacted a law based on the report of a special commissioner, Sir William Meredith (L.G. 1965, p. 124). The Ontario Workmen's Compensation Act introduced several new principles. An injured workman's right to bring an action for damages against his employer was taken away; in return, he was made eligible for compensation, regardless of his own or his employer's negligence. Employers, instead of being personally liable for payment of compensation, were

brought under a scheme of compulsory mutual insurance in a Government-operated Accident Fund. Under this scheme, all compensation costs were to be borne by employers collectively, and claims were to be removed from the courts and decided by a largely autonomous Workmen's Compensation Board.

The Act was widely copied. The new system gradually spread throughout Canada and is now in effect in all provinces, the last to adopt it being Prince Edward Island, in 1949, and Newfoundland, in 1951.

Under workmen's compensation laws, to be entitled to benefits a workman must be employed in an industry covered by the Act at the time of the injury, although in some jurisdictions compensation is not payable for injuries lasting less than a specified number of days—the "waiting period"—and a worker may be disqualified if the injury is due to his own misconduct. Medical benefits are provided without limitation, regardless of a waiting period. Benefits for disability are based on 75 per cent of earnings, subject to an annual ceiling. Where disability is permanent, a life pension is paid, irrespective of future earnings; and where death results, fixed monthly payments are made to dependants.

Labour Standards

Most Canadian workers are subject to minimum standards of wages, hours, annual vacations and public holidays.

The process of setting minimum wage rates for workers of both sexes has covered a span of close to 50 years. Provincial regulation of minimum wages dates from the years after World War I. In response to a demand for protection of women workers against exploitation, minimum wage laws had been enacted by six provinces by 1920. Minimum rates for men, although established in British Columbia in 1925, were not fixed in most provinces until the 1930s, and in Ontario and Nova Scotia, not until the mid-1960s.

Federal responsibility to regulate working conditions in certain industries was clarified only after World War II, and the Canada Labour (Standards) Code, enacted in 1965, set the first minimum wage rate for workers in federal industries.

Workers under federal jurisdiction are entitled by law to a minimum rate of $1.25 an hour. Under provincial minimum wage laws, rates have reached or are approaching $1 an hour in most provinces.

Working Hours

Although there are many exceptions, working hours in Canada are now commonly limited to eight in a day and 40, 44 or 48 in a week; or, if limits are not imposed, payment at an overtime rate must be made for work beyond specified daily and weekly hours.

The first Hours of Work Act in Canada was passed in British Columbia in 1923; it was modelled on an International Labour Convention, and restricted hours of male as well as female workers. Alberta followed in 1936 and other provinces in the 1940s. Quebec instituted its system of regulating wages and hours through the extension of collective agreements, under the Collective Agreement Act, in 1934.

Annual vacation legislation in Canada was first enacted in Ontario in 1944. Within the next three years, five other provinces followed suit; and in the 1950s, the New Brunswick, Nova Scotia and federal legislation was enacted. A two-week vacation is the usual standard set by law, but three provinces require a one-week vacation, and Saskatchewan provides for a three-week vacation after five years of service.

Legislation requiring the observance of paid public holidays was first enacted in Saskatchewan in 1947. An increasing number of provinces now have similar legislation. Under the federal law, the Canada Labour (Standards) Code, employers must give their employees eight paid holidays a year and, with some exceptions, must pay a premium rate to an employee required to work on a holiday.

Canadian laws guaranteeing workers equality of opportunity and treatment in employment, without discrimination on account of race, colour, religion or national origin, had their beginning in the Ontario Fair Employment Practices Act of 1951. Similar laws are now in effect in most jurisdictions.

In recent years, the grounds on which discrimination is prohibited have been extended. Quebec defines "discrimination" to include any distinction based on sex, and Ontario and British Columbia forbid discrimination against older workers solely on grounds of age. Equal pay laws in nine jurisdictions prohibit discrimination solely on the basis of sex, in the wage rates paid.

Unemployment Insurance

The Unemployment Insurance Act, passed in 1940 after a constitutional amendment gave Parliament jurisdiction in this field, established a compulsory contributory unemployment insurance program, which came into effect in 1941. The program now covers about four fifths of all non-agricultural workers in Canada; and on April 1 this year, coverage was extended to paid workers in agriculture and horticulture.

The program is financed by equal contributions from employers and employees, the amount depending on the weekly wages of the employees, plus a contribution from the federal Government. To obtain benefits, an unemployed worker must have made contributions for the required number of weeks, and must show that he is available for and capable of work but enable to obtain it. Benefits, which vary with the earnings of the insured person, are payable for a period related to the length of the person's contribution record, up to a maximum of one year.

To administer the program, the Act provided for the appointment of the Unemployment Insurance Commission. The public employment offices, which had functioned under a joint federal-provincial arrangement since 1918, were replaced by a national employment service operated by the Commission. On April 1, 1965 the National Employment Service was transferred to the Canada Department of Labour, and on January 1, 1966 to the Department of Citizenship and Immigration (now the Department of Manpower and Immigration), where it became the Canada Manpower Division.

Latest Developments

The development of labour legislation in Canada continues. Another law for the protection of the worker was enacted as recently as the end of December 1966, when Parliament passed the Canada Labour (Safety) Code. The passage of this act completed the Canada Labour Code, comprising the Canada Labour (Standards) Code, the Canada Fair Employment Practices Act, the Female Employees Equal Pay Act, and the Canada Labour (Safety) Code.

And labour organizations, in their annual submissions to both federal and provincial governments, continue to press for changes in labour legislation and in its administration. In addition to improvement of the minimums set in the Canada Labour (Standards) Code, the change most strenuously sought is a curb on the use of injunctions in labour disputes.

The whole subject of labour disputes is currently being studied by two government-appointed bodies, the federal Task Force on Labour Relations, established last September in the wake of the rail strike in August (L.G., Nov. 1966, p. 631), and the Ontario Royal Commission Inquiry into Labour Disputes (L.G., Dec. 1966, p. 709).

At the end of the nation's first 100 years, that's the status of labour legislation in Canada.

Department of Labour Library

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed by making application to the Librarian, Department of Labour, Ottawa. Students must apply through the library of their institution. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the Labour Gazette.

Annual Reports

1. ATLANTIC PROVINCES ECONOMIC COUNCIL. *Annual Report for the Year ending June 30, 1966.* Halifax, 1966. Pp. 26.

2. BRITISH COLUMBIA. DEPARTMENT OF LABOUR. *Annual Report for the Year ended December 31, 1966.* [Victoria ? 1967]. Pp. 123.

3. CANADA. DEPARTMENT OF LABOUR. ACCIDENT PREVENTION AND COMPENSATION BRANCH. *Fourteenth Annual Statistical Report of Claims for Work Injuries of Federal Public Service Employees for the Fiscal Year ending March 31, 1966.* Ottawa, 1966. Pp. 20.

4. CANADA. DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH BRANCH. *Wage Rates, Salaries and Hours of Labour. . Annual Report No. 48, October 1965.* Ottawa, Queen's Printer, 1966. Pp. 400.

Text in English and French.

5. CANADA. DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH BRANCH. *Working Conditions in Canadian Industry, 1965. Report No. 9.* Ottawa, Queen's Printer, 1966. Pp. 179.

Text in English and French.

6. CANADA. DEPARTMENT OF LABOUR. LEGISLATION BRANCH. *Labour Standards in Canada concerning Child Labour, Minimum Wages, Equal Pay for Equal Work, Hours of Work, Weekly Rest-Day, Holidays, Fair Employment Practices, Notice of Termination of Employment and Workmen's Compensation.* December 1965. [Ottawa, Queen's Printer, 1966] Pp. 73.

7. CANADIAN MARITIME COMMISSION. *Nineteenth Report, June 15, 1966, submitted under the Provisions of the Canadian Maritime Commission Act, 1947.* Ottawa, Queen's Printer, 1966. Pp. 33.

English and French text, the latter reversed with separate title page.

8. GREAT BRITAIN. SOCIAL SCIENCE RESEARCH COUNCIL. *Report, Dec. 1965/March 1966.* London, HMSO, 1966. Pp. [19].

9. MANITOBA. DEPARTMENT OF LABOUR. *Annual Report, 1966.* Winnipeg [1967 ?] Pp. 96.

10. NEW BRUNSWICK. DEPARTMENT OF LABOUR, *Annual Report for Year ending March 31st., 1966.* [Fredericton 1966 ?] Pp. 92.

11. NOVA SCOTIA. DEPARTMENT OF LABOUR. *Annual Report, Fiscal Year ending March 31, 1966.* Halifax, Queen's Printer, 1966. Pp. 70.

12. ONTARIO. DEPARTMENT OF LABOUR. *Forty-seventh Annual Report for the Fiscal Year ending March 31st, 1966.* Toronto, 1967. Pp. 68.

13. SASKATCHEWAN. DEPARTMENT OF LABOUR. *Twenty-Second Annual Report for the Twelve Months ended March 31, 1966.* [Regina, 1966] Pp. 120.

14. U.S. NATIONAL MEDIATION BOARD. *Thirty-Second Annual Report, including the Report of the National Railroad Adjustment Board for the Fiscal Year ended June 30, 1966.* Washington, GPO, 1967. Pp. 94.

15. U.S. PRESIDENT, 1963- (LYNDON B. JOHNSON). *Economic Report of the President transmitted to the Congress, January 1967; together with the Annual Report of the Council of Economic Advisers.* Washington, GPO, 1967. Pp. 314.

Automation

16. EUROPEAN CONFERENCE ON THE MANPOWER ASPECTS OF AUTOMATION AND TECHNICAL CHANGE, ZURICH, 1966. *Manpower Aspects of Automation and Technical Change: European Conference, Zurich, 1st-4th February 1966.* [*Final Report*] Paris, OECD, Manpower and Social Affairs Directorate, Social Affairs Division, 1966. Pp. 138. *Supplement to the Final Report.* Paris, OECD, 1966. Pp. 439.

"The present . . . conference . . . follows upon a North American regional conference held in Washington D.C. in December 1964 on 'The Requirements of Automated Jobs'."

The Final Report of the Conference presents a summary report, remarks by Government, university and management representatives, and conclusions of the conference. The Supplement contains papers presented at the conference. The conference "centred upon the degree of penetration of automation and new technical innovations and then upon their effects on the content and location of jobs, and finally upon preparation for work life and retraining for adults."

17. HEILBRONER, ROBERT LOUIS. *Automation in the Perspective of Long-Term Technological Change.* Washington, Dept. of Labor, Manpower Administration, 1966. Pp. 38.

"Condensed transcript of the seminar held in Washington, DC., December 16, 1965."

18. U.S. BUREAU OF LABOR STATISTICS. *Technological Trends in Major American Industries.* Washington, GPO, 1966. Pp. 269.

"[This bulletin] extends and updates the report, *Technological Trends in 36 Major American Industries*, which was issued in 1964 for the President's Advisory Committee on Labor-Management Policy.

"Major industries are covered in 40 separate reports . . . Each industry report deals with three broad aspects of change: outlook for technology and markets; manpower trends and outlook; and some issues and examples of formal and informal measures that are being used in the industry to ease the introduction of technological change."

Economic Conditions

19. EASTMAN, HARRY CLAUDE MacCOLL. *The Economic Council's Third Annual Review; An Evaluation.* Montreal, Private Planning Association of Canada, Canadian Trade Committee, 1967. Pp. 32.

20. NATIONAL INDUSTRIAL CONFERENCE BOARD. CANADIAN OFFICE. *Business Outlook in Canada, 1967, a Forum Report.* Montreal, 1966. Pp. 80.

The forum's fourth annual session on the Canadian business outlook held in Montreal on October 21, 1966.

Partial contents: United States economy. Capital spending. Government sector. Consumers' income and expenditure. Balance of international payments. Capital markets and monetary policy. Economic developments overseas.

The following seven Economic Surveys were prepared and issued by the Organization for Economic Co-operation and Development in Paris in 1966.

21. *Economic Surveys: Belgium-Luxembourg Economic Union.* October 1966. Pp. [41].

Reviews the economy of Belgium and Luxembourg in 1965 and examines the economic trends in 1966.

22. *Economic Surveys: Iceland.* December 1966. Pp. 41.

Reviews current trends in the economy and economic problems, and considers longer-term trends and problems.

23. *Economic Surveys: Netherlands.* July 1966. Pp. 54.

Contents: The wage increases of 1964 and 1965. Developments in 1964 and 1965. Early developments in 1966, prospects and policy problems.

24. *Economic Surveys: Socialist Federal Republic of Yugoslavia.* August 1966. Pp. 43.

Explains economic reforms introduced in Yugoslavia in 1965 and discusses short-term economic trends in 1965 and 1966.

25. *Economic Surveys: Switzerland.* December 1966. Pp. 37.

Examines recent economic trends and policies in Switzerland.

26. *Economic Surveys: United Kingdom.* July 1966. Pp. 37.

This survey reviews the background to the present economic difficulties, the current situation, the longer-term problem, and policy conclusions.

27. *Economic Surveys: United States.* December 1966. Pp. 47.

Examines economic conditions and the balance of payments situation.

Industrial Relations

28. BAITSELL, JOHN M. *Airline Industrial Relations, Pilots and Flight Engineers.* Boston, Division of Research, Graduate School of Business Administration, Harvard University, 1966. Pp. 398.

A study of the industrial relations system of the Air Line Pilots' Association, the Flight Engineers' International Association, and the United States scheduled airline companies. There is background information about the characteristics, history, and determinants of this industrial relations system; analyses of certain areas: compensation, scheduling, pensions, and work assignments; and ramifications of flight crew grievance handling and contract negotiating processes.

29. ECONOMIC COUNCIL OF CANADA. *Towards Better Communications Between Labour and Management.* February 1967. Ottawa, Queen's Printer, 1967. Pp. 12.

"This statement . . . sets out a number of principles which the Council believes should be accepted by both parties in order to achieve better labour-management relations in Canada."

English and French, the latter inverted and with special title page.

30. LABOUR - MANAGEMENT CONFERENCE, GUELPH, ONT., 1966. *Labour-Management Conference, Guelph, Ontario, Saturday, October 22, 1966. Conference Theme: "Preparation for Automation."* Ottawa, Labour-Management Consultation Branch, Canada Department of Labour, 1967. One volume (various pagings).

Conference sponsored by Canada Department of Labour [and others]. Three topics were discussed at this conference: automation and training, automation and social aspects, and automation and planning.

31. MORRIS, JAMES OLIVER. *Elites, Intellectuals, and Consensus: a Study of the Social Question and the Industrial Relations System in Chile.* Ithaca, N.Y., New York State School of Industrial and Labor Relations, Cornell University, 1966. Pp. 292.

A study of the development of the legal industrial relations system in Chile from 1900 to 1938.

International Labour Organization

32. INTERNATIONAL LABOUR OFFICE. *Labour Inspection on Plantations.* Third item on the agenda. Geneva, 1966. Pp. 61.

At head of title: Report 3. International Labour Organization. Committee on Work on Plantations. Fifth session, Geneva, 1966.

33. INTERNATIONAL LABOUR OFFICE. *Practical Measures to promote Good Labour-Management Relations on Plantations, with Particular Reference to: (a) Recruitment and Engagement of Workers; (b) Joint Consultation; and (c) Grievance Procedures.* Second item on the agenda. Geneva, 1966. Pp. 165.

At head of title: Report 2. International Labour Organisation. Committee on Work on Plantations. Fifth session, Geneva, 1966.

Labour Organization

34. CRISPO, JOHN H. G. *International Unionism: A Study in Canadian-American Relations.* Toronto, McGraw-Hill, 1967. Pp. 327.

"The research (for this book) was initiated and financed by the Canadian-American Committee . . ."

Contents: Introduction. Explaining the presence of international unionism in Canada. The Canadian membership within international unions. Relations between the central federations of labour in Canada and the United States. The unity and structure of the Canadian labour movement. Collective bargaining policies and practices in Canada. Policies and practices outside the area of collective bargaining. The flow of funds and benefits across the border. Employer and government attitudes towards international unionism. Summary and conclusion.

35. CRISPO, JOHN H. G. *The Role of International Unionism in Canada*. Toronto, Canadian-American Committee, 1967. Pp. 59.

"A more complete treatment of the subject has just been published in book form (*International Unionism: A Study in Canadian-American Relations*. Toronto, McGraw-Hill Co. of Canada Ltd., 1967)."

36. SCOTTON, CLIFFORD ARNOLD. *Canadian Labour and Politics: A Short History of the Development of the Canadian Labour Movement and its Relationship to and Influence on the Canadian Political Scene*. [Ottawa, Canadian Labour Congress, 1967?].

Traces the history of the participation of labour in Canadian politics from the 1870s up to the present, including an account of the formation of the Co-operative Commonwealth Federation and the New Democratic Party.

Labour Supply

37. ORGANIZATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT. *Manpower Policy and Programmes in Canada*. Paris, 1966. Pp. 160.

The examiners appointed by OECD to consider manpower and social problems, programs and policies in Canada were Professor Brinley Thomas, University of Wales, Cardiff; Mr. Marcel Graeve, Ministère du Travail, France; and Mr. Raymond D. Larson, Office of Manpower, Automation and Training, U.S. Dept. of Labour.

Contents: Pt. 1. Conclusions of the OECD Manpower and Social Policy. Pt. 2. Report by the Canadian Authorities. Pt. 3. Report by the [OECD] Examiners. Pt. 4. Replies by the Canadian Authorities to the Examiners' Questions.

38. PRINCETON MANPOWER SYMPOSIUM, PRINCETON UNIVERSITY. 2d, 1966. *Critical Issues in Employment Policy; A Report of the Princeton Manpower Symposium, May 12-13, 1966*. Edited by Frederick H. Harbison [and] Joseph D. Mooney. Princeton, N.J., Princeton University, 1966. Pp. viii, 162.

"A joint project of the Industrial Relations Section, Woodrow Wilson School of Public and International Affairs [and] The Princeton University Conference."

Partial Contents: Theory and measurement of labor shortages. Manpower policy, poverty and the state of the economy. The wage-price issue and the guideposts. Jobs for the hard-to-employ in private enterprise. Teen-age labor problems and the Neighborhood Youth Corps. Coordination among federal manpower programs.

Labouring Classes

39. BELING, WILLARD A. *Modernization and African Labor; A Tunisian Case Study*. New York, Praeger, 1965. Pp. 259.

". . . the author selected the Tunisian [labour] movement as a case study to examine the relative roles that ideology and nationalism play in the international relations of African labor." The Tunisian labour movement was a pioneer in Africa.

40. BIRCH, CECIL MACKINTOSH. *The Impact of Layoff and Recall at Ford-Windsor; An Examination of the Effect on Employees of the Ford Foundry and Engine Plants of the Reorganization of Production Facilities arising from the Canada—United States Automotive Trade Agreement*, by C. M. Birch and J. B. Gertz. Toronto, Ontario Economic Council, 1966. Pp. 37.

"A report of the Ontario Economic Council." This study describes the series of events connected with the layoff and recall of 1,302 workers at Ford Motor Company, arising from the reorganization of the engine and foundry plants in Windsor, Ontario, in June and August 1965. Information is given about the experience of the men after they were laid off.

41. CURTIS, CLARENCE HONEYWELL. *The Development and Enforcement of the Collective Agreement*. Kingston, Ont., Industrial Relations Centre, Queen's University, 1966. Pp. 115.

Contents: The development of the collective bargaining agreement. The collective agreement at common law. The collective agreement under statute law. The alternatives to arbitration. Labour arbitrations in the courts. Conclusion.

42. JAPAN INSTITUTE OF LABOUR. *Japan's Labour Statistics*. Tokyo, 1967. Pp. 178.

43. ONTARIO. DEPARTMENT OF LABOUR. *Report of a Study on the Labour Injunction in Ontario*. A. W. R. Carrothers, editor and director of the study; E. E. Palmer, deputy director of the study. [Toronto, 1966] 2 volumes (769 p.)

Contents: v. 1. The Labour Injunction in Ontario: Procedures and Practice [by] Horace Krever. The Labour Injunction in Ontario: Juridical Data, 1958-1966. [by] E. E. Palmer. Industrial Conflict in Ontario: 1958-1965 [by] Research Branch, Ontario Department of Labour. v. 2. Labour News, September 1965 to September 1966 [by] M. T. Mollison. Strike Law and the Labour Injunction: the British Experience: 1850-1966 [by] K. W. Wedderburn. Restraints on Trade Union Activity in Australia [by] H. J. Glasbeek. Labor Injunction in the United States [by] Benjamin Aaron.

44. PAKISTAN. LAWS, STATUTES, ETC. *Labour Laws in East Pakistan (enacted in 1965)*. Karachi, Bureau of Labour Publications, 1966. Pp. 122.

45. U.S. BUREAU OF LABOR STATISTICS. *Private Pension Plan Benefits*. Washington, GPO, 1966. Pp. 104.

"A private pension plan, as defined for this study, is a plan established by an employer, union, or both, that provides a cash income for life for qualified retired workers."

Information in the report is based on a study of nearly 16,000 plans.

46. U.S. OFFICE OF MANPOWER, AUTOMATION AND TRAINING. *Oak Glen—a Training Camp for Unemployed Youth*. Washington, GPO, 1966. Pp. 69.

"The monograph relies heavily on excerpts from a detailed report prepared by the Stanford Research Institute for the Office of Manpower Policy Evaluation and Research in the Department of Labor's Manpower Administration."

Describes and evaluates a training camp for unemployed young men near Riverside, California. Examines the experience of trainees after they left the camp to determine their success in getting jobs. The camp prepared young men 16 to 21 years of age for jobs as forestry trainees and for occupations related to camp operations, such as cooks and laundry workers. Educational courses were available. The course lasted six months but could be extended to one year.

47. VAID, KANWAL, N. *Contract Labour in Manufacturing Industries; A Report and An Analysis*. New Delhi, Shriram Center Press, 1966. Pp. 93.

A survey of prevailing contract labour practices in the sugar, textile, and engineering industries in India.

48. WISCONSIN. UNIVERSITY. INDUSTRIAL RELATIONS RESEARCH INSTITUTE. *State Labor and Social Legislation: A Symposium in Honor of Elizabeth Brandeis Raushenbush, May 20, 1966.* Madison, c1966. Pp. 112.

The symposium was sponsored by the Department of Economics and the Industrial Relations Research Institute of the University of Wisconsin.

The Industrial Relations Research Institute and the Department of Economics of the University of Wisconsin sponsored this symposium to honour Professor Elizabeth Brandeis Raushenbush who retired after serving more than 40 years as a faculty member in the Department of Economics. Some of the topics discussed in the symposium were State Unemployment Insurance, Workmen's Compensation, and Labour Legislation.

Management

49. ADELL, BERNARD L. *Employer "Free Speech" in the United States and Canada.* Kingston, Ont., Industrial Relations Centre, Queen's University, 1966. Pp. 38. "Reprinted from the Alberta Law Review [1965]."

50. DYER, FREDERICK CHARLES. *Bureaucracy vs. Creativity*, by Frederick C. Dyer and John M. Dyer. Coral Gables, University of Miami Press, 1965. Pp. 153.

Contents: Who speaks for leadership? Customer-centered vs. bureaucrat-centered organizations. What the experts say about bureaucratic people. Custodial leadership vs. creative leadership. What experts say about creativity and creative people. The chain of command: golden thread or anchor cable? Déformation professionelle: organized busy-ness vs. disorganized creativity. Four rules for minimizing the dilemma between bureaucracy and creativity. A look to the future. Institutionalizing our good intentions: recommendations.

Prices

51. INTERNATIONAL LABOUR OFFICE. *Prices, Wages, and Incomes Policies in Industrialised Market Economies*, by H. A. Turner and H. Zoetewey. Geneva, 1966. Pp. 172.

Contents: Wages and economic stability. Effects of inflation. Causes of inflation and the fixing of prices and wages. Some mechanics of inflations. Wage policy—methods and institutions. Criteria of wage adjustment in national wage policy. Some problems of national wage policy. Policy for non-wage incomes. Steps towards stability—improving wage systems.

52. ORGANIZATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT. WORKING PARTY ON COSTS OF PRODUCTION AND PRICES. *Policies for Prices, Profits and Other Non-Wage Incomes; a Report on Price Guidance and Control, Incomes Policy for Profits and Other Non-Wage Incomes.* Prepared for the Economic Policy Committee. Paris, OECD, 1964. Pp. 78.

At head of title: Second Report on Policies for Price Stability.

Describes and assesses "recent developments in governmental thinking about incomes policy and its application to profits and other non-wage incomes."

Wages And Hours

53. SWEDISH TRADE UNION CONFEDERATION. *Collective Wage Negotiations*, 1964 and 1965. Stockholm, 1965. Pp. [24].

54. U.S. BUREAU OF LABOR STATISTICS. *Salaries for Selected Occupations in Services for the Blind.* January 1966. Washington, GPO, 1966. Pp. 38.

Miscellaneous

55. ALLAN, JOHN RICHARD, Ed. *1. Altering the Tax Structure to Promote Economic Growth. 2. The Fiscal Performance of Indirect Taxation. 3. Some Aspects of a Value-Added Tax for Canada. 4.* Le jeu étatisé au Québec? 5. Revenue Productivity of the Real Property Tax (Ontario). Edited by John R. Allan and Irving J. Goffman. Toronto, Canadian Tax Foundation, c1966. Pp. 161. Queen's University. Papers in taxation and public finance, no. 3.

56. BRY, GERHARD. *The Average Workweek as an Economic Indicator.* New York, National Bureau of Economic Research, 1959; Ann Arbor, University Microfilms, 1966. Pp. 115.

"Reprinted with the permission of the National Bureau of Economic Research."

57. FONER, PHILIP SHELDON. *The Case of Joe Hill.* [1st.ed.] New York, International Publishers [1966, c1965] Pp. 127.

Joe Hill, an organizer for the Industrial Workers of the World as well as a songwriter and poet, was arrested in January, 1914 and charged with the murder of a Salt Lake City grocer and his son. He was tried, convicted and subsequently executed by firing squad in November 1915. The author, a labour historian, tells the story of Joe Hill, his trial, the defence campaign, and his execution, and outlines his reasons for believing that Joe Hill was framed.

58. KRUPP, SHERMAN ROY, Ed. *The Structure of Economic Science: Essays on Methodology.* Englewood Cliff, N.J., Prentice-Hall, 1966. Pp. vi, 282.

Contains 16 previously unpublished essays which are divided into four parts: Pt. 1. Theory and Dispute in Economics; Pt. 2. Mathematics and Observation in Economics; Pt. 3. The Boundaries of Economic Theory; Pt. 4. Value Premises in Economics.

59. REGIONAL SCIENCE ASSOCIATION. *Papers, the Philadelphia Meeting, November, 1965.* Volume 17, 1966. Edited by Morgan D. Thomas. Philadelphia, Wharton School, University of Pennsylvania, 1966. Pp. 224.

60. ROBBINS, LIONEL CHARLES. *The University in the Modern World, and Other Papers on Higher Education.* London, Macmillan; New York, St. Martin's Press, 1966. Pp. xiii, 157.

61. TORONTO. UNIVERSITY. COMMERCE CLUB. *The Commerce Journal, 1967.* [Toronto, 1967] Pp. 59. "Centennial issue."

Partial Contents: Labour Relations—Problems and Prospects, by A. Kruger. Market Research and Marketing Decisions, by N. Squirrell. Recent Developments in the Economic Organization of the Soviet Union. by Ian M. Drummond. Annual Reports and Meetings, by C. A. Ashley. The Outlook of the Commerce Student, by H. M. Cassidy. Adjustment Assistance, by V. W. Bladen. The Economist in Government, by H. I. Macdonald.

62. U.S. SMALL BUSINESS ADMINISTRATION. *Starting and Managing a Small Retail Drugstore*, by Lloyd Gladwell. Washington, GPO, 1966. Pp. 103.

Intended for the druggist planning to buy his own business, this booklet provides information about buying an established business or setting up a brand new store, where to locate, store planning and budget, whether or not to have a soda fountain, the prescription department, problems involved in stock, staff training and supervision, financial problems and handling sales.

*Revised. †Preliminary.

‡Includes post office wages and salaries. **Figures in this column are for total labour income, Canada, but are not totals of the figures in the remaining columns of this table, which do not show labour income in Agriculture, Fishing and Trapping.

NOTE: Monthly figures may not add to annual totals because of rounding.

SOURCE: *Estimates of Labour Income*, DBS.

Tables C-1, C-2, and C-4 are based on reports from employers having 20 or more employees in any month of the year; at December 1966, employers in the principal non-agricultural industries reported a total employment of 3,542,881. Table C-3 gives estimates of total employment, by industry divisions, for the provinces and Canada, derived from the survey of establishments employing 20 or more persons and from a sample survey of establishments employing less than 20 persons. Tables C-5 to C-7 are based on reports from a somewhat smaller number of firms than Tables C-1, C-2 and C-4. They relate only to wage-earners for whom statistics of hours of work are also available, whereas Tables C-1, C-2 and C-4 relate to salaried employees as well as to all wage-earners in the reporting firms.

D—Manpower Division

The re-organization of manpower activities under the Department of Manpower and Immigration has led to a number of administrative changes which have, in turn, altered the significance of D Table statistics about employment placements and unfilled job vacancies.

The result is that valid comparisons with previous periods are not possible on the basis of these statistics. Accordingly, their publication is being suspended.

New statistical series are being developed to give more significant information about persons using the services of Canada Manpower Centres. The results will be published as they become available.

E—Unemployment Insurance

Unemployment insurance statistics emanate from the operations of the Unemployment Insurance Act, and relate to persons in contact with the Unemployment Insurance Commission, either as contributors or claimants. The data are compiled in the Unemployment Insurance, Pensions and Manpower Section, DBS, from information supplied by the UIC. The source for Tables E-1 to E-4 is *The Statistical Report on the Operation of the Unemployment Insurance Act*. For further information regarding the nature of the data see Technical Note, page 404, June issue.

TABLE E-1—Estimates of the Insured Population under the Unemployment Insurance Act

Year and Month	*Total*	*Employed*	*Claimants*
1967—January	4,638,000	4,106,100	531,900
1966—December	4,633,000	4,209,600	423,400
November	4,591,000	4,324,700	266,300
October	4,521,000	4,336,700	184,300
September	4,528,000	4,363,100	164,900

Vancouver	137.5	141.2	142.5	139.8	143.2	134.0	152.4	174.1	161.8	126.4

*St. John's index on the base June 1951 = 100.

NOTE: Indexes above measure percentage changes in prices over time in each city and should not be used to compare actual levels of prices as between cities.

G—Strikes and Lockouts

Statistical information on work stoppages in Canada is compiled by the Economics and Research Branch of the Canada Department of Labour on the basis of reports from the Manpower Division, Department of Manpower and Immigration. The first three tables in this section cover strikes and lockouts that amount to ten or more man-days. The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the union directly involved in the disputes leading to the work stoppages. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included. For further notes on the series, see page 336, May issue.

TABLE G-1—Strikes and Lockouts, 1962-67

Month or Year	Strikes and Lockouts Beginning During Month or Year	Strikes and Lockouts in Existence During Month or Year: Strikes and Lockouts	Workers Involved	Duration in Man-Days: Man-Days	Duration in Man-Days: Per Cent of Estimated Working Time
1962	290	311	74,332	1,417,900	0.11
1963	318	332	83,428	917,410	0.07

AUG 2 1967

Canada Department of Labour Publications

Annual Report of the Department of Labour (Covers fiscal year ending March 31). (English or French). Cat. No. L1-1966.

Report of the Industrial Inquiry Commission on Canadian National Railways "Run-Throughs." Report of Hon. Mr. Justice Samuel Freedman, Commissioner. (English or French). Price $1.50, Cat. No. L35-965/1.

Supplements to Labour Gazette

Collective Bargaining Review. Prepared by the Collective Bargaining Section, Economics and Research Branch, Canada Department of Labour. Obtainable from the Canada Department of Labour. Free to LABOUR GAZETTE subscribers.

Reports of Boards of Conciliation established under the Industrial Relations and Disputes Investigation Act together with reasons for judgment of the Canada Labour Relations Board. Obtainable from the Canada Department of Labour. Free to LABOUR GAZETTE subscribers.

Economics and Research Branch

Labour Organizations in Canada (annual). Contains a brief commentary, the latest statistical data on union membership, and a directory of labour organizations with names of their principal officers, publications, and the geographic distribution of their local branches in Canada. (English or French). Price 50 cents, Cat. No. L2-2/1966.

Industrial and Geographical Distribution of Union Membership in Canada, 1966 (English or French). Price 15 cents, Cat. No. L31-766.

Strikes and Lockouts in Canada (annual). Furnishes a record of strikes and lockouts occurring in Canada during a year. Tables and related texts showing strikes and lockouts by years, by areas, by industries, including time lost, number of workers involved, duration, etc. Price 35 cents, Cat. No. L2-1/1965.

Wage Rates, Salaries and Hours of Labour, 1965. An annual report published in loose-leaf form and followed later by a paper-bound volume. Contains the results of an annual survey at October 1 of occupational wage rates and standard hours of work in most industries. Averages and predominant ranges of wage rates for selected occupations are tabulated separately on a regional basis for some 90 industries including logging, mining, manufacturing, construction, transportation, trade and service groups. Weekly salaries for office occupations and hourly wage rates for maintenance of service occupations and for labourer for several broad industry groups are shown, on a community basis, in 52 communities. Trends in wage rates are included in tables of index numbers by industry. First year service including attractive binder with index tabs and paper-bound volume, $9.50; service without indexed binder, $7.00; individual tables, 15 cents. Paper-bound volume, $2.50. (Bilingual). Cat. No. L2-548.

Working Conditions in Canadian Industry, 1965. Price 75 cents, Cat. No. L2-15/1965.

Répertoire de termes et expressions utilisés en relations industrielles et dans des domaines connexes. A catalogue, in French, of terms currently in use in the labour relations field. Prepared by the Economics and Research Branch. Price $4.50, Cat. No. L31-967F.

Labour-Management Research Series

Shiftwork and Shift Differentials in Canadian Manufacturing Industries. Price 35 cents, Cat. No. L2-22/2.

Vacations with Pay, 1951-61: An Examination of Vacation Practices in Canadian Industries (English or French). Price 35 cents, Cat. No. L2-22/4.

Collective Agreement Provisions in Major Manufacturing Establishments, 1964. Price 35 cents, Cat. No. L2-22/5.

96th CMA Meeting

Industry '67 — Centennial Perspective

Outgoing CMA president H. W. Joly, left, President, B. Houde and Grothé Ltée, Quebec City, receives a silver bowl from CMA president, R. A. Engholm, President, Marcotta Company of Canada, Limited, Rexdale, Ont.

— *Richard Mathews Photos*

More than 1,500 delegates attended the 96th annual general meeting of the Canadian Manufacturers' Association, held in Toronto on May 28 to 30. The theme of the meeting was "Industry '67—Centennial Perspective."

Hon. John R. Nicholson, Minister of Labour, delivered the opening address for the Industrial Relations Conference.

Other principal speakers at the conference were: H. W. Joly, CMA president; J. C. Whitelaw, CMA Executive Vice-President and General Manager; Ross Munro, Publisher, *The Canadian*, Toronto; William Ladyman, International Vice-President, International Brotherhood of Electrical Workers, Toronto; R. B. MacPherson, economist, Du Pont of Canada Limited, Montreal; Tom Kent, Deputy Minister, Department of Manpower and Immigration; D. O. Davis, Vice-President, Engineering, Dominion Foundries and Steel, Limited, Hamilton; and Prof. Eli Ginzberg, Columbia University, chairman of the U.S. national manpower committee.

The new CMA president elected for the 1967-68 term is Raymond A. Engholm, president, Macotta Company of Canada Limited, Rexdale, Ont.

Business Session

H. W. JOLY

H. W. Joly, retiring CMA president, told the general meeting that one and three-quarter million Canadians, representing the largest single segment of the national labour force, worked in manufacturing last year. "This is an addition of no less than 300,000 since 1960, and we have found these jobs in a period of rapid technological change and re-equipment at the plant and office levels."

In the same six years, he said, there was an increase in the average weekly wage in manufacturing from $72.76 to $93.08, a rise of 27.9 per cent as against a 13.0-per-cent increase in the consumer price index, and this took no account of the very considerable improvement that had occurred in fringe benefits.

The acute inflationary pressures of last year had subsided, and he predicted a marked slowdown in the rate of expansion this year. "The price of slower growth is not an excessive one to pay to curb inflation, and we can be thankful indeed that our Centennial year of 1967 will rank with the best that we have known."

But he warned the manufacturers to beware of complacency. "There is the productivity lag between ourselves and some of our major competitors, notably the United States." He referred to "the educational gap which still grows wider between our labour force and that of the United States."

Technological innovation was as necessary to improved productivity and rising living standards as capital investment, he said, but a prerequisite was a labour force that was highly skilled and adaptable.

In view of new and highly important factors in Canada's trading environment, the Association had established a special committee on adjustment assistance that would help firms and employees who might be adversely affected by the impending changes in tariff levels and anti-dumping measures.

"Many labour spokesmen know that we cannot achieve the necessary degree of productivity improvement without a pretty drastic reappraisal of the ways in which many key tasks are performed," he said. "In some cases this means no more than a streamlining of procedures or an improvement in job attitudes; in others, it may be a question of reassigning some duties and eliminating a number of jobs altogether."

He said that the responsibility lay with management. Much depended on the way in which it went about making these decisions, and there was no doubt that "the biggest challenge confronting us is that of selling labour on the imperative need to do those things that must be done."

Management could not accept the implications of the Freedman Report, he asserted. "Legislation to enact its recommendations would give unions the power to veto, or at least delay, essential technological progress and deal a serious blow to our productive capacity. No other country in the free world has contemplated hamstringing its management in such a fashion, and it is imperative that Ottawa does not make Canadian industry the guinea pig for such an experiment. Your Association will certainly continue to bend every effort to see that it does not."

But he emphasized what he believed to be the compelling obligation that rested on management to make necessary changes only after the fullest consultation and discussion with employee representatives. "It is only fair that those whose jobs will be affected by any redeployment or contraction should know about it as long in advance as humanly possible . . ."

He said that although labour and management saw weaknesses in the present collective bargaining system and would strive for changes, both must recognize that the system worked fairly well, and that it was "the very cornerstone of a way of life which has produced working conditions and a standard of living which attracts prospective immigrants from all over the world."

The CMA president said that management and labour could well spend more time reminding the public about the 95 per cent of labour agreements that were re-negotiated without any disruption of service.

In a comment on the proposals of the Carter Commission on Taxation, Mr. Joly said that the business community was exercised over "the sweeping nature of the proposals in this massive document and the cloud of additional uncertainty that overhangs business decisions."

The CMA should submit its views on the Carter Commission before final policy decisions were taken, he said, but he gave warning that government action on the report could not be unduly delayed.

J. C. WHITELAW

"During the past twelve months, we presented a number of extremely important submissions to the federal authorities," J. C. Whitelaw, Executive Vice-President and General Manager of the Association, told the meeting. "Topics ranged through labour matters relating to technological change, Bill C-231 on national transportation policy, the threatened rail strike of last summer, the inquiries of the Special Joint Committee of the Senate and House of Commons on consumer prices, and the Special Joint Committee of the Senate and House of Commons on immigration."

He said that, along with the United States and other large industrial countries, in the past year Canada had experienced a marked rise in prices and a slower rate in the growth of production. "Unquestionably Canadian industry has been harder hit by the cost-price squeeze than its major foreign competitors have, not least because of a disappointing productivity performance, coupled with substantial wage increases."

The accompanying decline in manufacturing profits, he said, was a clear indication that further deterioration of the cost structure and profit margin of Canadian manufacturers would seriously endanger the country's growth potential. "Against this background it is far from anti-labour to observe that across-the-board wage parity with the United States is a dangerous delusion. Effective parity will remain but a pipe dream until . . . output per employee in Canada reaches the level that obtains below the border. Perhaps it needs to be pointed out that it will profit our employees little to gain parity rates of pay if the consequence is our inability to employ them."

Mr. Whitelaw advised manufacturers to "somehow get it across to our labour friends" that if unit labour costs continue to rise faster than in the United States, with productivity climbing much more slowly than in American industry, employment levels and aggregate wages were going to suffer.

He said that it was necessary to make a new determination of national priorities. "In a prosperous society it is right and just that we make provision as we have done in the past for the least able in our midst. What we surely must do now, however, is resolve as a matter of national policy to give education priority over everything else. As the Economic Council of Canada has made abundantly clear, it is our educational weaknesses which threaten our future living standards and progress.

"It is not too much to say that further advances in the field of social security depend on the kind of increase in national wealth that higher educational standards and working skills alone can ensure."

Industrial Relations Conference

HON. JOHN R. NICHOLSON

"Your Association is to be congratulated for having chosen as the subject for this Conference—The Negotiated Settlement and Its Impact on Management, Labour and the Public," said Hon. John R. Nicholson, Minister of Labour, in the opening address at the CMA's industrial relations conference. Mr. Nicholson described "negotiated settlement" as an agreement through which the two parties try to share justly the economical, social and cultural benefits of the environment that they together helped to create.

He said that the great majority of Canadians were "totally uninhibited" in their thrust toward the creation of a new and vibrant society devoted to the furtherance of human ends. "This new society . . . will seek to make work more meaningful rather than merely more productive in the limited economic sense;" and this would be done, he said, through the collective bargaining machinery.

"Because of the volatile nature of our society today, . . . perhaps the only acceptable vehicle through which a proper shared balance of the general munificence can be attained, is the free collective bargaining system."

Mr. Nicholson said that negotiated settlements were surely preferable to

51st International Labour Conference

Director-General's report on the world's growing non-manual work force sets the topic for opening sessions

Hon. John R. Nicholson delivers Canada's reply to the report

Delegates to the 51st conference of the International Labour Organization, which opened June 7, faced questions that included the future role of non-manual occupations, the improvement of the lives of two fifths of the world's agricultural population, technical co-operation to developing countries, and the role of the International Labour Organization in industrialization and social progress.

This year, the report of ILO Director-General David A. Morse to the conference examined the contribution that non-manual activities make to social and economic advance in both developed and developing countries. His report highlights the way in which the ILO can aid today's growing swing towards employment in non-manual occupations throughout the world. In addition, the report covered the activities of the ILO during 1966.

The improvement of conditions of life and work of tenants, share-croppers and similar categories of agricultural workers was discussed by the conference for the first time. Although the ILO has already discussed landworkers' problems and the need for agrarian reform, it was the first time that working and living conditions of cultivators who are not wage-earners, and not owners of the land they work, have been separately examined by the ILO conference.

Exchange of Views

"The ILO and Technical Co-operation," including the role of the ILO in the industrialization of developing countries, served as a theme for an exchange of views by delegates so that the conference helped to point the way to fresh solutions. In almost all developing countries the ILO has been collaborating with governments for many years in running various technical co-operation projects, including its own and those of what is now the United Nations Development Program.

A draft Convention and draft Recommendation to regulate the maximum permissible weight to be carried by one worker was before the conference for a decision on the adoption of a draft Convention and Recommendation to regulate such maximum loads.

The revision of Conventions concerning old-age, invalidity and survivors' pensions, and examinations of grievances and communications within the undertaking, both appeared on the agenda for the second successive year for the final adoption of international instruments.

The conference also had before it a third special report on the *apartheid* policy of the Republic of South Africa, submitted by the ILO Director-General, pursuant to the Declaration concerning *apartheid* first adopted by the conference in 1964.

Conference President

The session opened at the Palais des Nations in Geneva with the unanimous election of Getahoun Tesemma, Minister of National Community Development and Social Affairs of Ethiopia, as president of the conference.

Ambassador Morio Aoki, the permanent delegate of Japan accredited to the ILO in Geneva, opened the session as chairman of the ILO Governing Body.

Ambassador Aoki said the review about to be undertaken of the role of the ILO in industrialization would facilitate and provide additional opportunities for full collaboration with the recently created United Nations Industrial Development Organization and other United Nations organs, as well as with international organizations, world-wide and regional, in this field.

Ambassador Aoki then quoted the unanimous conclusions of the Governing Body Working Party on the programme and structure of the ILO: "In periods of acute political tension, the ILO has a two-fold responsibility: to uphold the values of human freedom and dignity enshrined in its Constitution; and to circumscribe, rather than extend, the area of international tension by ensuring the fullest possible degree of continued co-operation in pursuit of the objectives of the ILO."

President's Address

In his inaugural address, the president of the conference pointed out how ILO membership has grown from 115 in 1966 to a current 119. He said: "The increase in membership is statistically insignificant . . . It is, [however], a victory for those who have liberated themselves from the forces of various forms of oppressions and have taken their rightful place in the ILO to enjoy social justice and equality, which they never had in the past."

Mr. Tesemma emphasized: "We should endeavour with all the good intentions at our disposal to equip the ILO properly so that it can meet boldly the multifarious tasks that it is expected to accomplish."

Of the 119 ILO member countries, 109 were represented at the opening sitting of the conference. Each national delegation consists of two government delegates, one employers delegate and one workers delegate, as well as several technical advisers.

Director-General's Report

The report of the ILO Director-General, David A. Morse, on the world's growing non-manual work force provided the basis for discussion for the opening sessions. The report is titled "Non-Manual Workers: Problems and Prospects."

The report deals with the broad category of non-manual workers defined as professional, technical, administrative, managerial, clerical, and sales and service workers. At present, their ranks are increasing steadily everywhere. In Canada and the United States, they account for some 50 per cent of the working population. In developing countries, in many cases, they are still a relatively small minority as compared with the very large agricultural population and the emerging industrial labour force.

Generally, the level of education and qualifications of an increasing number of non-manual workers is rising. The report points out how it has become a matter of urgency to determine the key occupational categories in various sectors of economic activity, and to forecast future needs and resources accurately in each type and level of qualification within each category. Changes that have taken place in the last decades in non-manual employment, however, have in general been so rapid and unexpected that machinery for matching the supply of manpower to demand have rarely succeeded in keeping pace with them. Many imbalances of unemployment, underemployment and stresses with occupations exist on the employment market throughout the world.

Canadian delegation, left to right: First row: C. B. C. Scott, Saul F. Rae, George V. Haythorne, Joseph Morris. Second row: Herbert Flesher, Pierre Vadboncoeur, Bernard Wilson, F. A. Armstrong, John Mainwaring, J. A. Beesley. Third row: L. R. Peterson, QC, Miss Joyce Hagan, Guy de Merlis, G. H. Paquette, William H. Wightman, J. E. E. Osborne, James Perna, Mrs. E. Sufrin. Fourth row: R. E. Wilkes, J. K. Wanczychi, G. A. Plante, H. L. Wallis, J. P. Fournier, A. L. Hepworth. Fifth row: K. A. Pugh, Louis H. Lorrain, Jacques Corbeil, W. J. McNally, Leonard Houzer. Absent when the photograph was taken were: R. M. Drennan, Hon. John R. Nicholson, Robert Andras, Bryce Mackasey, André Saumier, T. M. Eberlee.

Maintain Vigilance

The report states that, although many of the unemployment fears caused by change, especially by automation, have been found to be baseless in many industrialized countries, it would be unwise for governments to relax their vigilance. In order to overcome the "brain-drain", developing countries may soon be faced with the need to create employment in order to keep scarce non-manual staff who would otherwise emigrate, as well as to encourage others to return home. The report suggests possible steps to provide educated unemployed workers with suitable work within rural development programs and other projects.

Jobs call for a certain degree of social organization. Non-manual workers are the principal element in such social organization, a term which embraces private institutions, official services, trade unions, occupational associations, and appropriate patterns of organization of production. Co-operative patterns of organization often require consideration when countries review the institutional support needed for development projects and the creation of productive employment.

As economic and social development calls for more non-manual workers, educational and vocational preparation must be made available to broader groups of the population. The report suggests that wider access to education would ensure the creation of educational facilities to guide individuals toward the sectors or occupations most affected by manpower shortages. This would include measures aimed at permitting workers and students to be trained or to receive additional training.

Social Origin

The report notes that social origin still influences opportunities to acquire the education for higher-level, non-manual occupations and recalls that equality of opportunity and free choice of employment are one of the main objectives of employment policy. Nevertheless, the report says, there is increasing awareness of the importance of equality of opportunity as a means to promote the better utilization of manpower in industrialized countries.

One of the most pronounced trends regarding vocational preparation at present is the growth of the idea that any system of preparation for, and adjustment to, vocational life should be flexible and related to development needs. Some special problems arise in connection with the vocational preparation of rural non-manual workers. In the rural sector of an overwhelming majority of countries, part of the working population will inevitably leave the land.

The report notes that different types of incentives, applied in conjunction with appropriate educational, training and employment policies, may be indispensable to overcome imbalances. Monetary incentives alone are not enough. Appropriate stimuli applied through taxation, career prospects, selection and recruitment procedures, industrial relations, fringe benefits, employment security and improvement of working conditions, are important elements of an overall incentives policy.

In most developing countries, the crucial factor limiting the supply of high- and middle-level manpower is the inadequacy of the educational system. The scope for adjusting income differentials appears to be greatest when prevailing higher educational preferences of secondary school graduates diverge widely from development priorities. The inability of the public sector in many countries to compete with the private sector for high-level technical and professional workers poses another problem of skill allocation. This imbalance of skills hampers the improvement of public administration.

Meanwhile, the ILO is drawing up human resources policies suited to the needs of economically less advanced countries. The report stresses the need to

bring out the importance of certain categories of non-manual professions for human resources policy. It suggests that the conference might deal with problems arising in sectors that support and complement industrialization effects and study non-manual professions that play, or should play, a dominant role in rural and regional development.

John R. Nicholson

In his discussion of the Director-General's report, Hon. John R. Nicholson, the Canadian government delegate, congratulated Mr. Tesemma on his election as president of the conference. He recalled the honour of his service as president of the Eighth Conference of American States Members of the ILO, held last autumn in Ottawa (L.G., Nov. 1966, p. 634).

Mr. Nicholson commented that the report had special significance in Canada, where 40 per cent of the work force was made up of white-collar workers. He remarked that Canadian white-collar workers are seeking ways and means of protecting themselves against adverse technological and other changes. "An important and relatively new development in Canada has been an increase in collective bargaining activity among white-collar workers," he said.

"There has been some debate in Canada whether legislation may be necessary to establish rules for adjustment of technological change. So far, no clear consensus has emerged. But there have been some valuable developments in collective bargaining of late, and it may well be that the process of adjustment to change will develop in this way effectively without the need of legislation, or at least with a minimum of legislation."

The Minister described briefly the role of the Canadian Government's task force (L.G., Jan. 1966, p. 14) which is examining the industrial relations system in Canada in depth. "It is mobilizing the most comprehensive industrial relations research program ever undertaken in Canada," he said. "In the course of its work, the task force will visit the ILO in Geneva later this summer, and will draw on the broad experience of the ILO."

Mr. Nicholson said that the Canada Department of Labour has a vital role to play in a society dedicated to economic growth and to raising standards of living. "Departments of Labour have a special responsibility in government circles to reflect the aspirations of working people," he said, "but they cannot and will not fulfil that responsibility unless they can demonstrate the economic as well as the social desirability of the work that they are performing."

The Canadian Delegation

Government Delegation

Head of the Delegation and Government Delegate: Hon. John R. Nicholson, P.C., O.B.E., Q.C., M.P., Minister of Labour; Provincial Minister Accompanying the Delegation: Hon. L. R. Peterson, Q.C., Minister of Labour, Province of British Columbia, Victoria; Members of Parliament Accompanying the Delegation: Robert Andras and Bryce Mackasey, Parliamentary Secretary to the Minister of Labour; Government Delegate: G. V. Haythorne, Deputy Minister of Labour, Ottawa; Substitute Government Delegates: John Mainwaring, Director, International Labour Affairs Branch, Department of Labour, Ottawa; Saul F. Rae, Permanent Representative and Ambassador of Canada to the European Office of the United Nations, Geneva; André Saumier, Assistant Deputy Minister, Department of Forestry & Rural Development, Ottawa; Bernard Wilson, Assistant Deputy Minister, Department of Labour, Ottawa.

Government Advisers

J. A. Beesley, First Secretary and Consul, Canadian Permanent Mission, Geneva; Jacques Corbeil, Third Secretary and Vice-Consul, Canadian Permanent Mission, Geneva; Guy de Merlis, Labour Attaché, Canadian Embassy, Brussels; T. M. Eberlee, Deputy Minister, Department of Labour, Province of Ontario, Toronto; J. P. Fournier, Deputy Director, Advisers Division, External Aid Office, Ottawa; Leonard Houzer, First Secretary, Canadian Permanent Mission, Geneva; J. E. E. Osborne, Director of Research and Statistics, Department of National Health and Welfare, Ottawa; G. A. Plante, Assistant Director, Special Services Branch, Department of Labour, Ottawa (secretary of the delegation); K. A. Pugh, Deputy Minister, Department of Labour, Province of Alberta, Edmonton; J. K. Wanczycki, Legislation Branch, Department of Labour, Ottawa; Assistant Secretary (stenographer), Miss A. J. Hagan, Deputy Minister's Office, Department of Labour, Ottawa.

Employer Delegation

Employer Delegate: C. B. C. Scott, Assistant General Manager (Personnel), Hydro-Electric Power Commission of Ontario, Toronto, (nominated by the Canadian Manufacturers' Association); Employer Advisers: R. M. Drennan, Manager, Employee Relations, Cyanamid of Canada Limited, Montreal (nominated by the Canadian Chamber of Commerce); W. J. McNally, Policy Department, Canadian Chamber of Commerce, Montreal (nominated by the Canadian Employers' Committee on the ILO); G. H. Paquette, Industrial Relations Manager, Imperial Tobacco Company of Canada Ltd., Montreal (nominated by the Canadian Manufacturers' Association); H. L. Wallis, Manager, Industrial Relations, E. G. M. Cape and Company Ltd., Montreal (nominated by the Canadian Construction Association); William H. Wightman, Manager, Industrial Relations Department, Canadian Manufacturers' Association, Toronto (nominated by the Canadian Employers' Committee on the ILO); R. E. Wilkes, General Secretary, The Railway Association of Canada, Montreal (nominated by the Railway Association of Canada).

Worker Delegation

Joseph Morris, Executive Vice-President, Canadian Labour Congress, Ottawa (nominated by the Canadian Labour Congress); Worker Advisers: F. A. Armstrong, Vice-President, Brotherhood of Railway Carmen of America, St. Vital, Manitoba (nominated by the Canadian Railway Labour Executives' Association); Herbert Flesher, International Vice-President, International Hod Carriers' Building and Common Laborers' Union of America (AFL-CI0/CLC), Vancouver (nominated by the Canadian Labour Congress); A. L. Hepworth, Director, International Affairs Department, Canadian Labour Congress, Ottawa (nominated by the Canadian Labour Congress); Louis H. Lorrain, First Vice-President, International Brotherhood of Pulp, Sulphite and Paper Mill Workers, Montreal (nominated by the Canadian Labour Congress); James Perna, Canadian Director, United Glass and Ceramic Workers of North America, Toronto (nominated by the Canadian Labour Congress); Adrien Plourde, *Président, La Fédération nationale de la métallurgie*, Arvida, Quebec (nominated by the Confederation of National Trade Unions).

Racial Discrimination in Britain

Conference delegates included, left to right: Bayard Rustin, Executive Director, A. Philip Randolph Institute; George G. Blackburn, Director, Fair Employment Practices Branch, Canada Department of Labour; Miss Nadine Peppard, General Secretary, National Committee for Commonwealth Immigrants; and Dr. A. M. Ramsey, Archbishop of Canterbury, Chairman.

"Racial Equality in Employment" in Britain was the theme of a two-day conference in London last February. The need for fair employment practices legislation was discussed by groups opposing discrimination in employment procedures and by employers and union representatives favouring a "voluntary system."

The conference was arranged by the National Committee for Commonwealth Immigrants, and was supported by the Race Relations Board of Britain. It gathered delegates from Britain, United States and Canada to consider the question "Should Britain introduce fair employment practices legislation?"

The representatives from Canada and United States were asked specifically to discuss the effectiveness of law in relation to discrimination, and the experience of their Governments in this matter. The Canadian representatives were George G. Blackburn, Director, Fair Employment Practices Branch, Canada Department of Labour (L.G., April, p. 226), and Dr. Dan Hill, Director, Ontario Human Rights Commission. The representatives invited from the United States were Ben D. Segal, Director of Liaison, Equal Employment Opportunity Commission; Joseph L. Rauh, Jr., civil rights lawyer and General Counsel, United Auto Workers; Bayard Rustin, Executive Director, A. Philip Randolph Institute; and Victor G. Reuther, Director, International Affairs Department, United Auto Workers.

To Promote Equality

The National Committee for Commonwealth Immigrants was set up with Dr. A. M. Ramsey, Archbishop of Canterbury, as chairman. The purpose of the committee is to examine governmental policies, both central and local, and to make proposals that will promote equality. It attempts to help newcomers settle into an alien and sometimes hostile society, and to educate the host community away from prejudices. It watches also for injustices in the area of racial discrimination and takes action against them. Advisory panels of experts meet monthly to examine the problems and recommendations of the committee.

The Race Relations Board of Britain was established by the Government to administer the Race Relations Act of 1965, concerning discrimination in public places. The chairman of the Board is Mark Bonham Carter.

The two groups work in close-co-operation and, during the past year, they have investigated problems concerning racial discrimination. They produced a report, titled *Racial Discrimination*, which was published last April by Political and Economic Planning, a research agency in Britain.

During the conference, the American speakers supported a suggestion recommending fair employment practices legislation. They were strongly supported by the British speakers. During the smaller group discussions, however, some employers and union representatives expressed serious doubts as to the need and effectiveness of such legislation, and they argued in favour of a "voluntary system."

Although no resolutions were passed at the conference, the subject was of great interest to those groups that would likely be concerned in the future with the passing of such legislation. Several union representatives indicated that they would support the case for the legislation if it were properly presented. Mr. Blackburn, of the Canada Department of Labour, gave the concluding address, in which he summed up the thinking of the speakers at the conference.

The British research agency, Political and Economic Planning, has released a report titled *Racial Discrimination*, which presents the findings of a series of related studies of a survey concerning racial prejudice against recent immigrants to Britain.

The objective of the survey was to assess the extent of discrimination against Commonwealth immigrants in Britain. Although almost any reliable information related to the life experience of immigrants could be of potential value, the particular

50 Years ago

After a successful strike by Vancouver firemen for one day's rest in four, the LABOUR GAZETTE publishes an article on the two-platoon system in fire departments. Report of an investigation into the cold storage business.

In connection with a successful strike by Vancouver firemen for one day's rest in four in July 1917, the LABOUR GAZETTE for August of that year published a short article on "The Two-Platoon System in Fire Departments."

At that time this system was in force in 35 municipalities in the United States, but it had not been adopted anywhere in Canada. The Winnipeg Fire Department made a request for it in April 1917, and the city fire committee agreed that the system offered advantages; but it objected to the increased cost involved, and a compromise was arranged by allowing the men one full day off in every four. This necessitated an increase in the strength of the brigade.

"Where the two-platoon plan is in operation, the men usually work in two shifts, one of 10 hours from 8 a.m. to 6 p.m., without any time off for meals; and a night shift of 14 hours from 6 p.m. to 8 a.m., the men on the respective shifts alternating at regular intervals. In case of fire at the changing hour, the men coming on relieve the men at work, but if the conflagration is serious, the men off duty are required to respond without extra pay."

Fire chiefs in some of the municipalities in the United States that had adopted the system spoke favourably of the plan, "stating that it has resulted in better service, efficiency and health. The following quotation from a statement by the fire chief of Butte, Mon., will be of interest:

". . . The system has proven itself eminently satisfactory in every respect; about 18 per cent increase in men and expense; morals of the men better, more harmony, living conditions are better, less infraction of rules than ever before, and more interest in work is taken. Through our methods of inspection, made possible by the two-platoon system, the fire loss has decreased.

"While the majority of opinion would seem to be greatly in favour of the two-platoon system, it is not unanimous. The chief objection to the plan seems to be increased expense, though some fire chiefs claim also that it is subversive of discipline. The fire chief of New York City, for instance, says:

"I have always opposed the two-platoon system for the reason, firstly, that I consider it absolutely subversive of discipline; secondly, because it entails a greater expense without the compensating advantage of increased efficiency. The two-platoon system brings the men in the fire department down to a mechanical working basis . . . . Furthermore, under a two-platoon system the men are inclined to spend their days off duty in attending to their own business, coming back tired and fagged out to bunk in the engine house for the night; under such conditions the fire business soon becomes a secondary occupation.

" 'Give the men a day off in five, a day off in four, or even a day off in three, but never allow them to get you in a position where they are controlled by a labour organization and ready to demand pay for overtime as they did in Kansas City. A fireman's day is 24 hours; he is not working, he is waiting. The business demands eternal vigilance; it is only those who adhere to the principle of eternal vigilance who can properly guard the lives and property of the people of the city that employs them.'

"Numerous fire brigades in the United States and a few in Canada are now organized as labour unions. There are in the two countries 23 brigades organized as unions under charter from the American Federation of Labor, one being the Vancouver brigade. Of the 23 unionized brigades, eight work under the two-platoon system. The Winnipeg brigade is organized under the Dominion Trades and Labour Congress, and fire departments in some other Canadian cities are in process of organization as labour bodies.

"It is of interest to note that when the members of the Boston, Mass., fire department were organized, the organizer stated that the charter granted by the Federation prohibited strikes and that the Federation would not support members who took advantage of their connection with the union to violate rules of the department."

* * *

A report of an investigation into the business of cold storage in Canada was submitted to the Minister of Labour by the Acting Commissioner *re* cost of living in July 1917. The object of the investigation was to discover whether there was any illegal combination, undue accumulation or overcharging among those engaged in the cold storage business in Canada, in contravention of an order in council issued in November 1916 (L. G., Dec. 1966, p. 707).

The Acting Commissioner found that there was no "trust," and he did not discover any instance of the destruction of food fit for consumption. "There was nothing like combination among the various companies, but very lively competition instead," this journal for August 1917 said in a summary of the report. "A few of the cold storage firms, however, had attained such dimensions and had so centralized their business in certain lines that, in respect to particular commodities, they were able to exercise a practical monopoly, especially of export business. There was no evidence of over-accumulation. Immense amounts of products were bought, but as the world was bidding high for food, and the opportunity of selling at profit was not being overlooked, they were not carried for long.

"The report states that the cold storage companies of Canada, including abattoir houses, control about half the meat which is killed in Canada and about one fifth of the total quantity of eggs produced in Canada, more than one third of the cheese and about one fifth of the butter; that is, approximately these proportions of the total products of Canada in each of these commodities pass through cold storage in their transit from producer to consumer. It is not all the property at any given time of cold storage companies, but is either owned by them or stored on their premises.

"There are about 110 cold storage warehouses, operated by 76 different companies, two being American-owned. Seven operate one establishment only. Five are large export houses . . . . "

News Briefs

Amalgamation of unions proposed by CUPE

A long-term goal of amalgamating more than 100 existing Canadian unions into 10 national industrial unions was proposed to the Canadian Labour Congress, in a brief submitted in May by one of its affiliates, the 105,000-member Canadian Union of Public Employees.

The 40-page brief to the Congress's Commission on Constitution and Structure said that fragmentation into many unions was a basic fault of the Canadian labour movement, and that some international unions limited their Canadian members' autonomy in matters that were purely Canadian.

"We suggest that the long-term objective of the Congress should be the creation of 10 industrial-type unions on a Canadian basis. These would range in membership from 25,000 to 300,000. Any union with less than 25,000 members cannot effectively operate on an all-Canadian basis."

The brief asked also that union members with grievances against their unions be allowed to appeal to the CLC. If the union was found to be delinquent, but refused to rectify the grievance, the unhappy members should be allowed to switch union allegiance, the brief contended.

CUPE recommended a complete reorganizing of the CLC structure to eliminate the system of "too many chiefs and too few Indians." It asked the CLC also to seek a more friendly working relationship with the Confederation of National Trade Unions. "The time has come for renewed efforts to find a common ground between the two centres with the object of creating one central body."

CUPE is the first union to make public its submission to the CLC Commission.

Little calls for change in labour relations techniques

Union and management leaders must strive for a "more sophisticated and technical approach to the whole problem of industrial relations," Stanley Little, national president of the Canadian Union of Public Employees (CLC), told the annual convention of the union's Ontario division held in London, Ont.

"We—both employers and employees—must never fool ourselves into believing we have reached the ultimate in collective bargaining," he said. Although management and labour might never agree on their share of the economic pie, they could agree on a more effective and sensible way of settling differences. "The distressing alternative is to stick with the disruptive and chaotic methods now employed."

Union leaders who do not try to establish a rapport with management are harming their cause, he averred. "If some other method is not found, we will find ourselves shackled with compulsory arbitration."

Three Canadian girls win union scholarships

Three Canadian girls, all daughters of members of the International Brotherhood of Pulp, Sulphite and Paper Mill Workers (AFL-CIO/CLC), were among the ten winners of the 1967 John P. Burke Scholarships, donated by the union. Each will receive $1,000.

The three are: Louise Nadon, Temiscaming, Que.; Carol McIver, Campbell River, B.C.; and Susan Harty, Vickers Heights, Ont.

The announcement of the awards was made by President-Secretary Josph P. Tonelli.

New Bulletin issued on labour standards

Publication of a second edition of *Labour Standards in Canada* has been announced by the Canada Department of Labour. This bulletin, which is issued annually, has replaced the former annual *Provincial Labour Standards*.

The bulletin sets out the standards that are in effect under federal and provincial labour laws regarding child labour, minimum wages, equal pay for equal work, hours of work, weekly rest day, annual vacations with pay, public holidays, fair employment practices, notice of termination of employment, maternity protection (a new section this year) and workmen's compensation. The standards set by labour ordinances of the Yukon and Northwest Territories are also included.

The bulletin may be obtained from the Queen's Printer (Catalogue No. L2-7/1966) at 75 cents a copy.

Union-Management Council established in Ontario

An official labour-management body, the Union-Management Council, has been established by the Ontario Labour Department to explore and find solutions to mutual problems in the field of labour-management relations. Ontario Labour Minister Dalton Bales made the announcement in April, and named Dr. John Crispo, Director of the Centre for Industrial Relations, University of Toronto, as chairman.

The council emerged from an informal labour-management committee set up more than a year ago by Hon. Leslie Rowntree, former provincial Minister of Labour. The committee at the time consisted of a group of labour and business leaders under the chairmanship of Dr. H. D. Woods, dean of the faculty of Arts and Science at McGill University.

Representing labour were: David Archer, President of the Ontario Federation of Labour; William Ladyman, Vice-President of the International Brotherhood of Electrical Workers; Larry Sefton, Director of the United Steelworkers of America, District 6; and Russell Harvey, Office Employees' International Union, now deceased.

Management was represented by: H. J. Clawson, Vice-President of the Steel Co. of Canada Ltd.; J. H. Smith, President of the Canadian General Electric Company; J. A. Belford, Vice-President of Massey-Ferguson Ltd.; and R. P. Armstrong, who was then with the Foundation Co. of Canada Ltd. Michael Warren, Ontario Department of Labour, acted as secretary.

Frank Hall retires from negotiating committee

Frank H. Hall, 74, announced in June his retirement as associate chairman of the negotiating committee for 100,000 non-operating railway workers in Canada. For the past 18 months, Mr. Hall has served as adviser to the committee, following his retirement in October 1965, after serving for 20 years as chief negotiator for the non-operating employees (L.G. 1965, p. 1016).

Mr. Hall has also relinquished his post as Canadian executive assistant to the international president of the Brotherhood of Railway and Steamships Clerks.

Honorary appointment for Horace Pettigrove

Horace R. Pettigrove, industrial relations officer in Fredericton of the Canada Department of Labour since 1942, was recently appointed an honorary research associate in the School of Graduate Studies of the University of New Brunswick.

The function of honorary associates in the School of Graduate Studies is to provide closer association between university personnel and senior research officers employed by government agencies. It is proposed that the associates shall take part in the graduate program by being members of a graduate students supervisory committee; by giving courses of instruction for graduate students, and by participating in, among other things, graduate seminars and symposia.

Mr. Pettigrove was appointed fair wage officer for the province of New Brunswick in 1936, becoming the first full-time official on the staff of the Labour Division of the Department of Health and Labour. As fair wage officer he administered the province's industrial standards legislation. In 1941, he was appointed Director of the Labour Division.

After being appointed to the federal Department of Labour in 1942, he served as president of the Canadian Association of Administrators of Labour Legislation in 1943. In 1946, he was appointed Deputy Steel Controller under the War Measures Act during a strike at the Dominion Steel and Coal Company plant in Sydney, N.S. During the past 25 years, he has served as conciliator in a number of important labour disputes in the Maritimes and in the railway and shipping industries. In 1949, he headed the Canadian delegation to a conference of the ILO Coal Committee in Pittsburgh; and in 1955, he led the Canadian delegation to a conference of the ILO Textile Committee in Geneva.

Provisions broadened for equal pay in N.S.

The 1963 Nova Scotia Human Rights Act provided that: "No employer and no person acting on his behalf shall pay a female employee at a rate of pay less than the rate of pay paid to a male employee employed by him for the same work done in the same establishment."

The 1967 Session of the Legislature passed an amendment inserting the word "substantially" immediately after the word "for." The amendment was introduced as a result of complaints that employers were circumventing the law by maintaining that the work was nearly, but not quite "the same."

Bill C-278 to provide for the training of adults (L.G., May, p. 297) was given second reading on April 25 (*Hansard* p. 15346) and third reading on April 26 (p. 15424). The bill received the Royal Assent on May 8 (p. 15526).

The first session of the 27th Parliament was prorogued by the Deputy Governor General on May 8 (p. 15526) and the second session of the same Parliament was opened by the Governor General later on the same day (p. 1).

The Budget

In presenting the budget on June 1 (*Hansard* p. 855), Hon. Mitchell Sharp, Minister of Finance, referred to an easing of monetary and credit conditions made possible by a slackening of the rapid rise in business capital expenditures that had moderated the "excessive demands" on the economy.

He said that the employment situation was "reasonably satisfactory," with a seasonally adjusted rate of unemployment of 3.9 per cent in May. The most unsatisfactory aspect of the situation in Canada, he said, was the continuing upward movement of costs and prices. The consumer price index had risen by 7.3 per cent between April 1965 and April 1967, and that rate of increase in consumer prices was "more than we can tolerate on a continuing basis."

Price increases were too often "the result of demands for increased incomes and profits by those with strong market or bargaining power, or attempts by others to keep up with the leaders." Most of the increases in wage and salary rates were "substantially in excess of the general increases in productivity . . . . They clearly imply that further increases in prices are likely to occur."

The Minister said that with the increase of funds and resources available for housing, "this year will bring an increasing volume of building this summer and fall." He agreed with the Minister of Labour's view that housing starts this year should reach a total of 160,000.

"We are now pressing ahead vigorously with measures to improve our productivity," first by giving priority to the education of young people, and secondly by a "major program of training and retraining of adults in our labour force." More resources were being put into scientific and technical research and development. "We are also planning to improve the opportunities for those now working in less productive industries and occupations."

"Essentially, however, productivity is not something that the Government can achieve. It is a task for all of us. It is particularly a job for management and labour."

The Minister said that there would be no amendment to the Income Tax Act in this budget, but he proposed to remove the sales tax on drugs, and the remaining 6 per cent sales tax on production machinery and apparatus immediately, instead of on April 1, 1968.

He forecast a deficit on budgetary accounts before tax changes of $700 million, and on the national economic accounts basis a deficit of $230 million. The proposed tax changes would reduce budgetary revenues by an estimated $40 million, making a total forecast deficit of $740 million. The tax changes would also reduce the Old Age Security fund revenues by an estimated $33 million.

ILO Instruments Tabled

The text of instruments adopted at the 50th International Labour Conference held in Geneva in June 1966 were tabled by the Minister of Labour in English and French on May 25 (p. 549). The instruments consisted of two conventions and two recommendations.

Convention 125 sets up minimum international standards for certificates of competency for officers on salt water fishing vessels, and Convention 126 deals with accommodation of crews on salt water fishing vessels.

Recommendation 126 outlines vocational training programs for fishermen and Recommendation 127 concerns the role of co-operatives in developing countries.

A motion to adjourn the House under Provisional Standing Order 39A was moved on May 30 on the question of the claim of the Confederation of National Trade Unions that "natural negotiation units" should be recognized by the Canada Labour Relations Board (p. 775).

In replying to the motion, the Parliamentary Secretary to the Minister of Labour said that he agreed with the mover that the question had dragged on too long. He also agreed with him on the matter of increased bilingualism among the members of the Board, although he said that "the very latest in simultaneous translation equipment is placed at the disposal of each and every person" who participates in the proceedings of the Board. The Parliamentary Secretary further said that representatives of the CNTU would meet representatives of the Cabinet in Ottawa on Thursday (June 1), and he hoped that "following Thursday, there might be some amicable solution to a very controversial problem."

McGill University's 17th Annual

Industrial Relations Conference

"Human Values and Technology" was the theme of this year's conference. Principal speakers were the Minister of Manpower and Immigration, and professors from Canadian and United States universities in the fields of industrial relations, sociology and business.

The effects of technological change on industry, on the worker and on society, and the ways in which disturbances caused by such change could be mitigated, formed the subject of discussion at the 17th Annual Conference of the Industrial Relations Centre of McGill University, held on May 16 and 17. The theme of the meeting which was attended by about 120 delegates, was "Human Values and Technology." The 16th conference was held in September 1965 (L. G. 1965, p. 899).

The conference was addressed by four principal speakers. Their names, and the titles of their addresses, were: Prof. Harold L. Wilensky, sociology, University of California at Berkley, Calif.—"The Impact of Change on Work and Leisure Values;" Prof. C. Roy Brookbank, industrial relations, Dalhousie University—"The Worker: Insecurity, Fear and Resistance to Change;" Prof. Leonard Sayles, Graduate School of Business, Columbia University, New York—"Modern Approaches in Managerial Behavior;" and Prof. Peter C. Briant, Vice-Dean and Director of the School of Commerce, McGill University—"New Directions in Industrial Relations in Canada—The Professional Employee."

Hon. Jean Marchand, Minister of Manpower and Immigration, was the speaker at the conference dinner. His subject was "Freedom in The Age of Technology."

PROF. C. R. BROOKBANK

In any organization, there are a number of loosely formed groups of people who are connected with each other in their work, and who are accustomed to rely on each other in various ways; and the realization of the importance of these groups in the adjustment of such matters as the effects of technological change holds promise for the future, according to the view taken by Prof. C. R. Brookbank in his address on, "The Worker: Insecurity, Fear and Resistance to Change."

"A pertinent example of such a system," said Prof. Brookbank, "is often found in the patterned continuity of relationships existing between union and management representatives charged with the continuous administration of a collective agreement."

The members of these "role sets," owing to their dependence on each other, recognize certain mutual obligations, and they rely on each other to respect these obligations. In matters such as the administration of a collective agreement, union and management representatives also develop "secondary role expectations;" or, in other words, they come to expect and receive a certain degree of co-operation from each other.

"Let us suppose, then, that a new collective agreement has recently been signed that contains a clause setting forth the rights and responsibilities of both company and union to reflect upon and safeguard human values in the face of technological change. My hypothesis," the speaker said, "is that the successful implementation of specific technological changes will depend to a great extent on our awareness that the patterned system outlined . . . represents a matrix through which important action sequences must be channelled."

Too often in the past, in introducing changes in business and industry, attention has been paid only to what appeared on the organization chart, and "even now, many firms are oblivious to the forces and pressures that play upon human behaviour in the many small informal groups that make up the total organization. By circumscribing much of the behaviour in reciprocal relationships, and by developing management policies and procedures that place limits on the flexibility of application, employers unconsciously encourage the fear, insecurity and resistance to change which they so often deplore . . . . Fear and insecurity in such instances can be clarified as not essentially fear of change, but rather as fear of loss of control over change."

"By creative experimentation in business and industry, we should be able to find ways of lessening fear, insecurity and resistance to change that will be more effective because they are consistent with the research findings of behavioural science," Prof. Brookbank said in conclusion. "The task will require a new

level of sophistication on the part of line executives and personnel specialists. It will not be easily accomplished."

Replying to questions after his speech, Prof. Brookbank said that, if an attempt were made to stop change, people who thought it to be essential would find ways of making it anyhow. He agreed that there would be less resistance to change if it were not sprung on people, and that time was needed in putting changes into effect.

One of the delegates said that in collective bargaining it was impossible to make any progress without good faith on both sides, and he asked what would happen under the system advocated by Prof. Brookbank if good faith were lacking. Prof. Brookbank said that if his informal groups were working together, good faith emerged. The "patterned system," he contended, held promise of a better solution than anything we now had.

PROF. HAROLD L. WILENSKY

"The most striking thing about work in modern society is that it is unevenly distributed," said Prof. Harold L. Wilensky, a sociologist with the University of California. Prof. Wilensky, who is also research sociologist in the University's Institute of Industrial Relations, believes that talk of the leisure-oriented society has obscured the basic fact that modern populations, on the average, remain busy, with some groups becoming busier while other groups are being condemned to forced leisure.

The average man's gain in leisure has been exaggerated, he said, by selective comparison of gross averages in working hours now and during the period of rapid economic growth in England, France, and America, "a time of blood-curdling schedules and conditions." But estimates of annual and lifetime leisure, and comparisons with earlier times, present a different picture. "The skilled urban worker has now achieved the position of his 13th-century counterpart, whose long workday, seasonally varied, was offset by many holidays, rest periods and long vacations. Annual hours of work now, as then, remain in the range between 1,900 and 2,500."

Prof. Wilensky believes that the upper strata have in fact lost out. Even though their work-lives are shorter, and their vacations longer than those in the lower strata, they work many hours, week after week, reaching a staggering lifetime total.

On the subject of women workers, Prof. Wilensky said, "It seems plain that emancipation, while it has released women for the labour market, has not to any equal extent released them from housewifery. Studies report an average range of 50 to 80 hours a week in housework, child-care, and paid labour. If a woman takes a job today, she has to figure on adding to her work week a 40- or 50-hour "homemaking" minimum, unless she can afford and obtain a maid."

Not Leisure-Oriented

Prof. Wilensky disagrees with social critics who are of the opinion that modern society is leisure-oriented; that leisure must now take up the slack caused by the disruption of the labour market in the new era of "cybernation," or by the new alienation of modern work; that we will have to break the once-tight relationship between income and employment, or rewards and type of work; that the typical man once had a stable career, but now, with greatly accelerated technological change, does not or will not have a stable career. "If they imply that we are becoming a leisure-oriented society, quickly moving toward the day when the average citizen has no useful work to do, and therefore must find substitutes for work, I doubt it," he said.

"The uneven distribution of work among those working, and the incidence of involuntary retirement and unemployment, suggest that men who have gained most leisure, need and want more work. The 'leisure-stricken' are not replacing the 'poverty-stricken'; the two are becoming one."

Prof. Wilensky said that we need to bend our abundance to great purposes, pay people for work that needs doing—create jobs, full- and part-time, that will harness the energies and channel the idealism and enthusiasm of millions of men, women, and young people. "Even for the long run of 20 years, it still makes sense to talk about education, vocational training, and public policy as they relate to jobs, labour markets, and careers."

In conclusion, Prof. Wilensky said: "Our abundance is astonishing. It leaves a pool of unneeded, unwanted manpower behind it. The average amount of leisure is impressive, but it is unevenly distributed and most of it is forced; those who have it—the unemployed, the aged, the least skilled—lack the education and resources for its creative use, and would prefer to be working anyway."

PROF. LEONARD SAYLES

The commonly accepted picture of employees being reluctantly forced to accept changes under pressure from an aggressive employer, or from the force of external circumstances, was attacked by Prof. Leonard Sayles in his address on "Management's Role in Facilitating Change." This view, he said, was nonsense, and his talk was devoted to an exposition of the ways in which changes were frequently opposed or obstructed by people on the management side.

He disagreed with the view that human beings instinctively feared and opposed change. On the contrary, "Everything we know about the human being suggests that diversity, curiosity and new stimuli all combine to produce personality development as well as satisfaction." Although he admitted that excessive and ill-adapted changes were harmful, he asserted that "change itself need not be threatening or debilitating."

Managers must be doing something wrong if they succeeded, as so many seemed to, "in creating fear, resistance and distaste for something that is both natural and widely experienced," he said; and he went on to describe some of the ways in which he thought they were wrong.

Common Impression

Management often gave the impression that change was unlikely or even undesirable, and that everything could be specified minutely and precisely once and for all—as in job descriptions, statements of company objectives, and even in budgets. In such matters, leaving things alone was rewarded, and change was penalized. Too much effort was wasted in specifying the past. Changes in budgets, he pointed out, were inconvenient, and accounting procedures tended to discourage change. The alternative was to put policies and objectives in terms that could be adapted to change.

There was a tendency for management to avoid change during long periods of prosperity, until in a sudden crisis it was discovered that costs were getting out of line with receipts. In this case, changes were usually introduced at the worst possible time, when employees were in fear of unemployment.

Management's most serious failure was in not creating an atmosphere of acceptance of change. Managers often did not understand the process of change; and there was a naive assumption that the "workers" would be the problem, not management. The worst problems arose when supervisors colluded with employees to protect their department's "rights" and autonomy. Even upper management was not infrequently less enthusiastic about change than one would expect.

Competitiveness

Competitiveness among professionals and managers spreads to the work force. Banks, for instance, had had problems in installing electronic data processing because front office people resented the rise in importance of "back office" operations that this brought about.

The time required to put changes into effect, and the cost of doing so, were commonly underestimated by 100 per

cent, Prof. Sayles said. As a result, when management put pressure on people who were thought to be too slow in completing the changes, a "panic environment" was created that was disturbing to the employees. Part of the failure was because too little time was allowed for "new patterns of co-ordination to develop." The speaker gave as an instance the experience of the navy, which was that new techniques could sometimes be taught in 10 days, but that it took six months at sea to get things working smoothly.

Management failed to understand the amount of give-and take required in jobs. There was almost no such thing as a simple change. Even what appeared to be minor changes might profoundly affect various relationships. The speaker gave as an instance a case in which a new hybrid variety of corn had been introduced among Indian farmers. The new variety greatly out-yielded the native variety; but it was found that before long the farmers went back to the old variety, the reason being that the new kind made an inferior, soggy tortilla.

All or Nothing

The moral was that it was impossible to change one part of a system without affecting other parts. Change had to be dealt with *in toto* [as a whole] and management often failed to see that, when changes were made, trouble was to be expected. It was no use to expect that even the most careful planning would anticipate all the difficulties that would arise. Flexibility and readiness to respond to the people most affected were required.

The industrially developed countries, Prof. Sayles said, commonly made the mistake of supposing that all that the developing countries had to do was take what was given them. Criticisms and proposals must be sympathetically received because they were often grounded on experience of problems that had not been foreseen by outsiders.

One of the delegates suggested that there was an inconsistency in Prof. Sayles's insistence on the impossibility of management's anticipating all the problems that would arise in connection with change. He asked whether the speaker should carry that a step further and question the wisdom of the changes themselves. In deciding on changes, there must be a balancing of costs and benefits. It was not only a question of adaptation, but of examination of change itself.

Changes were often forced on management, as for instance by outside pressure, Prof. Sayles said. It was often a question of adapting to needs rather than a choice of whether or not to make the change.

In commenting on something that Prof. Sayles had said about management's not understanding the relationship between jobs, a questioner asked how, in that case, overall planning by management was possible. Prof. Sayles denied that there was any contradiction here. One had to make efforts, but at the same time be prepared for the failure of one's efforts, he said.

PROF. PETER C. BRIANT

In cases where professionals cannot rely on individual bargaining power derived from their ability to better themselves by changing jobs, and where the advantage of a close working relationship does not exist between professionals on the employee and on the management side, there seems to be no alternative to collective bargaining. This was the opinion stated by Prof. Peter Briant, in his address on "New Directions in Industrial Relations in Canada—The Professional Employee."

Most of Prof. Briant's talk was about the collective bargaining position of the Protestant Teachers' Association—with which he is connected—under the Labour Code of Quebec and under Bill 25, which regulates collective bargaining by teachers in the province. But out of his discussion of this question he drew certain conclusions applicable to professional employees of large concerns in general.

The speaker divided professionals into three classes. In the first class he placed those who, owing to their professional qualifications and their mobility, i.e. the fact that alternative employment was open to them, could defend their own interests without joining any organization. Such persons could not properly negotiate collectively with their employers, because they sat on the management side in negotiations with other employees, and because they were in possession of management's secrets. "The essence of individualism and freedom along this avenue rests on the power of individual alternatives. It leaves the employer organization free to remain an authoritarian bureaucracy and assumes the existence of alternative employment opportunities."

The True Route

Prof. Briant said that he considered the exercise of mobility to be "the true route" for a professional, and one that might in the future be used more frequently outside of private industry, to which it was at present mainly restricted, "as the level of professional competence increases [and as] professionals working for public organizations find that alternative job opportunities provide one of the best options during private individual negotiations."

In the second class were those professionals who could protect their interests as employees by reason of the advantage they gained by sitting together with professionals on the management side of committees to develop organizational goals, policies and plans. "This approach would be appropriate for universities, schools and hospitals. Where this approach is adopted, there is no need for collective bargaining, because the countervailing power concept of collective bargaining would be incompatible with the notion of organizational government.

"It would surely not be feasible for professionals to participate in policy formulation one day, and sit on the opposite side of the table and bargain collectively with their confreres the next period," the speaker remarked.

Group Action

For the third class of professionals — who did not fall into either of the first two classes—the speaker said that collective bargaining seemed to be necessary. As examples of such professionals, he mentioned employees of the Quebec civil service or Quebec Hydro. "Here, the professionals rely on the coercive power that is derived from group action," he said. For such professionals, however, he found existing Quebec legislation inappropriate.

Taking a general view, he said that, when "the individual is unable to achieve his goals through his own efforts or through his own professional organization or his work organization, he will turn to other organizations. In any event, we cannot deny professional employees the right to safeguard and pursue their legitimate ends through collective bargaining in the same manner as other employees.

"In a society dedicated to improving the general welfare, we cannot avoid the twin problems of specialization and bureaucracy. Specialization is a requirement of mass production; bureaucracy is necessary for administrative order and leads to the need for specified rules or contractual arrangements so that subordinates are not at the mercy of the whims of a supervisor. Until other social forms are developed to modify the authoritarianism of a bureaucratic hierarchy, we shall probably have to accept collective bargaining by professional employees.

"There is at present under certain circumstances," Prof. Briant concluded, "no viable alternative if we are to reconcile the human values and aspirations of professional employees with the needs of an increasingly technological and impersonal society."

HON. JEAN MARCHAND

"Someone, somewhere, somehow, must act to restore the delicate balance between the interests of society and the opportunities of the individual," Hon. Jean Marchand, Minister of Manpower and Immigration, told the conference. He was

speaking on "Freedom in the Age of Technology."

"Faced with the vast and rapid changes of our revolutionary age of technology, the worker cannot act alone. The forces of change stacked against him are too powerful. They may even be too powerful for relatively small, though well organized, groups of men." The Minister went on to say that the single most powerful force in our society must act. "And by this, I mean the Government."

Mr. Marchand sympathized with the worker who finds himself replaced by a machine after working at a job for 15 or 20 years. "Naturally he will resent change and will think his world is collapsing." The Minister stressed that the displaced worker must be given the opportunity to adjust and to master another job. That is one part of what the Government is trying to do, he said, through the new Adult Occupational Training Act.

Meaningless and Illusory

Without opportunity to adjust, Mr. Marchand said, freedom from want becomes a meaningless phrase, and the additional leisure that follows, an illusory thing. He said that the displaced worker, instead of enjoying the fruits of machine-assisted labour may well find he has all the leisure in the world to suffer the misery of unemployment.

"In essence, under my department's Adult Occupational Training Program we are ready to purchase for the worker the kind of training that will make it possible for him to adjust to the formidable changes of our time."

He pointed out that the worker would have to be kept informed about the opportunities that will come his way after retraining. And this will be the work of manpower counsellors. To keep the counsellors abreast of the short-term and middle-term prospects of the labour market, the Department is setting up labour market research and analysis facilities, he said.

Mr. Marchand pointed out also that the mere availability of training opportunities and retraining itself, is not enough. The worker has to have a sufficient training allowance, and, if necessary, enough money to move his family and himself to another job. There was also a need to provide incentives to prospective employers to establish their operations in areas of under-employment.

A Choice of Roads

"Quite obviously, the mobility of the worker may be easier to sustain than the mobility of sources of employment," Mr. Marchand said. "But that does not mean that we have to take the easy road just because it is easier, and forget the harder one which in the long run may provide better opportunities for our national growth."

The Minister expressed concern over the plight of the older worker. "Granted, most employers do not deliberately discriminate against older workers. Granted, it may be more difficult to retrain a man of 45 than a younger man. But the fact remains that the older worker, as a general rule, finds it more difficult to find a job than a younger man." The Minister said that he could foresee a turning point, within a decade or so, when the hiring age may rise to 50 or 55 instead of 40 or 45. "This improvement is being assisted by the portability features of the Canada and Quebec Pension Plans, and by provincial legislation ensuring portability of private pension rights."

Industry invests large sums of money each year for research and development in technology, he said. It does so out of the need to compete and grow and improve productive capacity.

"The same kind of development for manpower also provides benefits to employers," Mr. Marchand concluded. "My department's Adult Occupational Training Program provides for assistance to industry in this regard."

Symposium

The four principal speakers took part in the symposium that brought the conference to a close; and Mrs. Frances Bairstow, Associate Director of the Industrial Relations Centre, was chairman.

Prof. Wilensky and Prof. Brookbank agreed that those who threw themselves into their work usually showed the same activity in other matters, such as in community work and in their leisure occupations. Prof. Wilensky said that if people were cut out of their work, it dampened their interest in other things, and to solve the problem of leisure it was necessary to solve the problem of work.

He said that the period of most rapid technological change in the United States was in the 1890s. "We bend our abundance to great purposes," he said, and he contended, as he had said in the course of his address, that there was plenty of work to be done. It was necessary to create jobs in such directions as urban redevelopment, welfare services and recreational services. More should be done to develop part-time jobs. Automation replaced people, but there were things that could be done to absorb them. Screams about lack of work were only propaganda or a poor capacity to forecast. Planning assumed that we knew the future.

Quebec Professionals

Prof. Briant said that professionals in Quebec tended to want to make their career in the province, and this made them less mobile than professionals elsewhere. American professionals were more mobile than Canadian professionals, he said; and he pointed out — and others agreed — that in the United States there was more active bidding for the services of professionals in the matter of salaries than there was in Canada. Prof. Wilensky remarked that the labour market for engineers was more of a national one in the United States than it was in Canada. He also said that professional engineers in the United States had not shown much tendency to organize, and that was because they could see "a way out."

A questioner asked why people entered the teaching profession when they could surely see before they did so that there was no "way out." Prof. Briant said that those who went into teaching often did not foresee this, and that when they found it out, many did leave the profession. The turnover among Protestant teachers in Quebec was very high. Teachers who never became principals were most frustrated people, he remarked.

One of those present pointed out that there was a lack of a way out for female professionals in Quebec. For nurses, he said, mobility did not give much real bargaining power, except in the case of the elite.

Prof. Briant said that when professionals started to bargain collectively, and to the extent that they did so, they gave up their own professional responsibility and regulation. Some collective agreements regulated all kinds of details. The pressure to put everything into an agreement tended to grow, and this resulted in the professionals' loss of control over their own standards.

Prof. Brookbank said it seemed to him that he himself had a great deal of freedom and control over what he taught. Under collective bargaining, however, teachers may have good agreements from an economic standpoint, but no control over what they taught — as was the case in Nova Scotia, he said. Since they had chosen the alternative of a strong bargaining position, they had lost control over other matters.

Referring to the position of teachers in Quebec, Prof. Briant said that new institutions were being developed in the province. Under the new legislation, economic matters would be dealt with at the provincial level. Heretofore school boards had been concerned with finance, and they had been composed largely of businessmen. But if economic matters were to be handled by the province, the character of school boards could be expected to change. With the economic points ruled out, the question would be how to arrive at the best arrangements for the children.

CIRRI Annual Meeting

Compulsory Arbitration And Collective Bargaining

Whether compulsory arbitration in the public service would inhibit collective bargaining was the subject of much serious discussion among members attending the Canadian Industrial Relations Research Institute Annual Meetings in Ottawa on June 5-6. Prof. Saul Frankel, Vice-Dean of Social Sciences, McGill University, and a member of the Public Service Staff Relations Board of Canada, gave the opening address on "Collective Bargaining in the Public Service."

The speaker elaborated on some of the main problems encountered in the administration of the Public Service Staff Relations Act. The topic of major interest to analysts of industrial relations, he said, was the provision for resolution of disputes contained in the Act. The index of success in industrial relations was the number of disputes avoided, not the number settled. "However, the latter remains the major focus of interest."

Prof. Frankel suggested that any deadlock in collective bargaining negotiations favoured the employer, and that such a situation was not meaningful collective bargaining.

Arbitration not Compulsory

The Act did not make arbitration compulsory, he pointed out, adding "a study of 'why ?' would be interesting." The Act took a novel approach to the institution of the strike, in that the strike was now recognized as a legal tool for public employees.

"Designated employees," however, may not strike because of the necessity of their work, Prof. Frankel explained. It is up to the employer to determine which employees are to be "designated employees." If a dispute should arise concerning such classification, the Public Relations Board shall determine the classification.

Prof. Frankel described the routes that employee groups might take to reach a settlement during collective bargaining. They had the option between the "strike" route or the "arbitration" route, he said. This choice was to be made after certification of the union group, but before proceeding with collective bargaining, and the decision was binding.

Prof. Frankel discussed the similarities between the permanent arbitration tribunal and the civil service tribunal of Britain, established about 1925.

Might Inhibit Collective Bargaining

He then asked a question pertinent to the discussion of the effectiveness of the new Act: "Does the Act take full advantage of the provisions of collective bargaining ?" He repeated that the option between strike action or arbitration must be made before negotiation began and that such an option was unilateral on the part of the union. This compulsory provision might tend to inhibit collective bargaining, Prof. Frankel thought. The element of uncertainty tended to stimulate collective bargaining, and that element was missing in the process laid down by the Public Service Staff Relations Act, in that it made the choice between routes binding, once the union decided between them. This situation would freeze the collective bargaining position of the two groups, and might make negotiating more difficult.

The speaker suggested that the choice between options should be extended to employers as well; and that the option, once taken, should be subject to change after negotiations began.

One unique feature of the Act was that grievance procedures were available to everyone, including managers, Prof. Frankel explained. In addition, grievances were not prejudicial to agreements reached in bargaining.

Prof. Bernard Solasse of the Industrial Relations Department of Laval University, gave a report titled, "Unionism and Collective Bargaining in the Quebec Civil Service." He did not discuss the achievements of Quebec in the field of collective bargaining in the civil service, but he reported on the activities of the Laval research seminar, established last January for the study of these questions.

Prof. Solasse described the plan of action of the seminar. It collected important data for study and analysis in this field, he said, and it proposed to survey the "collective consciousness" of a group of professional employees. In addition, it planned to study the structure and functioning of provincial administration in Quebec.

In the discussion that followed, Jacob Finkelman, chairman of the Public Service Staff Relations Board, referred to the experience in Ontario regarding compulsory arbitration. He pointed out that, contrary to fears that compulsory arbitration in the public service would inhibit collective bargaining, a breakdown in bargaining for police and firemen, who are not permitted to strike, had not occurred in that province.

Abbé Gerard Dion of Laval University said that the hospital strike in Quebec hospitals provided an example of the use of strike action for public service employees. "There were inconveniences," he said, "but not to too great an extent."

Prof. A. R. Weber

The guest speaker at the banquet was Prof. Arnold R. Weber of the Graduate School of Business at the University of Chicago, who spoke on "A Perspective on the U.S. Industrial Relations Scene."

Experiments in industrial relations in the United States had been successful, he said, but they had not caught on. One reason for this was that issues had changed and the big one now was the demand for more money.

Prof. Weber said that there was continued resistance in the United States to unions and to collective bargaining, unlike the situation in western Europe. Some of the new factors in the United States were the resurgence of union growth, dominated by mushrooming organization among professionals, government employees and teachers.

Union members in the United States were asserting a degree of independence and militancy far greater than that shown by union leaders. This was borne out by the fact that 10 per cent of the contracts had been rejected by the members after approval by the negotiators. Prof. Weber attributed this phenomenon to the average age of the work force, which has had a

Collective Agreements in Manufacturing

Part III

More Provisions Affecting Pay

Time and a half is the standard rate for overtime pay for workers in Canadian manufacturing industries.

A recent survey conducted by the Department shows that 75 per cent of the collective agreements covering these workers stipulate time-and-a-half overtime premium rates after the regular period of daily hours. An additional 22 per cent of the agreements include provision for time and a half followed by a higher rate.

The purpose of the survey is to examine the main types of provisions contained in a total of 94 collective agreements that cover bargaining units of 1,000 or more employees in Canadian manufacturing industries. There is a total of 249,120 employees covered.

Parts I and II of the survey studied 25 main types of provisions in the 94 collective agreements. They included agreement provisions dealing with paid vacations and paid holidays, compensation for work on paid holidays, shift premiums, call-in pay guarantees, pay for union officials for time spent on grievance work or in the negotiation of collective agreements, paid bereavement leave, and a number of miscellaneous provisions.

In an extension of this study, an additional 42 types of provisions contained in these agreements have been analysed, and the findings of this new study are being published in two additional parts, Part III in this issue, and Part IV in the September issue.

Part III examines premium pay for time worked, provision for paid holidays that fall on days not normally worked, and pay guarantees for reporting and travel allowance on call-in (call-back). Some of the main findings among these provisions are:

- time-and-a-half premium rates for overtime work after weekly hours is standard in 45 agreements of the 94, which cover 140,040 employees; another 45 agreements covering 99,920 employees make no specific provision;
- time-and-a-half premium rates for employees working on Saturdays not normally worked is standard in 46 agreements; double time pay for working Sundays not normally worked prevails in 45 agreements; and 33 agreements provide for time-and-a-half pay for working Sundays not normally worked.

Most of the 94 agreements make no specific provisions regarding pay for holidays that fall on days not normally worked:

- only 21 agreements provide for a working day off with pay if a paid holiday falls on a Saturday, and only three agreements award an extra days pay;
- 36 agreements provide for a working day off with pay if a paid holiday falls on a Sunday, and four provide for an extra days pay.

Other tables under the heading of pay for time not worked:

- half of the 94 agreements provide four hours of work or pay for employees who report for work at the usual hour but are not given work for their regular shift; other pay guarantees for reporting are stipulated in 30 agreements;
- only eight of the 94 agreements provide for travel allowance on call-in, or call-back, and of these, only four specify the amount given.

Seven of the tables from this part of the survey are not included in this report. The reader should refer to the April issue (p. 232) of this journal for the tables showing *month of expiry* and *coverage by province* for the 94 agreements. The data contained in the other five tables are summarized in the text below.

Premium pay provision for regularly scheduled work on Saturday was included in 10 agreements covering 50,210 employees. The remaining 84 agreements, covering 198,910 employees, made no specific provision. Only 25 agreements, covering 77,320 employees, provided premium pay for regularly scheduled work on Sunday.

Some of the agreements included provisions regarding pay for time not actually worked. Paid wash-up time was stipulated in 19 agreements covering 43,400 employees. Paid sick leave, or sick leave benefit plan, was provided for or mentioned in 44 agreements covering 131,990 employees; the agreements do not make reference to sick leave benefit plans in all cases where such plans exist. Of the 94 agreements, 52 of them, covering 136,890 employees, provide for paid leave of absence for jury duty or court witness; this topic does not include provisions regarding paid leave of absence in connection with court cases involving the company only.

In Part IV of this survey, the clauses analyzed will deal with hours of work, union security, seniority, arbitration, special provisions for women and older or handicapped workers, and other miscellaneous provisions.

The findings of this survey are set out in the accompanying tables and in those that will be published in the September issue.

This report on the survey is a continuation of the previous study, "Collective Agreements in Manufacturing, Parts I and II" (L.G., April, p. 232; May, p. 292).

The study was made by Barry Maloney, Tim Thahane, Emile Vallée, Sheila Rajani and Henri Gallard of the Economics and Research Branch of the Department, under the supervision of Félix Quinet, Chief, Collective Bargaining Division.

It should be noted that in a number of cases the language used in the agreements was not entirely clear. In such instances, the provisions were classified subject to the proviso that they may be open to other interpretations as well.

The complete study of the 42 provisions in major collective agreements covering employees in Canadian manufacturing industries, including the charts and tables that have been omitted in this report, is available from the Collective Bargaining Division, Economics and Research Branch, Canada Department of Labour. Also available is the previous study of 25 types of provisions included in the same collective agreements.

Premium Pay for Time Worked

Women in the Labour Force

Laval University held its 22nd annual Conference on Industrial Relations on April 3 and 4. Having studied the Quebec Labour Code and manpower problems at the last two conferences, the conference this year had the theme, "Women in the Labour Force." Those attending the conference were representatives of government, unions and management.

JEAN-PIERRE DESPRÉS

Jean-Pierre Després, Assistant Deputy Minister of the Canada Department of Labour, the first speaker, dealt with the changing participation of women in the world of work. The participation of women in gainful employment evolved slowly, he said. It developed during two main periods, one of protection and the other of promotion.

During the protection or pre-war period, the governments or the International organizations exercised but a limited control because they could not prevent female work. The age of admission to work, health and safety measures for certain types of work considered unhealthy or dangerous, the prohibition of night work or of work in underground mines, and some maternity protection, for instance, were legislated on. General labour legislation itself did not cover the field it does today. Since 1945, however, the number of women at work has followed an upward trend brought about by union pressure and also by the technical progress during the first half of the twentieth century.

With the passing years, the increasing industrialization of nations and the invasion of the world of work by women, a parallel effort by the International Labour Organization and several governments has made it possible to determine several objectives. It is expected that the conclusions of the United Nations Committee on the Status of Women, which sat last March, will agree with and bring back into focus the international conventions and recommendations developed by the International Labour Organization.

Equal pay for equal work, non-discrimination in employment and occupation, fair employment practices, vocational guidance and training for all workers—some of which have already been written into law, and others will certainly become so—will be matters that the Royal Commission on the Status of Women (1967) will deal with, since, comparing its terms of reference with those of the United Nations Committee on the Status of Women, the objectives of the two working groups are similar. Thus, under the terms of the Royal Commission, at least with regard to matters coming under federal jurisdiction, the commissioners are requested to study (a) the actual and potential role of women in the Canadian labour market, including the special problems of married working women and the steps that could be taken under federal jurisdiction to help solve them; (b) the measures that can be adopted, within the limits of the federal jurisdiction, with a view to making better use of the skills and education of women, including the idea of retraining for those who wish to return to work; (c) federal labour legislation and regulations concerning women.

In Mr. Després' opinion, "the experience acquired shows that, in order to bring a durable and satisfactory solution to the problems of female employees in a period of change such as the present one, it is as necessary to change the views as it is to find, in practice, the means which the conditions existing in each country demand to enable a woman to fulfil her different roles, within the family, in the economy and society at large."

JACQUES SAINT-LAURENT

Jacques Saint-Laurent, an economist, said that it would always be less interesting for the working mother to be on the labour market, because, even given conditions as favourable as those of man, the replacement services she must ensure at home already reduce her net income at the outset. In the case of many enterprises, the costs of female work, particularly with regard to absenteeism, mobility and maternity, are higher and may lead to lower production even if at the outset equal opportunity is given to man and to woman as to the volume of physical production. For these reasons, a woman reduces her opportunities.

Mr. Saint-Laurent, who saw the short stay of woman on the labour market as an additional inconvenience, questioned the necessity of specialized studies for women. Although the number of men will continue to be higher than that of women in this respect, he did not deny a woman her right to education but he had a warning to women, asking them to seek appropriate remuneration for their work and a greater participation of their fellow women in the labour force, either part-time or full-time, so as not to leave untapped sources of energy required by society and the nation.

Mr. Saint-Laurent believed the female sector of the labour force would grow.

GÉRALD FORTIN

In order to do away with the amateur approach to female work and to favour the professional training of women, Gérald Fortin, a sociologist, suggested that work be organized on a part-time basis and that retraining of women in the 25-40 age group be encouraged. Day-care institutions and nursery schools should also be made available to working mothers. Thus, working women might be given an opportunity to acquire skill training and participate fully and without interruption in the labour force. As a result of both husband and wife's working, a new society emerges, Mr. Fortin said, since the relations between husband and wife lead them to discuss in a friendly atmosphere their personal unrelated experiences. It is obvious that a greater participation in household operations is required of the father, thereby returning to him a greater authority over the children and encouraging shorter, perhaps, but more intimate contacts between children and parents.

Permanent education and retraining of female workers are two realities of the world of work today and women, as well as men, must learn through the best means

Continued on page 488

Employment Injuries in Canada in 1966

Among the employment injuries reported to the Workmen's Compensation Boards, the proportion made up of temporary disability, permanent disability and fatality cases has not differed significantly from year to year during the past decade as shown in Table 1.

Table 1

Averages for 1957-1966		*Per Cent*
Fatalities	988	0.5
Permanent disabilities	8,341	4.0
Temporary disabilities	198,945	95.5
TOTAL	208,274	100.0
Figures for 1966		
Fatalities	1,162	0.4
Permanent disabilities	9,864	3.8
Temporary disabilities	251,154	95.8
TOTAL	262,180	100.0

Over the 10-year period, there has been a slow, gradual improvement in the ratio of employment injuries* to the number of workers employed. The slight shift in proportion from permanent to temporary disability in 1966 might be a reflection of improved medical assistance and a more effective accident prevention program.

Average Ratio

The average ratio of the number of fatalities reported by the Workmen's Compensation Boards to the total number of fatalities compiled by the Economics and Research Branch of the Department of Labour for the past 10-year period amounts to 79.8 per cent. This indicates that 20.2 per cent of the total fatalities are not covered by workmen's compensation legislation. This ratio is the only means by which an approximation of the grand total of employment injuries can be calculated.

Furthermore, by relating the number of temporary disability, permanent disability and fatality cases reported by the Workmen's Compensation Boards to the total number of workers employed, an approximation can be made of the workmen's compensation settlement rates for those injuries. The 1966 workmen's compensation settlement rates are slightly higher than the average rates for the past 10-year period—an indication that workmen's compensation coverage is being expanded to include more and more workers.

The 1966 preliminary total of employment injuries, both fatal and non-fatal, reported by the Workmen's Compensation Boards of the 10 provinces was 797,653. The final total for 1965 was 740,482.

The Canada Department of Labour received reports of a total of 1,173 employment fatalities that occurred in Canada during 1966. The revised total for 1965 was 1,326, approximately 5 per cent higher than the preliminary total for that year reported in the previous annual review (L. G., July 1966, p. 356).

Total Below Average

In 1966, the number of fatalities in the primary industries, and their proportion of the total number of fatalities, decreased below the average number of fatalities in these industries for the past 10-year period, reflecting the declining labour force in these industries. In the manufacturing, construction and transportation industries, the reverse development took place, corresponding to the shift in the distribution of the labour force in these industries. The situation in the service and commercial industries has not changed significantly, however, in spite of considerable increases in their labour force.

During 1966 the construction, transportation and manufacturing industries together accounted for 61.8 per cent of the total number of fatalities. Of the total, 279 occurred in construction, 237 in transportation and 206 in manufacturing. The remaining 38.2 per cent of the fatalities were distributed in other industry divisions as follows: mining, 11.6 per cent; forestry, 8.9 per cent; agriculture and trade, 4.5 per cent each; service, 3.5 per cent; fishing, 3.1 per cent; public administration, 2.3 per cent; and finance, 0.1 per cent.

The Province of Ontario accounted for one third of the total number of fatalities; British Columbia and Quebec together, for another third; Alberta for one tenth.

Falls and Slips

An analysis by type of accident shows that the categories of falls and slips, and of being struck by different objects, accounted for almost half of the total fatalities. One third of the total fatalities were caused by such accidents as collisions, derailments and wrecks, or were the result

---

The non-fatal and fatal employment injuries covered in this review are those sustained by persons gainfully employed. They occurred during the course of, or arose out of their employment, and they include deaths and other employment injuries resulting from industrial diseases.

Statistics on employment injuries are compiled by the Economics and Research Branch from reports received from the provincial Workmen's Compensation Boards and certain other official sources. Newspaper reports are used to supplement these. For industries not covered by workmen's compensation legislation, newspaper reports are the Department's only source of information. It is possible, therefore, that coverage in such industries as agriculture, fishing and trapping, and certain of the service groups is not as complete as in industries covered by workmen's compensation legislation. Similarly, a small number of traffic accidents, that are in fact industrial may be omitted from the Department's records because of lack of information in press reports.

The number of employment injuries that occur during the period under review is usually greater than indicated in the article and tables, but injuries that were not reported in time for inclusion are recorded in supplementary lists, and the statistics revised accordingly in the next annual review.

*See Tables H-1 to H-9 at the back of this issue.

of being caught in, on or between different objects. The remaining one sixth were the result of conflagrations, temperature extremes and explosions; of inhalations, absorptions, asphyxiations and industrial diseases; of contact with electric current; of over-exertions; of striking against and stepping on objects; and of miscellaneous accidents.

During 1966, 12 multi-fatality accidents brought death to 76 workmen. Thirty-seven of these were drowned in five accidents. Fourteen employees died as a result of an explosion or fire in two accidents. Two construction mishaps caused the deaths of 12 workmen. Ten persons were killed in two aircraft accidents, and a head-on collision between two railway vehicles claimed the lives of three workmen.

The 1966 preliminary fatality rate (number of fatalities per 10,000 workers employed) was 2.31 for men and 0.06 for women. The fatality rates for the past eight years (figures for women in parentheses) are shown in Table 2.

Table 2

Year	*Fatalities*	*Workers Employed*	*Rate per 10,000 Workers Employed*
		(in thousands)	
1959	1,318 (8)	4,353 (1,502)	3.03 (0.05)
1960	1,124 (10)	4,362 (1,593)	2.58 (0.06)
1961	1,082 (4)	4,381 (1,674)	2.47 (0.02)
1962	1,128 (7)	4,488 (1,737)	2.51 (0.04)
1963	1,220 (13)	4,567 (1,808)	2.67 (0.07)
1964	1,314 (6)	4,698 (1,911)	2.80 (0.03)
1965	1,318 (8)	4,842 (2,020)	2.72 (0.04)
1966*	1,159 (14)	4,983 (2,169)	2.31 (0.06)

*Preliminary

This table shows that the male fatality rate has not changed significantly over the past eight years, and that the female fatality rates were negligible.

Workers employed in the primary industry occupations, comprising approximately 10 per cent of the total workers employed, account almost exclusively for 28 per cent of the 1966 total fatalities. Workers employed in manual occupations comprising about 40 per cent of the total workers employed, account for approximately 62 per cent of the total fatalities; and workers of the service and white-collar occupations, comprising approximately 50 per cent of the total number of workers, are responsible for nearly 10 per cent of the total fatalities.

Employment injury statistics including those of 1966, fluctuate; but the general trend indicates a slow gradual improvement.

Racial Discrimination

Continued from page 475

focus of the survey was centred on the areas of employment, housing (including private rental, purchase and public rental) and credit facilities, insurance and personal services.

The method of study entailed personal interviewing with immigrants, personal interviewing with people in a position to discriminate, and "situation tests" for which the conditions of potential discrimination were reproduced. Whenever possible, all three methods were employed.

Subject Areas

The report is divided into four sections: the immigrant's reaction to life in Britain; his opportunities for employment in situations where discrimination is a factor; his opportunity to obtain housing; and his use of services and credit facilities. The groups of immigrants participating in the survey were West Indian, Pakistani, Indian and Cypriot. Native British and Hungarian groups also participated to serve as a basis for comparison.

The survey reveals that discrimination is largely based on colour. For example, Cypriots experienced the least discrimination, West Indians the most. The immigrants' participation in the survey were found not to be hypersensitive about their colour or over-ready to claim incidence of discrimination. The number of claims was fewer than expected, probably because the immigrants tended to avoid situations in which discrimination might occur.

The survey was sponsored jointly by the Race Relations Board and the National Committee for Commonwealth Immigrants. The research project was conducted by Research Services Limited for Political and Economic Planning.

Laval Conference

Continued from page 486

how to take advantage of these new conditions.

RÉJEANNE COLAS

While presenting a series of facts to illustrate the reality of womanpower, Réjeanne Colas, President of the Women's Association of Quebec, deplored the existing attitude of opposition whenever women claim a greater place. In spite of the efforts made with the submission of Bill 16 for the emancipation of married women, the matrimonial system of co-ownership still limits the rights of women and one cannot foresee when a complete legislation will give women the rights they are claiming. A change in mental attitude in her working environment is perhaps more important than legislative measures because in a hostile environment a woman cannot make the most of her capacities, and her chances of promotion and advancement are jeopardized. In conclusion, Mrs. Colas said there was still a long way to go before women workers were assured a real place in legislation, in the minds of individuals and in workplaces.

PIERRETTE SARTIN

Mrs. Pierrette Sartin, speaker at the closing banquet of the convention, agreed with Jacques Saint-Laurent in that equal pay for men and women cannot be a reality owing to the economic machinery itself and to the degree of actual possible participation of women in the world of work. Mrs. Sartin, as a writer, is in a position to observe women at work in her country, France, and she gave certain characteristics and attitudes of French women at work. The latter find security, acquire a feeling of real life when in contact with another social environment, a greater intellectual and emotional discipline, and see the end of a state of passivity and dependence which naturally flowed from the situation they accepted previously.

Special greetings for eight centenarians

Eight recipients of Canadian Government annuities, four men and four women, who have passed or are reaching their 100-year mark in Canada's centennial year, have been sent letters of congratulation by Hon. John R. Nicholson, Minister of Labour.

The oldest of the group, an Ontario man aged 104, has been receiving his Government annuity for 34 years. One 100-year-old woman has been getting annuity cheques for 44 years. The others have been getting their annuities for from 21 to 35 years.

What is believed to be the record among recipients of Government annuities was established by a woman who died in 1965 at the age of 100 after drawing an annuity for 50 years. An investment of $4,500, made in 1915, brought her a total return of $15,150.

City Consumer, May 1967

The consumer price indexes (1949=100) advanced between April and May in all regional cities except Saint John, where there was a decline of 0.1 per cent. The increases ranged from 0.7 per cent in Edmonton-Calgary to 0.1 per cent in Halifax, Montreal and Toronto.

Food indexes remained unchanged in Winnipeg, declined in Saint John, Montreal and Toronto, and rose in the remaining six cities. The increases ranged from 0.8 per cent in Ottawa, Saskatoon-Regina and Vancouver to 0.1 per cent in Halifax. Housing indexes rose in all cities except Ottawa and Saskatoon-Regina, where they remained unchanged. The clothing indexes remained unchanged in one city, advanced in three, and declined in six. Transportation indexes increased in six cities and declined in four.

Rises were recorded in health and personal care indexes in all cities except Saint John. Recreation and reading indexes increased in all cities, ranging from 2.9 per cent in Winnipeg to 0.3 per cent in St. John's, Nfld. Tobacco and alcohol indexes were higher in seven cities and remained unchanged in three.

Regional consumer price index point changes between April and May were: Edmonton-Calgary + 1.0 to 138.9; Saskatoon-Regina + 0.6 to 139.1; St. John's* + 0.5 to 129.2; Ottawa + 0.5 to 146.2; Vancouver + 0.5 to 143.0; Winnipeg + 0.3 to 141.9; Montreal + 0.2 to 147.2; Toronto + 0.2 to 149.8; Halifax + 0.1 to 140.3; Saint John − 0.1 to 143.9.

Consumer, May 1967

The consumer price index (1949=100) increased 0.2 per cent to 148.1 at the beginning of May from 147.8 in April. It was 3.3 per cent higher than the May 1966 figure of 143.4.

In the current period, all main component indexes except food and clothing showed increases from the preceding month. The food component recorded a decrease while the clothing component was unchanged.

The food index declined 0.2 per cent to 143.7 from 144.0. Lower prices were reported for all meat, fish and poultry items with the exception of liver and chicken; declines were also noted for bread, jam, infants' food, coffee, tea, all fats except butter, eggs, orange juice and canned fruits, as well as for potatoes, canned corn, canned baked beans, tomato juice and frozen green beans. These declines were partially offset by higher prices for most dairy products, cookies, sugar, all fresh fruits and most fresh vegetables.

The housing index rose 0.3 per cent to 150.5 from 150.1 as a result of general increases in both the shelter and the household operation components.

The clothing index was unchanged at 131.9. Increases in men's wear and footwear were offset by decreases in women's and children's wearing apparel and piece goods.

The transportation index moved up 0.1 per cent to 157.2 from 157.0.

The health and personal care index rose 0.5 per cent to 191.0 from 190.0, reflecting price increases in most pharmaceutical items, personal care supplies, men's haircuts and women's hairdressing services.

The recreation and reading index increased 1.5 per cent to 166.6 from 164.2. Higher prices for theatre admissions, camera film, bicycles and toys were recorded.

The tobacco and alcohol index rose 0.2 per cent to 127.9 from 127.7 in April.

Group indexes a year ago, in May were: food 143.8; housing (shelter and household operation) 144.2; clothing 125.0; transportation 151.1; health and personal care 180.7; recreation and reading 159.2; and tobacco and alcohol 125.1.

*On base June 1951=100.

Wholesale, April 1967

The general wholesale index (1935-39=100) for April was 262.0, unchanged from March and 1.5 per cent higher than the April 1966 index of 258.2. Four major indexes were higher, one declined, and three remained the same.

The three major group indexes, vegetable products 230.1, non-ferrous metal products, 236.6, and chemical products, 209.9, remained unchanged.

The non-metallic minerals products group index rose 0.4 per cent to 198.6 from the March index of 197.7. A rise of 0.3 per cent to 344.0 from 343.0 in the wood products group index reflected price increases for cedar, hemlock, fir, and hardwoods. Little change occurred in the textile products group, 251.5 from 251.4, and the iron products group, 272.6 from 272.5.

The animal products group index moved down 0.5 per cent to 289.2 from 290.6 on lower prices for livestock, fresh and cured meats, hides and skins, and animal oils and fats.

Farm Products Prices

The index of Canadian farm products prices at terminal markets (1935-39=100) increased 2.7 per cent to 249.6 from 243.0 in the three-week period April 28 to May 19. The animal products index moved up 3.5 per cent to 327.8 from 316.6, and the field products index advanced 1.2 per cent to 171.4 from 169.4.

U.S. Consumer, April 1967

The United States consumer price index (1957-59=100) increased by 0.3 per cent to 115.3 in April from 115.0 in March.

Increased costs of gasoline, motor oil, apparel, household maintenance and consumer services, and especially medical care, contributed substantially to the increase.

The cost of medical care, which rose one half of 1 per cent in April, is now up 9.3 per cent from the level of a year ago, the largest increase in any consumer price.

The decrease in food prices, 0.4 per cent, resulted mainly from lower prices for meats, most fresh vegetables and eggs. Increased production of beef and pork brought retail prices of meats down 6 per cent from those of April 1966.

British Retail, April 1967

The British index of retail prices (Jan. 16, 1962=100) was 119.5 at April 18, 1967, compared with 118.6 at March 21. At April 19, 1966, it was 116.0.

Increase in the prices of milk, potatoes, tomatoes, other fresh vegetables, apples, beef and lamb were responsible for a rise of less than 2 per cent in the average level of food prices. The index for the food group as a whole was 119.6 compared with 117.5 in March.

The index for the housing groups as a whole rose by more than 1 per cent to 133.4, compared with 131.8 in March.

In the transport and vehicles group as a whole, the index rose by nearly one half of 1 per cent to 111.2, compared with 110.8 in March.

Employment and Unemployment In May

Employment increased by 284,000 between April and May, an above-average increase for this time of year. The labour force, at 7,713,000 in May, was 330,000, or 4.5 per cent, higher than a year earlier. Employment was 273,000 higher than in May 1966.

Unemployment declined by 61,000 during the month from 365,000 to 304,000, but was 57,000 higher than a year earlier.

Unemployment in May represented 3.9 per cent of the labour force, compared with 3.3 per cent in May 1966 and 3.7 per cent in May 1965.

Employment

Employment, at 7,409,000, increased by 284,000 from April to May.

Almost half the April to May increase in employment, about 137,000, was among persons under 25 years of age. Employment of persons 25 years of age and over increased by 147,000.

Compared with a year earlier, employment was higher in community, business and personal service, transportation, communication and other utilities, manufacturing, and trade. There was a relatively small decline in construction employment.

Unemployment

Unemployment, at 304,000, was 61,000 lower than a month ago and 57,000 higher than in May 1966.

Of the total unemployed, 207,000, or 68 per cent, had been unemployed for less than four months. Of the remainder, 57,000 had been unemployed for four to six months and 40,000 for seven months or more.

NOTE: The classification of labour market areas, and the summary table titled "Labour Market Conditions", are not included in this issue because the statistical basis for these tables is not comparable with a year ago. Beginning September 1, 1966, all registered applicants were asked to contact Canada Manpower Centres every 30 days — instead of the previously requested period of 14 days — to keep their registrations active. Another factor influencing the comparability of registered applicants is the extension of provisions, such as temporary layoffs, for exempting certain classes of unemployment insurance beneficiaries from registration.

Insurance Registrations And Other UIC Statistics

On March 31, insurance books or contribution cards had been issued to 5,334,212 employees who had made contributions to the Unemployment Insurance Fund since April 1, 1966.

On the same date, registered employers numbered 375,613, an increase of 22,646 since February 28.

Enforcement Statistics

During March, 10,550 investigations were conducted by enforcement officers across Canada. Of these, 7,734 were spot checks of claims to verify the fulfilment of statutory conditions, and 928 were miscellaneous investigations. The remaining 1,888 were investigations in connection with claimants suspected of making false statements to obtain benefits.

Prosecutions were begun in 331 cases, 133 against employers and 198 against claimants.*

Punitive disqualifications as a result of false statements or misrepresentations by claimants numbered 661.*

Unemployment Insurance Fund

Revenue received by the Unemployment Insurance Fund in March totalled $33,613,446.82† compared with $32,967,532.32 in February and $37,459,302.35 in March 1966.

Benefits paid in March totalled $53,166,725.31† compared with $43,530,946.67 in February and $46,114,519.12 in March 1966.

The balance in the Fund on March 31 was $253,912,564.00†. On February 28, it was $273,465,842.49 and on March 31, 1966 it was $141,483,169.21.

U.S. rail union wins pay increase

An agreement signed by the 40,000-member Brotherhood of Locomotive Engineers and the U.S. railroads at the end of May gave the union an increase of 6 per cent in basic wage rates retroactive to August 12, 1966.

A BLE spokesman said that the contract, which needed no ratification by the membership, would mean an increase of about $1.71 a day for the first 100 miles, the basic work unit on the road. The basic work unit in the yards is an eight-hour day. The agreement also provides a substantial increase, retroactive to January 1, for locomotive engineers working without a fireman-helper.

*These do not necessarily relate to the investigation conducted during this period.

†Figures for March 1967 are subject to revision.

Wage Schedules Prepared In April

During April, the Department of Labour prepared 312 wage schedules for inclusion in contracts proposed to be undertaken by departments of the federal Government and its Crown corporations in various areas of Canada for works of construction, remodelling, repair or demolition, and other services. In the same period, 86 contracts in these categories were awarded. In addition, 58 contracts containing the General Fair Wages Clause were awarded by Central Mortgage and Housing Corporation, The St. Lawrence Seaway Authority, and the Departments of Defence Production, Post Office, Public Works and Transport.

A copy of the wage schedule issued for each contract is available, on request, to the trade unions concerned, or to others who have a bona fide interest in the execution of the contract.

Contracts awarded in April for the manufacture of supplies and equipment were:

Department	*No. of Contracts*	*Aggregate Amount*
Defence Production	38	$661,134.00
Post Office	4	303,927.35
RCMP	4	179,414.40
Transport	2	5,965.00

During April, the sum of $1,895.17 was collected from 11 contractors for wage arrears owing their employees as a result of the failure of the contractors, or their subcontractors, to apply the wage rates and other conditions of employment required by the schedule of labour conditions forming part of their contract. This amount is for distribution to the 99 workers concerned.

CUPE sample agreement has discrimination clause

A sample collective agreement which is used as a guide to CUPE locals in the preparation of agreements contains a clause under the heading "Employer Shall Not Discriminate" . . . "by reason of age, race, creed, colour, national origin, political or religious affiliation, sex or marital status . . ."

The provision regarding sex and marital status which has recently been inserted has already been negotiated by the Union in a number of municipalities across Canada.

†Centres of 5,000 population or more.

Women in Canada's Federal Undertakings And Public Service

In 1965, more than one out of five employees in industries under federal jurisdiction was a woman. This was lower than the proportion in the national labour force, where about three out of ten were women. Women employees under federal jurisdiction, numbering 84,000, were concentrated in the telephone communications and banking industries, which together accounted for 70 per cent of that total. In these two industries, 73 per cent of all employees were office workers. In the rail transportation industry, on the other hand, although 37,000 out of the 100,000 employees were classified as office workers, fewer than 7,000 were women.

Industries under federal jurisdiction* include: interprovincial and international undertakings; shipping; transportation; communications; banks; works, undertakings and businesses that, although situated within one province, have been declared by Parliament to be for the "general advantage of Canada or for the advantage of two or more provinces"; and most crown corporations.

In the public service, where conditions of employment were governed by the Public Service Employment Act, and which is not subject to the provisions of the Canada Labour Code, women's share of employment was closer to the national average. The participation rate for women had risen from 18.7 per cent in 1937 to 27.7 per cent in 1960†, and has remained at about that level.

*Based on a special compilation of data collected in the annual survey of *Working Conditions in Canadian Industry, 1965* by the Economics and Research Branch, Canada Department of Labour. A 20-per-cent upward adjustment should be applied to total employment under federal jurisdiction. This adjustment is based on an estimate of employment in (a) establishments not responding to the survey and (b) establishments with fewer than 15 employees not covered by the survey.

†Royal Commission on Government Organization, (Glassco), Volume I.

In 1965, more than half of the female civil servants were employed in Ontario, 13 per cent in Quebec and 9 per cent in British Columbia. The remainder were scattered among the other provinces, Yukon, and the Northwest Territories, and 366 were employed abroad*.

Age and Occupation

The average age of women in the public service was somewhat higher than that of the average Canadian working woman; 63 per cent of all women employed in the public service being over 35, whereas only half of the Canadian female labour force was in that category.

Although women were employed in almost every occupation, they were concentrated in office and hospital service occupations and they held 90 per cent of all clerical jobs in the public service of Canada.

The Glassco Commission, appointed early in the 1960s to make recommendations that would "promote efficiency, economy and improved service in the despatch of public business" reported that:

> The policy of equality of treatment for women, which is implicit in the Civil Service Act, is not fully implemented in practice . . . Canada is trailing behind the United States and the United Kingdom in terms of the number of women it allows to reach senior positions in the public service.

The Commission further pointed to subtle ways in which discrimination was shown — such as: less effort being made to attract women at the university recruiting level; exclusion of women from jobs with limited accommodations, or from positions involving the supervision of male labour; infrequent referral to training opportunities, especially management training; and a negligible proportion of women in the category of those earning more than $5,000 a year. The Commission said that "it would be to its [the Government's] advantage were it to make more effective use of the talents and qualifications of women, because of the wide range of employment opportunities which are suited for women."

*C.S.C. Annual Report 1965.

Study Initiated

In line with this recommendation a survey was recently undertaken under the direction of Dr. S. Judek, Professor of Economics, Ottawa University, on the "Employment and the utilization of women in the federal service of Canada."

Data from some 5,000 completed questionnaires, roughly three fifths of which were from male respondents and two fifths from women respondents, are now in the process of being analyzed.

The object of the study is to provide information on career development related to such variables as age, length of service, education, occupation and career commitment. Practices and policies in the public service will be compared with those in similar sectors of the rest of the labour force.

Recommendations will be made as to how policies and practices within the federal service may be modified to make more effective use of the capacities and skills of women.

The study will also provide statistical and analytical information on changes in the pattern of women's employment in the public service, past and present. It will examine the principal characteristics of female federal employees, and in some respects will present a comparison with male employees. Legislation, regulations and personnel policies and practices that impede the employment of women in the public service, as well as policies and practices relating to working conditions, social security and career development, will be scrutinized.

The Farm Training Centre At Ladner

This is an abridged version of an article written for this branch by Selwyn Simons, Executive Director of the Farm Training Centre, Ladner, B.C.

The Farm Training Centre in Ladner, B.C., is a place where retarded adults and adolescents are trained in farm work, life and living. It was organized by five chapters of the British Columbia Association for Retarded Children—Cloverdale, Delta, Langley, North Surrey and White Rock.

The organizers had considered the problem of training for retarded persons from many points of view. They realized that, to be successful, sheltered workshops should be in an area with plenty of secondary industries and with easy access by public transportation for the workers. In a rural area such as theirs, neither of these requirements could be met. They knew that in many parts of Canada farm help was needed, some for the year-round, but much of it on a seasonal basis. They believed that many retarded persons, particularly the older children still attending special classes or chapter schools for retarded children, would benefit from vocational training in practical work on the farm.

With these considerations in mind, an organization known as The Lower Fraser Valley Habilitation and Vocational Society for Retarded Persons was set up under the Societies Act of British Columbia, and work began on a farm training project.

Opened in 1964

The society was fortunate in obtaining from the Department of National Defence the use of 75 acres of land, part of the old Boundary Bay air field. The Farm Training Centre took shape, and in 1964 the program got underway with five students.

By the spring of 1966, after a few minor set-backs, the farm was in business. About 30 acres had been broken and prepared and contracts were taken to grow bush beans for canning, cucumbers for pickling, and potatoes for the Vegetable Marketing Board, in addition to sugar beets that had been sown the previous fall.

In March 1966, the B.C. Department of Education recognized and approved the Farm Training Centre as a suitable vocational training facility for students aged 16 to 18 who were attending special classes or chapter schools for retarded children.

Five students have been enrolled from the schools. These boys are physically fit, but their academic level is between Grade 2 and Grade 6. Experience has shown that these students, who have been subject to a certain level of discipline in the schools, progress faster than the adults who have been at home for a while, with little or nothing to do. Of the 11 students at the farm at the end of 1966, five drive tractors, some with great aptitude. They are trained to take care of the equipment and assist in repairs and maintenance. Others who lack the ability to operate machinery use manual tools and wheel hoes. Garden tractors can be handled by some of the students, who may not yet qualify for regular tractors.

Dividends

The harvest in 1966 was better than anticipated. The farm produced 26,000 pounds of sugar beet seed, 20 tons of potatoes, 41,000 pounds of bush beans, 8,400 pounds of cucumbers, and some carrots and turnips for home use and for the four Shetland ponies on the farm. The gross revenue for crops was $5,277. With the exception of mechanical harvesting of bush beans and sugar beet seed, and some spraying, all the work was done by the students. A report from one organization was that "the bush beans were the cleanest crop harvested in the district."

In the fall and winter months, and at other times when field work is impossible, students repair and repaint the farm machinery and furniture. They are also taught other skills and handicrafts.

Until now, the farm work has been confined to field crops. Although this limited activity has proved the value of the project, and has developed a definite level of productivity, diversification is essential so that each student will have an opportunity to find something of particular interest to him. Diversification, however, requires a considerable investment in residences and other buildings.

Help Wanted

If sufficient interest can be aroused, farms may be started in other areas—provided, of course, that both Provincial and Federal Governments can be persuaded to provide financial assistance. The general accommodation plan at the Centre calls for a maximum of 40 residential students and 15 to 20 day students. Any number greater than this would tend to "institutionalize" the project, and the directors do not want this to happen. Every effort will be made to keep a home-like atmosphere and environment.

Some students may use the residences as temporary homes, especially those who live in the immediate area, and who, due to sickness or disability in the family, need temporary shelter. The ultimate future of the students is still uncertain, but there is a possibility that some may be able to take full-time jobs with farmers in the district. For others, seasonal or temporary work may be found. Others again may never be able to work, except at the farm under direct supervision. Other problems still to be solved are related to the pros and cons of remuneration for work done, grades or levels through which the student progresses, and the introduction of "graduations," at which time a student would become a worker, and then perhaps a foreman or junior instructor.

The Ladner experiment has proved that, even with limited facilities and a mere one year of operation, retarded people can be productive on the land; and the possibilities for increased production will be much greater when the farm has become more diversified.

Consultation Branch

Getting to the Heart of the Matter

The record at G. Tamblyn Ltd.—16 years without a strike or a slowdown—is built on a policy of getting to the heart of the matter.

"We keep on top of everything," explains Alfred Power, personnel director since 1951.

"If you let employees stew over a grievance it only gets worse. I'd sooner spend half an hour and get the air clear."

William Nutt, local union president, is of the same mind.

"We nip the grievance in the bud. That's the way it's worked here."

And worked it has for Tamblyn's Toronto warehousing operation, and its 60 hourly-paid employees, represented by Local 431, International Chemical Workers' Union (AFL-CIO/CLC).

The Willowdale, Ont., plant supplies 115 Tamblyn retail drug stores from the prairies to the Maritimes.

Union-management relations are carried on in an informal atmosphere; joint consultation meetings held on an irregular basis—to meet a need, either at the request of employees or management. A typical meeting would bring together Mr. Nutt and three other unionists, a division manager and Mr. Power.

As well, the company keeps an "open door" policy. The personnel director and the union chief, for example, are not farther apart than a telephone call.

Mr. Power says the policy is reflected in a low rate of absenteeism, a low labour turnover, and a general feeling of trust and goodwill. When the union contract was negotiated and settled last year, the whole matter was wrapped up in two days. "When we negotiated the first agreement in 1951," Mr. Power recalls, "I told the boys then I never close the door. I've always felt that is the policy to follow."

Management has been able to streamline production by consulting employees on safety and housekeeping. Management reciprocates by keeping employees aware of company plans.

"If we want to make a move we discuss it with the union first," says Mr. Power, who feels company benefits have kept pace with the times. The company has a plan that pays the entire cost of disability benefits for employees with ten years service.

* * *

In terms of its employees and their skills, a hospital is a sea with many islands.

At the London, Ont., Westminster Hospital, for example, there are 25 "islands," or departments, through which 1,490 employees are dispersed.

As an employer, Westminster's task—one peculiar to big hospitals—is that of bringing together the nurse on the 6th floor, the pharmacist in the east wing and the laundry worker in the basement.

And this is where joint labour-management consultation comes in.

In contrast to industry, whose goal is production of the perfect product, the goal of hospitals is the cured patient. Westminster's Mutual Interest Committee defines its prime reason for existence thusly: "The Perfect Care of the Patient."

With this goal in mind the committee, begun less than three years ago, set out to (1) develop itself into a productive forum of communication—a place where employees and management can talk over issues, and (2) encourage all employees to speak up if they have an opinion to express.

Dr. William J. F. Bugg, hospital director, who encouraged formation of the committee in November 1964, comments favourably on the committee's efforts to provide better communication within the hospital.

"I have noticed a favourable change, not only at committee level, but in the hospital as a whole," he says. "The individual is becoming more open and able to communicate better with his supervisors and fellow employees."

As well as improved communications Dr. Bugg says the committee members "through their interest and participation" have made many constructive ideas useful to the hospital.

The hospital is operated by the federal Department of Veterans Affairs. Its employees are represented by the Public Service Alliance of Canada and the Professional Institute of the Pubic Service of Canada.

Chairman of the committee is the hospital's chief pharmacist, Harvey Sullivan. He was Dr. Bugg's choice to initiate meetings in 1964 "because of his unbounding energy and his willingness to help people."

The committee has made several useful suggestions which have been carried through. A heated shelter was built at the hospital bus stop, directional signs were posted to direct visitors around the hospital grounds, suggestion boxes were designed and put up in the hospital, hospital bulletin boards were improved, to name a few of the committee's suggestions.

"The whole design is to get these people talking," explains Mr. Sullivan. The role of a chairman is that of a catalyst and once members start talking the chairman remains silent. Occasionally he has to speak up to control enthusiasm and keep the meeting moving on schedule.

Among the topics discussed are: quality service, public relations, conservation of supplies and equipment, safety, promotion of understanding and good housekeeping.

Dr. Bugg, in summing up the committee's value, notes that it has increased the flow of information in the hospital. "Many constructive ideas have been developed due to the interest and participation of all representatives."

Older Worker Counselling

Texas Older Worker Project

"The older worker counsellor must realize that the older applicant's discouragement and frustration are a normal reaction to his situation," wrote Mrs. A. J. Metherd, Supervisor, Houston Older Workers Project, Texas Employment Commission, in a recent article on the counselling of older workers. "The counsellor must work out ways to help the applicant regain enough self-assurance and composure to present himself for the job opportunities that do exist."

The project is one of five similar schemes being conducted in some of the principal cities of the United States to develop new techniques in finding employment for older workers. The Houston project has been operating for a little more than a year, and has done much to confirm the findings of other groups investigating the problems in this field.

It has long been recognized that age is not the only handicap factor when someone past his middle years goes jobseeking. There are a number of other factors, such as limited or obsolete education, physical handicaps, inadequate knowledge of the labour market, and the inability of the older worker to appraise his own capabilities realistically. Such practical barriers, quite apart from social and psychological factors, are in themselves sufficient to engender frustration and discouragement.

The Houston Older Workers Demonstration Project was begun on April 1, 1966 to determine the additional quality and extent of services that local Employment Service offices could give older workers if sufficient staff were provided. Fifteen persons were assigned to the seven local offices in Houston. Success of the project was seen to be vitally dependent on the ability of the older worker staff to make use of the existing resources and the wealth of research material from the state office and of the national office of the Bureau of Employment Security and to incorporate the additional older worker services into the general employment program. Without this ability to draw upon the resources of the existing establishment, no amount of dedication, sympathetic concern or idea-development could have had any worthwhile effect.

The staff acted, in general, on their own initiative, because it was thought that close supervision would have impeded development. The general outline of the project called for such approaches as intensive counselling of difficult-to-place older workers, interviews in depth, screening the files for older applicants who were not getting job referrals, and general co-ordination of older worker services within the offices.

The idea of an employee's developing his own job assignment, rather than his being trained and closely supervised in a previously outlined work routine, was a somewhat radical innovation. But it was thought that this was the only way the project could operate.

Ingenuity and Help

"Older worker staff needed to learn to use their ingenuity, to develop ideas, and to forget about the time involved," continued Mrs. Metherd. "They needed a lot of help from the regular office staffs in order to operate at all; but most of all they needed to forget the negative aspects of the job they were trying to do, and to develop faith in their own capabilities and resources. They had to learn to accept that unsuccessful ideas weren't necessarily failures, or 'poor job performance'; but rather, necessary steps toward the ultimate objective—jobs for older workers. And sometimes they simply needed time to fold their hands and think about what to try next."

Close communication was maintained between the seven local offices, information being exchanged by telephone, at monthly staff meetings, or in monthly reports. Besides case histories of successful job placements, the persons working on the project were written up in the reports. If there appeared to be a need for more professional assistance, a representative from an agency operating in the field of welfare or rehabilitation was invited as a speaker or panel participant at the monthly meetings. Welfare agencies were grateful for the assistance given their applicants through the project, and they reciprocated by expediting emergency assistance needed by older applicants from the employment offices. The state rehabilitation agency provided hearing aids, glasses, dental care, and medical treatment for applicants whose employability was limited without this help.

Newspapers co-operated by running editorials and feature stories on the project. They were asked to keep the "do-goodism" aspect in the background, and to emphasize the idea of the value of age and experience to a prospective employer. When employers began repeating the ideas from the newspapers, it seemed evident that the articles were fulfilling their purpose—re-educating the hiring public that had been turning down the older applicants solely on the basis of age.

In some offices the project has been effective. In a few it is still in the growing stage. Project statistics are not showing remarkable results; but they do not mention such cases as that of the 62-year-old who was placed as a stenographer, when previously she could get work only as a baby-sitter or a companion because she was "too old" for an office job. Nor do they tell of the 55-year-old accounting clerk, displaced by automation, who managed to stay in accounting instead of accepting employment as a security guard.

Certification and Other Proceedings

Before the Canada Labour Relations Board

By the Employee Representation Branch

The Canada Labour Relations Board met for four days during May. The Board granted four applications for certification, rejected two, ordered three representation votes, and granted one request for a review of an earlier decision. During the month, the Board received 14 applications for certification and allowed the withdrawal of one such application.

Applications for Certification Granted

1. General Truck Drivers' and Helpers' Union, Local 31, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America on behalf of a unit of owner-operators of pickup and delivery vehicles and warehousemen employed at the Vancouver Terminal of Midland Superior Express Limited, Calgary, Alta. (L. G., Mar., p. 190) (Reasons for Judgment issued).

2. Canadian Merchant Service Guild on behalf of a unit of mates and engineers employed on vessels owned and/or operated by Blue Peter Steamships Limited, St. John's, Nfld. (L. G., May, p. 309).

3. Tunnel & Rockworkers' Union, Local 168, Labourers' International Union of North America on behalf of a unit of labourers and watchmen employed at Clinton Creek, Y.T., by Humphrey Construction Ltd., North Vancouver, B.C. (L. G., June, p. 364).

4. Canadian Marine Officers' Union on behalf of a unit of marine engineers employed by Transit Tankers and Terminals Ltd., Montreal, Que. (L. G., July, p. 416).

Applications for Certification Rejected

1. National Association of Broadcast Employees and Technicians, applicant, and Baton Broadcasting Limited, Toronto, Ont., respondent (L. G., Feb., p. 128) (Reasons for Judgment issued).

2. Seafarers' International Union of Canada, applicant, and Chembarge Ltd., Point Edward, Ont., respondent. (L. G., Feb., p. 128). The application was rejected for the reason that it was not supported by a majority of employees eligible to cast ballots in the representation vote conducted by the Board.

Representation Votes Ordered

1. *Syndicat National des Employés du Port de Montréal* (*CSN*), applicant, National Harbours Board, Ottawa, Ont., respondent (cold storage warehouse and refrigeration engineers) (L. G., May, p. 309) and International Union of District 50, United Mine Workers of America, intervener. The Board directed that the names of the *Syndicat National des Employés du Port de Montréal* (*CSN*) and the International Union of District 50, United Mine Workers of America, appear on the ballot (Returning Officer: R. L. Fournier).

2. Chauffeurs, Teamsters and Helpers, Local Union 395, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, applicant, and the Security Storage Division of Motorways Van Lines Ltd., Regina, Sask., respondent. (L. G., May p. 309) (Returning Officer: A. E. Koppel).

3. Building Material, Construction and Fuel Truck Drivers' Union, Local 213, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, applicant, H. M. Trimble & Sons Ltd., Calgary, Alta., respondent (L. G., May, p. 309) and Professional Transport Workers' Union of Canada, intervener. The Board directed that the names of the Building Material, Construction and Fuel Truck Drivers' Union, Local 213, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, and the Professional Transport Workers' Union of Canada, appear on the ballot (Returning Officer: D. H. Cameron).

Requests for Review Granted

The Board granted a request by *l'Association nationale des employés et techniciens en radiodiffusion* (National Association of Broadcast Employees and Technicians) for a review of the Board's decision of June 30, 1965 that certified the Association as bargaining agent for a unit of employees employed at Radio Stations CHLT-AM and CHLT-FM and television station CHLT-TV by *La Tribune Inc.*, Sherbrooke, Que. (L. G., Apr., p. 248). The Board directed that the certificate be amended by adding to the bargaining unit employees classified as telephone operator, assistant accountant, accounting machine operator, maintenance carpenter, and messenger, and that the order be amended also by deleting the name of "*La Tribune Inc.*" and substituting the name of "*Radio Télévision Sherbrooke* (*1967*) *Inc.*"

Request for Review

The Board received a request from the International Association of Machinists and Aerospace Workers for review of the Board's decision of August 27, 1948 that certified the petitioner as bargaining agent for a unit of employees of Canadian Pacific Air Lines Limited, Vancouver Airport, B.C. (L. G. 1948, p. 1102).

Applications for Certification Received

1. Truckers, Cartagemen, Construction and Building Material Employees, Local 362, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America on behalf of a unit of drivers and other employees of Monarch Transport Ltd., Edmonton, Alta. (Investigating Officer: J. D. Meredith).

2. International Union of Operating Engineers, Local 115, on behalf of a unit of maintenance employees of D. S. Scott Transport Ltd., North Vancouver, B.C. (Investigating Officer: D. H. Cameron).

3. International Longshoremen's Association on behalf of a unit of longshoremen and checkers employed by Clarke Traffic Services Ltd. (Clarke Steamship Co. Ltd.), Montreal, Que. (Investigating Officer: R. L. Fournier).

4. International Union of District 50, United Mine Workers of America on behalf of a unit of drivers employed by

---

This section covers proceedings under the Industrial Relations and Disputes Investigation Act involving the functions of the Canada Labour Relations Board, for which the Employee Representation Branch of the Department is the administrative agency.

Tank Truck Transport Limited, Maple, Ont., at its terminals in Sarnia, Maple, Sudbury and Cornwall, Ont., and Montreal, Que. (Investigating Officer: H. A. Fisher).

5. Canadian Merchant Service Guild on behalf of a unit of tugboat masters employed by Davie Shipbuilding Limited, Lauzon, Que. (Investigating Officer: R. L. Fournier) (see applications for certification withdrawn).

6. Bricklayers, Masons, Cement Block Layers, Marble Masons and Vitrolite Tile Setters, Terrazzo Workers, International Union, Local 1, Manitoba, on behalf of a unit of bricklayers and bricklayer apprentices employed by the Hudson Bay, Mining and Smelting Co. Limited, Flin Flon, Man. (Investigating Officer: A. E. Koppel).

7. Canadian Marine Officers' Union on behalf of a unit of captains and licensed engineers employed by McAllister Towing Ltd., Montreal, Que. (Investigating Officer: R. L. Fournier).

8. Seafarers' International Union of Canada on behalf of a unit of unlicensed personnel employed by Desgagnes Navigation Limited, Montreal, Que. (Investigating Officer: R. L. Fournier).

9. Canadian Brotherhood of Railway, Transport and General Workers on behalf of a unit of drivers and other employees of Northern Distributing and Warehousing Ltd., Saskatoon, Sask. (Investigating Officer: A. E. Koppel).

10. International Union of Operating Engineers, Local 115, on behalf of a unit of crane operators employed on a log barge by Rivtow Marine Ltd., Vancouver, B.C. (Investigating Officer: D. H. Cameron).

11. D. K. W. Employees' Association on behalf of a unit of drivers and other employees of Deruth Transport Ltd., Regina, Sask. (Investigating Officer: A. E. Koppel).

12. D.K.W. Employees' Association on behalf of a unit of drivers and other employees employed by J. Kearns Transport Ltd., Regina, Sask. (Investigating Officer: A. E. Koppel).

13. D.K.W. Employees' Association on behalf of a unit of drivers and other employees employed by Walco Trucking Ltd., Regina, Sask. (Investigating Officer: A. E. Koppel).

14. Truckers, Cartagemen, Construction and Building Material Employees, Local Union 362, and General Truck Drivers' and Helpers' Union, Local 31, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America on behalf of a unit of truck drivers employed by Tiger Transfer Ltd., Calgary, Alta. (Investigating Officer: D. H. Cameron).

Applications for Certification Withdrawn

1. International Association of Machinists and Aerospace Workers, applicant, and Eastern Provincial Airways (1963) Limited, Gander, Nfld., respondent (L. G., July, p. 416).

2. Canadian Merchant Service Guild, applicant, and Davie Shipbuilding Limited, Lauzon, Que., respondent (see Applications for Certification Received).

Scope and Administration of Industrial Relations and Disputes Investigation Act

Conciliation services under the Industrial Relations and Disputes Investigation Act are provided by the Minister of Labour through the Conciliation and Arbitration Branch. The Employee Representation Branch acts as the administrative arm of the Canada Labour Relations Board in matters under the Act involving the board.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944 and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until superseded by the Wartime Regulations in 1944. Decisions, orders and certificates given under the Wartime Regulations by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the Act.

The Act applies to industries within federal jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the federal Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of conciliation officers, conciliation boards, and Industrial Inquiry Commissions concerning complaints that the Act has been violated or that a party has failed to bargain collectively, and for controlling applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents; the writing of provisions — for incorporation into collective agreements — that fix a procedure for the final settlement of disputes concerning the meaning or violation of such agreements; and the investigation of complaints referred to it by the Minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act, the Regulations made under the Act, and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported here under two headings: (1) Certification and Other Proceedings Before the Canada Labour Relations Board and (2) Conciliation and Other Proceedings Before the Minister of Labour.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, Halifax and St. John's, Newfoundland. The territory of the officers resident in Vancouver comprises British Columbia, Alberta and the Yukon and Northwest Territories; officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; officers resident in Toronto confine their activities to Ontario; officers in Montreal are assigned to the province of Quebec; and officers resident in Fredericton, Halifax and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Conciliation and Arbitration Branch and the Employee Representation Branch are in Ottawa.

Sidney Emmerson

Sid Emmerson, conciliator with the Conciliation and Arbitration Branch, Toronto Office, Canada Department of Labour, died June 16 at the age of 60.

Mr. Emmerson joined the Department's Labour-Management Co-operation Section of the Industrial Relations Branch in September 1959, and transferred to the Conciliation Section in November 1963.

Mr. Emmerson served as president of the Textile Workers' Union of America, Cornwall local, and in 1944 became the international representative of the Union, a position he held for 14 years.

Conciliation and Other Proceedings

Before the Minister of Labour

By the Conciliation and Arbitration Branch

During May, the Minister of Labour appointed conciliation officers to deal with the following disputes:

1. General Enterprises Ltd., *et al.*, Whitehorse, Y. T. and Local 2499, United Brotherhood of Carpenters and Joiners of America (Conciliation Officers: D. H. Cameron).

2. E.M.I. — Cossor Electronics Ltd., St. John's, Nfld., and National Association of Broadcast Employees and Technicians (Conciliation Officer: W. J. Gillies).

3. B.C. Towboat Owners' Association (certain member companies) and Local 400, Canadian Brotherhood of Railway, Transport and General Workers (unlicensed personnel) (Conciliation Officer: D. S. Tysoe).

4. B. C. Towboat Owners' Association (certain member companies) and Seafarers' International Union of Canada (Conciliation Officer: D. S. Tysoe).

5. The Owen Sound Transportation Co. Limited, and Seafarers' International Union of Canada (Conciliation Officer: T. B. McRae).

6. Robin Hood Flour Mills Limited, Saskatoon, Sask., and United Packinghouse, Food and Allied Workers (Conciliation Officer: A. E. Koppel).

7. Clarke Steamship Company Limited Eastern Canada Stevedoring (1963) Limited, and *Agence Maritime Inc.*, Sept-Iles, Que., and Local 5197, United Steelworkers of America (Conciliation Officer: C. E. Poirier).

8. National Harbours Board, Port of Montreal, and Seafarers' International Union of Canada (Conciliation Officer: C. E. Poirier).

9. Quebecair, Rimouski, P.Q., and the International Association of Machinists and Aerospace Workers (Conciliation Officer: C. E. Poirier).

10. Aqua Transportation Limited, Vancouver, and Canadian Merchant Service Guild (Conciliation Officer: D. S. Tysoe).

11. North American Elevators Limited, Sorel, P.Q., and *Le Syndicat Catholique et National des Debardeurs de Sorel Inc. (CSN)* (Conciliation Officer: C. E. Poirier).

Settlements by Conciliation Officers

1. National Harbours Board (Prescott Elevator — casual employees) and Public Service Alliance of Canada (Conciliation Officer: T. B. McRae) (L. G., July, p. 417).

2. General Enterprises Limited, Whitehorse, Y.T., and Local 115, International Union of Operating Engineers (Conciliation Officer: D. H. Cameron) (L. G., July, p. 417).

3. General Enterprises Limited, *et al.*, Whitehorse, Y.T., and Local 2499, United Brotherhood of Carpenters and Joiners of America (Conciliation Officer: D. H. Cameron) (see above).

4. Giant Yellowknife Mines Limited, and Local 802, Yellowknife and District Miners' Union of the International Union of Mine, Mill and Smelter Workers (Canada) (Conciliation Officer: J. D. Meredith) (L. G., June, p. 364).

5. Robin Hood Flour Mills Limited, Moose Jaw, Sask., and Local 201, United Packinghouse, Food and Allied Workers (Conciliation Officer: A. E. Koppel) (L. G., June, p. 364).

6. Air Canada, and Canadian Air Line Flight Attendants' Association (Conciliation Officer: T. B. McRae) (L. G., June, p. 365).

7. *Radio Lac St-Jean Ltée (CFGT)* Alma, Que., and National Association of Broadcast Employees and Technicians (Conciliation Officer: C. E. Poirier) (L. G., May, p. 310).

8. Robin Hood Flour Mills Limited, Saskatoon, Sask., and United Packinghouse, Food and Allied Workers (Conciliation Officer: A. E. Koppel) (see above).

Conciliation Boards Appointed

1. Canadian National Railways (Canadian National Newfoundland Steamship Service and Yarmouth-Bar Harbour Ferry Service) and Canadian Brotherhood of Railway, Transport and General Workers (L. G., July, p. 417).

2. *Radio Iberville Ltée*, Ville Jacques-Cartier, Que., and *Syndicat Général de la Radio CSN (CHRS)* (L. G., May, p. 310).

Conciliation Boards Fully Constituted

1. The Board of Conciliation and Investigation established in April to deal with a dispute between Atomic Energy of Canada Limited, Pinawa, Man., and Lodge 608, International Association of Machinists and Aerospace Workers (L. G., July, p. 417) was fully constituted in May with the appointment of R. A. Gallagher, Q. C., Winnipeg, as Chairman. Mr. Gallagher was appointed by the Minister in the absence of a joint recommendation from the other two members of the Board, company nominee D. Proctor and union nominee E. A. Smith, both of Winnipeg.

2. The Board of Conciliation and Investigation established in April to deal with a dispute between Canadian Pacific Air Lines, Limited, Vancouver, and Lodge 764, International Association of Machinists and Aerospace Workers (L. G., July, p. 417) was fully constituted in May with the appointment of George W. Rogers, as Chairman. Mr. Rogers was appointed by the Minister in the absence of a joint recommendation from the other two members of the Board, company nominee J. A. Bourne and union nominee H. Rankin, both of Vancouver.

3. The Board of Conciliation and Investigation established in April to deal with a dispute between Canadian Lake Carriers' Negotiating Committee (26 com-

Legal Decisions Affecting Labour

The Ontario Court of Appeal has ruled that an employee has no right to participate in arbitration proceedings under a collective agreement respecting union-management policy

The British Columbia Court of Appeal has ruled that a union local was liable for damages for a breach of the union membership contract

The Nova Scotia Supreme Court has decided that the Rand Formula is valid under the Nova Scotia Trade Union Act

On February 16, 1967 the Ontario Court of Appeal, by a majority decision, ruled that, in the case of arbitration respecting union-management policy with regard to an interpretation of a collective agreement, an employee, though he was directly affected by the arbitration award, could not claim to participate in arbitration proceedings and had no right to a notice of hearing.

Circumstances of Dispute

The circumstances of the dispute as related by Mr. Justice Laskin, who rendered the majority judgment, were as follows:

The Court of Appeal considered an appeal from a judgment of Mr. Justice Grant of the Ontario High Court (1966) 58 D. L.R. (2nd) Part 4, p. 338, who dismissed an application for *certiorari* to quash an arbitration award regarding a dispute under a collective agreement between Greening Metal Products and Screening Equipment Company and Local 6266 of the United Steelworkers of America, the certified bargaining agent for the company's employees.

The arbitration award, dated April 1, 1966, was challenged by an employee of the company who was not, in his individual capacity, a party to the arbitration proceedings, nor to the grievance out of which the arbitration arose. But he claimed that the arbitration award adversely affected his employment rights, and that the failure to give him a notice of the proceedings deprived him of an opportunity to participate in the arbitration proceedings, which was contrary to the principles of natural justice.

Preliminary Issues

There was a collective agreement between the union and the company effective March 18, 1965, concluded for one year, but automatically renewable unless a notice for amendment or termination was given. Such notice was given and the agreement came to an end after March 17, 1966.

The grievance that led to arbitration was entered by the union on March 22, 1966 as a "policy grievance" under Art. 7.08 of the expired collective agreement. It alleged violation by the company of a union security clause as amended by the union and the company on September 1, 1965. The parties decided to submit the grievance to a single arbitrator instead of a tripartite board prescribed by the collective agreement.

On *certiorari* it was contended that there was neither a valid basis for the policy grievance nor any authorized arbitration machinery for its final decision. In particular, it was claimed that there was no collective agreement in existence on March 22, 1966, and no arbitration machinery under which the award of April 1, 1966 could be made.

Mr. Justice Laskin rejected these preliminary arguments because, in his view, it was within the power of the union and the company to amend the union security clause by mutual consent on September 1, 1965, and to agree to submit the dispute to a single arbitrator, provided that the collective agreement was still in force when arbitration before a single umpire was agreed upon.

He pointed out also that, if a notice of amendment or termination of a collective agreement is given when no collective agreement is in operation, Sec. 59 of the Ontario Act secures for a prescribed period the *status quo* between union and employer regarding the governing terms of employment and the dispute-resolving machinery, as these matters were reflected in the expired collective agreement.

Before the union was certified as exclusive bargaining agent on June 27, 1962 the employee in question (who was the applicant for *certiorari*) advised the company and the union that, because of religious convictions and political preference he would neither join nor give any financial support to the subsequently certified union.

He joined in 1961 an organization attractive to his beliefs, the Christian Labour Association of Canada, and he remained an outspoken and uncompromising opponent of compulsory dues payment and compulsory union membership, which the union in question sought to introduce into its collective agreement with the company. Mr. Justice Laskin noted that such provisions are, within the scope of collective bargaining under the Ontario Act, subject to some limitations, none of which was relevant to the case at bar.

Neither the first collective agreement between the union and the company, nor the second as originally concluded, contained provisions that would require union membership or payment of union dues from an existing employee, engaged before the agreement came into effect.

Provisions Amended

On September 1, 1965, however, the company and the union amended the union security provisions of their collective agreement, thereby affecting the applicant through the following clause:

> 5.02. As a condition of their continued employment, all present employees shall, on or before the 15th day of September, 1965, and all future employees shall, within 30 days following their employment, be required to execute and deliver to the Company an authorization for deduction of their union dues, or an amount equivalent to the regular monthly dues paid by members, as the case may be. Such authorization may be revoked by any employee by giving written notice to the Company and the Union within the 30-day-period prior to the termination date of the contract.

The parties to the agreement agreed, however, not to enforce this provision

until the expiration of the agreement on March 17, 1966. The applicant continued to insist on keeping his employment without being required to comply with provisions to which all other employees had subscribed and which were binding on all employees under Sec. 37 of the Act. The company did not press him to comply with the new union security provisions, but the union did — and some employees manifested their objection to the applicant's attitude by going on strike on March 18, 1966.

Arbitration of Policy Grievance

To resolve any doubt as to the meaning and effect of Article 5.02 of the amended collective agreement, and particularly, to determine who had the duty to administer it, the company and the union agreed to an arbitration, the result of which was challenged in the courts. The subject of arbitration was a policy grievance lodged by the union as follows:

> It is the Union's contention that, on March 18, 1966, the Company did violate Article V, Sec. 5.02 of the current collective agreement as amended on September 1, 1965.

According to the arbitration award, Sec. 5.02 imposed a duty on the company to direct an employee to sign a dues deduction authorization form or face disciplinary action by way of discharge.

Right to Intervene

Mr. Justice Laskin noted that all employees, being bound by the terms of a collective agreement, are affected by the way in which the company and the union administer those provisions of the agreement that are of general application. The employees are also affected by any arbitration decision following a policy grievance lodged either by the union or the company. This does not mean, however, that any employee (or any group of employees) may, by merely asserting it, enforce a claim to participate in the administration of the collective agreement against the wishes of the properly authorized representative of the exclusive bargaining agent; nor does it mean that any employee (or group of employees) might at their pleasure intervene as of right in grievance adjustment or arbitration respecting union policy grievances or management grievances.

Mr. Justice Laskin held further that, except when a collective agreement provides for a procedure dealing with individual grievances and subject to the Labour Relations Act, the conduct of relations with an employer is, under Ontario Law, committed on behalf of employees to the bargaining agent certified as their exclusive representative, or properly established as such by voluntary recognition.

The applicant in the case at bar insisted on his individual freedeom to be free of representation by the union, but the law does not permit him to make his own bargain with the company. The law allows the employee to seek, in association with others, the replacement of the incumbent union by another, or its displacement without any substitute. But if the employee is not able to achieve that, and is unwilling to work under the conditions as to wages, hours or otherwise, negotiated by the incumbent union on behalf of all employees, he may freely depart.

But he cannot have his own way in the face of a law which governs all employees and employers within its scope, regardless of their personal religious and political convictions. Mr. Justice Laskin added further:

> I find nothing admirable in the applicant's stand. Our society secures to everyone the right to adhere to a religion of his choice, and to hold to a self-determined political creed. It does not, however, give liberty to insist on religious conviction or political creed or both in contexts which the law does not regard as relevant to their free enjoyment, and as a ground for thwarting agreements binding on all irrespective of religious or political persuasion. This is presently the case in labour relations.

Mr. Justice Laskin held that no denial of natural justice occurred at the beginning of the union's grievance or on the submission to arbitration. But the applicant contended that the arbitration was converted into a single concern with his status. Accordingly, the applicant claimed that he was injured in his economic security as an employee of the company, and was without previous notice or an opportunity to make representations.

Arbitration Procedure

Dealing with the issue of arbitration, Mr. Justice Laskin considered, among others, the relation between individual and policy grievances. The Ontario Labour Relations Act compels ultimate settlement of disputes under collective agreement "by arbitration, without stoppage of work, of all differences between the parties arising from the interpretation, application, administration or alleged violation of the agreement, including any question as to whether a matter is arbitrable." The "parties" referred to are the union and the employer who have concluded the collective agreement. The arbitration decision is binding upon them and upon any employee affected by it.

The collective agreement relevant to the case at bar included provisions for the lodging of individual grievances, and for the lodging of a policy grievance which, in Sec. 7.08, was "defined and limited to one which alleges an actual violation of interpretation, application or administration of a specified provision of this agreement. . . ." In Mr. Justice Laskin's view, the advantage of the policy grievance is "that it is an extension of the administration of the bargain by the parties who concluded it, and the award therein becomes, in effect, a clarifying term of the agreement, a touchstone by which individual claims may be adjusted without (that is the hope) further resort to arbitration."

Another function of a grievance about policy is to provide for redress by the company for an alleged violation of a promise or term in the agreement favourable to the union, and this was involved in the proceedings under consideration.

In *Re International Nickel Co. and Rivando* (L. G. 1956, p. 1155) the court held that a labour arbitration board in Ontario is enough of a statutory tribunal to make its award amenable to *certiorari*. Unlike many statutory tribunals, however, a labour arbitration board, which is usually an *ad hoc* board, is the creation of the parties to a collective agreement; it has no initiative in bringing cases before it; no decision can be made by it unless the decision is sought by a complaining party; and the terms of the contract, rather than any statutory provision, set the limits within which it may exercise its authority.

It may be assumed that the legislation which conferred upon a trade union the right to negotiate a collective agreement (with binding effect upon all employees within the bargaining unit) left it to the union and the employer to determine what role any individual employee might play in the administration of the terms of the collective agreement.

In the case at bar, Mr. Justice Laskin continued, the ordinary provisions found in collective agreements for lodging of individual and policy grievances were supplemented by a special provision which preserved "the rights of any individual employee to present any of his personal grievances to the management." In Mr. Justice Laskin's opinion, this provision meant that an employee was not obliged to submit to union representation before being entitled to approach the management on his own behalf. But it was not made clear whether an employee might invoke the arbitration machinery against an employer without espousal of his cause by the union or even despite the union.

Rights of Individuals

Regarding individual rights under a collective agreement, Mr. Justice Laskin referred to various authorities. He noted that in *Nabess and Lynn Lake Base Metal*

Workers' Federal Union v. Sherritt Gordon Mines Ltd. (1959) 27 D.L.R. (2nd)54, the court held that the individual aggrieved employee had no standing to impeach an adverse arbitration award in a dispute between a union and an employer.

He concluded that neither the Labour Relations Act of Ontario nor the collective agreement involved in the case at bar contains any rule as to who could legally be the parties to any arbitration proceedings; and the question had to be decided in the context of the legislative and labour relations framework within which the individual sought to apply the principle *audi alteram partem.*

It was contended that notification of the applicant employee regarding arbitration proceedings became necessary by reason of the manner in which the policy grievance was argued and determined, that, in particular, the policy grievance was mere subterfuge to secure the employee's discharge, and that the proof of this was contained in the terms of the award.

Mr. Justice Laskin dealt with this contention both on facts and on principle.

On the facts, in his view, the contention failed because it was not in the union's power to procure the discharge of the employee if he was prepared to pay the periodical union dues. The right to discharge belongs to management, either as a matter of cause at large, or as specifically provided in the collective agreement. The union grievance policy was designed to force management to put before the employee the option under Sec. 5.02 of the collective agreement. If he decided to pay, his job was secure against union coercion.

On the question of principle, Mr. Justice Laskin assumed that an employee adversely affected by an arbitration award may decide to take action against the union if, in his opinion, it committed a breach of duty by failing to represent his interests in good faith; but the employee has no right to attack an award that was the result of non-collusive contention between union and employer.

Without Right to Challenge

Mr. Justice Laskin held that, in the case at bar, the employee was not seeking to enforce his rights under the collective agreement, the validity of which was extended by the statute. What the employee was attempting was to deny part of the collective agreement; and consequently, the issue before the court was whether the employee was entitled to attack the award for failing to give notice of arbitration proceedings.

Although the employee relied on the collective agreement to protect him against discharge, except for just cause, the arbitration was not one to determine whether he had been justly dismissed, Mr. Justice Lasking noted. Consequently, there were no proceedings of which the employee could complain because he was not allowed to participate. The purpose of arbitration was to fix the company with a positive duty under the amended Sec. 5.02, and it was instigated to provide an interpretation that would serve the union as such in respect to all employees in the bargaining unit. The fact that the employee in question might be the only one to feel the impact of the award gave him no special claim to be notified that the arbitration was taking place.

Further, Mr. Justice Laskin held, the union security provisions of Sec. 5.02 were within the union's power to negotiate with the company, and the union was entitled to have declared through arbitration the company's obligations toward the union under the union security clause.

The question submitted to arbitration revolved around the employee's resistance both to paying union dues and to membership in the incumbent union; and the purpose of the submitted question was to obtain a ruling and a direction against the company as the party obliged to make the employee in question, or any other employee, comply with the provisions governing continued employment. It so happened that the employee was the only one on whom the arbitration decision could have had an immediate effect. It was therefore not strange that the arbitrator "personalized" his award by delivering it against the background of facts out of which the arbitration arose. Mr. Justice Laskin noted that there were neutral passages in the reasons of the award, but it was obvious that, in the main, the award dealt with the meaning and effect of Section 5.02 of the collective agreement in relation to the action the company was obliged to take against this particular employee.

The operative part of the arbitration award read as follows:

> I therefore conclude that the Company is in violation of article 5.02 as amended and require the Company to notify the employee Hoogendoorn in writing forthwith by registered mail that he must execute and deliver to the Company a proper authorization form for deduction of his union dues, or an amount equivalent to the regular monthly dues paid by members as the case may be (enclosing such form) within seven (7) days from the date of the post-mark date on the envelope containing the notice, or be discharged from his employment. If Mr. Hoogendoorn fails to comply then I direct that the Company exercise its powers as an employer and discharge him.

Mr. Justice Laskin found no fault with the first (the long) sentence of the quoted award. It required the company to take action in obedience to its ascertained obligation under Sec. 5.02, and specified the nature of the action—namely, that the applicant be notified that he must submit to dues deductions or face discharge. In this part of the award, there was no direction to the applicant employee, so he could not claim any special standing in the arbitration proceedings regarding thereof.

The second direction of the award merely spelled out the consequences flowing from the first. It might, however, be said that it went beyond the issues raised by the submission to arbitration. In that event, the second direction was severable, and the Court had power to order it deleted accordingly.

Mr. Justice Laskin stated further:

> It is apparent to me that the applicant is, in a circuitous way, seeking to avert the consequences of a regime of collective bargaining imposed by the Labour Relations Act and carried out in the employment and related prescriptions mutually agreed to by the Union and the Company. It may very well be that, should he grieve his discharge, effected upon his refusal to obey the Company's direction that he submit to dues deduction, he will be met with rebuff; but this will be not because he is a victim of discrimination or unjust treatment, as he alleges, but because the issue on which he stands has been, first, taken out of his hands by the results of collective bargaining and, second, has been conducted in respect of all employees in the same way by an arbitration award.

Judgment Upheld With Variation

Mr. Justice Laskin held that Mr. Justice Grant rightly dismissed the application of *certiorari.* Counsel for the applicant, dealing with the main issue, cited cases with reference to natural justice placing considerable reliance on *Ridge v. Baldwin* (1963) 2 All E.R. 66. In the opinion of Mr. Justice Laskin, the authorities dealing with natural justice must be read in their statutory context; and he added that mere generalities about invalidity of a decision made without regard to principles of natural justice are of no assistance.

He pointed out that, in Britain, there is no statutory collective bargaining regime compared to that of Ontario, which includes provision for binding collective agreements and for compulsory arbitration of disputes under agreement. Further, he said, the Ontario regime provides for exclusive representation of the economic interests of all employees in a defined bargaining unit by a certified trade union of which not all employees may be members at the time of certification or later. Mr. Justice Laskin held, therefore, that

British case law on natural justice cannot be selectively applied to arbitration proceedings under collective agreement as if the statutory background was irrelevant.

Mr. Justice Laskin held that, in the case at bar, there was no failure to observe the rules of notice of a statutory tribunal; and an obligation to give notice to the employee could not be reasonably imposed upon the union or the company. The union and the company were contesting an issue arising immediately between them alone, and within the framework of a bargained arrangement that permitted contestation in the form in which it took place.

By a majority decision, the court affirmed the judgment of the court below, but it excluded from the arbitration award the supplementary direction to the company to discharge the applicant employee if he failed to comply with the request to authorize monthly dues deductions. *Hoogendoorn v. Greening Metal Products and Screening Equipment Company et al.*, 67 CLLC, para. 14,017.

B.C. COURT OF APPEAL

The British Columbia Court of Appeal, in a unanimous decision on June 1, 1966, allowed an appeal from the judgment of Mr. Justice Aikins (65 CLLC, para. 14,095), who had dismissed an employee's action for damages for breach of union membership contract and for injunction.

The Court of Appeal found that the president of Local 97 of the International Association of Bridge, Structural and Ornamental Ironworkers had discriminated against a member of the local with regard to employment opportunities because of his dual membership in a rival union.

The Court ruled further that the union security provisions contained in the constitution of the international union, which prevented a court action until internal union remedies were exhausted, applied not to an action against the local, but to actions against the international union only. Finally the Court of Appeal ruled that Local 97 was a legal entity and was liable in name for damages for breach of its contract of membership with a union member.

Circumstances of Dispute

The circumstances of the dispute, as related by Mr. Justice McFarlane who rendered the judgment of the Court of Appeal, were as follows:

Hornak, the appellant in the case at bar, has been for several years a member in good standing of International Association of Bridge, Structural and Ornamental Ironworkers, Local 97. Since 1960 he has also been a member of a rival union known as Canadian Ironworkers Union, Local 1. Paterson (the respondent in the case at bar) has been the president and the business agent of Local 97.

In February 1962, Local 97 as the certified bargaining agent of certain employees, together with a number of other union locals entered into a collective bargaining agreement with Peace Power Constructors Limited, a company whose function is to supply the labour required in the construction of the Peace River Power project. The agreement provided, *inter alia* (among other things), that structural ironworkers employed on the Peace River Power project had to be members of Local 97.

The agreement did not provide specifically that the employer was entitled to request the dispatch for employment of individual employees named by it. (The plan of supplying individuals named by the employer is described as the "name-request" system and should be distinguished from the "referral" or "rotary" system under which a union selects and dispatches the individuals to fulfil an employer's requirements.)

The Peace Power Company and Local 97 adopted a system under which the company would send its request for structural ironworkers, whom it designated by name, to the office of the National Employment Service in Vancouver. That office then relayed the request to Local 97 and asked for a "clearance"—i.e., a certificate of acknowledgment that the person named in the company's request was a member in good standing of Local 97. The local would then inform its member of the request made for his services. If the member accepted the employment, his transportation and dispatch to the work would be arranged by the National Employment Service.

In October 1962, Local 97 concluded a collective agreement with the Steel Erectors Association, which represents some thirty-five employers (including the Peace Power Company) operating in the Yukon Territory and in British Columbia. This agreement, which did not apply to the Peace River project, included the following clause 12(a), Union Security:

> When Structural Ironworkers are required by the employer, he shall employ them through the business office of Local 97. The employer shall have choice of selection provided he contacts the business office of Local 97 before hiring said employees, provided such employees shall be members in good standing of Local 97 as a condition of continued employment.

On October 16 and 17, 1963 (the dates relevant to the litigation) Local 97 had adopted and was maintaining in effect the name-request system. This system applied to the employers represented by the Steel Erectors Association and their contractual obligations. In the case of the Peace Power Company, the name-request system was used to "oblige" the employer, and it was in effect in fact.

On October 16, 1963 the Peace Power Company sent to Local 97, through NES at Vancouver, a request that a named foreman and three or four other named members of the local, including the appellant Hornak, be dispatched for employment on the Peace River project. This request was immediately passed on by NES to Local 97. The president of the local issued a clearance slip to one person only. Hornak (the appellant) was not "cleared" and not dispatched.

According to the trial judge, neither Paterson nor any other employee or officer of Local 97 attempted to notify Hornak of the availability of employment on the Peace River project, and this failure to notify him was deliberate. According to the trial judge, this failure to notify Hornak of certain opportunities for employment was an act of discrimination on the part of the president of Local 97.

It was contended at the time of the trial that perhaps such discrimination was justified on the ground that Hornak was a member of the rival union, the Canadian Ironworkers Union Local 1. In court it was assumed that Hornak, notwithstanding his membership in Local 1, was entitled to be treated on exactly the same footing as any other member of Local 97. The trial judge was therefore of the opinion that the conduct of Local 97 in discriminating against Hornak was unfair and oppressive. He also found, however, that Local 97 was not bound by contract with Hornak to apply the name system, and that "it remains a matter of policy for the local union to decide what practice to follow from time to time."

Rights of Union Members

Mr. Justice McFarlane noted that it is common ground that the terms of Hornak's contract with Local 97 were contained in the constitution of the international association from which Local 97 derived its charter and in the bylaws of Local 97 itself. Counsel for Hornak contended that certain directions or instructions set out in telegrams from the general secretary of the international association to the local, relating to use of the name-request system, were also part of the union membership contract.

Regarding the nature of the relationship between a member and his union, and considering particularly the powers granted to, and responsibilities imposed upon unions vis-a-vis their members, Mr. Justice McFarlane held that the membership contract implied a provision that the union shall not discriminate between members in applying any policy it might adopt with respect to job opportunities or the assignment of men to available employment.

This could be implied from the principle explained by Lord Justice MacKinnon in *Shirlaw v. Southern Foundries (1926) Ltd.* (1939) 2 K.B. 206 at p. 227.

Mr. Justice McFarlane noted further that Art. III of the international association's constitution contained the words: "the objects of the International Association shall be . . . to equitably distribute opportunities of employment." This was accordingly one of the terms of Hornak's contract of membership with Local 97, which required that he should not be discriminated against by the union's system of distributing employment opportunities. Mr. Justice McFarlane accordingly held that Hornak had a right to damages for breach of the union membership contract, unless the defences raised by Local 97 were valid.

Internal Union Remedies

As the first of the defences raised, counsel for the president of Local 97 contended that Hornak was debarred from court action until he had exhausted his remedies under the Constitution of the International Association of Bridge, Structural and Ornamental Ironworkers. In support of this contention, reliance was placed upon Art. XIX, sec. 4 of that constitution, the relevant part of which reads as follows:

> No suit or other action at law or equity shall be brought in any court, and no proceeding shall be initiated before any administrative agency by any officer or member of the International Association or any local unions affiliated with the International Association until and unless all rights, remedies and reasonable provisions for hearing, trial and appeal within the International Association shall have been properly followed and exhausted by the officer, member or local union. This provision shall require resort to internal remedies for a period not exceeding four (4) months.

In Mr. Justice McFarlane's view, this provision did not prevent access to the courts for redress; it merely postponed actions or proceedings for a period of four months from the time a complaint arose. Under Sec. 4, the action, which was commenced within the four-month period, would be dismissed, but afterwards the appellant Hornak would be entitled to sue again.

Mr. Juctice McFarlane added that it is a well established principle that contractual provisions which prevent, hinder or delay access to the court are to be construed strictly in the sense that such a provision is effective when expressly, or by necessary implication, it applies to the particular case. Examining Sec. 4 with that principle in mind, he found that it meant to postpone the bringing or initiating of suit, actions or proceedings by certain persons—i.e., officers or members of the international association and local unions. In Mr. Justice McFarlane's opinion, Sec. 4 did not expressly designate the persons or organizations against whom such suits, actions or proceedings were to be postponed. Specifically it did not apply expressly to an action such as the one at bar, which was brought against a local union by a member thereof.

Further, in his view, Sec. 4 did not apply to the case at bar by necessary implication. Since Sec. 4 is contained in the constitution of the international union, the reasonable interpretation is that it was intended to apply to suits, actions and proceedings against the international union only. Mr. Justice McFarlane found nothing in the bylaws of Local 97 which would extend the effect of Sec. 4 to Local 97. Consequently he held that this defence submitted by counsel for the respondents failed.

Union a Legal Entity

The next defence submitted was that Local 97 was not an entity "which may be sued in its common name herein." This submission, in Mr. Justice McFarlane's view, was answered completely and authoritatively, so far as the province of British Columbia is concerned, by the judgment of the Supreme Court of Canada in *International Brotherhood of Teamsters, etc. v. Therien* (L.G. 1960, p. 276) where Mr. Justice Locke, with the concurrence of the other members of the court, stated:

> In my opinion, the appellant is a legal entity which may be made liable in name for damages either for breach of a provision of the Labour Relations Act or under the common law.

Counsel for the respondents sought to distinguish the *Therien* case on the ground that it involved an action for damages in tort. Mr. Justice McFarlane held that this was not a valid distinction. In his opinion, when Mr. Justice Locke referred to damage under the common law he meant to include damages for breach of contract such as the contract of union membership invoked in the case at bar, as well as damages for tort.

Mr. Justice McFarlane noted further that Mr. Justice Locke referred to the rights, powers and immunities conferred upon trade unions by the B.C. Labour Relations Act, which defines a trade union as an organization that has as one of its purposes the regulation in the province of the relations between employers and employees through collective bargaining. The right to bargain collectively and to enter into agreements for that purpose necessarily involves the creation of contractual obligations as between the union and the employees for whom the Legislature has empowered it to act when certified according to the statute. Mr. Justice Locke also stated:

> In the absence of anything to show a contrary intention . . . the Legislature must be taken to have intended that the creature of the statute shall have the same duties and that its funds shall be subject to the same liabilities as the general law would impose on a private individual doing the same thing. *Qui sentit commodum sentire debet et onus.*

Mr. Justice McFarlane stated that this interpretation of the *Therien* case was applied, in his view correctly, by Mr. Justice Maclean in *Boldt v. Seafarers' International Union of North America* (L.G. 1961, p. 570) and by Mr. Justice Verchere in *Hughes v. Seafarers' International Union of North America* (*L.G. 1962, p. 863*).

Local 97 Liable in Damages

For these reasons, Mr. Justice McFarlane held that Local 97 may be made liable in name for damages for breach of its contract of membership with the union member in question. Mr. Justice McFarlane noted that the respondent Paterson was sued on his own behalf and as a representative of all members of Local 97, and he held him liable on his own behalf equally with Local 97 since he was the person who actively caused the breach of contract by his own deliberate acts. To sue Paterson in the representative capacity was unnecessary, but this misjoinder, in Mr. Justice McFarlane's view, would not affect the costs of the proceedings.

Appeal Allowed

Mr. Justice McFarlane allowed the appeal, set aside the judgment of Mr. Justice Aikins and directed judgment for the appellant Hornak against the respondents Paterson and Local 97 for damages for the breach of union membership contract. He remitted the case to the court below to determine the amount of damages and the nature of the injunction, if any, to which the appellant Hornak might be entitled. *Hornak v. Paterson et al.* (1966) 58 D.L.R. (2d) Part 2, p. 175; 66 CLLC, para. 14, 165.

NOVA SCOTIA SUPREME COURT

On November 8, 1966 Mr. Justice Cowan of the Nova Scotia Supreme Court, in dismissing an action brought by some employees for a declaration that they were not bound by a compulsory checkoff clause in a collective agreement, held that such a clause was not prohibited under the Nova Scotia Trade Union Act and, if included in a collective agreement entered into by a duly certified bargaining agent, was binding upon all employees in the

bargaining unit including those who were not members of the bargaining agent.

Mr. Justice Cowan held further that, because, under the Nova Scotia Trade Union Act, all the parties were bound to do everything required of them by the provisions of the collective agreement, the compulsory checkoff of union dues was a permissible deduction under the Nova Scotia Coal Mines Regulation Act.

Circumstances of Dispute

The circumstances of the dispute as related by Mr. Justice Cowan in his reasons for judgment were as follows:

On May 19, 1959 the United Mine Workers of America, District 26 was certified by the Nova Scotia Labour Relations Board as bargaining agent for a unit of employees of the Dominion Coal Company Ltd. in Nova Scotia. After certification, the union concluded with the company on September 7, 1965 a collective agreement, effective from January 1, 1965 to August 1, 1966. The agreement was to continue in force from year to year unless notification to re-open it was served by either of the parties. In fact such notice was given, and the parties agreed to extend the 1965 agreement up to December 1, 1966 to give further time for negotiation.

Union Security — Rand Formula

The 1965 agreement contained clause 27 regarding union security. Subclause (c) of clause 27 provided for a checkoff of the equivalent of union dues in the case of employees who were not members of the Mine Workers Union, but who came within the bargaining unit to which the agreement applied.

Subclause (c) of clause 27 reads, as follows:

> *Check off of Equivalent to Union Dues—Non-members*
>
> The parties agree that from and after the first day of September, 1965, there shall be a compulsory checkoff of an amount equivalent to union dues from the pay of all employees who are not members of the union and who come within the bargaining unit to which this Agreement applies. Such checkoff shall continue during the period the provisions of this Agreement are binding upon the parties. The amount to be deducted shall be such sum as may from time to time be assessed by the Union according to its Constitution as Union Dues payable by its members.

Some employees of the company who came within the bargaining unit had never been members of the certified Mine Workers Union and had never paid dues to it. Since 1960, they had been employees of the company in question and, when the dispute arose were members of Central Auxiliary Workers' Union (also known as Central Lodge No. 679, International Association of Machinists). Since at least 1960, the Central Auxiliary Workers' Union has been a trade union within the meaning of Sec. 1(s) of the Nova Scotia Trade Union Act.

Validity of Rand Formula Disputed

When the 1965 collective agreement was signed, the company put into effect the checkoff provisions of the agreement, including the provisions contained in subclause (c) of clause 27, which were applicable to employees who were members of the bargaining unit, but who were not members of the bargaining agent. Then the employees, who were members of the Central Auxiliary Workers' Union brought a court action for a declaration that the checkoff clause (referred to above) in the 1965 collective agreement between District 26 of the Mine Workers Union, and the Dominion Coal Company was illegal and unenforceable as against them, and that the union security clause in question was not binding upon them.

Plaintiffs' Arguments

In support of their claims, the plaintiffs argued that the union security clause (27(c)) was not binding upon them, by reason of the provisions of Sec. 6(1) of the Nova Scotia Trade Union Act and Sec. 124(1) of the Coal Mines Regulations Act. In the alternative, they submitted that the clause was not binding on them because such a clause is generally unenforceable in collective agreements in Nova Scotia or—in the further alternative in the case of the 1965 Agreement—because of the wording of that agreement.

Sec. 124 of the Coal Mines Regulations Act (as amended) reads as follows:

> (1) Except as hereinafter provided, or as required or permitted by the Trade Union Act, the wages or salary of every employee in or about a mine shall be paid to him in money current in the Dominion of Canada, or by cheque of the employer drawn on a chartered bank without any abatement, set off, or contra claim of any kind whatsoever, provided that every employer, when so requested in writing by any employee, shall retain from the wages or salary due to the employee from the employer and pay over to the person designated in such written request the sums due from the employer for: (a) doctor's dues or fees; and (b) payments, contributions and levies for benefit society, hospital and church.
>
> (2) An employer may, without the written request of the employee, deduct also from wages or salary sums due to the employer for rent, coal, powder, tools or other warehouse supplies, and shall without such written request deduct from wages or salary checkweigher's dues and fees.

The words in the opening sentence of subsection (1) "or as required or permitted by the Trade Union Act" were added in 1964 and at the same time the word "union" was deleted from clause (b) of subsec. 1 of Sec. 124.

Regarding the Trade Union Act, prior to the year 1964, Sec. 6 provided as follows:

> No provision in a collective agreement requiring an employer to discharge an employee because such employee is or continues to be a member of, or engages in activities on behalf of a union other than a specified trade union, shall be valid.

In 1964 Sec. 6 was amended by renumbering the former provisions of that section as (2) and by adding the following subsection as subsec. (1):

> Nothing in this Act prohibits the parties to a collective agreement from inserting in the agreement a provision requiring, as a condition of employment, membership in a specified trade union, or granting a preference of employment to members in a specified trade union; but no such provision shall affect a person who, on the fifteenth day of February, 1964, (a) was an employee of an employer who is a party to the agreement containing the provision, (b) was not a member of the specified trade union or was not paying dues to the specified trade union, and (c) was a member of a trade union other than the specified trade union, unless he subsequently ceases to be a member of that other trade union or becomes a member of the specified trade union.

Mr. Justice Cowan summed up the first argument submitted on behalf of the plaintiffs—that, under Sec. 124(1) of the Coal Mines Regulations Act, the wages due to the plaintiffs must be paid to them without deduction by way of checkoff under clause 27(c) of the 1965 agreement. Also, that such a checkoff was not "required or permitted by the Trade Union Act" since Sec. 6(1) of the Act permitted only certain kinds of union security provisions, and the plaintiffs argued that they came within the proviso to Sec. 6(1). Also that the plaintiffs claimed the only type of checkoff contemplated by the Nova Scotia Trade Union Act was a voluntary revocable checkoff by individual employees, dealt with by Sec. 67 of the Trade Union Act.

Arguments Rejected

Mr. Justice Cowan found that the plaintiffs' arguments were not acceptable for the following reasons. He referred to Sec. 18 of the Trade Union Act, which provides as follows:

(1) A collective agreement entered

into by a certified bargaining agent is, subject to and for the purposes of this Act, binding upon: (a) the bargaining agent and every employee in the unit of employees for which the bargaining agent has been certified; and (b) the employer who has entered into the agreement or on whose behalf the agreement has been entered into.

(2) Every employer and every trade union and every person who is bound by a collective agreement, or on whose behalf a collective agreement has been entered into, whether the agreement was entered into before or after the coming into force of this Act, shall do everything he is required to do and shall refrain from doing anything that he is required to refrain from doing by the provisions of the collective agreement.

Mr. Justice Cowan stated that the effect of Sec. 18 was that, assuming that the 1965 agreement was a "collective agreement" entered into by the Mine Workers Union as certified bargaining agent, it was binding on the union in question, on every employee in the unit of employees for which the Mine Workers Union was certified, and on the employer who was a party to the agreement. Consequently all the parties were bound to do everything they were required to do by the provisions of the agreement. Therefore, the deduction of an amount equivalent to union dues in the case at bar was required to be made by Sec. 18 of the Trade Union Act, and was a permissible deduction under Sec. 124(1) of the Coal Mines Regulation Act.

Mr. Justice Cowan concluded that, unless there was something in the Trade Union Act, or some rule of common law that would invalidate clause 27(c) of union security, the company was required by Sec. 18 to deduct by way of checkoff from the wages of the plaintiffs' employees the amount in question. Then, Mr. Justice Cowan added:

> Section 67 of the Trade Union Act relates only to a voluntary revocable checkoff. It seems obvious that the purpose of this section is to require the employer to comply with the authorization of employees with respect to a voluntary revocable checkoff. It does not follow, however, that an involuntary and irrevocable checkoff may not be made binding upon an employee and upon an employer, by reason of the operation of other sections of the Trade Union Act.

Validity of Union Security Clause

Another argument of the plaintiffs was that clause 27(c) of the 1965 agreement was not binding on them, by reasons of the wording of this clause and of other clauses of the 1965 agreement; also by reason that such a clause would not be binding on them at common law, and that there was no provision in the Trade Union Act that would permit such a clause to be made binding on the plaintiffs.

Mr. Justice Cowan noted that the argument based on the wording of the 1965 agreement arose from the wording of clause 34(a) of the agreement, which reads as follows:

> All provisions and terms of this Agreement are hereby mutually agreed to by and between the Coal Company and all the miners of District No. 26 and signed by the representatives of the parties hereto who have been duly authorized to execute the same on behalf of the Dominion Coal Company and on behalf of District No. 26 of the United Mine Workers of America respectively.

It was argued that the wording of clause 34(a) made the 1965 agreement binding only on "the miners of District No. 26," and that the plaintiffs, not being members of United Mine Workers of America District No. 26, were not bound by the agreement.

Mr. Justice Cowan referred to clause 25 of the 1965 agreement which provided:

> The terms of this Agreement apply to men working in and around the mines, shops and departments covered by this Agreement in accordance with Order Number 562 issued by the Labour Relations Board (Nova Scotia) dated May 19, 1959.

He held that the plaintiffs were in fact "men working in and around the mines, shops and departments covered by this agreement," and that the order 562 issued on May 19, 1959 by the Nova Scotia Labour Relations Board certified the Mine Workers Union as the bargaining agent for a bargaining unit "consisting of all the employees of the Respondent in Nova Scotia, but excluding all salaried employees of the Respondent and employees of the Respondent under the jurisdiction of the government of Canada."

On this ground Mr. Justice Cowan ruled that the 1965 agreement was entered into by the Mine Workers Union as bargaining agent for the bargaining unit referred to in the Board's order 562, and that the provisions of the 1965 agreement, including clause 27(c), applied in their terms to the plaintiffs as employees of the company who were members of the bargaining unit.

Case Law Considered

Mr. Justice Cowan noted that, in *Syndicat Catholique des Employés de Magasins, Inc. v. Compagnie Paquet Ltée.*, the issue before the courts was the validity of a clause in a collective bargaining agreement providing for compulsory checkoff of union dues from all employees, whether the employees are members of the union or not—the so-called Rand Formula (L.G. 1946, p. 123). This clause was similar to the provision contained in clause 27(c) of the agreement in the case at bar.

The trial judge had held (L.G. 1956, p. 1579) that the clause was null and void because it was not a *condition de travail* within the meaning of the relevant Quebec statutory provisions, the Professional Syndicates' Act, and the Labour Relations Act, and that it was, therefore, outside the scope of the contracting power of the union and the company when they made their collective bargaining agreement.

The French version of both statutes used the phrase *conditions de travail* while the English version in one statute referred to agreements "respecting the conditions of labour" and in another to "respecting conditions of employment." The trial judge had divided *conditions de travail* into two classes, one being a true *condition de travail* that could be inserted into the collective agreement without the individual consent of the employees, and the second type, which required such a consent.

The Supreme Court of Canada, by a majority decision (L.G. 1959, p. 286), allowed the appeal and found that the trial judge and the Court of Queen's Bench (L.G. 1958, p. 767) were wrong in rejecting the clause in question as a *condition de travail*, and that the trial judge was wrong in subdividing *conditions de travail* into two classes.

True Test

Mr. Justice Judson, in his reasons for judgment, said that "whatever the phrase may be, *conditions de travail*, 'conditions of labour' or 'conditions of employment', all three deal with the same general concept, and in one language the terminology is uniform." In his view, the true test was "its real connection with the contract of labour," and he found that the clause in question was a *condition de travail.* The Supreme Court ruled that the compulsory withholding clause was not prohibited by the law of Quebec.

Mr. Justice Cowan quoted the definition of the "collective agreement" as contained in Sec. 1(d) of the Nova Scotia Trade Union Act:

> "Collective agreement" means an agreement in writing between an employer or an employers' organization acting on behalf of an employer on the one hand, and a bargaining agent of his employees on the other hand, containing terms or conditions of employment of employees that include provisions with reference to rates of pay and hours of work.

Mr. Justice Cowan ruled that, in view of the reasoning of Mr. Justice Judson in the *Paquet* case, clause 27(c) of the 1965 agreement came within the phrase "terms or conditions of employment" contained in the definition of "collective agreement" in Sec. 1(d) of the Trade Union Act.

Mr. Justice Cowan added further:

> The 1965 Agreement is a collective agreement and, by reason of Sec. 18 of the Trade Union Act, it is binding upon the bargaining agent and the plaintiffs as employees in the unit of employees for which the bargaining agent has been certified, and the Defendant Company as the employer who has entered into the agreement. I can find nothing in the Trade Union Act which would make clause 27(c) of the 1965 Agreement invalid or unenforceable.

Mr. Justice Cowan found support for his ruling in the decision of Chief Justice McRuer, *Hill v. Canadian Pacific Railway Co.* (L.G. 1962, p. 450), who ruled that the union dues agreement was a "collective agreement" within the meaning of Sec. 2(1)(d) of the federal Industrial Relations and Disputes Investigation Act, which section contains the phrase "terms or conditions of employment" as it is used in Sec. 1(d) of the Nova Scotia Trade Union Act. Chief Justice McRuer stated:

> The provisions in the union dues agreement that employees must pay union dues whether they belong to the union or not, or be subject to the discipline of losing a preference of runs given to employees who do pay union dues, is clearly a term or condition of employment. The Brotherhood agreed to it, and by Sec. 18 of the statute, the plaintiff is bound by it while he continues in the employment of the company.

Mr. Justice Cowan also referred to the decision in *Brotherhood of Locomotive Engineers and Brotherhood of Locomotive Engineers & Firemen v. Sloan and Canadian National Railway* (L.G. 1962, p. 956), decided under the Federal IRDI Act when Mr. Justice Casey stated:

> It is unrealistic and contrary to the economy of the Act to assume that unions must or should donate their services to non-member employees; it is in the interests of the employees that they be given a bargaining agent, and this interest implies a duty to contribute to the costs incurred by that agent in the discharge of its functions. In consequence, before declaring these provisions invalid under the Act, I would require an express prohibition or, at the very least one that necessarily implies invalidity. Since I am unable to find either, I consider that defendant's position on this point is unfounded.

Mr. Justice Cowan noted that the Ontario Labour Relations Act expressly provides that a collective agreement may include a provision such as the Rand Formula, "requiring the payment of dues or contribution to the trade union." He stated that there is no such provision in the Nova Scotia Trade Union Act, or in the federal Industrial Relations and Disputes Investigation Act. However, he concluded that the omission of such a provision from these Acts did not mean that a union security clause such as clause 27(c) of the 1965 Agreement was invalid.

Mr. Justice Cowan, in dismissing the plaintiffs' action, ruled that clause 27(c) of the 1965 agreement was valid and binding on the plaintiffs' employees and the Dominion Coal Co. Ltd., and that the company was bound to make deductions from wages of the employees in question. *Trainor et al. v. Dominion Coal Co. Ltd. et al.* (1967) 60 D.L.R. (2d) Part 2, p. 145; 66 CLLC, para. 14, 162.

Recent Regulations Under Provincial Legislation

British Columbia and Quebec have issued new minimum wage orders

Manitoba has revised the wage schedule for building construction workers in Greater Winnipeg

In British Columbia, a new general order and a revised order for the fishing industry established a minimum wage of $1.25 an hour.

In Quebec, a new order for service establishments set a general minimum of 90 cents an hour in Zone I and 80 cents in Zone II. An order for the hotel industry established a general minimum of 85 cents an hour in Zone I and 80 cents in Zone II. Both orders provided for further increases on September 1, 1967.

A new wage schedule for building construction workers in Greater Winnipeg increased most rates.

Annual and General Holidays Act

A holiday order, issued by the British Columbia Board of Industrial Relations under the Annual and General Holidays Act, provided for eight paid general holidays a year for certain employees, effective from August 1.

The first such order to be issued in British Columbia was made under the authority of a 1966 amendment, which authorized the Board to make orders providing for certain statutory holidays with pay.

It applies, with few exceptions, to all employees subject to the Act. In effect, this means all employees except farm labourers, horticultural workers, domestic servants, professional employees and professional trainess, and the following other categories of employees:

(a) employees covered by a collective agreement under the Labour Relations Act; (b) automobile, bus, heavy duty industrial equipment, mobile home, and truck salesmen; (c) employees exempted by regulation from the Male and Female Minimum Wage Acts (commercial travellers, employees of the Pacific Great Eastern Railway, Vancouver; prospectors; persons taking training as practical nurses; students enrolled in occupational training programs in public secondary schools; and handicapped employees working in specified sheltered workshops).

The eight general holidays with pay are: New Year's Day, Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day, Remembrance Day

and Christmas Day. There is also provision for the substitution of another day for any of the eight holidays listed.

The general principle is that, if an employee does not work on a general holiday, he is entitled to his regular pay for the day. His wages must not be reduced by reason of his not working on a holiday if he is paid by the week or the month; and if he is paid on any other basis, he must receive the equivalent of a normal day's pay. If an employee's hours differ from day to day, or if his wages are not calculated on a time basis, his pay for a general holiday must be the equivalent of his average daily earnings, exclusive of overtime, for days worked in the four-week period immediately preceding the week in which the holiday occurs.

An employee who is not required to work on a general holiday must not be required to work on another day of that week that would normally be a day of rest, unless he is paid at his regular rate for all hours worked, plus all other wages due him for the day.

If a general holiday falls on a day that is a non-working day, he must be given a holiday with pay at some other time not later than his next annual holiday, or on termination of employment, whichever occurs first.

An employee who is required to work on a general holiday must be paid time and one half his regular rate for all hours worked and, in addition, must be given a holiday with pay at some other time not later than his next annual vacation, or on termination of employment, whichever occurs first. For purposes of this provision, "regular rate" means "the average of an employee's hourly earnings, exclusive of overtime, for hours worked in the four-week period immediately preceding the week in which the holiday occurs."

An employee is not entitled to pay for a general holiday that occurs in his first 30 days of employment.

There is also a service requirement to be met. An employee is not entitled to be paid for a general holiday on which he does not work when he is not entitled to wages for at least 15 days during the 30 calendar days immediately preceding the general holiday.

The regulations require an employer to keep records showing the following particulars in respect of each employee: Each general holiday given; the amount of pay given for work on a holiday; the date of the holiday with pay given in lieu of a general holiday that falls on a rest-day, or in substitution for one of the general holidays listed, together with the general holiday for which the same is substituted.

Male and Female Minimum Wage Acts

The British Columbia Board of Industrial Relations has replaced its order for amusement places by a general minimum wage order, which applies to almost all employees not covered by other orders. It has also revised its order for the fishing industry. Both orders provide for an interim hourly rate of $1.10 effective from June 5, with provision for an increase to $1.25 an hour on November 1, 1967.

The new general order (B.C. Reg. 100/67) gazetted May 11, is the first such provincial order, and it is intended to extend minimum wage protection to groups not previously covered. It applies to all employees subject to the Male and Female Minimum Wage Acts, except employees covered by or excluded from other minimum wage orders and a few other occupational groups. These are: casual workers employed otherwise than for purposes of the employer's trade or business; artists, musicians, performers, and players; golf caddies; watchmen; motion-picture projectionists; and persons employed in a supervisory, managerial or confidential capacity, whose duties are entirely of a supervisory or managerial character.

The order for the fishing industry (B.C. Reg. 94/67) gazetted April 27, applies to all employees in the industry except persons employed in a managerial or confidential capacity who are: exempt from the Hours of Work Act; office employees, guards, fire wardens, store clerks, stockroom men, commissary men and oil station attendants in organized territory; and employees on boats or vessels.

Both orders make an exception for apprentices, part-time workers, or handicapped employees working under a special permit from the Board, all of whom must be paid the rate specified in the permit.

The overtime standard is the same in both orders, requiring the payment of one and one half the regular rate for all hours worked in excess of 8 in the day and 40 in a week, or in excess of a weekly average of 40 hours in cases where the Board has approved an agreement to average hours over a fixed period. This represents a change for employees in amusement places, as the former order required the payment of overtime after 8 hours in a day or 44 in a week, or in excess of the limits agreed upon where hours were extended with the approval of the Board.

MANITOBA

Construction Industry Wages Act

A new wage schedule, fixing minimum wages and standard weekly hours for building construction workers in Greater Winnipeg, went into force on June 1.

The schedule (Man. Reg. 50/67) again sets rates for 21 occupational categories, but there are now fewer subdivisions. Only one rate is set for construction labourers. The regular work week is 40 hours, except for four categories.

Most rates are higher than those in last year's schedule. A minimum of $3.70 an hour is set for journeymen electricians, increasing to $3.80 an hour on November 1, 1967. For journeymen plumbers, pipefitters and welders, and for millwrights, the minimum is now $3.57 an hour, increasing to $3.66 an hour on November 1, 1967.

For general construction labourers, the minimum hourly rate has been raised from $2.10 to $2.30, with provision for a further increase to $2.40 an hour on October 1. Men whose jobs are not classified are to receive $1.70 an hour instead of $1.65. These rates are again based on a regular work week of 42½ hours.

The minimum for watchmen and flagmen has been increased to $1.25 an hour. The standard work week for these employees remains 48 hours.

Students under 18 years, employed during the period May 1 to September 15, are to be paid at least $1.50 an hour. Unlike last year's schedule, the new schedule does not fix a monthly minimum for these employees, nor does it set a special rate for students over 18.

Taxicab Act

A regulation under the Manitoba Taxicab Act (Man. Reg. 40/67, gazetted May 13) increased the minimum wages of taxicab drivers in Greater Winnipeg, effective from June 1, 1967.

Under the new provisions, a driver hired by the week, and who regularly works at least nine hours a day for six days in a week, must now be paid a minimum of $55 a week, plus $1 an hour for each hour on duty in excess of 54 in a week, or 40 per cent of his gross intake for the week, whichever is greater.

A driver hired on other than a weekly basis must receive a minimum of $3 for each day on duty, with an additional $1 for each hour in excess of three hours.

ONTARIO

Hours of Work and Vacations with Pay Act

Commission salesmen were excluded from the mandatory vacation provisions of this Act by O. Reg. 165/67, gazetted on May 13.

In the regulation, a commission salesman is defined as an "employee who receives all of his remuneration in the form of commissions and bonuses based on commissions, who receives no guaranteed wages from his employer, and whose hours of work are not controlled by or cannot be verified by the employer."

QUEBEC

Minimum Wage Act

Two new minimum wage orders, Order No. 5, 1967, governing service establishments, and Order No. 8, 1967, covering the hotel trade, went into force on June 1, replacing Order No. 40, 1960, which applied to hotels, restaurants, hospitals, real estate undertakings and taxi operations.

The order for service establishments applies to: recreation and entertainment establishments; taxi undertakings; hospitals (including convalescent homes and homes for children and the aged); religious and welfare organizations; lodging houses and staff houses; and also concerns providing educational, maintenance, or protective services.

The service order does not cover the employer's wife or children; clergymen and members of a religious order; students employed in a summer camp or carrying out recreational or educational programs for children; students in approved work initiation training programs; student nurses; and employees working outside the employer's establishment whose hours are not controlled by him.

As in other orders, rates are fixed on a zone basis. Zone I applies to the Greater Montreal area, and Zone II covers the rest of the Province.

The service order sets a general minimum of 90 cents an hour for Zone I and 80 cents an hour for Zone II. On September 1, 1967 these rates are to be increased to $1 and 90 cents.

The minimum for employees under 18 is 75 cents an hour in Zone I and 70 cents in Zone II, with no provision for an increase in the fall.

Lower minimums are set for probationers during the first 60 days of their employment. The rate is 75 cents an hour in Zone I and 70 cents in Zone II. These rates are to be increased by 10 cents an hour on September 1.

The above rates are based on a regular work week of 54 hours, and time and one half the minimum rate must be paid for any additional hours worked. The only exceptions are employees paid on a fixed weekly, monthly or yearly basis who receive at least $70 a week in Zone I and $60 in Zone II.

Tips are the exclusive property of the employee, and the employer may not count them as part of wages even with the employee's consent.

If an employer requires an employee to wear a uniform, he must not make any deductions from the minimum wage for the purchase, use or upkeep of the uniform.

If an employer provides an employee with a room or meals, the maximum deductions from the minimum wage for these services are: 60 cents for a single meal; $3 a week for a room; and $15 a week for room and board.

If lodgings are provided, an employer must not deduct more than 20 per cent of the employee's minimum wage for heated accommodation, and not more than 15 per cent for unheated accommodation.

Hotel Trades

The order for hotel trades covers a hotel, restaurant, lodging house, or camping ground, as defined in the Hotels Act. It also applies to places where alcoholic beverages are sold for consumption on the premises, and establishments that sell, deliver or serve meals to be eaten elsewhere. It does not cover: an establishment connected with a religious, educational or charitable institution, a hospital or an asylum that serves only employees or inmates of the institution; an establishment maintained by a business enterprise or a public corporation for the use of its employees; or small lodging houses (those with fewer than six rooms in cities and towns, those with fewer than three rooms elsewhere) that are not required to obtain a permit under the Hotels Act. Also exempt are students employed during the school year in an approved training program, and the employer's spouse and children.

The general minimum for the hotel trade is 85 cents an hour in Zone I and 80 cents in Zone II. On September 1, 1967 the minimum is to be increased by 10 cents to 95 cents an hour in Zone I and 90 cents in Zone II. Rates for probationers during the first 60 days of their employment are the same as in the service order—75 cents an hour in Zone I and 70 cents in Zone II. These minimums are to be increased by 10 cents an hour on September 1.

For a watchman provided with free accommodation, the minimum wage is $50 a week in Zone I and $45 in Zone II.

The above rates are based on a regular work week of 54 hours, and time and one half the minimum must be paid for any additional hours worked. The only exceptions are watchmen and employees paid on a fixed weekly, monthly or yearly basis who receive at least $70 a week if in Zone I and $60 if in Zone II.

The rules with regard to tips, deductions for uniforms, and charges for room and board are similar to those in the order for the service trades.

SASKATCHEWAN

Theatres and Cinematographs Act

New regulations under the Theatres and Cinematographs Act went into force on June 1.

Among other changes, the minimum age for first- and second-class projectionists' licences was lowered by one year to 19 for a first-class licence, and 18 for a second-class licence. As before, applicants for examination for a third-class licence must be at least 18.

The minimum age for apprentices remains 17, except that the Minister of Labour no longer has discretionary authority to grant an apprentice's licence to a person 16 years of age if there is a shortage of older applicants.

Conciliation

R. J. Thomas dies at 66

R. J. Thomas, president of the United Auto Workers' union from 1939 to 1946, died on April 18 at his home in Muskegon, Mich.

Mr. Thomas was succeeded as president of the UAW by Walter Reuther in 1946. He became an assistant to Philip Murray, president of the Congress of Industrial Organizations and, after the AFL-CIO merger in 1955, an assistant to George Meany, president of the AFL-CIO, until his retirement in 1963.

By the Unemployment Insurance, Pensions and Manpower Section, Dominion Bureau of Statistics

March Claimants Total 8,000 Fewer Than February's

Claimants for unemployment insurance benefit totalled 544,000 on March 31, which was about 8,000 or 1 per cent fewer than the 552,000 reported at the end of February, and almost 46,000 or 9 per cent more than the total on March 31, 1966.

The March total of regular benefit claimants was 407,000 approximately 22,000 fewer than the February total for the same category. The month-to-month comparison of seasonal benefit claimants, however, increased by almost 15,000. There was an increase of 52,000 regular benefit claimants at the end of March compared with the figure for the same period a year ago. Seasonal benefit claimants in March 1967 decreased by approximately 6,000 compared with those of March 1966.

The month-to-month decrease in the total number of claimants can be attributed almost entirely to a decrease in male claimants, whereas the annual comparison indicates that the increase in female claimants was higher than that for males. Compared with February figures, male claimants increased by 5 per cent in New Brunswick and by 6 per cent in Quebec. In the remaining provinces, male claimants decreased in number, compared with the February total. An 11 per cent decrease of male claimants in British Columbia was the largest. The month-to-month comparison of female claimants revealed a rise of 6, 5 and 1 per cent in British Columbia, Manitoba and Ontario. There was a decrease of female claimants in the remaining provinces: Prince Edward Island first, with 14 per cent, and New Brunswick second, with 10 per cent.

Male claimants in March 1967 increased in all provinces except Prince Edward Island and Manitoba, where they decreased by 4 per cent and 11 per cent. Female claimants decreased from the total of a year ago in the Prairie provinces, with a 10 per cent reduction in Saskatchewan and 5 per cent in Alberta.

A claimant's unemployment register is placed in the "live file" at the local office as soon as the claim is made. As a result, the count of claimants at any given time inevitably includes some whose claims are in process. "Claimants" should not be interpreted either as "total number of beneficiaries" or "total job applicants."

Summary Table

	March 1967	*Feb. 1967*	*March 1966*	*Cumulative Data 1967 Jan. to March*	*Cumulative Data 1967 12 months ending March*
	(in thousands)				
Insured population as at month-end	—	4,708	4,498	—	—
Initial and renewal claims filed					
Total	182	170†	159	606†	1,620
Initial	134	128	121	464	1,213
Renewal	48	41	38	143	407
Claimants currently reporting to local offices	544	552	498	543*	322*
Beneficiaries (weekly average)	458	420	370	411*	239*
Weeks compensated	2,059	1,681	1,847	5,335	12,321
Benefit paid	$53,167	$43,531	$46,157	$138,080	$307,316
Average weekly benefit	$ 25.82	$ 25.89	$ 24.98	$ 25.88	$ 24.92

*Monthly Average.
†Discrepancy between totals and sub-totals is due to rounding.

Initial and Renewal Claims

A total of 182,000 initial and renewal claims were filed during March. The figures increased by 23,000 over those for March 1966, and rose by 12,000 on a month-to-month basis. Claims for March 1967 increased from the previous month's total in all provinces except Ontario, where a decrease of 4 per cent occurred. This was attributed to the decrease in the number of male claimants. In five provinces, the number of claims increased by more than 15 per cent during March: Newfoundland, 32 per cent; Nova Scotia, 19 per cent; Quebec, 18 per cent; New Brunswick, 17 per cent; and Manitoba, 16 per cent.

Beneficiaries and Benefit Payments

The average weekly number of beneficiaries was estimated to be 458,000 for March, compared with 420,000 for February and 370,000 for March 1966. Benefit payments totalled $53.2 million during March, compared with $43.5 million in February and $46.2 million in March 1966. The average weekly payment was $25.82 in March, $25.89 in February, and $24.98 in March 1966.

Nova Scotia nursing assistants given right to bargain

Nursing assistants in Nova Scotia gained the right to collective bargaining in April, after a decision by the provincial Labour Relations Board that reversed the Board's long established policy of excluding certified nursing assistants from hospital workers' bargaining units.

Donald Morrison of Halifax, speaking for the Canadian Union of Public Employees (CLC), said that the board's decision "opens the door for all other certified nursing assistants to join bargaining units with the other hospital workers". The next step for CUPE, he said, would be to obtain the same recognition for hospital office employees who are now the only non-professional hospital group denied this right.

Decisions of the Umpire

Under the Unemployment Insurance Act

CUB 2672

The claimant in this case applied for unemployment benefit on January 21, 1966 and reported that he had been employed as a transport driver with a Toronto transport company until the day before. He gave as the reason for losing his employment that he had been "locked out due to a possible labour dispute." He said that he was capable of, and available for work. His employer reported that he was on strike.

The claimant was a member of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers; and the employer was a member of the Motor Transport Industrial Relations Bureau of Ontario. The case arose out of a complicated labour dispute between the bureau and the union involving maintenance division and freight division employees. The claimant belonged to the freight division, and, on January 20, 1966, the union called out on strike 109 of its members who were employed in this division by one of the member companies of the bureau.

The bureau had told the union that it would consider a strike against any of its members to be a strike against all of them, and it thereupon instructed its members to begin closing down their terminals. This closing down began on January 20, and most premises were closed by January 22. On February 14, the union proclaimed that the freight division was on strike in the Southern Ontario zone; on February 17 it made a similar declaration regarding the maintenance division.

All the members of the union's freight division who applied for benefit, including the claimant, were disqualified under Sec. 63 of the Act, as of January 21. In giving his reasons for this disqualification, the insurance officer said that the evidence clearly showed that when the union called some of its members out on strike on January 20, and the employer retaliated by locking out others, a labour dispute had been going on for some time. It was immaterial, he said, whether a stoppage of work was caused by the action of the worker or by that of the employer. It was clear that the claimants had lost their employment by reason of a stoppage of work attributable to a labour dispute at the place where they were employed, and it was also clear that they had a direct interest in the outcome of the dispute. They were therefore disqualified under Sec. 63 (CUBs 85 — L. G. 1947, p. 567; 570 — L. G. 1950, p. 898; 762; 944 — L. G. 1953, p. 1522; 1142; 1419; 1514; 1606 — L. G. 1959, p. 297; 1817; 2107 and 2258).

By taking strike action, the employees of the freight division had failed to prove that there had been no participation by them or by members of their grade or class. The locking-out of union members also failed to prove no participation because the union was acting as their agent; and non-union employees had failed to prove that they were non-members of the same grade or class as the union members.

On March 13, the claimant appealed to the board of referees, and, in his notice of appeal, he said that he had been laid off by his employer on January 20 and had been told that there would be no more work until he was notified. He had applied again on January 21 and had been called back to work in the afternoon. He had called every day during the next week, but there was no work for him. At this time, he was not involved in any organizing of truck stoppage or in any picketing.

After hearing the case on April 5, the board unanimously decided that there had been a "labour dispute" between the parties between December 24, 1965 and January 16, 1966. On the latter date, the board said, the union membership had refused to ratify the conciliation board's recommendations, and had declared themselves in favour of a strike. "The making of this statement by the union was a clear indication that at any given moment a stoppage of work could result. The board's next problem is to establish when a 'stoppage of work' took place, if at all. The union called an unauthorized strike at [the company] in a number of its depots throughout Ontario on January 20, 1966.

"There was no doubt that that action was a 'stoppage of work', although it was not area-wide, and did not directly affect other factory workshops or premises in which other union members were employed. On the same day, however, union employees at [three other companies in Toronto] withdrew their labour, although in the evidence presented by the union today, this withdrawal of labour was not sanctioned by the union involved."

The board said that, according to the evidence, after this strike and withdrawal of labour began, the bureau had informed its members on the same day that, in view of the union's action and according to their agreed policy, all members of the bureau would be deemed to have been struck. All members of the bureau were therefore directed to close down, "and what is sometimes termed a 'lockout' came into existence."

The board found that the claimant had lost his employment by reason of a work stoppage attributable to a labour dispute at the premises where he was employed on January 21, and that he was "certainly directly interested in the labour dispute, in that results of the negotiations with the employer will be either of benefit or detriment to him."

The board further decided that, since the claimant was employed in a union shop, its finding would also apply to other members of his class and grade involved in the strike, and that it would be effective with regard to locals of the union in Toronto, Hamilton, Windsor and Kingston.

On May 16, Toronto Local 938 of the union appealed to the Umpire on the ground that the board's interpretation of the evidence was biased. The insurance officer denied that there was anything in the evidence to support the union's contention.

The union, in submitting further comments to the Umpire, pointed out that the Act provided that, when an insured person quitted his employment, a penalty of six weeks waiting time applied. In this

case, the employees had been "on the street" for 14 weeks. The union asked what difference there was between a man's "quitting his employment or withholding his labour"; and it argued that its members should be paid benefit for the last eight weeks of the strike.

Considerations and Conclusions.

The record clearly shows that a labour dispute existed between the employees of the claimant's grade or class and their employer. The evidence makes it clear also that the claimant and all those covered by this representative appeal lost their employment by reason of the stoppage of work which took place in consequence of that dispute. Therefore, all the aforementioned claimants were rightly disqualified by the insurance officer under Sec. 63 of the Act. As the insurance officer said, in effect, in his reasons for imposing a disqualification under that section, it is immaterial whether the stoppage of work was caused by the action of the workers or by the action of the employer (CUB 570, CUB 944 and CUB 1142).

The conditions under which a claimant can be relieved from a disqualification imposed under Sec. 63 of the Act are set out in subsec. (2) of that section; and one of the six conditions which a claimant must fulfil is that he must prove that he is not directly interested in the labour dispute. As the evidence clearly shows that the working conditions of the employees of the claimant's grade or class stood to be affected by the outcome of the aforementioned labour dispute, it must be said that they failed to prove that they were not directly interested therein.

In consequence of the above, I decide to maintain the unanimous decision of the board of referees and to disallow the union's appeal.

This decision shall apply, *mutatis mutandis* (with the necessary alterations), to the case of claimant . . ., whose appeal was heard by the Umpire in Toronto, on August 11, 1966. The claimant was present with his representative. The Commission was represented by . . . one of its solicitors.

As the claimant was one of those concerned by the decision of the board of referees on the case of (the) claimant, and as the essential facts in both cases, except for minor details, are identical, the reason given by the chairman of the board of referees for granting leave to appeal to the Umpire, viz. "if the Union has a basic right of appeal, then this claimant . . . should have the same basic right," was not a proper one. Under Sec. 72 of the Act, a claimant in person clearly does *not* have the same right of appeal as does his union, and leave to appeal in person from a unanimous decision of a board of referees ought properly to be in accordance with the provisions of Sec. 73(1) of the Act.

CUB 2673

The claimant was employed as a bar steward from 1960 to October 20, 1965, when he was laid off because, as the employer reported, he was 66 years of age and found the hours too long. His claim for benefit was allowed and benefit was paid until a spot check was made on May 11, 1966, when "because of the claimant's activities a formal investigation was requested."

The reason for the investigation was that the claimant was found to have been working in his son's grocery store for five hours a day, starting about November 17, 1965. The claimant testified that he had received no pay for this work, and that he did it "to pass the time." He also said that he had no interest in his son's business and that he controlled his own hours. He was ready to take a full-time job of a kind that he could do — at the going wage, he added. The claimant's statement was supported by a written statement by his son.

On June 9, 1966 the insurance officer disqualified the claimant from November 14, 1965 under Sec. 54 of the Act on the ground that he was engaged in employment "which is normally carried on for remuneration, and you are in a position of controlling your working hours and have not proved that you are unemployed."

On June 15 the claimant appealed his disqualification to the board of referees. He reiterated his statement that he had been, and was prepared to accept employment at light work suitable to his age and qualifications. He said that he had received no remuneration for his work at the store either in cash or in kind, adding that any work he had done there "was no more than doing a favour, and should this now be deemed 'employment' I would discontinue at once." He stated emphatically that he had had no intention of receiving money he was not entitled to, "or by false pretences."

The claimant's statement was supported by a letter from a clergyman, the rector of the claimant's church, who testified to his honesty and good character. He said that from his knowledge of the son's business he knew that it was "a struggle to make ends meet," and he was sure that the claimant had told the truth in saying that he had never received any remuneration for his work in the store.

The board unanimously upheld the decision of the insurance officer that the claimant had not proved that he was unemployed on November 14 and subsequently, in accordance with the Act. It said that although the claimant said that he had not been paid for his services, he was doing work "for which remuneration is usually received." Further, he should have reported to the insurance office the work he was doing at his son's store.

In granting leave to appeal to the Umpire, the chairman of the board said that the "case was a most difficult one to assess, and the board reached its decision in accordance with the regulations as laid down under the Act. The board's opinion was that the claimant did not have the intent to defraud or commit any act that would harm his reputation which in the community was above reproach . . ."

Considerations and Conclusions

The fact that a claimant is engaged in work that is normally carried on for remuneration merely raises a presumption that he is working under a contract of employment and hence is not unemployed. It is open to a claimant to produce evidence that he is not in fact working under such a contract, and if he does this and also proves that he meets the other requirements of the Act and Regulations, then he will qualify for benefit. This principle is contained, in substance, in the jurisprudence established by the Umpire in (another) decision. . . .

In my opinion, the instant claimant has produced more than adequate proof that he was not working under a contract of employment. It is not suggested that he was engaged in partnership or co-adventure with his son. He was merely helping his son out when he had nothing else to do.

Under these circumstances, it cannot be said that the claimant was "employed" at all, either within the meaning of paragraph (a) or (b) of Regulation 154(1).

As a consequence, I decide to allow the claimant's appeal.

CUB 2678

The claimant filed a renewal application for benefit. He declared that he had been employed as a track mobile operator at an hourly wage of $2.10, from November 1965 to January 1966, when he was laid off due to "lack of work." The employer stated that the claimant was "laid off, present orders completed."

At about the same time, the claimant completed a Farm Questionnaire, wherein he stated that he had owned a 320-acre farm since April 1965. It was situated 38 miles from the town in which he lived. The gross returns from the farm for the year 1965 were shown as $725.

The claimant stated that he did not consider farming as his main means of livelihood and that his work on the farm would not prevent him from accepting immediately suitable full-time employment, either during the summer or winter

months. He added that no one helped him in the performance of his work on the farm.

On February 8, 1966 the local office stated that, when the claimant bought his farm in April, 1965 he was on a continuing claim. He subsequently established a new initial claim, effective May 16, 1965, but his farming activities were not declared until he filed a renewal claim on February 3, 1966. On June 7, 1965 he ceased to be on claim, as he had found work.

The insurance officer notified the claimant that, on the information he had presented, it had been decided that the claimant was engaged in business on his own account as a farmer, and that he could therefore be considered unemployed only during the farming off-season, provided that during the off-season he did not work or performed so little work in connection with his farming operation that he was available for full-time employment elsewhere.

The insurance officer contended that the farming off-season began with the week in which October 1 falls and ended with the week in which March 31 next falls (Unemployment Insurance Regulation 154(1) and (3)). As long as the claimant was engaged in business on his own account as a farmer, the insurance officer continued, he was disqualified and benefit would be suspended from April 3, 1966 to May 15, 1966 inclusive, as provided by the Act. To be eligible during any other period, he maintained, the claimant must fulfil all the conditions of entitlement to benefit.

The insurance officer requested an investigation of the claimant's entitlement to benefit since the date of the purchase of his farm, and the claimant made the following statement, on April 12, 1966 to an enforcement officer of the Commission:

> I signed Postal Application for Benefit dated November 19, 1964, . . . and March 25, 1965. New Claim for Benefit dated May 16, 1965.
>
> Renewal Postal Application for Benefit dated February 3, 1966. Farm Questionnaire dated February 3, 1966. Weekly declaration [for period March 21 to June 6, 1965]. I knew I should declare earnings or employment or sale of any farm produce while on claim.
>
> During 1965, I put in 50 acres of wheat and 50 acres of barley. I commenced mid-May, 1965 and finished end of May, 1965 . . . I cultivated about 110 acres of summer fallow after I seeded. The only other work I did was about two days of fencing. There was no sale of any farm produce. While I was doing the above farm work, I would say there was only about two days that I didn't work. I didn't do any farm work during 1964. Had there been a job available during the two weeks involved, I would have readily accepted it and dropped the crop in after working hours. This is why I was declaring myself available over the two weeks concerned, (the weeks of May 16 and May 23, 1965).
>
> I didn't declare any self-employment because I did not understand I was required to do this. When I first went on claim, I didn't have the farm; and after I purchased the farm, this didn't occur to me. I didn't consider [that the] self-employment question on the weekly declaration included farming. I figured the declaration was correct when I submitted it.
>
> When I was on claim, I was looking for work. I was looking for mechanic's work in a garage or a carpenter's work — driving truck — I have a "B" licence. I was looking for pipeline work as well.
>
> I am a member of local 551 — United Electrical Radio and Machine Workers of America U.E., I have to be available to [employer] because of the union membership, and I would drop anything else I was doing and go to them. . . . The union will let us work in other work as long as it is not their line; that is, pipeline. I was not confined to pipeline work, and I would have gone to work for anybody. I was available within the 25-mile radius . . . I was available for any hours of work and I would have accepted part-time.
>
> My claimed dependant has always resided with me, and I have been her whole support while on claim.

On May 16, 1965 the claimant filed a new claim for benefit and, as previously mentioned, did not declare his farming activities. The insurance officer notified the claimant that he was disqualified and his benefit suspended (a) from April 4, 1965 to May 15 and (b) from May 16, 1965 to September 25, inclusive, as provided by section 54(1) of the Act, as he was engaged in business on his own account as a farmer. The insurance officer added: "The disqualification re: farming, with relief in farming off-season, commencing 3 April, 1966 to 15 May, 1966 remains in effect."

The claimant appealed to a board of referees on May 16, 1966, and said:

> You state that you have information that, as I own a farm, I am disqualified to receive benefits under the Unemployment Insurance Regulations. To further prove this, I did not buy the farm until April 27, 1965; but you say you overpaid me from April 4, 1965. How can this be? My employment record [proves] that farming is not my main means of livelihood . . . . You state on May 9, 1966 in a letter which I received from you that I was overpaid in the amount of $288 [that] was for the year 1965. I feel this was not just.

The insurance officer, in his submission to the board of referees, stated that, on receipt of the claimant's letter of appeal, he had amended his previous decision to show disqualification as not unemployed commencing May 2, 1965, the Sunday of the week immediately following the date on which the claimant acquired his farm. The disqualification, he said, had previously been imposed to commence with the beginning of the on-season, as the claimant had stated that his farm was purchased in April 1965, with no specific date shown. The overpayment to which the claimant referred in his letter was reduced to $162 by the amended decision, the insurance officer stated.

A board of referees heard the case in Edmonton, Alta., on June 21, 1966 and, by unanimous decision, dismissed the appeal.

Considerations and Conclusions

The question to be decided is whether the claimant's main occupation is or is not as a farmer, and this is a question of fact.

The record shows that the claimant, who is 43 years old, has devoted most of his life to farming, that he sold his farm in 1963 and moved to the town of Camrose, that in 1965 he purchased the farm in question here, and that in 1965 he put the crop in, worked summer fallow and took the crop off himself. On the face of it, it seems that the farm work referred to here requires more time than the "minor extent" contemplated under subsection (2) of Regulation 154.

From a letter from the claimant, it appears that his industrial employment history did not commence until April 22, 1964, only one year before the disqualification which gave rise to this appeal.

While I am prepared to believe the claimant when he says he could have done the farm work in his spare time, and that he would have accepted employment in any event, nevertheless it is the claimant who must prove that he is unemployed; and to do that in this case, he must first show that his main occupation in 1965 was industrial employment and not farming. With his long history of farming, and his very short history of industrial employment, I do not think the claimant could, at the time of his disqualification, prove that industrial employment, not farming was the occupation which he followed as his principal means of livelihood.

As earlier stated, we are here concerned with a pure question of fact, and I consider that there was sufficient evidence to justify the board's finding. In any event, it cannot be said that the board's unanimous decision was unreasonable.

As a consequence, I decide to disallow the . . . appeal.

Canadian Railway Office of Arbitration

Releases Decisions in Five Disputes

Five disputes were dealt with by the Canadian Railway Office of Arbitration at a hearing in Montreal on May 8. They concerned: a runaround claim by a brakeman when not called as spare assistant conductor; a claim by a conductor and crew for pay while tied up; a claim by a yardman for eight hours pay at yard-helper's rate; a claim by a yardman for eight hours pay at yard foreman's rate; and a claim by a passenger train conductor for pay at way-freight rate on certain trips.

The arbitrator allowed none of the claims.

Summaries of the five cases, Nos. 66 to 70 inclusive, follow:

CASE NO. 66

Dispute between Algoma Central Railway and the Brotherhood of Railroad Trainmen concerning a runaround claim submitted by a brakeman when he was not called for spare assistant conductor on a passenger train.

A trainman was working as conductor in pool freight service on a subdivision prior to a change of timetable. That day, when the trainman arrived at his home terminal, he was "bumped," due to a reduction of crews that accompanied the timetable change. All positions were rebulletined, in accordance with an article of the collective agreement, and the trainman was assigned as brakeman in pool freight service at the subdivision, at his home terminal.

A brakeman, a qualified conductor, held an assignment as brakeman in pool freight service on the subdivision both before and after rebulletining at the change of timetable. A senior conductor, assigned in pool freight in this subdivision, went on vacation at this time for twelve days. The vacancy was filled by a conductor who was junior to the trainman. The trainman became the senior qualified brakeman at the terminal and the brakeman became the second senior qualified brakeman.

The trainman departed on his assignment for that day, and in addition, he signed on the crew sheet for the spare job of assistant conductor required for a passenger train for the following day, which he accepted.

The brakeman, meanwhile, was called on the second day for his regular assignment as brakeman. Because the trainman was called for, and accepted, the spare run as assistant conductor instead of himself, the brakeman submitted a runaround claim for 50 miles, which the company declined to pay.

The brotherhood based the claim on some articles of the collective agreement that said that "Establishment of conductors' spare board: (a) conductors working as brakemen in either assigned or irregular service will be required for all relieving of conductors;" and "a promoted conductor will not be permitted to hold an assignment as brakeman out of his home terminal while a junior conductor is employed as conductor out of such terminal."

The company based its argument on an article that said: "The senior qualified available man at each terminal will stand first out for spare work on the subdivision to which he is assigned. When the senior man is called for a run, the next senior man will be so notified."

The company argued that at the time of the trainman's arrival at the terminal, he was displaced from his existing position as a conductor and reduced to the rank of brakeman, excepting only that another position as conductor might be available to him. Such position, it was claimed, had in fact existed on that date, but it was filled by a man, junior to the trainman, who was on the point of leaving when the trainman arrived.

The company contended that the trainman's claim to this trip could not be avoided under the provisions of the collective agreement. Had the brakeman been called in his place, undoubtedly the trainman would have claimed a runaround, the company said.

In giving his award, the arbitrator pointed out that both men had the classification of brakeman, but that the trainman was senior in that classification to the brakeman. The arbitrator said that the brotherhood's interpretation that the trainman should not take the assignment, because the junior conductor took the holiday assignment, did not apply. In this instance, the trainman did not take an assignment as brakeman. As senior qualified man, he was entitled to stand first out for spare works.

This reduces the problem to one of determining the applicability of the collective agreement.

The company's brief suggested the desirability of a ruling as to whether or not there is a mutual obligation upon the parties to the agreement to administer its provisions. For example, if in this case it had been found that the trainman was in the wrong, could the company alone be held responsible, or should the union control their members so as to prevent such an occurrence.

As this was a point not raised in the joint issue and the brotherhood did not concur in the suggestion, not being ready to present an argument on it, this suggestion must remain for future determination, if and when raised.

For the reasons given this claim was denied.

CASE NO. 67

Dispute between Algoma Central Railway and the Brotherhood of Railroad Trainmen concerning the claim of a conductor and crew for eight hours pay when tied up at a station.

A conductor and crew worked at a way-freight rate of pay from a station junction to a station, and tied up at 9:50 p.m. after

being on duty 12 hours and 25 minutes. The crew was called on the following morning and ordered to work an unscheduled train from the station to another one, and return. The crew worked for 11 hours and 25 minutes to carry out this order, and tied up at the station at 6:45 p.m.

On the third day, the crew was ordered to be at the station at 10:30 a.m. They returned to the station junction (point of departure), and went off duty at 4:40 p.m.

The crew submitted a claim for pay for the first eight-hour period that they were tied up at the first station, after 6:45 p.m. on the second day. The company declined to pay the claim.

The brotherhood based this claim upon the provisions of an article of the collective agreement, which says in part: "Trainmen tied up at any point between the initial terminal and the point for which called, which point shall be recognized as the final terminal, shall be paid . . . . "

The brotherhood argued that the station at which the crew booked their rest was not a terminal and, therefore, the claim should be paid.

The company maintained that the crew's booking of rest disrupted the schedule for their train. Hence, the schedule for their train and the next one had to be annulled and re-assigned. This re-assignment for a new trip from the station and back on the second day would make that station both the initial and final terminal on the special run.

The article of the collective agreement, quoted above, is then interpreted to show that this crew was not tied up at any point between the initial and the final terminal, which was the station. Therefore, the article does not apply.

The arbitrator disallowed the claim for these reasons.

CASE NO. 68

Dispute between Canadian National Railway Company (Mountain Region) and the Brotherhood of Railroad Trainmen concerning the claim of a yardman for eight hours at yard helper's pro rata rates.

A yardman was regularly assigned as yard helper on a 10 p.m.—6 a.m. yard assignment. After commencing work on his regular assignment one day, he was notified at approximately 10.30 p.m. that he was required to work as yard foreman on 10.30 p.m.—6.30 a.m. yard assignment.

For services performed on that day, the yardman submitted a time return claiming eight hours at yard helper's pro rata rate for the 30 minutes worked on his regular yard assignment and a further time return claiming eight hours at yard foreman's pro rata rate for the eight hours worked on the other yard assignment. The company allowed payment of these time claims on the basis of continuous service from 10.00 p.m.—6.30 a.m. at yard foreman's rates, pro rata rate for the first eight hours, and punitive rate for the remaining 30 minutes

The yardman subsequently submitted a claim for the difference between the amount originally claimed and the amount paid. The company declined to pay this claim.

The brotherhood contended that this decision violated an article of the collective agreement, which says that eight hours or less shall constitute a day's work.

The company explained that the crew office had tried to notify the yardman at his home that he would be required to fill the yard foreman vacancy. Failing to reach him, the crew office notified him of the change after he had reported for duty on his regular assignment. Immediately, he assumed the yard foreman vacancy.

Payment was allowed for this period at the yard foreman rate of pay.

The joint statement of issue contended the violation claimed concerned an article of the collective agreement that said: "Yardmen (foremen and helpers) assigned to regular shifts who are required to work in excess of eight consecutive hours, or who are required to commence work on second tour of duty within 24 hours of the starting time of the preceding shift paid for at pro rata rate, will be paid for time worked in excess of eight hours continuous service and for the second tour of duty at one and one-half times the pro rata rate."

Analyzing this provision, the company maintained it contained two provisions: one contemplating continuous service in excess of eight consecutive hours; the second dealing with the commencement of a second tour of duty after completing one tour and going off duty. If no break occurred between the periods of duty, payment for all time worked, it was claimed, would fall within the first situation.

Thus, the trainman did not go off duty and there was no period of uncompenpensated time during the change from one classification to the other.

In addition, to support their argument, the company referred to Canadian Railway Office of Arbitration Case No. 6 (L. G. 1965, p. 828), concerning a dispute between the Canadian Pacific Railway and this brotherhood over division of a single tour of duty.

For these reasons, the arbitrator found there was no violation of the claimant's rights under the agreement, and the claim was denied.

CASE NO. 69

Dispute between the Canadian National Railways (Prairie Region) and the Brotherhood of Railroad Trainmen over a yardman's claim for eight hours at yard foreman's pro-rata rate when a self-propelled crane moved cars from one track to another and unloaded them.

On July 8, 1964 a self-propelled crane moved twelve cars of gravel, two at a time, and unloaded them by means of its clam bucket. A yardman, who was first out on the spare board, claimed pay for eight hours at yard foreman's rate, on the ground that the company had violated an article of the agreement in not having yardmen to accompany the cars when they were moved from one track to an adjacent one. The company declined payment.

The union contended that the moving of the cars by the crane without yardmen violated an article of the agreement which required that "Yardmen will do all transfer, construction, maintenance of way, and work-train service exclusively within switching limits, and will be paid yard rates for such service."

The company argued that this clause was not to make work for yardmen, but was to ensure that bona fide yardmen's work was performed by none other than yardmen, and the work in question was not yardmen's work.

The brotherhood stated that the crane had switched cars, and that maintenance of way employees had thrown switches in connection with the movement; but the company said that the article did not mention switching, and on this ground it reasoned that yardmen had not got the sole right to do switching. Furthermore, the company said that the crane in this dispute had not performed switching, but had simply moved cars from one track to another and unloaded them.

The company stated that the union had attempted, during negotiations for renewal of the contract in 1961, to have a provision included that would have prescribed a "crew consist" for self-propelled machines. This request had been refused, and the company argued that this attempt on the part of the union showed it was aware that at that time no such provision existed. A conciliation board had refused to recommend acceptance of the union's demand, and the agreement had been renewed without inclusion of any provision of the kind the union wanted.

Again in November 1965 the brotherhood had demanded a provision to establish a "crew consist" on self-propelled equipment performing any switching or handling of cars. The conciliation board

had refused to accept the request, and again the agreement had been renewed without the provision.

The company quoted an award by an arbitrator in a dispute concerning the company and the Eastern yardmen's agreement, and quoted Case No. 24 of the Canadian Railway Office of Arbitration (L. G., May 1966, p. 249), both of which referred to similar disputes about self-propelled equipment, and both of which had supported the company's contention.

After careful study, the arbitrator said he was satisfied that another article of the agreement that had been quoted referred to the "crew consist" of bona fide yard crews when locomotives were used within switching limits for yard work; and that "further agreement between the parties is required, as has been sought, to enlarge the scope of that provision to include these unusual types of equipment, self-propelled machines, with their own distinctive functions, differing from that type of equipment requiring the traditional crew common to yard engines."

For these reasons the claim was denied.

CASE NO. 70

Dispute between Canadian National Railways (Prairie Region) and the Brotherhood of Railroad Trainmen over the claim of the conductor of a passenger train for pay at the way-freight rate.

On four dates in February 1966, the conductor of a passenger train that handled as express certain consignments that had originated as L.C.L. (less-than-carload) freight, claimed the way-freight rate of pay. The company paid him the passenger rate. The union contended that the company, in refusing to pay the difference between the two rates, had violated an article of the conductors' agreement.

This article and an equivalent one in the trainmen's schedule read: "Conductors will be paid way-freight rates over the full trip if they load or unload way freight or switch at three or more points, or a combination of three of both."

The union admitted that Case 790 of the Canadian Railway Board of Adjustment No. 1 (L. G. 1962, p. 1038), involving a similar changing of L.C.L. freight into express shipments, had been decided against the brotherhood, but it argued that this decision had been rendered without a statement of reasons. It suggested that the present case should be compared with Case No. 765 (L. G. 1961, p. 937), in which a decision by Prof. Bora Laskin gave explicit reasons for a contrary decision that, it was contended, involved a similar principle.

In a comprehensive explanation of the different methods of handling freight on passenger trains, the company said that when there was enough way freight to warrant it, a freight car or cars were included in a passenger train to deal with this traffic. Such cars are manned by L.C.L. freight handlers on passenger trains, and these employees are covered by a separate agreement. When a passenger train has an express car, this car is in charge of an express messenger, who is responsible for handling express traffic, and his position is covered by an agreement with another union.

The company stated that a conductor on a passenger train on which express or less-than-carload freight was loaded or unloaded en route had always been paid only the usual passenger rate of pay, since he was not required to assume any responsibility with regard to such shipments.

The company said that, owing to a decline in this kind of traffic, when way freight was on hand at a station, and way-freight service was not immediately available, the traffic was often turned over to the express department. Such consignments were forwarded as express, and while in transit were in the care of an express messenger if handled in an express car, or of a train baggageman paid an express allowance if handled in a baggage car. In either case, the express department assumed the cost of the service performed.

The arbitrator said he had found that the problem dealt with in Case No. 765 was quite different from that raised in the present case and the judgment in that case did not help him in interpreting the language of the article quoted by the parties in the present case.

It had been established, he said, that the traffic handled on the train in question on the dates mentioned had moved in an express car accompanied by an express department form, and in the care of an express messenger who was responsible for the handling of the traffic. There could be no question that the shipments were express, and not way-freight traffic.

For this claim to succeed, there would have had to be a provision in the conductors' agreement for additional payment to a passenger train conductor for assisting an express messenger or baggagemen in the loading or unloading of express traffic that had been converted from a freight consignment, and there was no such provision.

"The plain wording of the provision relied upon indicates that conductors will be paid way-freight rates over the full trip if they load or unload way freight," but there was nothing in that provision to prevent the company "from deciding, in the interest of a more efficient operation, to facilitate shipment of material commencing as L.C.L. way freight by converting it into an express shipment. Such a restriction remains a matter for possible future negotiation.

"For these reasons the contention of the brotherhood cannot be sustained."

New publication to help Ontario women

A new booklet titled, *Law and the Woman in Ontario*, issued by the Women's Bureau, Ontario Department of Labour, touches on marriage, divorce, property rights, support of children, inheritance, and laws regarding wages and hours of labour. The booklet does not give detailed legal advice, but it helps to make women acquainted with legislation that affects their rights and responsibilities. Aspects of the law that apply to both men and women are not dealt with.

The booklet was compiled as a result of many requests from individuals and from women's organizations for information on women's rights. It is available from the Women's Bureau, Ontario Department of Labour, 74 Victoria Street, Toronto 1A, Ont., price 25 cents for single copies or 20 cents each for lots of 25 or more.

Canadian work patterns outlined in DBS bulletin

"*Work Patterns of the Canadian Population, 1964*" has recently been published by the Labour Division of the Dominion Bureau of Statistics. No. 2 in the Special Labour Force Studies series, the report is "the second in a series of research studies concerned with the analysis of selected economic, social or demographic aspects of the working population in Canada."

The bulletin deals with: the annual labour force, unemployment, long-duration unemployment, full-year and part-year labour force participants, and full-time and part-time employment. The text is accompanied by 45 tables.

Copies of the publication, price 75 cents, may be obtained from the Queen's Printer or from the Dominion Bureau of Statistics.

New York, 1966. Pp. 73, 57.

Contents: Basic conditions for development. Improving the conditions for enterprise. Matching human with physical resources. Making more efficient use of physical capacities. Building a stronger fiscal and monetary base for development.

12. UNITED NATIONS SEMINAR ON PLANNING TECHNIQUES, MOSCOW, 1964. *Report*. New York, United Nations, 1966. Pp. 190.

Seminar held July 8-22, 1964, organized by the United Nations in co-operation with the Government of the USSR.

Economics

13. JOHNSTON, JOHN. *Econometric Methods*. New York, McGraw-Hill, c1963. Pp. 300.

This book, intended for students, is divided into two parts: an explanation of the linear normal regression model, and of the theory of econometrics.

14. MCFARLANE, BRUCE. *Professor Irvine's Economics in Australian Labour History, 1913-1933.* Canberra, Australian Society for the Study of Labour History, 1966. Pp. 71.

A brief examination of the writings of the Australian economist. Professor R. F. Irvine (1861-1941).

15. SAMUELSON, PAUL ANTHONY. *Economics; An Introductory Analysis* [by] Paul A. Samuelson [and] Anthony Scott. Canadian ed. Toronto, McGraw-Hill Co. of Canada, 1966. Pp. 902.

This Canadian edition of Professor Samuelson's well-known textbook has been adapted for Canadian use.

Executives

16. HARVARD BUSINESS REVIEW. *Skills That Build Executive Success.* [Boston, c1954-1964] Pp. 121.

Partial contents: The knowledge of an executive. Skills of an effective administrator. Understanding leadership. Developing decision makers. Managing for business effectiveness [by] Peter F. Drucker. How to stay on top of the job.

17. LOPEZ, FELIX M. *Evaluating Executive Decision-Making; the In-Basket Technique.* New York, American Management Association, 1966. Pp. 159.

This study is concerned with a management game, the "in-basket", which can be used as a training method, a research instrument, and as a selection test. In the "in-basket" exercise, the participant is supplied with background information and with material such as memos, letters, etc., that might be found in an executive's in-basket, and is asked to make decisions on each problem.

18. NATIONAL INDUSTRIAL CONFERENCE BOARD. *The Changing Role of the International Executive*, by Enid Baird Lovell. New York, c1966. Pp. 254.

A study of the management role of senior international executives in United States companies which maintain overseas operations. It shows how the assignment and delegation of authority of the international executive is tied in with the overall corporate management structure. Includes case studies and company organization charts.

19. NATIONAL INDUSTRIAL CONFERENCE BOARD. *Top Executive Compensation*, by Harland Fox. New York, 1966. Pp. 77.

An analysis of the 1965 compensation of the three highest paid executives in each of 1,304 corporations in manufacturing, retail trade, gas and electric utilities, commercial banking, life insurance, and fire, marine, and casualty insurance.

Human Relations

20. IVENS, MICHAEL WILLIAM, Ed. *Case Studies in Human Relations, Productivity and Organization.* Edited by Michael Ivens [and] Frank Broadway. London, Business Publications, 1966. Pp. 380.

Eighty-nine case studies cover such subjects as personnel management, labour relations, staff selection, conditions of employment, communications, staff training, and, productivity and productivity agreements.

21. SAYLES, LEONARD ROBERT. *Human Behavior in Organizations* [by] Leonard R. Sayles [and] George Strauss. Englewood Cliffs, N.J., Prentice-Hall, 1966. Pp. xii, 500.

This book examines the interrelationships between individuals, jobs and groups. It discusses such matters as job satisfaction, automation, and white-collar work, work groups, motivation, delegation of responsibilities, employment management, interviewing, discipline, etc. Includes examples of actual work situations.

Income

22. BARLOW, ROBIN. *Economic Behavior of the Affluent* [by] Robin Barlow, Harvey E. Brazer [and] James N. Morgan. Washington, Brookings Institution, 1966. Pp. 285.

"[This] study was made as part of the program of The University of Michigan Survey Research Center."

The authors, members of the Faculty of Economics of the University of Michigan, report the results of a field survey, conducted in 1964, of the investments and working behavior of 947 individuals with annual incomes of $10,000 or more. These individuals also answered questions on estate planning, charitable donations, information sources used by investors, motives for saving, delegation of investment decisions, and other matters.

23. ORGANIZATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT. *Non-Wage Incomes and Prices Policy; Trade Union Policy and Experience; Background Report for Trade Union Seminar.* Paris, OECD, Manpower and Social Affairs Directorate, Social Affairs Division, 1966. Pp. 191.

Papers for a Trade Union Seminar; Supplement to the Report. Paris, 1965. Pp. 159.

The Trade Union Seminar on Non-Wage Incomes and Prices Policy was not held. Instead, there was a meeting of rapporteurs whose papers are presented in the Supplement to the Report. The background report was prepared by Derek Robinson.

Industrial Relations

24. INTERNATIONAL CONFERENCE ON INDUSTRIAL RELATIONS, TOKYO, 1965. *The Changing Patterns of Industrial Relations; Proceedings.* Tokyo, Japan, Institute of Labour [1966?] Pp. 335.

Conference sponsored by Japan Institute of Labour and held February 1-5, 1965 in Tokyo.

This was the first industrial relations conference to be held in the Far East. Participants from United States, Great Britain, Germany, and Japan discussed industrial relations in their respective countries and related topics such as labour legislation, government and industrial relations, and industrial disputes.

25. WARNER, KENNETH OREN, Ed. *Developments in Public Employee Relations: Legislative, Judicial, Administrative.* Chicago, Public Personnel Association, 1965. Pp. 170.

All except two of the papers were presented at the Institute on Management-Employee Relations in the Public Service held in Chicago in 1964 and sponsored by the International City Managers' Association and the Public Personnel Association.

Partial contents: Employee attitudes toward work, management, and unions. Nature and purpose of management communication. Management's right to manage. Development of written employee relations policies. Before collective bargaining begins. Techniques of negotiation. Employee grievance procedures. Organizing management for employee relations. Legal aspects of collective bargaining in public employment.

Labour Laws And Legislation

26. INTERNATIONAL LABOUR CONFERENCE. *Conventions and Recommendations adopted by the International Labour Conference, 1919-1966.* Geneva, International Labour Office, 1966. Pp. 1176.

At head of title: International Labour Organization.

"The texts contained in this volume are reprinted from the authentic texts of the Convention and Recommendations adopted by the International Labour Conference in the course of the 50 sessions which have been held from 1919 to 1966."

Contains 126 Conventions and 127 Recommendations adopted by the Conference in its 50 sessions. On July 1st, 1966, 106 Conventions had received the number of ratifications necessary to bring them into force and a total of 3,175 ratifications had been registered.

29. U.S. DEPARTMENT OF LABOR. WAGE AND HOUR AND PUBLIC CONTRACTS DIVISIONS. *Handy Reference Guide to the Fair Labor Standards Act.* Washington, GPO, 1966. Pp. 13.

Labouring Classes

30. DARTNELL CORPORATION. *How Business prepares Employees for Retirement.* by Marilyn French, editor, Dartnell Management Service. Chicago, c1964. Pp. 230.

Of 284 companies surveyed, 80 firms had programs to help employees prepare for retirement. Firms give reasons for having, or not having, retirement plans and various plans are described.

31. MASTERS, STANLEY HINMAN. *The Behavior of Output per Man During Recessions, a Study of Underemployment.* Ann Arbor, Mich., University Microfilms, 1966. Pp. 180.

Thesis (Ph.D.)—Princeton University, 1966. "This 'O-P Book' is an authorized reprint of the original edition, produced by Microfilm-xerography by University Microfilms, inc., Ann Arbor, Michigan, 1966."

The author defines "underemployment" as "declines in output per man which accompany short-term declines in aggregate demand and output."

32. RAWSON, D. W. *Labor Parties and Trade Unions.* [Melbourne, University of Melbourne, A.L.P. Club, 1964?]

At head of title: Chifley memorial lecture 1964.

33. U.S. BUREAU OF LABOR STANDARDS. *Workmen's Compensation; the Administrative Organization and Cost of Administration.* Washington, GPO, 1966. Pp. 142.

A study of the organization and administrative practices of State workmen's compensation agencies and methods of financing the cost of administration of workmen's compensation laws.

34. U.S. BUREAU OF LABOR STATISTICS. *Digest of 100 Selected Health and Insurance Plans under Collective Bargaining, Early 1966,* Washington, GPO, 1966. Pp. 152.

35. WARD (JOSEPH B.) AND ASSOCIATES (INT'L) LTD. *An Assessment of the Skilled Manpower Requirements of the Mechanical Construction Industry of British Columbia, 1970.* [by] Joseph B. Ward and Associates (Int'l) Ltd. and John de Wolf. Vancouver, 1965. Pp. xv, 100.

Study commissioned by the Trustees of the Journeymen Training and Industry Promotion Fund which is sponsored by the Mechanical Industrial Relations Associations and Local Union 170 of the United Association of Journeymen and Apprentices of the Plumbing and Pipefitting Industry.

"This study was commissioned to determine whether a shortage of skilled manpower will be faced by the mechanical construction industry of British Columbia at 1970; how serious the proportions of any shortage would be likely to become; and what measures, if any, could be recommended to prevent any manpower gap." The scope of the mechanical construction industry includes companies engaged in heating, sanitation, oil burning, gasfitting, stoker installations, and all pipefitting installation for the conveying of liquids and air. There are five basic crafts or trades within the mechanical construction industry: plumbers, pipefitters, steamfitters, welders and sprinkler fitters.

Prices

36. GREAT BRITAIN. NATIONAL BOARD FOR PRICES AND INCOMES. *Costs, Prices and Profits in the Brewing Industry.* London, HMSO, 1966. Pp. 15.

37. NATIONAL INDUSTRIAL CONFERENCE BOARD. *Inflation and the Price Indexes,* by Martin R. Gainsbrugh and Jules Backman. New York, 1966. Pp. 129.

"Submitted to the Subcommittee on Economic Statistics of the Joint Economic Committee, Congress of the United States."

This study was prepared for the NICB under a grant from the Life Insurance Association of America.

An examination of the three indexes most frequently used to measure the extent of price inflation: (1) the wholesale price index, (2) the consumer price index, and (3) the implicit price index.

38. U.S. BUREAU OF LABOR STATISTICS. *Price Trends, March 1966.* Pp. 49.

Contains charts and tables useful for evaluating current price trends.

Professional Workers

39. GREAT BRITAIN. WORKING GROUP ON MANPOWER PARAMETERS FOR SCIENTIFIC GROWTH. *Interim Report.* London, HMSO, 1966. Pp. 38.

At head of title: Committee on Manpower Resources for Science and Technology.

The Working Group was requested to determine "whether there was any imbalance in the employment of qualified engineering, technological and scientific manpower. Are Universities, Research Councils and Government laboratories employing men and women with honours degrees, and higher degrees, on a scale that has worked to the detriment of industry and school teaching? If so, what steps can be taken to correct such an imbalance?"

56. GREAT BRITAIN. WORKING PARTY ON THE PROBLEMS ARISING FROM THE CYCLICAL PATTERN OF MACHINE TOOL ORDERS. *Report.* London, HMSO, 1966. Pp. 35.

The Working Party considered the problem that faces machine tool manufacturers who must forecast future demands for their products and plan for increases in the capacity of their plants.

57. ROGERS, IAN MACFEE. *Municipal Councillors' Handbook.* With a foreword by Lorne R. Cumming. Toronto, Carswell, 1965. Pp. 101.

Contents: The municipal corporation. Incorporation. Annexation and Amalgamation. Effect of incorporation, change of status and alterration of teritory. Elections. Council members. The municipal council. Meetings of Council. Municipal Officers. Municipal powers. Municipal by-laws. Revenues and rating. Borrowing. Trade and business regulation. Zoning and building construction. Other local authorities.

58. UNITED NATIONS. CENTRE FOR INDUSTRIAL DEVELOPMENT. *Industrial Estates: Policies, Plans and Progress; a Comparative Analysis of International Experience.* New York, 1966. Pp. 59.

At head of title: Department of Economic and Social Affairs.

This study is concerned with objectives, policies and methods relating to the establishment, operation and development of industrial estates. The term "industrial estate" is used "to designate a planned clustering of industrial enterprises, offering developed sites, pre-built factory accommodation and provision of services and facilities to the occupants."

59. UNITED NATIONS. ECONOMIC COMMISSION FOR EUROPE. *Population Structure in European Countries; Tables and Pyramids showing the Distribution of Population by Sex, Age and Marital Status.* New York, United Nations, 1966. Pp. 115.

Text in English, French and Russian.

CMA Meeting

Continued from page 471

settlements imposed arbitrarily by a third party, and no one had yet proposed an alternative system more compatible with the democratic, private enterprise environment of Canada.

Much of the wholesale condemnation of the free collective bargaining system, he said, arose from those who sought a confortable, neat and tidy method of settling negotiable matters. "There still are places in the world where such matters are settled neatly—but only for those in positions of economic or political power—and I'm sure no one in this room would like to raise their families in that environment."

The Minister said that Canada was rushing into a new era where she would see a veritable revolution in the composition of her labour force. "In addition, we are now witnessing a huge influx of youth with more education, with new and different values, with no inhibiting history of unemployment and depression, with none of the historic disciplines of war, and with a multiplicity of job alternatives arising out of the increase in labour mobility."

There was every indication, Mr. Nicholson said, that unionization would continue to escalate rapidly. "It will embrace a whole new profile of membership—white collar and professional—and produce all sorts of new demands, much of it associated with increased education and increased leisure time."

He believed that the whole climate surrounding negotiated settlements must change "from the old, essentially primitive 'combat' approach to a more mature and reasoned 'problem-solving' approach," and he urged management to "seize the initiative" without delay.

"I firmly believe that the leaders of management, as well as labour, have no responsible choice left but to lead in the encouragement of this new environment."

ROSS MUNRO

Ross Munro, publisher of *The Canadian*, Toronto, whose subject was "The Impact of Negotiated Settlements on the Public," argued that the whole system of collective bargaining was open to question, "and is being questioned in the public mind."

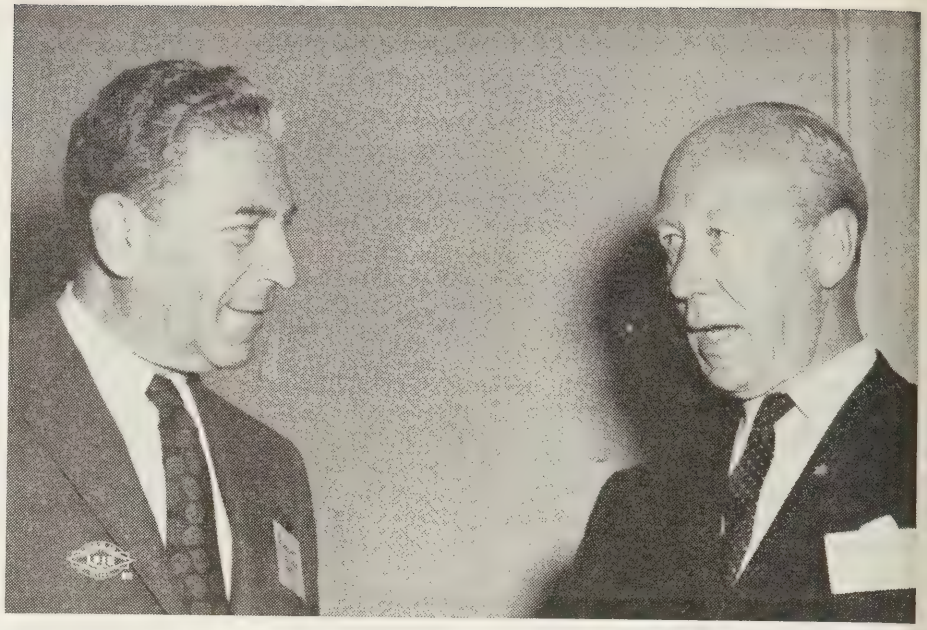
The basic concern of the public today was the way prices were increasing, and many Canadians were finding it difficult to maintain incomes that would meet these rising costs, he said.

"In the past few years, a good many negotiated settlements where labour has pushed exceedingly hard for major increases, and management has felt itself compelled to yield, have increased the public discontent." The net result was a further increase in cost to the public, he said. Union wages in many cases move ahead, but "there remains a very large group of wage-earners who don't want to be organized and never will."

The public mood is rapidly becoming inflamed at price spirals, the speaker said, and their consumer boycotts are only the beginning. "We are going to witness more serious consumer rebellions unless the inflationary surges affecting prices are brought into some reasonable alignment."

Mr. Munro does not believe that governmental controls are the answer. The real problem goes much deeper, and "is impaled in large degree by our traditional industrial relations system, where unions go for broke, where management all too frequently compromises, where the ultimate weapons are strike or lockout, and the public takes a licking . . ."

Mr. Munro was critical of some of the settlements imposed by the federal Government and cited as an example the Seaway workers' settlement (L.G., Aug. 1966, p. 430).



"Government intervention in railway disputes and others has usually produced a certain sigh of relief that public inconvenience has been ended, but when one counts the cost one wonders whether the public welfare has been properly protected and the real rights of the public served.

"The organization of the federal public service," the speaker thought, was "causing some apprehension among the taxpayers—the public. The civil service should not be segregated without some rights to bargain as other workers, but the cost of government already is so fantastic that major disurbances in this field are going to meet with little sympathy from the general public."

Another area of public concern, he said, "is the campaign now underway for certain international unions, such as the auto workers and the steelworkers, to achieve wage parity with their American brothers." Although the economic factors that mitigate against parity should be clear, he said, "big unions are going to hit this hard, and it could bring to a head the growing disenchantment on the part of the public, including thousands of union members who can't stomach a further thrust on prices."

Mr. Munro believed that collective bargaining in the final analysis was the most important part of our system of industrial relations, but he questioned whether it was the right one for our modern industrial society. "There is something archaic in this system . . . The time has come where a better form of industrial relations should be developed".

He concluded by saying that the whole question of strike and lockout should be re-examined. "Compulsory arbitration is not the answer, and I don't know what it is. But I do know that there is a highly restive Canadian public wondering if the public interest could not be better served by a system of industrial relations more suited to these times."

Management and labour meet socially. Left to right: Francois E. Cleyn, Cleyn and Tinker Limited, Huntingdon, Que.; W. Ladyman, International Brotherhood of Electrical Workers, Toronto

— Richard Mathews Photos

WILLIAM LADYMAN

William Ladyman, International Vice-President, International Brotherhood of Electrical Workers, Toronto, told the manufacturers that collective bargaining "has been and still remains a bulwark, a protection, a defensive mechanism of the private enterprise system." If collective bargaining is modified and weakened, he said, the forces of private enterprise will also be fighting a losing battle.

"Collective bargaining is a power relationship between organizations, between company spokesmen and union spokesmen. And it does not properly exist unless the union has the ultimate right to resort to force, and management, too, has the ultimate right to refuse workers employment."

Mr. Ladyman said the amount of time lost through strikes and lockouts was a very small percentage of our Gross National Product. "That lost time is but a tiny fraction of the time lost through sickness resulting in absences, or from deaths and injuries of the working force whether at work or at play." He believed that the vast majority of the collective relationships in the private enterprise field provided an avenue for the orderly and peaceful resolution of differences through compromise, agreement, and co-operation.

"Where you find accusations, name-calling, bargaining in the news columns, and high-blood-pressurising emotional outbursts, you find the people responsible are the amateurs, the immature, the unsophisticated—all practitioners of a type of unskilled collective bargaining that is rapidly becoming obsolete."

Mr. Ladyman told his audience that the collective bargaining contract established a body of law, and the union provided the police force for the protection and extension of employees' rights on the job. Admitting that it had its defects, he maintained that it gave employees a sense of satisfaction, a feeling that they have "pushed" the employers just about as far as they can at any one point in time. "In this sense, collective bargaining provides very solid support and aid for our system of democratic capitalism."

Mr. Ladyman pointed out that both labour and management had quite a task to keep collective bargaining where it belonged. He said that many people on both sides of the bargaining table expected collective bargaining to accomplish much more than settle wages and working conditions. "We must not expect collective bargaining to solve national or global economic and social problems."

Turning to the Rand Royal Commission appointed by the Ontario Government, he said that Commissioner Ivan C. Rand had been receiving submissions from trade unions, union members and employer groups, with the recurring cry that "it is absolutely necessary to ensure that the rights of the general public, as well as those of employees and employers are safeguarded."

He said that only when war threatened or natural disasters struck should the "security and safety of the public" be invoked. He averred that this phrase should not be used as a red herring to destroy the proper interplay of true collective bargaining. "Support compulsory arbitration, put crimps in conciliation and strike machinery, and you hasten the end of private enterprise," he said. "Every time your members urge the Government to take some action that is properly outside the jurisdiction or function of this association, you are helping to build up the authority of the state to the detriment of our free economy."

He drew the CMA's attention to Bill C-170, and the new area of public service staff relations that came in with it. He said that it would take about two years to define bargaining units, and they would generally correspond with the classification structure of the Civil Service Commission. The interests of the employer would be represented by the Treasury Board.

"The dispute settlement provisions are of the greatest importance, because when notifying the employer of intention to bargain, the union or organization has to choose between one of two dispute settlement options. One option is binding arbitration. The second—through conciliation—to the right to strike, except for those employees deemed necessary in the interests of the safety or security of the public."

Mr. Ladyman said that much would depend upon the proportion of public employees who chose compulsory arbitration instead of conciliation service to be followed by strike action; and much would also depend upon the attitude of the Treasury Board and their superiors, the Cabinet and the "party philosophers."

"Much will depend also upon private industry. If you embark upon good wage and salary policies you will keep the most talented and best-qualified men working for private enterprise. If you do not, the number and the influence of the public service will increase. If the public service can pay salaries equivalent to private enterprise and still give security of employment, you will lose many of your best men to the state."

Collective bargaining had been valuable in maintaining a high degree of industrial peace, the speaker said. "The impact of the organization of the public service cannot be clearly seen as yet, but if it develops heavily on the side of compulsory arbitration, it cannot help in the long run but affect traditional collective bargaining. I suggest to you that an attack on the freedom of a worker to withdraw his labour is also an attack upon the freedom of an employer to open or close his plant."

He urged the manufacturers to re-examine the true purposes of their association. "I ask you to desist from your running battle with unions, lest we both fail to recognize that the even greater force and development of state corporatism can and may outstrip us both."

R. B. MacPHERSON

"Since the beginning of 1965, average wage and salary increases amount to 6.4 per cent per annum," R. B. MacPherson told the delegates. "This compares with the comparable figure of 5.6 per cent for the United States. In fact, average hourly earnings in manufacturing in this country, now amounting to $2.25 per hour, are over four times greater than the 50 cents per hour paid to workers in Japan, which is rapidly emerging as a major competitor to employment and production in this country."

Mr. MacPherson said that wage settlements during the past two years were far in excess of the growth in productivity during that period. "What is even more alarming is the fact that there was no increase in productivity in the non-agricultural sector of industry in 1966," he said. "The effects of rising wages and disappointing productivity mean higher unit costs which can only result in a serious deterioration in the rate of economic growth."

He pointed out that the pressures at the bargaining table had been intensified by the changes that had taken place in the distribution of gross national expenditures since 1960. The purchasing power of the average consumer had shown a definite upward trend over the years, but consumer expenditures had tended to account for a declining percentage of the Gross National Product. There were two reasons for this: large capital outlays were necessary to develop resources and provide new plant capacity, and the Government was taking a larger share of the GNP through sales tax, income taxes and other levies. Another factor was that people had been conditioned to expect great benefits from advances in technology, "but when the improvement in living standards falls below expectations, dissatisfaction sets in, and the resentment manifests itself by increased pressures at the bargaining table."

Mr. MacPherson stated that Government employees had been in the vanguard in obtaining pay increases. "The average level of remuneration in government today, amounting to $5,900 per person,

is substantially higher than the comparable figure of $4,500 in manufacturing, and $3,500 for services," he said. "In fact, the one group that has been largely successful in achieving wage parity with the United States has been government employees." He added that government "does not have to face the cold, hard facts of competition either internally or externally."

Although the level of productivity in Canada compared favourably with that of most countries except the United States, he stated that the trend for more than a decade had been extremely disappointing. "Excluding agriculture, the trend of productivity in Canada has averaged 1.3 per cent during the past decade, but failed to advance last year." He said that the slowdown in productivity became even more sobering when compared with the increase in employee remuneration during the past two years.

"Average wages and salaries advances, amounting to 13 per cent for the past two years, are 7.5 times greater than the increase in productivity during the same period," he said. "The result, of course, has been higher costs of production. In fact the gap in the unit costs of production between Canada and the United States has widened alarmingly since the beginning of 1965." This not only added to inflationary pressure, but made Canadian industry more vulnerable to foreign competition both at home and abroad.

"The change in the rate of increase in productivity in the great majority of cases is not the result of more or less effort expended by labour. Productivity under today's conditions is the function of the level of demand, modern technology, and the type of industry, whether it is of low or high productivity," the speaker pointed out.

The rate of improvement in productivity reflected major economic policies, and the level and direction of new capital investment, and it was "significant that Canadian investment in the goods-producing industries has compared not unfavourably with the relative proportions of GNP devoted to this purpose in other countries."

Labour's attempts to improve its position by successive rounds of wage increases had resulted in higher costs and prices, which in turn had adversely affected the competitive position of many manufacturing industries at home and abroad.

"Labour's demands exceed the increases in productivity not only of labour itself, but of the contribution made by all of the other sectors of production," he said. "Both the cost of Government and the cost of workers have been increasing faster in Canada than in the United States and many other countries, with the result that our competitive situation, beginning in 1965, has deteriorated very seriously."

The speaker believed that further wage increases or higher taxes could not help but accelerate this trend, with the inevitable adverse effect on employment opportunities. He expressed the opinion that the situation would be made even more difficult by the Kennedy Round of tariff reductions.

Mr. MacPherson commented briefly on wage parity with the United States. "We are already in a position where the wage differential between the two countries is in line with the productivity gap," he said. "To narrow the wage gap without reducing the productivity gap would shift production to the U.S."

He believed that it was as much in the interest of the worker as it was in that of other groups to accept a slowing down in wage rates until productive capacity had been expanded, in order to restrain price increases and thus conserve the buying ability of the individual's savings. But he commented that "the sound solutions for all are the ones usually rejected."

He rejected the popular suggestion that wages should be tied to productivity. "This admittedly would have the merit of bringing about some restraint in wage increases, but it overlooks the inescapable fact that if we are to have a growing economy, a larger share of the improvement in productivity must go to the investor and the consumer."

Mr. MacPherson made the following suggestions for a voluntary stabilization program:

First, there should be a halt to total government expenditures until the non-defence outlays of governments in Canada, expressed as a percentage of GNP, decline to the American level.

Secondly, as the difference in wage rates between Canada and the United States roughly approximates the difference in output per worker, the increase in employee remuneration in Canada should not exceed the rate of increase in wages paid by competitive industry in the United States.

Thirdly, these concessions to the national welfare by government and labour should be matched by industry's agreeing to limit any increase in prices to the trend exhibited by the United States.

"I believe," the speaker said, "some such voluntary scheme must soon be forthcoming and [must be] adopted by government, labour and management, if this country is to avoid the very worst of all possible situations—that is, rising costs and prices accompanied by a declining production and employment."

TOM KENT

"Science and industry have freed us from back-breaking toil," said Tom Kent, Deputy Minister of Manpower and Immigration, another speaker at the industrial relations conference, "but they impose on us enormously greater emotional and mental demands." He explained that the aim of the Government's manpower policies was to help to adjust to changing employment.

The fundamental service undertaken by his department was job counselling, he said. "For this purpose we must have in every community a Manpower Centre that people can turn to for information, advice and assistance about employment . . [The essence of the department's responsibility] is to advise people how to improve their chances in the competitive, changing world of work."

The federal program of Occupational Training for Adults now enabled the manpower counsellor to offer workers suitable training when their present employment opportunities were poor, Mr. Kent said. "Retraining need not necessarily wait until the worker actually becomes unemployed. We will buy training whenever there is clear evidence that it will have a good benefit in improving the worker's productivity in an occupation that is in demand."

The training will be purchased from the existing public training facilities and some private trade schools, and when industry provides classroom-type training, teaching its employees occupational skills that could otherwise be taught in public institutions, the Government is now able to make a contract to cover much of the firm's cost, the speaker said. "We cannot expect industry to do enough of this occupational training unless Government helps to pay for it."

Regarding immigration, he said that his department was in the process of devising new selection criteria and procedures to adapt immigration to national manpower needs "more efficiently and more humanely" than before. Although "our affluent society offers few opportunities for the unskilled," this did not mean that only highly qualified immigrants should be accepted.

"Some of the most exciting things we are doing are not in the field of policy as such, but—what is far more difficult—in structuring an organization that will bring manpower policies effectively and efficiently home to people, that will practicably serve the needs of industry," Mr. Kent concluded. "To that end, we are making our organization more decentralized than any government department has ever been before. We are using concepts of program budgeting and cost-benefit analysis that are more familiar to

you in industry than they have hitherto been in the public service.

"If we succeed, we will have done something new in Government. . . . We have a great deal to learn, and whether we succeed is going to depend very largely on whether our efforts earn your sympathy and co-operation."

D. O. DAVIS

"The capacities of the average human being for creativity, for growth, for collaboration, for productivity are far greater than we have yet recognized," said D. O. Davis, Vice-President, Engineering, Dominion Foundries and Steel, Ltd., Hamilton. We have not learned enough about the utilization of talent, and "we are a long way from realizing the potential represented by the human resources we now recruit into industry."

Smaller industries place more emphasis on specialized training in the schools. "Since smaller companies do not have employee development programs, they have been relying on the schools to give this training to their employees."

Anticipating the future, Mr. Davis said that by 1977, business and industry would demand more highly educated people to staff their organizations. He thought that the kinds of educational backgrounds demanded might be: 10 per cent, less than secondary school graduation; 50 per cent, secondary school only; 30 per cent, post-secondary school, i.e., two- or three-year courses in Ontario's Community College program; and 10 per cent, university graduation. "It is certainly industry's responsibility to spell out its needs, and education's responsibility to meet these needs," he said.

To meet industrial hiring requirements in 1977, the high school population should perhaps be made up of 50 per cent in business and occupational programs, 30 per cent in "pre-community college" type programs and 20 per cent in university preparatory programs.

When an industry undertakes the development of a new product, it usually makes a very scientific and thorough approach, Mr. Davis said. "The opposite to this sound approach is to not properly evaluate the huge sums of money spent on educational facilities and programs—the primary means of developing our human resources."

Mr. Davis said many persons gifted with their hands were not equal to the basically academic nature of education in secondary schools, and a way must be found to prepare these young people with programs of "Education for Employment." He urged the CMA to strongly support post-secondary schools such as Ontario's Community Colleges, so that they would be "accorded status and recognition in keeping with the significance of their potential." He said that it was through them that more young men and women would acquire productive and rewarding occupations.

Mr. Davis asked: Have we given enough attention to the 50 to 70 per cent of young people in secondary schools who go directly into business and industry, by providing them with an adequate 'Education for Employment' program? Have we treated them as second-class citizens because they were not going on to university?

He said that what was obviously needed was a truly liberal academic community in which the study of art and typewriting, philosophy and metalworking, theology and medicine, and pure and applied science were judged to be equally honourable and valuable.

"Many students currently preparing for post-secondary education should be advised to go into other programs," Mr. Davis said. "They must be guided by schools and parents toward areas of interest rather than allowed to select jobs on the basis of hopes or prestige."

The unemployed must be motivated to retrain. "The schools must start this motivation in all students prior to their first employment." He said that the workers of the future should always be preparing for the next higher level of employment through adequate school and industrial training programs. "The time is not far distant when each of us—and especially management—will be spending 20 per cent of our working day in preparation for change."

If the educational processes were still undirected and education regarded as a form of intellectual snobbery, "we cannot be equipped for change." If, however, the educational requirements of industry and the community were realistically appraised and the necessary facilities established, "we can face change with confidence," the speaker said.

PROF. ELI GINZBERG

Management must take new attitudes in dealing with its highly-educated professional elite, a Columbia University professor told CMA delegates. "Be sensitive to the fact that the old approaches don't fit the new people," said Prof. Eli Ginzberg, chairman of the U.S. national manpower committee. "Hour controls or clock-watching should not be applied to the more valuable people on the staff. Professionals are not hired hands."

He urged, for example, that management should stop emphasizing the number of hours spent at work when dealing with top professionals and creative leaders. "A man who stays home 360 days a year will still be valuable if he devises two new products during the five days at the plant."

Prof. Ginzberg did not believe that employers could successfully pre-select people for advanced training. "A person of limited potential may be selected by an error in judgment, or, if he is the right person, he might leave the company after he has been trained." He said it was necessary to build into the budgeting an increasingly large figure of time and money for re-education.

"If you need a work force adaptable to change, you have to find people willing to keep on being educated," he said. He told delegates that the best approach was to broaden the opportunity structure so that they would not have to worry about motivating those who did not want to be motivated.

Prof. Ginzberg suggested that management should pay 50 per cent of the cost of training, if the employee completed his course. "You can't force a person to keep alive mentally without having some commitment from the individual that he is willing to contribute time and money."

Once the employee had been re-trained, he said, he must be permitted to use the education or it would be a waste of time and money. Too many people were promoted "out of sentimental reasons," or because they had been around a long time. "Remember that the 45-year-old on your staff is probably 20 years behind the young scientist just coming into the organization."

Prof. Ginzberg advised management to give their people time and opportunity to keep abreast of advances in their specialities. He believed that most companies were overstaffed, and that more money should be budgeted for educational and professional development. "A company that reduces its senior staff must relieve those remaining of unimportant duties." They would then be compelled "to stretch themselves" to handle important work to their own satisfaction and to the benefit of the company.

Career centre opened by Ontario Labour Department

Women whose careers were temporarily suspended by marriage and motherhood will have help in returning to the labour force through a pilot project instigated by the Ontario Department of Labour. It is a career consultant centre formed by the Women's Bureau of the Department.

The centre, which opened at Toronto in April, was created to help women evaluate their educational and vocational plans; it is not a job placement service.

*Revised. †Preliminary.

‡Includes post office wages and salaries. **Figures in this column are for total labour income, Canada, but are not totals of the figures in the remaining columns of this table, which do not show labour income in Agriculture, Fishing and Trapping.

NOTE: Monthly figures may not add to annual totals because of rounding.

SOURCE: *Estimates of Labour Income*, DBS.

Tables C-1, C-2, and C-4 are based on reports from employers having 20 or more employees in any month of the year; at January 1967, employers in the principal non-agricultural industries reported a total employment of 3,504,541. Table C-3 gives estimates of total employment, by industry divisions, for the provinces and Canada, derived from the survey of establishments employing 20 or more persons and from a sample survey of establishments employing less than 20 persons. Tables C-5 to C-7 are based on reports from a somewhat smaller number of firms than Tables C-1, C-2 and C-4. They relate only to wage-earners for whom statistics of hours of work are also available, whereas Tables C-1, C-2 and C-4 relate to salaried employees as well as to all wage-earners in the reporting firms.

D—Manpower Division

The reorganization of manpower activities under the Department of Manpower and Immigration has led to a number of administrative changes which have, in turn, altered the significance of D Table statistics about employment placements and unfilled job vacancies.

The result is that valid comparisons with previous periods are not possible on the basis of these statistics. Accordingly, their publication is being suspended.

New statistical series are being developed to give more significant information about persons using the service of Canada Manpower Centres. The results will be published as they become available.

E—Unemployment Insurance

Unemployment insurance statistics emanate from the operations of the Unemployment Insurance Act, and relate to persons in contact with the Unemployment Insurance Commission, either as contributors or claimants. The data are compiled in the Unemployment Insurance, Pensions and Manpower Section, DBS, from information supplied by the UIC. The source for Tables E-1 to E-4 is *The Statistical Report on the Operation of the Unemployment Insurance Act.* For further information regarding the nature of the data see Technical Note, page 404, June issue.

TABLE E-1—Estimates of the Insured Population under the Unemployment Insurance Act

End of	*Total*	*Employed*	*Claimants*
1967—February	4,708,000	4,156,200	551,800
January	4,684,000	4,152,100	531,900
1966—December	4 633,000	4,209,600	423,400
November	4,591,000	4,324,700	266,300
October	4,521,000	4,336,700	184,300
September	4,528,000	4,363,100	164,900
August	4,577,000	4,389,800	187,200
July	4,512,000	4,316,000	196,000
June	4,500,000	4,318,700	181,300
May	4,404,000	4,186,400	217,600
April	4,465,000	4,051,100	413,900
March	4,498,000	4,000,000	498,000
February	4,506,000	3,975,500	530,500

TABLE E-4—Benefit Payments, by Province, March 1967

Province	*Weeks Paid**	*Amount of Benefit Paid*
Newfoundland	139,642	3,666,908
Prince Edward Island	27,586	667,822
Nova Scotia	134,338	3,310,837
New Brunswick	125,590	3,119,940
Quebec	607,177	16,004,150
Ontario	582,392	14,952,995
Manitoba	77,364	1,978,857
Saskatchewan	64,981	1,665,720
Alberta	76,477	1,977,043
British Columbia	223,432	5,822,453
Total, Canada, March 1967	2,058,979	53,166,725
Total, Canada, February 1967	1,681,483	43,530,943
Total, Canada, March 1966	1,847,439	46,156,729

*Represents the total of complete and partial weeks of benefit paid during the month.

TABLE E-3—Initial and Renewal Claims for Benefit, by Province, March 1967

	Claims Filed at Local Offices			*Disposal of Claims and Claims Pending at the End of the Month*			
Province	*Total**	*Initial*	*Renewal*	*Total Disposal of†*	*Entitled to Benefit*	*Not Entitled to Benefit*	*Pending*
Newfoundland	6,778	5,627	1,151	6,219	5,390	829	2,526
Prince Edward Island	1,060	811	249	1,162	1,011	151	307
Nova Scotia	8,017	6,435	1,582	7,131	5,991	1,140	3,166
New Brunswick	8,682	7,243	1,439	8,729	7,525	1 204	2,846
Quebec	62,061	46,704	15,357	61,658	51,071	10,587	22,557
Ontario	61,512	41,147	20,365	62,889	51,846	11,043	17,645
Manitoba	5,554	4,690	864	5,572	4,474	1,098	1,455

*St. John's index on the base June 1951=100.

NOTE: Indexes above measure percentage changes in prices overtime in each city and should not be used to compare actual levels of prices as between cities.

G—Strikes and Lockouts

Statistical information on work stoppages in Canada is compiled by the Economics and Research Branch of the Canada Department of Labour on the basis of reports from the Manpower Division, Department of Manpower and Immigration. The first three tables in this section cover strikes and lockouts that amount to ten or more man-days. The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the union directly involved in the disputes leading to the work stoppages. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included. For further notes on the series, see page 336, May issue.

TABLE G-1—Strikes and Lockouts, 1962-67

Month or Year	Strikes and Lockouts Beginning During Month or Year	Strikes and Lockouts in Existence During Month or Year		Duration in Man-Days	
		Strikes and Lockouts	Workers Involved	Man-Days	Per Cent of Estimated Working Time
1962	290	311	74,332	1,417,900	0.11

Eaton Yale and Towne Inc., St. Catharines, Ont.	U.E. Loc. 535 (Ind.)	123	120	120	May 31 —	Wages, fringe benefits, seniority—
Machinery						
Smith Corona Machines, Scarborough, Ont.	U.E. Loc. 514 (Ind.)	270	5,940	15,930	Mar. 8 —	Wages in a new agreement—
Transportation Equipment						
Canadian Vickers Ltd., Montreal, Que.	Metal Trades' Federation (CNTU)	1,800	24,600	48,200	Apr. 3 May 29	Wages—Wage increase 80¢ an hr. over three years.
Lucas-Rotax Ltd., Montreal, Que.	Machinists Loc. 423 (AFL-CIO/CLC)	152	1,270	1,270	May 18 —	Wages—
Canadian Kenworth Ltd., Burnaby, B.C.	Machinists Loc. 1857 (AFL-CIO/CLC)	350	350	350	May 26 May 29	Protesting presence of non-union worker—Return of workers.

TABLE G-4—Strikes and Lockouts Involving 100 or More Workers, May 1967 (Preliminary) (Continued)

Industry, Employer — *Location*	*Union*	*Workers Involved*	*Duration in Man-Days*		*Starting Date* — *Termination Date*	*Major Issues* — *Result*
			May	*Accumulated*		
Electrical Products						
The Canadian Coleman Co. Ltd., Toronto, Ont.	CLC—directly chartered	227	4,990	37,360	Oct. 18 —	Wages in new agreement—
Northern Electric Co. Ltd., Montreal North and St. Laurent, Que.	Northern Electric Employees (Ind.)	375	380	380	May 5 May 9	Protesting alleged stockpilling by company—Return of workers.
Canadian General Electric Co. Ltd., Toronto, Ont.	U.E. Loc. 507 (Ind.)	208	310	310	May 9 May 11	Disciplinary suspension of some workers—Return of workers pending negotiations.
Canadian Westinghouse Co. Ltd., Hamilton, Ont.	U.E. Loc. 504 (Ind.)	3,521	56,340	56,340	May 9 —	Wages—
Northern Electric Co. Ltd., Lachine, Que.	Northern Electric Employees (Ind.)	800	2,800	2,800	May 12 May 18	Protesting alleged stockpiling by company—Return of workers.
Northern Electric Co. Ltd., Point St. Charles, Montreal, Que.	Northern Electric Employees (Ind.)	2,000	1,000	1,000	May 16 May 17	Protesting alleged stockpiling by company—Return of workers.
Northern Electric Co., Montreal and area, Que.	Northern Electric Employees (Ind.)	10,350	46,150	46,150	May 25 —	Wages—
Non-Metallic Mineral Products						
Raybestos-Manhattan (Canada) Ltd., Peterborough, Ont.	Steelworkers Loc. 5141 (AFL-CIO/CLC)	189	4,160	7,940	Apr. 3 —	Wages, incentive plan—
Siporex Co., Delson, Que.	Chemical Workers Loc. 602 (AFL-CIO/CLC)	136	2,990	2,990	Apr. 29 —	Wages—
Canadian Johns-Manville Co., Port Union, Ont.	Chemical Workers Loc. 346 (AFL-CIO/CLC)	506	11,130	11,130	May 1 —	Wages—
Miscellaneous Manufacturing						
The Arborite Co., LaSalle, Que.	Pulp and Paper Mill Workers Loc. 658 (AFL-CIO/CLC)	306	4,590	4,590	May 10 —	Wages—
CONSTRUCTION						
Several construction contractors, Richelieu-Verchères, Que.	CNTU and QFL	2,000	44,000	82,000	Apr. 4 —	Jurisdictional dispute between unions—
Several Painters & Decorators Contractors, Various locations Northwestern Ontario.	Painters Loc. 1671 (AFL-CIO/CLC)	140	560	1,260	Apr. 24 May 5	Wages—40¢ an hr. increase May 5, 1967, 20¢ an hr. Oct. 1, 1967.

TABLE G-4—Strikes and Lockouts Involving 100 or More Workers, May 1967 (Preliminary) (Concluded)

Industry, Employer — Location	*Union*	*Workers Involved*	*Duration in Man-Days*		*Starting Date — Termination Date*	*Major Issues — Result*
			May	*Accumulated*		
Centrale Nucléaire de Gentilly, Gentilly, Que.	Labourers Loc. 617 (AFL-CIO/CLC)	271	5,960	6,370	Apr. 27 —	Wages, fringe benefits—
Various plumbing contractors, Hamilton, Ont.	Plumbers Loc. 67 (AFL-CIO/CLC)	348	350	700	Apr. 28 May 2	Employment of non-union labour on the project—Return of workers.
Hydro Electric Power Commission of Ontario, Various locations, Ontario.	Various unions	2,904	64,940	64,940	May 1 —	Union membership, union security—
Mactaquac Constructors, Keswick, N.B.	Various unions	954	4,090	4,090	May 2 May 8	Wages for foremen rodmen— Return of workers when agreement reached.
Canadian Bechtel Co., Temagami, Ont.	Plasterers Loc. 162 (AFL-CIO/CLC)	731	12,430	12,430	May 8 —	Jurisdictional dispute—
Various structural steel contractors, Various locations, Ontario.	Structural Iron Workers various locals (AFL-CIO/CLC)	2,323	5,970	5,970	May 10 —	Wages, hours, fringe benefits—
Various construction contractors, Various locations in Metro Toronto, Ont.	Labourers Locs. 183 & 506 (AFL-CIO/CLC)	3,500	40,000	40,000	May 12 —	Wages—
Various construction contractors, St. Maurice region, Que.	Building and Woodworkers' Federation (CNTU)	1,250	15,000	15,000	May 15 —	Wages, hours in a new agreement—
Various plumbing contractors, Oshawa, Bowmanville, Whitby, Ont.	Plumbers Loc. 463 (AFL-CIO/CLC)	100	400	400	May 26 —	Wages, hours—
TRANSPORTATION AND UTILITIES						
Transportation						
National Harbours Board*, Halifax, N.S.	I.L.A. Loc. 1843 (AFL-CIO/CLC)	150	750	750	May 25 —	In protest over the promotion of one worker—
Power, Gas and Water						
West Kootenay Power and Light Co., Various locations, British Columbia.	I.B.E.W. Loc. 999 (AFL-CIO/CLC)	223	4,910	7,810	Apr. 11 —	Wages, hours—
Hydro Quebec, Province wide, Quebec.	Public Employees Various locals (CLC)	8,250	28,880	28,880	May 8 —	Wages—

*Federal Jurisdiction.

TABLE H-7—Employment Fatalities by Industry‡ and Type of Accident, Canada, 1966 and 1965 (Continued)

Type of Accident	Agriculture	Forestry	Fishing	Mining	Manufacturing	Construction	Transportation	Trade
	1966*							
Collisions, Derailments, Wrecks, etc.:								
Involving steam railways	1	—	—	1	4	4	16	1
Involving street railways	—	—	—	—	2	—	—	—
Involving automobiles and trucks	4	8	2	6	12	23	54	20
Involving tractors, loadmobiles, etc.	2	1	—	1	—	3	6	2
Involving mine and quarry cars	—	—	—	—	—	—	—	—
Involving water craft	1	—	—	—	—	2	—	—
Involving aircraft	—	2	—	3	1	—	19	—
Involving other transport agencies	—	—	—	—	—	1	—	—
Involving elevators and other hoisting and conveying apparatus	—	—	—	—	—	—	—	—
Involving animal-drawn vehicles	—	—	—	—	—	—	—	—
Involving miscellaneous agencies	—	—	—	—	—	—	1	—
TOTAL	8	11	2	11	19	33	96	23
Falls and Slips:								
Due to rough ground or floor surface	—	—	—	—	—	—	—	—
Due to collapse of resistance	—	—	—	—	—	—	—	—
Due to tripping over or stepping on object	—	—	—	—	1	—	1	—
Due to slippery surface	—	—	—	—	—	3	—	—
Due to slipping while handling materials	—	—	—	—	2	—	—	—
Due to slipping while operating machines	—	—	—	—	—	—	1	—
Due to physical condition of workman	1	—	—	1	5	3	8	2
Due to vehicles in motion	—	—	—	2	—	—	2	—
Miscellaneous falls on same level	—	—	—	1	2	1	—	—
From ladders or stairs	—	—	—	2	2	4	4	1
From scaffolds and stagings	—	—	—	2	6	12	2	—
From platforms, ramps and stationary vehicles	—	—	—	2	1	5	2	1
From buildings, roofs and towers	—	—	—	1	4	24	2	—
From bridges, trestles and catwalks	—	—	—	2	1	12	—	—
From poles, trees, logs and stumps	—	—	—	—	—	1	3	—
From stockpiles and loads	—	—	—	—	—	1	—	—
From moving railway vehicles	—	—	—	1	—	—	1	—
From other moving transportation vehicles	2	—	—	—	1	4	—	—
Into holds of vessels	—	—	—	—	—	—	1	—
Into shafts, pits, excavations, etc.	—	—	—	9	1	4	—	—
Into rivers, lakes, seas or harbours	1	16	30	2	5	18	14	—
Into storage bunkers	—	—	—	1	1	—	—	—
Into vats, tanks or kilns	—	1	—	—	1	—	—	1
Miscellaneous falls to different levels	2	—	—	2	9	5	2	—
TOTAL	6	17	30	28	42	97	43	5
Conflagrations, Temperature Extremes and Explosions:								
Conflagrations	—	3	—	—	3	1	2	1
Exposure to welding flashes	—	—	—	—	1	—	—	—
Exposure to cold or cold substances	—	—	—	—	—	—	—	—
Exposure to steam or other hot vapours	—	—	—	—	—	—	—	—
Exposure to hot liquids or molten metal	—	—	—	—	1	—	—	—
Exposure to heat or hot substances, N.E.C.	—	—	—	—	—	—	—	—
Explosions—blasting accidents	—	—	—	1	3	2	—	1
Explosions of coal and/or dust	—	—	—	—	—	—	—	—
Air blasts (bumps) in mines	—	—	—	1	1	—	—	—
Explosions of steam pressure apparatus	—	—	2	—	—	3	1	—
Explosions of liquid air, gas pressure apparatus	—	—	—	—	—	4	3	—
Explosions of gasoline and/or oil	—	—	—	1	—	—	1	1
Explosion of chemicals	—	—	—	—	12	—	—	3
Ammunition and firearms (accidental)	—	—	—	—	—	—	—	—
Other explosions	—	—	—	—	3	1	—	—
TOTAL	—	3	2	3	24	11	7	6

CIRRI Meeting

Continued from page 483

great influx of new employees whose average age is about 28 years.

Second Session

The second session of the meeting began with a discussion of wage and price guidelines and incomes policies in Canada.

Russell Bell, a member of the Economic Council of Canada, spoke on "The Economic Council's Views and Some Reactions to It."

He described economic conditions in Canada during the past couple of years. "As actual output in the economy moved closer to potential, . . . a number of people came to the conclusion that some kind of incomes policy was required," he explained.

Mr. Bell said that the Council had not focused its attention on one goal only, but on a number of basic economic and social goals. These were: full employment, a high rate of economic growth, reasonable stability of prices, a viable balance of payments and an equitable distribution of rising incomes.

The speaker discussed methods of achieving a "trade-off" between high employment and reasonable price stability. He said that there was a problem of immense difficulty in bringing the national interest to bear on the making of individual wage and price decisions.

An incomes policy may have the unfortunate effect of preventing changes in relative prices, costs and incomes needed to bring about the reallocation of resources required to meet changes in demand. To the extent that such policies impede the appropriate reallocation of resources, the nation's economic growth could be adversely affected," he said.

Most people tended to think of an incomes policy as a way to maintain a fixed relationship between rates of increase in labour productivity and rates of increase in wages. The CLC reflected this view in a February 1966 report, which rejected the "productivity approach" to guidelines because labour would not accept the position that wage rates should never advance faster than productivity. This would mean that labour's share of a rising national income should never increase. This arrangement would protect the status quo of relative incomes shares, the report said.

Mr. Bell added that an incomes policy would have little hope of succeeding in Canada because of strong regional differences, and divisions of jurisdiction between federal and provincial governments in key legislative areas in the field of industrial relations. Besides this, the federal Government had little influence over important sectors of the economy, particularly in manufacturing.

The position of collective bargaining in a unionized industry might be jeopardized by a controversy over the choice of an output figure and a labour input figure, if measurements of the rate of productivity changes are attempted at the industry level, Mr. Bell said.

The Economic Council's *Third Annual Review* states: "The structure of the Canadian labour movement is far from being such that the Canadian central bodies could enter into meaningful undertakings that would bind member unions to the observance of a set of guidelines. The most that they could do would be to urge conformance on a voluntary basis."

The report, however, stopped short of outright rejection in all circumstances. An incomes policy, it said, could play a useful, but temporary, role in times of crisis in applying corrective measures to basic problems.

In replying to the speaker, John Fryer, director of research, Canadian Labour Congress, added some of his views concerning the Economic Council's rejection of an incomes policy for Canada. He stated that incomes policy was usually a euphemism for wage policy or wage restraint. He explained that labour wants more equitable distribution of incomes, but rejects wage restraint and guidelines. "Incomes policy, si; wage restraint, no."

Not the Only Criterion

Mr. Fryer stressed that productivity is not the only criterion for an incomes policy. He said that labour groups prefer to rely on the "more intelligent and imaginative" use of fiscal and monetary policies to achieve a more equitable distribution of the nation's wealth.

Prof. Tait Montague, head of the Institute of Industrial Relations at the University of British Columbia, doubted that the Economic Council, made up of government, labour, management and public representatives, was the appropriate body to deal with the role assigned to it. He agreed that the mere linking of wages to productivity was not an incomes policy. "We don't know how to gear our wage system to give us stable labour costs,"he said.

In the discussion that followed, the panelists spoke about the difficulties associated with price guidelines and the adjustments that would be necessary, should they be adopted. It was said the collective bargaining today, like motherhood, is considered to be one of the sacred principles of our society. The panelists suggested, however, that if wage and price guidelines were adopted, the role of collective bargaining must be scrapped. The role of power in collective bargaining was then discussed. It was pointed out that the unions reject the status quo rigidity of productivity guidelines.

Two Professors Speak

In the afternoon session, two professors, Sidney Maxwell, School of Business, University of Toronto, and Richard S. Hodgson, School of Business Administration, University of Western Ontario, spoke about "Organization Theory and Its Application."

They described several styles of management that are either now widely used or just beginning to achieve popularity in the higher management circles of certain enterprises.

Prof. Maxwell discussed training programs for middle and higher management people for teaching methods of decision-making. He described the training course adopted by the Canadian National Railways and outlined the four phases of the program. In addition, he described some of the techniques of "sensitivity" training courses, but warned of the danger of mental breakdown in some of the trainees.

Example Cited

Prof. Hodgson then described "The Infancy and Childhood of Modern Organization Theory." He cited the example of the National Aeronautics and Space Agency in the United States to show how an organization that offers incentives for advancement can contribute to remarkable increases of productivity among employees.

He told the members of CIRRI that, in certain tests made of relations between employees and management, the more the workers were permitted to share in the decisions of management, the higher the level of their productivity. He added that management, however, was unwilling in most instances to give up their decision-making functions.

Officers Elected

At the annual business meeting, Prof. Stuart Jamieson, of the Economics Department at the University of British Columbia, was elected as president of CIRRI for the coming year. Dr. John Crispo, Director of the Centre for Industrial Relations at the University of Toronto, remained on the executive as past-president. Prof. Tait Montague, also of the University of British Columbia, was named secretary-treasurer.

The members of the executive committee for the coming year are: Prof. Louis-Marie Tremblay, Industrial Relations Department, University of Montreal; Prof. William Cunningham, Department of Economics, Mount Alison; and George Lach, Assistant Vice-President, Personnel, Canadian National Railways.

Government
Publications

labour gazette

Canada Department of Labour/September 1967

Canada Department of Labour Publications

Annual Report of the Department of Labour (Covers fiscal year ending March 31). (English or French). Cat. No. L1-1966.

Report of the Industrial Inquiry Commission on Canadian National Railways "Run-Throughs." Report of Hon. Mr. Justice Samuel Freedman, Commissioner. (English or French). Price $1.50, Cat. No. L35-965/1.

Supplements to Labour Gazette

Collective Bargaining Review. Prepared by the Collective Bargaining Section, Economics and Research Branch, Canada Department of Labour. Obtainable from the Canada Department of Labour. Free to LABOUR GAZETTE subscribers.

Reports of Boards of Conciliation established under the Industrial Relations and Disputes Investigation Act together with reasons for judgment of the Canada Labour Relations Board. Obtainable from the Canada Department of Labour. Free to LABOUR GAZETTE subscribers.

Economics and Research Branch

Labour Organizations in Canada (annual). Contains a brief commentary, the latest statistical data on union membership, and a directory of labour organizations with names of their principal officers, publications, and the geographic distribution of their local branches in Canada. (English or French). Price 50 cents, Cat. No. L2-2/1966.

Industrial and Geographical Distribution of Union Membership in Canada, 1966 (English or French). Price 15 cents, Cat. No. L31-766.

Strikes and Lockouts in Canada (annual). Furnishes a record of strikes and lockouts occurring in Canada during a year. Tables and related texts showing strikes and lockouts by years, by areas, by industries, including time lost, number of workers involved, duration, etc. Price 35 cents, Cat. No. L2-1/1965.

Wage Rates, Salaries and Hours of Labour, 1965. An annual report published in loose-leaf form and followed later by a paper-bound volume. Contains the results of an annual survey at October 1 of occupational wage rates and standard hours of work in most industries. Averages and predominant ranges of wage rates for selected occupations are tabulated separately on a regional basis for some 90 industries including logging, mining, manufacturing, construction, transportation, trade and service groups. Weekly salaries for office occupations and hourly wage rates for maintenance of service occupations and for labourer for several broad industry groups are shown, on a community basis, in 52 communities. Trends in wage rates are included in tables of index numbers by industry. First year service including attractive binder with index tabs and paper-bound volume, $9.50; service without indexed binder, $7.00; individual tables, 15 cents. Paper-bound volume, $2.50. (Bilingual). Cat. No. L2-548.

Working Conditions in Canadian Industry, 1965. Price 75 cents, Cat. No. L2-15/1965.

Répertoire de termes et expressions utilisés en relations industrielles et dans des domaines connexes. A catalogue, in French, of terms currently in use in the labour relations field. Prepared by the Economics and Research Branch. Price $4.50, Cat. No. L31-967F.

Labour-Management Research Series

Shiftwork and Shift Differentials in Canadian Manufacturing Industries. Price 35 cents, Cat. No. L2-22/2.

Vacations with Pay, 1951-61: An Examination of Vacation Practices in Canadian Industries (English or French). Price 35 cents, Cat. No. L2-22/4.

Collective Agreement Provisions in Major Manufacturing Establishments, 1964. Price 35 cents, Cat. No. L2-22/5.

50 Years Ago

From the Labour Gazette September 1917

An account of the rise in prices during war and its causes is given in a special article. The inflation of credit by governments hungry for military supplies, and the scarcity of goods are cited as main reasons

"The rise in prices which set in at the beginning of the war in nearly all parts of the world, 'taking off' from the already high levels reached by 1913, continued steadily, save for slight and temporary recessions; but toward the end of 1916 the movement acquired a steepness and rapidity in the prices of foods, fuel and other necessaries of life which created a serious situation in many countries," the LABOUR GAZETTE said in a special article on "War Prices—a Review of the Movement in Canada and in Other Countries," published in the September 1917 issue.

Further on, the article said that "by June 1917, retail food prices in Canada had risen 60 per cent since the beginning of the war." In consequence of this rapid rise in prices by midsummer 1917, a number of countries that had previously made some attempt to control prices took "further measures for control."

In Canada, food and fuel controllers were appointed. In the United States, legislation gave the President powers to control supplies and to fix prices through a food administrator. "In former wars, very high price levels have been experienced as operations of war required an increasing share of the products of industry and the efforts of the people," the article continued. "In England during the Napoleonic wars, the highest point was reached in 1809, at the crisis of the war, after which prices declined. The Sauerbeck index number, now continued in the London *Statist*, was estimated to have advanced from 130 in 1803 to 190 in 1809, falling to 110 in 1816.

"During the Crimean War the index number rose from 75 in 1851 to 101 in 1855 and to 105 in 1857, and again reached 105 in 1864 during the American Civil War. After the Franco-Prussian War, there was a rise in prices, and 111 was reached in 1873. Before the present war, this index number had risen from 61 in 1896 to 85 in 1913, but averaged 137 for 1916 and reached 179.3 for June 1917.

"In the United States, the index number of wholesale prices of the Bureau of Labor Statistics rose from 141.0 in 1860 to 317.5 in 1864. In France, an index number of wholesale prices published by the Ministry of Labour rose from 133 in 1869 to 137 in 1870 and 148 in 1871.

"The chief factor to be noted in price movements during the war is the enormous increase in the demand for goods of nearly every variety, as contrasted with the decrease in the production of many necessaries of life. Since governments have unlimited credit, in theory at least (and power to commandeer supplies in their own and occupied territory), civilian needs come second, and the government demand has full effect in bidding for the supplies available, thus raising prices greatly when there is scarcity. The diversion of men to the armies, and to the production of goods for the operations of war, reduces the production of goods for other purposes unless means are found for maintaining this, for instance, by recourse to more female labour, greater use of machinery, development of new resources, etc. . . .

"It has been enunciated with increasing earnestness and persistence by not only economists, but the highest financial authorities, that a most important factor in the rise in prices has been the inflation of purchasing power—that is, an increase in the monetary supply without a corresponding increase in the goods for sale. In former wars, the issue of irredeemable paper money in large and increasing quantities was a prominent feature—notably in France during the revolutionary war, and in the United States during the Civil War.

"In the present war, however, except perhaps in Russia, over-issues of paper money have not been marked; but the inflation of bank credit as a result of the large government loans has been stated to have a similar effect in causing advances in prices when issued in greater volume than can be paid for by the public out of current savings, as such large issues involve increased bank deposits, loans, the circulation of cheques, drafts and other forms of effective purchasing power. . . ."

In Canada, "the greatest advances in retail food prices appeared in bread and flour in the early part of the war, but by the summer of 1916 these were almost as low as just before the war. From that date, however, until May 1917, prices advanced steadily, reaching a level almost twice as high as that in 1914. Bread was up to 8 cents per pound in most of the cities, and in some reached 10 cents. Flour reached about the same price per pound.

"The chief feature of the food market, however, from the autumn of 1916 to June 1917, was the great scarcity of potatoes, especially in Ontario and Quebec; but prices were very high throughout the Dominion, large quantities being shipped from New Brunswick and the Western Provinces where the crops were large. In many cities in Ontario, the price was up to $5 per bag in the spring when the planting of the new crops was taking place. . . .

"In meat, the advances were not so great, but sirloin steak averaged about 32 cents per pound in the early summer. Fresh pork was also about 30 cents per pound, and breakfast bacon was higher than 40 cents in many of the cities. Eggs had reached a very high level at the end of 1916, being as high as 85 cents [a dozen] in some of the cities. Storage eggs averaged 45 cents in January 1917. In the spring prices fell, but were still much higher than the prices of previous years, not falling lower than 30 cents in most of the cities...."

Labour Day Messages

MacDonald

A Time for Re-Dedication

By Donald MacDonald

Secretary-Treasurer
Canadian Labour Congress

As we celebrate this Labour Day, the Canadian labour movement stands at one of the most important stages of its history. Many significant events have taken place in the past year, and we are now at a point where we face decisions that may well have a marked bearing on the whole future of our movement. While, as Canadians, we have been celebrating the Centennial of our country, we have also been able to look back on a period of labour history which pre-dates Confederation and which has made a great contribution to the growth and welfare of Canada.

Now trade unions stand at an all-time high in point of membership, and the prospects for continued growth are exceedingly good. The membership of the Canadian Labour Congress, which represents the overwhelming majority of organized workers in Canada, is crowding the million-and-a-half mark. Many of our affiliated organizations are finding their personnel resources taxed in meeting requests for information and organization.

Outside the established trade union movement, there has been an enormous surge of interest in collective bargaining among many professional and semi-professional groups. The practice of bargaining collectively, which has always formed the basis of the trade union movement, is now being widely accepted. The significance of this development is one of the important situations now confronting the trade union movement.

These circumstances clearly prove the fallacy of those who, only a short time ago, were predicting the demise of the labour movement. It is now quite obvious that not only is our movement going to remain, and continue to increase in numbers and strength, but it is also going to play a more important role in the society of the future.

The collective bargaining activities of many of the organizations affiliated with the Canadian Labour Congress attracted considerable attention during the past year. In a number of instances, long-overdue wage increases were won and other improvements gained. The opposition that this trend met from some quarters was to be expected. Without exception, every gain won by labour in past years has been subject to the same type of criticism and has been accompanied by the same forecasts of disaster; but the economy has flourished, and the working people of Canada and their families have benefited from a better life.

Suggestions that working people are getting too large a slice of the economic pie are contradicted by the figures. Although there have been some fluctuations in the share of the Gross National Product going to salaries, wages and

A Tribute to the Working Force

Smith

By Charles Smith

Chairman
Canad'an Railway Labour Executives' Association

Labour Day is a day set aside in our calendar as a special tribute to the working force, a day on which we may reflect upon the achievements of labour in relation to the economic growth and expansion of our country.

During this Centennial year, evidence of labour's contribution is demonstrated in every Province, and the marvels of new construction in countless Centennial projects is a tribute to the adaptability of the workers to new methods and acceptance of technological change in the interests of increased efficiency.

Yet, labour unions are constantly under criticism because they advocate protection of the interest of employees so that they may share in the great benefits that science brings to our society.

The Canadian Railway Labour Executives' Association, representing International Railway Unions—the bedrock of trade unionism on the railways—deplores the unprincipled attacks made upon them from time to time by those who would seek for personal gain to disrupt the responsible, democratic bargaining processes established over a period of more than 70 years.

The Canadian Railway Labour Executives' Association has forged ahead since its inception in 1965 welding railway workers together so that they now speak with a strong voice on all issues of vital interest to the welfare of our railway family, not only as railway employees, but as responsible citizens of Canada.

Despite the assertions of those who would create chaos in labour relations, the Canadian Railway Labour Executives' Association has complete authority to make its own decisions and is not a satellite of the United States.

We view with appreciation the requirements in the Sanitary Code as recommended by the Public Health Engineering Division, Department of National Health

51st International Labour Conference

Conference adopts six new international labour instruments — two Conventions and four Recommendations

The 51st Session of the International Labour Conference, which was held in Geneva June 7 to 29, adopted six new international labour instruments—two Conventions and four Recommendations. The new standards bring the total number of Conventions to 128 and the number of Recommendations to 131.

The six new instruments* are:

—a Convention and a Recommendation on the maximum permissible weight to be carried by one worker;

—a Convention and a Recommendation on invalidity, old age and survivors' pensions;

—a Recommendation on the examination of grievances with the undertaking, with a view to their solution, and a Recommendation on communications between management and workers within the undertaking.

The work of the session also included:

—the first draft of a Recommendation on the improvement of conditions of life and work of tenants, share-croppers and similar categories, and a resolution calling for a study of ILO-related aspects of agrarian reform;

—general discussion and adoption of a resolution and conclusions on the ILO and technical co-operation and the ILO's contribution to the industrialization of developing countries;

—general discussion of the Director-General's report on the role of non-manual workers in developed and developing countries, and on ILO activities in 1966;

—adoption of the 1968 ILO budget amounting to $24,836,091.

—examination of a report on the application by member states of ILO standards. The 10 ratifications registered during this session brought to 3,302 the total number of ratifications of ILO Conventions.

—adoption of a number of resolutions on subjects other than technical questions included on the agenda, in particular a resolution on the fiftieth anniversary of the International Labour Organization in 1969.

*Complete texts of the recommendations and conventions passed during the 51st session of the ILO Conference can be obtained from the International Labour Office, Geneva, Switzerland; or Canada Branch, International Labour Organization, c/o Mrs. Gloria Ramesbottom, 4th floor, 178 Queen Street, Ottawa 4, Ontario.

Canadian Participation

Government delegates served on conference committees as follows: George V. Haythorne, Deputy Minister of Labour, Ottawa, primary member—selection and standing orders committees. John Mainwaring, Director, International Labour Affairs Branch, Department of Labour, Ottawa; Bernard Wilson, Assistant Deputy Minister, Department of Labour, Ottawa; Saul Rae, Permanent Representative and Ambassador of Canada to the European Office of the United Nations, Geneva; and Leonard Houzer, First Secretary, Canadian Permanent Mission, Geneva; substitutes—selection and standing orders committees. J. A. Beesley, First Secretary and Consul, Canadian Permanent Mission, Geneva—resolutions; J. K. Wanczycki, Legislation Branch, Department of Labour, Ottawa—application of Conventions and Recommendations; J. E. E. Osborne, Director of Research and Statistics, Department of National Health and Welfare, Ottawa—social security; Bernard Wilson, Assistant Deputy Minister, Department of Labour, Ottawa—grievances and communications; K. A. Pugh, Deputy Minister of Labour, Province of Alberta—maximum weight; Guy de Merlis, Labour Attaché, Canadian Embassy, Brussels—technical co-operation and industrialization.

Employer delegates on committees were: C. B. C. Scott, Assistant General Manager (Personnel), Hydro-Electric Power Commission of Ontario; substitute: W. J. McNally, Manager, Policy Department, Canadian Chamber of Commerce—resolutions; Mr. Scott; substitute: William H. Wightman, Manager, Industrial Relations Department, Canadian Manufacturers' Association—application of conventions and recommendations; Mr. Scott; substitute: R. M. Drennan, Manager, Employee Relations, Cyanamid of Canada Limited—social security; Mr. Scott; substitute: G. H. Paquette, Industrial Relations Manager, Imperial Tobacco Company of Canada Limited—grievances and communications; Mr. Scott; substitute; H. L. Wallis, Manager, Industrial Relations, E. G. M. Cape and Company Limited—maximum weight; Mr. Scott; substitute: Mr. Wightman—agricultural workers; Mr. Scott; substitute: Roland E. Wilkes, Executive Secretary, Railway Association of Canada—technical co-operation and industrialization.

Worker delegates on committees were: Joseph Morris, Executive Vice-President, Canadian Labour Congress; A. L. Hepworth, Director, International Affairs Department, Canadian Labour Congress—resolutions; Mr. Hepworth—recommendations; Louis H. Lorrain, First Vice-President, International Brotherhood of Pulp, Sulphite and Paper Mill Workers—social security; James Perna, Canadian

Director, United Glass and Ceramic Workers of North America—grievances and communications; Herbert Flesher, International Vice-President, International Hod Carriers' Building and Common Laborers' Union of America—maximum weight; Pierre Vadboncoeur, Legal Adviser, Confederation of National Trade Unions—agricultural workers; F. A. Armstrong, Vice-President, Brotherhood of Railway Carmen of America—technical co-operation and industrialization.

Director-General's Reply

To make effective headway in problems of human rights, industrialization, and employment, the International Labour Organization and all United Nations organizations must be able to work toward a common goal, and the ILO must have the necessary resources at its disposal, the Director-General said in his reply to those who spoke on his report (L.G., Aug., p. 472). Mr. Morse called for closer co-operation between all international organizations in the United Nations family to oppose poverty, backwardness and underdevelopment.

Delegates to the 51st International Labour Conference, which met in Geneva from June 7 to June 29, heard the director-General describe these objectives as the ones toward which the ILO should direct its efforts.

A total of 214 speakers addressed the conference on the Director-General's report. In his reply, Mr. Morse stated that the ILO had long been concerned with non-manual workers. Within its technical co-operation programs, the ILO had been providing assistance to many countries in training such important categories of non-manual workers as managers, supervisory staff, and officials of labour administrations.

The Director-General said that special attention must be paid to non-manual occupations in policies for the development utilization of human resources in both the industrialized and the less developed countries.

Mr. Morse added that he hoped to see the ILO become more firmly established in a position of influence, authority and inspiration in the field of social policy. "Until now, our member States and the ILO have tended to adopt a piecemeal approach to social problems," he said.

"Social policy is a whole complex of practical, inter-related measures carefully designed to make a positive and lasting contribution to the achievement of such fundamental goals as freedom from want, social and economic progress, and equality of opportunity," Mr. Morse explained. A social policy could not make a lasting impact on the problem of poverty if it did not take into account economic realities.

Mr. Morse singled out three spheres that should be given priority in the ILO's future course of action: human rights, industrialization and employment. "We must . . . ensure that preoccupation with economic growth and development does not serve as a pretext for exploitation of the worker, for inhuman conditions of work or for a denial of freedom," he said.

The Director-General spoke of the need for the ILO to make "its own special and distinctive contribution to a broader international programme, in which we would hope the United Nations Industrial Development Organization will play a leading role."

Another ILO priority that Mr. Morse noted was to increase levels of productive employment throughout the developing world. He cited wide-scale unemployment in the cities of many countries, and underemployment in rural areas, as obstacles to ILO world-wide objectives. ILO action in rural development, youth training and employment schemes had helped to improve the lot of two-thirds of mankind living at or below the subsistence level, he said.

The Director-General then stated his intention on the occasion of the ILO's 50th Anniversary in 1969 of putting forward a world-wide programme of action for the development of human resources, based on regional plans such as that adopted at the Eighth Conference of American States members held in Ottawa last September (L. G., Nov. 1966, p. 634). Referring to this latter plan, he said that it would remain a document of pious hopes unless the ILO was given the tools and resources with which to carry it out.

"It is up to our member states" said Mr. Morse, "to decide whether they have sufficient confidence in the ILO to invest in it as an instrument for greater prosperity, for progress and for peace."

Maximum Weight

The conference adopted a convention concerning the maximum permissible weight to be carried by one worker.

It requires member states that ratify it to take appropriate steps to ensure that workers assigned to manual transport of loads other than light loads receive prior training or instruction in working techniques, to safeguard health and prevent accidents. Moreover, the convention states that no worker be permitted or required to carry loads likely to jeopardize his health or safety. Additionally, in order to limit or to facilitate the manual transport of loads, suitable technical devices shall be used as much as possible.

The assignment of women and young workers to manual transport of loads other than light loads is to be limited. Where they are engaged in the manual transport of loads, the maximum weight of such loads is to be substantially less than that permitted for adult male workers.

A recommendation complementing this convention was also adopted.

The recommendation states that where the maximum permissible weight to be transported manually by one adult male worker is more than 55 kg., measures should be taken as speedily as possible to reduce it to that level.

The recommendation provides for the safeguarding of the health of women and young workers and proposes that competent authorities actively promote scientific research, including ergonomic studies on the manual transport of loads.

Participants at the 1966 preparatory technical conference concerned with drafting the maximum permissible weights for workers of both sexes had been advised, in the conclusions of an earlier meeting of experts, that the load levels set were theoretical and a proposal for a 50 kilogram limit (for men) recommended to cover differences of environment and work-rhythm in countries as disparate as, for example, India and Sweden.

Accordingly, the physiological aspects of load-carrying were taken into account; which include such individual factors as the worker's weight; size; degree of muscular development, general health; age; sex and training. Heavy muscular work, for instance, could be carried out—without excessive fatigue—if it were broken by suitable pauses. At the same time, load-carrying would be manifestly easier if loads could be carried symmetrically without awkward posturing.

Medically speaking, the conference noted that workers were subject to both acute and chronic ill-effects from lifting and carrying heavy loads excessively. Workers could suffer spinal and muscular injuries and also be adversely affected in the trunk, limbs, or the joints. At the same time, sudden increases in blood pressure could result in brain-haemorrhages—especially among older people.

The current trend in the packaging sectors of industrialized countries is towards smaller units. This was pointed out by the meeting of experts that preceded the Preparatory Technical Conference, and reflects the demand by commerce for packages that can be supplied directly to retailers and consumers. In turn, the establishment of a maximum permissible weights appeared to form part of a general pattern of development favouring improved conditions of work for load-carriers throughout the world.

The Conventions concerning pensions elaborated by the ILO in 1933 have been brought up to date with the adoption of a new instrument which is more general and more flexible. The new Convention has been modelled on the Social Security (Minimum Standards) Convention (No. 102) 1952 and makes appreciable and

reasonable improvements in the earlier standards.

The new Convention revises six 1933 Conventions: Convention 35 — old age insurance (industry, etc.); Convention 36 —old age insurance (agriculture); Convention 37—invalidity insurance (industry, etc.); Convention 38—invalidity insurance (agriculture); Convention 39—survivors' insurance (industry, etc.); and Convention 40—survivors' insurance (agriculture).

In ratifying it, member states can accept the obligations of the new Convention either entirely or partially in Parts II, III, and IV.

Part II provides that a member state shall give benefits to persons unable to engage in any gainful activity, to an extent prescribed, due to an incapacity likely to be permanent, or that persists after the termination of a prescribed period of temporary or initial incapacity.

Part III provides that a member state shall secure old age benefits for the persons protected.

Part IV provides that a member state shall secure survivors' benefits for the persons protected. This includes the loss of support suffered by the widow or child as the result of the death of the breadwinner.

In addition, a supplementary recommendation was adopted which could serve as a guide for further developments in social security legislation.

Grievances

The conference adopted a recommendation on the examination of grievances within enterprises with a view to their settlement.

After establishing methods of application, the recommendation provides in its general principles that: "Any worker who, acting individually or jointly with other workers, considers that he has grounds for a grievance should have the right to submit such grievance without suffering any prejudice whatsoever as a result; and to have such grievance examined pursuant to an appropriate procedure . . . . "

Collective agreements should include provision for an examination of grievances to promote their settlement under the procedures provided, and the parties should abstain from any action that might impede the effective functioning of these procedures, the Recommendation added.

Workers should have the right to participate directly in the grievance procedure and to be assisted or represented during the examination of a grievance by a representative in conformity with national law or practice, the Recommendation said.

Finally, unsettled grievances should be settled through procedures provided for by collective agreement; conciliation or arbitration by the competent public authorities; decision of a labour court or other judicial authority, or any other appropriate procedure, it said.

Communications Within the Undertaking

The conference adopted a recommendation on communications within the undertaking.

In its general considerations, the recommendation states that employers and employees recognize the importance of a climate of mutual understanding and confidence that is favourable both to the efficiency of the enterprise and to the aspirations of the workers.

The methods of communication should in no way derogate from freedom of association; or the workers' representatives.

Referring to the elements for a communications policy within the undertaking, the text continues: "Any communications system within the undertaking should be designed to ensure genuine and regular two-way communication between representatives of management and the workers; between the head of the undertaking, the director of personnel or any other representative of top management and trade union representatives or such other persons as may, under national law or practice, or under collective agreements, have the task of representing the interests of the workers at the level of the undertaking."

The recommendation suggests use of such media of communication as meetings for the purpose of exchanging views and information, supervisors' bulletins and personnel policy manuals, and house journals, magazines, and newsletters.

In particular, management should give information regarding general conditions of employment, including engagement, transfer and termination of employment; job descriptions and the place of particular jobs within the structure of the undertaking; possibilities of training and prospects of advancement within the undertaking; instructions for the prevention of accidents and occupational diseases; staff welfare services; and social security or social assistance schemes in the undertaking.

Tripartite Committee Formed

The conference set up a tripartite committee to examine the application of ratified Conventions and the fulfilment by member states of other obligations established by the constitution of the ILO.

The committee based its work, as usual, on the reports and other information supplied by governments, as well as on the technical examination that had been carried out in the report of the Committee of Experts on the Application of Conventions and Recommendations.

On this occasion, the committee reviewed the functions of the ILO supervisory bodies concerning conventions and recommendations, and discussed various suggestions. It emphasized the impressive evolution that had taken place, both in the volume of reports and information to be examined and the methods of examination and the situations considered.

The committee discussed international protection of human rights, particularly in connection with the covenants adopted by the United Nations in December 1966.

In addition, the committee noted new cases of progress or assurances given to it in respect of members' obligations, particularly as a result of exchanges of views that took place in the committee.

The committee devoted part of its work to the problem of hours of work. This had been dealt with in the general survey carried out this year by the committee of experts on the basis of reports of governments. The committee noted a general reduction of hours of work. It found that at present, normal working hours were less than 48 hours per week in about two-thirds of the countries covered by the survey, and about 30 of these countries have already adopted the "social standard" of 40 hours.

In addition, it noted that normal hours of work exceeding 48 hours per week were still frequently found in certain activities and that overtime sometimes led to excessively long actual hours of work. The committee stressed the need for legislation to establish essential guarantees, combined with a certain degree of flexibility to take into account the role of collective bargaining.

50th Anniversary (1969)

The conference unanimously adopted a resolution calling for the celebration in connection with the 50th Anniversary of the ILO in 1969.

In addition to commemorative activities throughout the year, special ceremonies will be held on June 18, 1969, during the 53rd session of the conference and ceremonies will be held in member countries on October 29, 1969, the anniversary of the first session of the conference in 1919.

The purpose of the celebration is to promote a broader and fuller understanding of, and more active support for, the ILO's objectives, and to intensify a "continuous and concerted international effort to promote the common welfare in freedom and dignity."

According to the resolution, it is expected that governments, employers and workers in ILO member countries, as well as other governmental and non-governmental organizations, will take part in the Anniversary activities.

Carleton professor wins labour fellowship

Carleton University professor Bruce A. McFarlane has won the 1967 Canada International Labour Fellowship. The fellowships, valued at $6,000 plus an equal amount for expenses, are awarded annually to senior Canadian scholars to promote research into manpower, industrial relations and general labour problems at the International Institute for Labour Studies in Geneva, Switzerland.

Prof. McFarlane is at present Chairman of the Sociology Department at Carleton University, consultant to and National Rapporteur for Canada to the Directorate for Scientific Affairs of the Organization for Economic Co-operation and Development (OECD), Paris, and Consultant to the Royal Commission on Bilingualism and Biculturalism.

Dr. McFarlane will spend one year in Europe to investigate the impact of technological change upon the education, training, utilization and careers of a number of sub-professional groups — primarily technicians — of several western European countries. On his return here, he will compare the European experience with that of Canada.

Prof. B. A. McFarlane

Toronto labourers strike ends after seven weeks

In the early part of July about 3,000 labourers ended a seven-week strike that had crippled much of Metropolitan Toronto's construction industry. A series of strikes and lockouts had stopped work on road, sewer and watermain projects that employed union labour.

The new agreement meant a minimum increase of 95 cents an hour over a 36-month period. Fringe benefits in the new contract included a provision that water for drinking and washing should be available for those working on sewers, watermains and road-building projects. Other provisions called for shelters for the men to eat their lunches in during the winter, and the supply of oilskins and boots in inclement weather.

When labourers employed by four contractors working on a subway contract went on strike about the middle of May, other contractors engaged in heavy construction applied a lockout in retaliation. About 500 employees were affected by the lockout imposed by 30 companies.

Occupational Training Act passed by Parliament

The Adult Occupational Training Act, which was recently passed by Parliament, is intended to provide training services and training allowances for all adults who wish to take advantage of the training offered and who are in a position to benefit by it.

The new act replaces the Technical and Vocational Training Assistance Act, under which retraining was available only to workers who were unemployed or who belonged to certain special categories. The Minister of Manpower and Immigration, in a statement about the new act, said that every person in Canada who had been out of school for more than a year would be eligible to benefit from it.

The training allowances that may be paid under the program range from $35 to $90 a week, and the Minister said that the only restriction on their payment was that they must not be used "to compete with the school system. They are designed for retraining, not to make training a substitute for school."

An adult who has not attended school regularly for at least 12 months may apply at his nearest Manpower Centre to be enrolled in an occupational training course; and if the manpower officer who interviews him considers that he would benefit by training, the officer will arrange for him to be enrolled in a course that will increase his earning capacity or his opportunities for employment.

To be eligible for a training allowance as well as free training, however, an applicant must have been a member of the labour force substantially without interruption for not less than three years; or he must have one or more persons wholly or substantially dependent upon him for support.

The amount of the allowance depends on the number of dependents the man has, and the general level of earnings in his province or region. The actual scales, within these limits, are to be settled by consultation between the federal authorities and the provinces; and, if a province wishes, the federal Government will use different scales in different parts of the province to conform to variations in the local level of earnings. After June 30, 1968 the allowance limits will be raised each year as average hourly earnings in manufacturing rise.

The federal Government will pay 100 per cent of the costs of these allowances, which will be paid directly to the trainees. It will also pay 100 per cent of the costs of operating training courses for adults, and it may make loans to provincial governments to help with the purchase or construction of occupational training facilities.

The Parliamentary Secretary to the Minister of Manpower and Immigration said in the Commons during the debate on the bill that the Government hoped the number of persons taking adult training would double this year, and would grow substantially in the future.

U.S. Labor Secretary speaks for new employment act

"There are still many employers, some labor unions and some employment agencies guilty of subtle, but no less illegal violation of the equal opportunities principle and law", said U.S. Secretary of Labor, Willard Wirtz, testifying before the Senate Subcommittee on Employment, Manpower and Poverty in support of the Equal Employment Opportunities Act. He added that "past and present discrimination results in disproportionate unemployment rates among non-whites, Spanish-speaking persons and women."

Rotating strikes used in Hydro-Quebec dispute

A technique of rotating strike action was introduced in Canada by technicians, tradesmen and office workers for Hydro-Quebec during a seven-week-long dispute to protest working conditions.

Beginning on May 8, a series of 24-hour strikes was held in one section of Quebec after another. The 24-hour strike is common in public service industries in France, from where the employees borrowed the strike plan.

The object of the staggered strikes was to decrease services by the provincial utility's 9,000 employees to demonstrate their displeasure with the company's contract offers. The previous contract expired on December 31, 1966 and had not been renewed by the time the plan for strike action was adopted. Since essential services were supposed to be maintained, union spokesmen explained, it was a strike against the employer, not against the people.

The essential element of the tactic was surprise. Hydro officials did not know in which location the next strike would be called. A spokesman for Hydro-Quebec said that there was no danger of a power cut-off and that union officials had promised to provide emergency services throughout the strike, under the terms of an agreement signed between Hydro-Quebec and the Canadian Union of Public Employees, which maintains bargaining rights for the workers.

A negotiator for CUPE said that the unusual strike technique had been adopted partly to avoid the possibility that Quebec Premier Daniel Johnson would order an immediate return to work if all employees left their jobs at the same time. Premier Johnson, however, praised the Hydro-Quebec employees for using rotating strikes in place of a mass walkout. He said that the union's method has restored, to a certain degree, the prestige of the right of employees in public services to strike.

Services were disrupted for several hours as a result of power breaks, despite union promises to avoid such disruptions. Among those inconvenienced by the power failures were about 40 factories and businesses in the north end of Montreal. These disruptions prompted the writers of newspaper editorials to sharply rebuke public service employees for strike action that could deprive the public of essential services.

The Quebec Government later warned that it would step in with special legislation if the series of walkouts created any problems for the public. The warning was given in answer to a threat to convert the regional rotating walkouts into a strike. Mr. Johnson forestalled this possibility by inviting representatives of both groups to talks in his office.

After seven weeks of rotation strike action, the Hydro-Quebec employees voted on June 26 in favour of accepting the company's latest offer and returned to work immediately.

Farm labour agreement signed in California

A trend-setting farm labour collective agreement has been signed in the United States between the Di Giorgio Fruit Corporation and the United Farm Workers' Organizing Committee. At the same time, an 11-month-old boycott against the company was lifted.

A month later, in May, the U.S. Government and organized labour supported legislation that will give farm workers the right to form unions and bargain collectively with their employers. Farmers were exempted from the National Labor Relations Act (L.G. 1935, p. 605) passed by Congress more than 30 years ago.

The arbitration award covers nearly 3,000 workers at three properties of the company. The contract is of three years duration but may be re-opened after two years. The union may not strike at that time, and unresolved economic issues will go to binding arbitration.

Hourly wage rates were raised immediately from the prevailing federal minimum for California farm workers of $1.40 an hour to $1.65 an hour. Included in this is a 15-cent increase retroactive to the fall of 1966 for some workers. In 1968, there will be an additional increase of 5 cents an hour, bringing the hourly rate to $1.70. Piecework rates will be adjusted proportionate to the hourly wage increase. As yet, there is no basic minimum for piece-rate workers.

The contract provides for six paid holidays each year, a one-week paid vacation after one year of service, and two weeks after two years. The company has put $25,000 into a fund for health-welfare-pension benefits, and pays 5 cents hourly to the fund for each worker, retroactive to January 1967. The agreement provides for a hiring hall arrangement stipulating that the company must give the union 72 hours notice to produce needed workers before the company can hire outside the hiring hall.

The new contract is the climax of many years effort by diverse groups to organize farm workers, who have been generally regarded as among the most exploited of working groups.

Parliament

Bill C-135, to establish a Cape Breton Development Corporation to acquire, reorganize and rehabilitate certain coal mining works and undertakings on Cape Breton Island, to conduct coal mining operations in the Sydney coalfield, and to promote and assist the development of industry on Cape Breton Island to provide employment outside the coal producing industry and to broaden the base of the island's economy, was introduced by the Minister of Energy, Mines and Resources and was given first reading on June 15 (*Hansard* p. 1550). The bill provided for the setting aside of the sum of $20,000,000 for the purpose of promoting and assisting the development of industry on the island.

The bill passed second reading on June 19 (p. 1671) and third reading on June 27 (p. 2051). It received the Royal Assent on July 7 (p. 2396).

The House adjourned on July 7 until September 25 (p. 2396).

Two extensions granted ILO woman expert

The first ILO woman expert recruited in Canada, Mrs. Olga L. Crocker took up her appointment as an expert on clerical training in Kabul, Afghanistan, in July, 1964 under the United Nations Regular Program of Technical Assistance, by arrangement between the International Labour Office and the Government of Afghanistan.

On leave of absence from the Edmonton Public School Board, where she held the position of business education co-ordinator for the Bonnie Doon Composite High School, Mrs. Crocker was granted a one-year extension beginning January 1, 1966 and another year's extension beginning January 1, 1967.

The task on which Mrs. Crocker is engaged is to assist the Department of Labour of the Royal Afghan Ministry to improve office practice techniques, and to organize the training of clerical staff.

Social work program for women graduates

A new plan recently put into effect at the University of Manitoba enables women university graduates to enrol in the university's master of social work program on a two-day-a-week study schedule. The women students, who will have to qualify in the same way as regular students, may take as long as five years to complete the two-year program, but they are assured of positions upon graduation.

Technological Innovations And Collective Bargaining

Why is it that, although technological change has been with us for many decades, there seems to be more emphasis today on technological change than ever before, asked Félix Quinet, Chief, Collective Bargaining Division, Economics and Research Branch, in a paper delivered to the faculty and students of Laurentian University's Department of Business Administration. The title of Mr. Quinet's paper was "Technological Innovations and Collective Bargaining".

Mr. Quinet provided two answers: the kinds of technological change experienced in the last decade have been introduced at a more rapid rate than those introduced in earlier years, and current technological change has far-reaching effects on industry's manpower requirements. "The introduction of technological change in industry is generally associated with a substantial increase in the number of skilled, technical and professional occupations and a slower growth rate for the semi-skilled and unskilled occupational groups," he said.

Mr. Quinet then asked: If technological change, rapidly introduced, means that many workers, young and old, with much or little seniority, with much or little potential, may rapidly become useless, how can the parties to collective bargaining — labour and management — design ways to cushion the effects of technological change on the labour force? And if rapid technological change is a must for an employer or a businessman in order to compete successfully or even to survive in a given market, how can the collective bargaining process help this employer or this businessman to introduce the required technological change at the desirable rate, while minimizing the adverse effects that this change might have on the work force?

Being unable to answer these two questions in a categorical way, Mr. Quinet described the indications shown in Department of Labour studies that something positive has been done by labour and management to meet the challenge of technological change, both from the point of view of industrial efficiency and human welfare.

Impact on Techniques

The advent, or even the expectation of technological change is going to have an impact on both the kinds of provisions included in collective agreements and the way in which the collective agreement is negotiated, in other words, on the techniques of collective bargaining. Mr. Quinet said everyone agrees that the introduction of new equipment can result in problems that require a different approach from labour and management than, say, problems resulting from a wage demand. In the latter case labour and management often make a hurried compromise during a tense bargaining session in order to avoid a threatened strike or lockout, but "it is hard to conceive that the problems resulting from the introduction of automated machinery might be properly discussed in the same atmosphere of tension and pressure."

Here Mr. Quinet listed a few questions that can be raised as a result of technological innovations: How many of the current jobs will become obsolete? How can we retrain the people we now have to fill the new jobs created by the new technology? If some of the people we have cannot be retrained, what kind of arrangements can be made to ensure that these employees are transferred to jobs in the company, or outside, in which they could be usefully employed?

There are many similar questions, Mr. Quinet said, but the point he wanted to make was that the manpower problems, the problems of adjustment generated by technological change, "call for joint and sustained discussions and consultation by labour and management, and not for hurried and tense bargaining sessions in the traditional sense."

Mr. Quinet here recalled that governments in Canada have recognized this need for a new type of labour-management relationship in a context of technological change, citing as an example the federal government's Manpower Consultative Service, behind whose establishment one of the key principles was that appropriate steps should be taken well in advance of worker displacement resulting from technological change.

Technological Change Provisions

There has been an increasing incidence of technological change provisions in Canadian collective agreements since the early 1960s. A study of collective agreements in major manufacturing establishments in 1961-62 showed that very few agreements made specific references to technological change, Mr. Quinet said, but a recent study conducted by his Division indicated that out of 471 collective agreements covering 500 or more workers in all Canadian industries except construction, 137, or 30 per cent, contained at least one provision for adjusting to technological change. Altogether, there were 281 separate provisions of that kind.

Here Mr. Quinet quoted from a paper delivered by George Saunders, Director, Economics and Research Branch, at the Conference on Law and Industrial Relations in Toronto in May 1966. In that paper Dr. Saunders had stated that, in a period when both the Canadian and United States economies operated at high levels of employment and unprecedented prosperity, collective bargaining was concerned mainly with the distribution of money between the bargaining parties. But when unemployment rose and increasing international competition forced

Canadian industry to turn to mechanization as a means of production, which occurred more frequently in highly unionized industries, there was a noticeable shift in collective bargaining from concern with wages to concern about job security. In other words, Mr. Quinet commented, this growing incidence of technological change provisions can be related to a changing economic and technological environment.

In addition to being reflected in a growing number of technological change provisions in Canadian collective agreements, the impact of technological change on collective agreements can be reflected in other provisions. "It is my belief that the nature of technological change is such that to attempt to assess its extent or significance only on the basis of the incidence of specific technological provisions might, in fact, be misleading."

Technological change, he explained, could prompt many provisions that don't necessarily make obvious references to the problems from which they result. As an example he cited the case of a factory where the introduction of automated equipment might result in the employment of women, which, in turn, might result in the introduction of an "equal pay for equal work" provision. There might not be in that agreement any specific reference to the automated machinery.

Technological change provisions are of a great variety. Some provide for "total employment security," which is a written guarantee by the employer that if automation is introduced, workers in one or several occupational classes will not be laid off. Other provisions specify that workers whose jobs might be affected by changes in technology may benefit from retraining and readjustment programs. Others provide that when workers lose their jobs as a result of the introduction of technological innovations, the employer will take steps to cushion the drastic effects on the worker. And other provisions found in his Division's survey provided for a variety of joint labour-management arrangements to study a specific program and to review a number of measures related to technological change.

> Specific provisions for union-management consultation and for advance notice in a context of technological change are, of course, very significant. Would it be wrong on my part to assume that provisions for union-management consultation may imply that, to a certain extent, management is willing to divulge its future plans to the union in advance of their implementation? Provision for advance notice is equally significant in that the worker who is likely to be displaced can make plans, with the help of the union and of management, with regard to his possible transfer to another job within the company or to a job in another company. There is justification in saying that these types of provisions are likely to help create a new climate between labour and management, a climate calling for a more sustained dialogue and also perhaps for a greater sense of partnership.

Specific Examples

At this point Mr. Quinet provided specific examples of technological change provisions. He cited a collective agreement covering a press agency in western Canada, which contained a clause providing that during the life of the agreement, there would be no layoffs for economy reasons, or as a result of new automated processes or if a publication is sold or discontinued, and a provision for a joint standing committee to study the effects of automation in the company and to make recommendations for possible relocation and retraining of employees affected by new processes. Finally, the company agreed to provide the money for retraining employees.

Another example was a collective agreement covering a firm in the iron and steel products industry that said the company was, under specified conditions, prepared to assist employees to acquire their junior or senior matriculation. Another example was a collective agreement covering a large plant in eastern Canada, which contained a retraining provision developed jointly over a period of several months away from the bargaining table. Under this provision, the company provides on-the-job training and pays tuition fees and half the costs of text books for courses offered in the evening at the local vocational schools. If a shift worker enrols in these evening courses, he is assigned to day work during the school term.

Significance of the Provisions

Looking at the significance of technological change provisions in collective agreements, Mr. Quinet pointed out that "the way in which the parties to collective bargaining are to meet the challenge of technological change is likely going to be affected by the very nature of the industry where this change is taking place." He assumed that the problems of technological change might be approached by labour and management in a shoe factory in a different way from that in an airline company.

The kinds of technological change provisions in collective agreements might also be determined, to a certain extent, by the kind of impact generated by the change and also by the economic position of the firm or of the industry involved. In an industry where automation or technological change is severely slashing into the number of available jobs, the technological change provisions might stress security of employment or, for that matter, early retirement. In an industry where technological change results in the disappearance of a number of old jobs but results in the creation of an equal number of new jobs, the provision in effect in that industry will likely stress retraining.

In a period of economic slowdown for a firm or industry, technological provisions in that firm or industry might stress security of employment, but in times of economic expansion and buoyancy in the same firm or industry, provisions might stress retraining in order to not only retrain but retain their manpower.

Up to this point in his paper, Mr. Quinet said, he might have given the impression that what labour and management have been doing in facing up to technological change through collective bargaining is to adjust: to adjust manpower to the new requirements, to adjust training programs to the demands for new skills, etc. But he believed that labour and management through collective bargaining have done more than simply adjust to change. In adjusting to it and in jointly planning for change, they have contributed to change and may well have generated other changes in turn, he said. For example, when a collective agreement provision offers basic courses to workers with the financial and moral support of the company, that provision may represent a new venture in adult education, may generate new attitudes on the part of the workers towards education, and will most certainly lead to useful experiences. These provisions might, in fact, represent an experiment of wide significance that will in turn encourage similar changes and similar ventures elsewhere.

"In meeting the challenge of technological change, collective bargaining may in some instances pioneer new solutions, break new grounds and may, in fact, show the way to society at large in planning for the technological world of the future," Mr. Quinet said.

Collective bargaining could be strengthened through its responses to technological change, Mr. Quinet concluded. Technological change has had on collective bargaining an impact that has made of it an even stronger institution for dealing with the problems of evolution and change in general and not necessarily with changes of a technological nature. By gaining the habit of joint consultation on technological matters, Mr. Quinet asked, might not labour and management become better equipped, because of that practice, to deal jointly with problems other than those arising out of technological change?

Minimum Standards Legislation And Economic Policy

Important developments that have taken place recently in Canadian laws concerning minimum wages and hours have led to a fairly general upward revision in minimum standards. Phillip Cohen, a senior economist of the Canada Department of Labour, has described the Canada Labour (Standards) Code as "a package of minimum standards covering basic working conditions for workers engaged in industries coming within the legislative authority of Parliament."

Chief of the Department's Federal Industries Division in the Economics and Research Branch, Mr. Cohen presented an evaluation of the Code to the 25th Interstate Conference on Labour Statistics meeting in Toronto in June. He had evaluated the role of minimum standards in order to see whether the standards were effectively fulfilling their expressed objectives. "Such an assessment," he said, "must rest, in large measure, on a better understanding of the social and economic implications of wage and hours standards."

The Code came into effect on July 1, 1965 (L.G. 1965, p. 594), and it applies to such industries as shipping, air transport, interprovincial rail and highway transport and communications, as well as banking, uranium mining, grain elevators, feed mills, and certain crown corporations. It has introduced a set of minimum standards to these industries, which were not previously covered by provincial legislation. "Although federal government departments or departmental corporations are not directly covered by the Code," Mr. Cohen explained, "the Government has made a commitment to apply the same standards to employees in the public service as well."

Unique Legislation

He described the mechanics of the Code (L.G. 1965, p. 697) as "unique" because it both combines four major types of work standards in one act, and provides a high degree of flexibility. It also permits certain warranted deferments of both wage and hours-of-work provisions, without affecting the essential standards or excluding any classes of employees or industries. The "averaging principle" in the Code provides an additional degree of flexibility.

In order to illustrate the relationship between minimum standards legislation and economic policy, Mr. Cohen went on to describe the Department's experience with the Code.

Although not many employers had found it necessary to defer the increase of minimum wages to $1.25 an hour, deferments with respect to hours were more numerous. Mr. Cohen attributed this result to the provision that limits weekly hours to 48.

On the one hand, he said, management is faced with an increase in costs through overtime payments and additional manning if hours are to be reduced. On the other hand, workers may have reduced take-home pay. The Department is trying to achieve an accommodation through discussions with labour and management, and, as a last resort, through Inquiry Commissions.

Help or Hinder?

"A basic issue is whether minimum wages and hours legislation hinders or aids the normal collective bargaining system. Does it, as some authorities contend, detract from the collective bargaining process or does it act as a useful support?" Mr. Cohen asked. He stated that the effect of the Code was to encourage unions to re-examine its standards to see if their members agreed with them.

Another effect of the Code was to create a situation whereby "the issues it poses for management and labour may be resolved outside the formal bargaining system through tripartite discussions . . . Even where agreement cannot be reached through this means, the knowledge already gained by both parties of each other's positions can still provide a basis for settling the issues at the bargaining table."

The speaker commented that this exchange of knowledge between unions and employers in the Code would seem to strengthen the view that minimum standards legislation can act as a useful support to the collective bargaining process.

In his appraisal of the Code, Mr. Cohen discussed the difficulties in coping with the 48-hour week. This feature was the most difficult, although it was necessary to include it in order to reduce excessive hours of work.

He noted that the minimum standard of $1.25 an hour had already had a pervasive influence on provincial wage standards, and therefore had helped to raise substandard labour conditions outside federal jurisdiction.

He added: "There is growing recognition that minimum standards must be continually revised in the light of changing economic and social conditions." The question of the criteria to be used for this is, in turn, dependent upon the broader question of the rationale behind current and future minimum standards laws, he said. And this question leads to the topic of research needs — investigation into the impact of minimum standards laws on employment, wage structure and costs, and on productivity in the economy, the industry, and the plant.

Mr. Cohen described briefly the research program conducted by the Department of Labour in this area. It included mailed surveys covering all industries under federal jurisdiction concerning employment, wage distribution and working conditions. The results indicated some adverse effects on employment. For example, some industries experienced narrowed wage differentials.

Another feature of the research program is the development of a framework for studying the industrial relations system and its operation in federal industries. This framework will be useful in anticipating industrial relations problems and in determining the effects of the Code on the collective bargaining process. In this connection, Mr. Cohen mentioned that the Branch had recently published a report titled *Survey of Hours of Work in Great Lakes Shipping* (available from Economics and Research Branch, Canada Department of Labour).

Mr. Cohen's concluding point was that minimum standards policies can be developed to raise the substandard conditions that prevail in various sectors of the economy, in the same way that training and mobility programs were developed to help workers adapt to rapid technological and other economic changes. The social and economic implications of minimum standards are inter-related and must be largely determined by that which is economically practicable, he said. "Both these considerations . . . find a place in the justification and new rationale of labour standards legislation."

Part IV

Collective Agreements in Manufacturing

Hours of Work, Union Security And Other Provisions

The eight-hour day and the 40-hour week are still the standard provisions for hours of work in collective agreements covering workers in Canadian manufacturing industries. Part IV of this study of "Collective Agreements in Manufacturing," based on a recent survey conducted by the Canada Department of Labour, shows that in 88 per cent of the agreements the standard work day is eight hours, while in 81 per cent the standard work week is 40 hours.

Parts III (L.G., Aug., p. 484) and IV cover 42 types of provisions in 94 collective agreements that apply to bargaining groups of 1,000 or more employees in Canadian manufacturing industries. In all, 249,120 employees were included. An explanation of these two parts of the study was given in Part III.

Some of the principal findings of the survey are:

—a five-day work week is the rule in 89 of the 94 agreements;

—a union shop is specified in 24 agreements; and a modified union shop, with compulsory membership for new employees, is specified in an additional 19 agreements;

—compulsory checkoff of union dues appears in one form or another, in 58 agreements; and a voluntary checkoff is provided for in 28 agreements;

—all of the agreements make provision for arbitration: 77 provide for arbitration that is to be used only in difference arising out of the application, violation or interpretation of the agreement, while 17 agreements mention arbitration in other circumstances;

—provision for a board of arbitrators is made in 65 agreements and for a single arbitrator in 20 agreements.

Tables concerning a number of provisions are omitted, but the data they contain are summarized in the text below.

Some form of preferential hiring or rehiring was provided for in 16 collective agreements covering 33,220 employees. Provision for preferential treatment for union officials in case of lay-off was found in 32 agreements covering 92,340 employees. Seniority on transfer out of the bargaining unit was provided for in 38 agreements covering 87,550 employees.

The study examined special provisions for women. Most of the 94 agreements contained no specific provision of the kind. Specific reference to equal pay for equal work for women was mentioned in only nine of the agreements, which covered 18,590 employees. A separate seniority unit for women was included in 17 agreements covering 53,460 employees, and provision for maternity leave was included in 16 agreements covering 34,990 employees.

Provisions concerning older or handicapped workers were also studied. Of the 94 agreements, 26 agreements covering 75,690 employees included provisions concerning employment of older or handicapped workers. Specific provision concerning extension of employment after regular retiring age, however, was mentioned in only 3 agreements covering 7,400 employees.

Some of the miscellaneous provisions examined in the survey include paid meals, job posting, moonlighting, and work stoppages in other establishments.

Meal allowances in certain circumstances were provided for in 30 agreements covering 61,200 employees. The posting of job vacancies was specified in 47 agreements covering 143,040 employees. Moonlighting, or engaging in some other gainful occupation while employed by the company, was limited or prohibited, mostly during vacation or other leave, in 6 agreements covering 9,710 employees. Only 9 agreements covering 21,620 employees included clauses concerning the handling of goods from strike-bound firms or from other establishments affected by work stoppages.

The next issue of this journal will present Part I of a new survey concerning provisions in collective agreements covering office employees in Canadian manufacturing industries. Copies of this new survey, as well as the previous surveys in the series, which have been summarized in this journal, are available from the Collective Bargaining Division, Economics and Research Branch, Canada Department of Labour.

The findings of this survey are given in the accompanying tables and those that were published in Part III in the August issue.

The study was made by Henri Gallard, Barry Maloney, Sheila Rajani, Tim Thahane and Emile Vallée, of the Economics and Research Branch of the Department of Labour, under the supervision of Félix Quinet, Chief, Collective Bargaining Division.

It should be noted that in a number of cases the language used in the agreements was not entirely clear. In such instances, the provisions were classified subject to the proviso that they may be open to other interpretations as well.

Union Security

	Agreements		Employees Covered	
	No.	%	No.	%
Membership				
No specific provision	36	38	83,970	34

S.U.B. plan, with or without severance pay	22	23	75,030	30

*"Severance pay" refers to special payments made to employees separated from employment with no expectation of recall. This does not include such payments as wages owing up to the date of separation, pay in lieu of notice, pay for unused vacation credits, pension benefits, payment of the employees's equity in a savings or profit sharing plan, and refund of his contributions to a pension fund. S.U.B. refers to supplemental unemployment benefit plans approved by the Unemployment Insurance Commission.

Guaranteed Minimum Income

Two approaches to provision of a guaranteed minimum income were examined in a paper prepared by Dr. James Cutt, an economist at York University, Toronto, for the annual meeting of the Ontario Welfare Council. These were: the negative income tax, or subsidy through the income tax structure to a family whose income falls below a stipulated minimum, and the universal demogrant or social dividend approach guaranteeing a specified income to all, without qualification.

Dr. Cutt's paper stated that the negative income tax, operating through the existing personal income tax mechanism, would take two general forms. In the first, an official minimum income level would be established, and payment used to make up the deficiency between actual income and the official minimum. And in the second, those individuals or families who were unable to take advantage of personal deductions and exemptions in the present tax structure would be paid all or a portion of unused exemptions. Both forms incorporated incentives to recipients to seek further earnings from work.

The "universal demogrant proposal" would operate on a much larger scale, providing not merely income supplements, but a uniform payment to all regardless of means. It might, or might not, be included in income for tax purposes, whereas the negative income tax would be partially recouped from taxable income.

Dr. Cutt examined the two approaches in depth, reviewing arguments made by proponents of both schemes, and concluded that the budgetry costs of a univeral demogrant were much higher, and that a compromise solution might be more easily attained under a negative income tax.

"The eligibility test required under a negative income tax scheme is a simple objective extension of present income tax procedures and cannot be compared to a means test," Dr. Cutt said. Serious administrative difficulties could be avoided if the negative income tax operated through the existing tax mechanism. And finally, although it was not as stabilizing an instrument as a universal demogrant, the negative income tax would increase the stabilizing effectiveness of the personal income tax.

Dr. Cutt thought that a negative income tax in Canada could be justified for four reasons:

(1) Canada's income tax structure is fluid after the Carter Commission's report had unequivocally endorsed equity as its primary objective, and suggested a more comprehensive definition of income and the continued use of progressive tax rates.

(2) in the eventuality that all Canadians will be covered by government medical insurance, the major contingency expenditure would be equalized for all families, greatly simplifying the task of defining a minimum income;

(3) Canada's social security and welfare system had undergone considerable reform over the last few years, and the principle of guaranteed income had been adopted in partial form—i.e., Family Allowance, Youth Allowance, and Old Age Security with its Guaranteed Income Supplement; and

(4) the substantial evidence of persistent poverty in Canada: 23 per cent of the population in 1961 had incomes below $3,000.

Dr. Cutt conceded that although "recent reforms in social security and welfare legislation will alleviate the situation," significant deficiencies remain. "Benefits under the Canada Assistance Plan are given on the basis of a so-called 'needs test,' which falls somewhere between a means test and a simple income test," and there is little justification for the existence of this old welfare tradition today.

The Canada Pension Plan Dr. Cutt described as "a highly regressive form of taxation" that did little to alleviate inequalities. "In its present form it cannot be considered a sufficient base for a meaningful war on poverty," he said.

Tax Exemptions

Tax exemptions, Dr. Cutt continued, might be re-defined more generously at $1,500 for an individual, $2,500 for a couple and $500 for each child. He suggested a progressive scale of negative tax rates based on unused exemptions, ranging from 50 per cent on exemptions of $4,000 and over to 15 per cent for $500 to $999.

Dr. Cutt said that the scheme would serve as the core of a rationalized welfare system and would be intended to replace almost entirely the present Old Age Security System, Family and Youth Allowances, the Canada Assistance Plan, and virtually all Provincial General Assistance programs. Special provision would continue to be made for the elderly and those unable to work.

"There may be a case for retaining a work-earnings related pensions scheme along with the scheme proposed, though the present scheme with its regressive means of financing runs directly contrary to the redistribution envisaged in the negative income tax scheme," he said. "The best solution would probably be the abandonment of the whole contributory pensions scheme . . . and the financing through general tax revenue of progressively more generous negative tax payments, particularly to the aged."

Two aspects of the present social security system would be retained with the negative tax scheme—short-term unemployment and provincial minimum wage legislation. The latter aspect had to be related to the scheme, he said, to ensure that negative tax payments did not become an incentive to pay substandard wages.

"A revised more generous program of unemployment compensation administered by the federal Government could be integrated into the negative tax scheme," he said. "In addition, the whole concept of a negative tax scheme, which provides modest assistance to those who are able to work, implies an effective role by Government toward the elimination of unemployment."

Statutory provision should be made for the annual of biennial revision of payments on the basis of an overall productivity index. "In this manner recipients would participate in the benefits of economic growth."

In conclusion, Dr. Cutt suggested that allowance would have to be made for regional disparities in the cost of living indexes. Negative tax payments should be related to regional cost-of-living indexes to provide equal geographical value of payment at any time. "Equally, protection of the real value of payments over time in the various regions would require the association of payments with regional price indexes."

Employment Fatalities in Canada

First Quarter, 1967

The employment fatalities covered in this review involved persons gainfully employed, and occurred during the course of, or arose out of their employment, and included deaths resulting from industrial diseases.

Statistics on employment fatalities are compiled by the Economics and Research Branch from reports received from the provincial Workmen's Compensation Boards and certain other official sources. Newspaper reports are used to supplement these. For industries not covered by workmen's compensation legislation, newspaper reports are the Department's only source of information. It is possible, therefore, that coverage in such industries as agriculture, fishing and trapping, and certain of the service groups is not as complete as it is in industries covered by workmen's compensation legislation. Similarly, a small number of traffic accidents that are in fact industrial may be omitted from the Department's records because of lack of information in press reports.

The number of fatalities that occurred during the period under review is usually greater than indicated in the article and tables. Fatalities that were not reported in time for inclusion, however, are recorded in supplementary lists, and statistics are revised accordingly in the next annual review.

The Department received reports on 211 employment fatalities that occurred in Canada during the first quarter of 1967. During the previous quarter, 303 fatalities were recorded. This is 86 more than the previously published total of 217 (L.G., Apr., p. 239). In the first quarter of last year, 277 fatalities were recorded—62 more than the preliminary figure of 215 (L.G., Aug. 1966, p. 446).

During the quarter, three multi-fatality accidents brought death to 26 workmen. Eighteen crew members of the fishing trawler *Cape Bonnie* died when the ship crashed on rocks and sank off the Nova Scotia coast in February. Five men died when the tug boat *Gulf Master* sank off the Straits of Georgia, B.C. in January. In that same month, three Winnipeg men died in an air crash near Dryden, Ont.

Three industry divisions accounted for 53.5 per cent of the total number of fatalities.* Of the total, 45 fatalities occurred in transportation, 38 in mining and 30 in construction. The remaining 46.5 per cent were distributed in other industry divisions as follows: forestry, 12.8 per cent; manufacturing, 12.3 per cent; fishing, 9.5 per cent; trade, 4.3 per cent; service, 3.8 per cent; agriculture, 1.9 per cent; public administration, 1.4 per cent; and finance, 0.5 per cent.

The 25-44 age group accounted for 44.6 per cent of the total number of fatalities. Workers in the 45-64 age group accounted for 32.7 per cent, and the remaining 22.7 per cent were distributed in the other age groups as follows: 20-24 age group, 12.3 per cent; 65-and-over age group, 6.6 per cent; and 14-19 age group, 3.8 per cent.

Three occupational divisions accounted for 60.2 per cent of the total number of fatalities: craftsmen, production process and related workers, 23.2 per cent; transport and communication workers, 21.3 per cent; and miners, quarrymen and related workers, 15.7 per cent.

The remaining 39.8 per cent were distributed in the other occupational divisions: loggers and related workers, 10.9 per cent; fishermen, trappers and hunters, 9.0 per cent; labourers and unskilled workers (not agricultural, logging, fishing or mining), 7.6 per cent; managerial, 3.3 per cent; professional and technical occupations workers and service and recreation workers, 2.8 per cent each; sales occupations workers, 1.4 per cent; and farmers and clerical occupations workers, 1.0 per cent each.

Three accident-type categories accounted for 70.2 per cent of the total number of fatalities. These were: struck by different objects and collisions and derailments, 25.6 per cent each; and falls and slips, 19.0 per cent. The remaining 29.8 per cent were distributed in other accident-type categories: inhalations, absorptions and industrial diseases, 8.5 per cent; caught in, on or between different objects, 6.6 per cent; over-exertion, 4.7 per cent; conflagrations, temperature extremes and explosions, 4.3 per cent; electric current, 3.3 per cent; and miscellaneous accidents, 2.4 per cent. No fatalities were recorded in the striking-against or stepping-on-objects accident-type category.

A cross-section analysis of the greatest concentration of fatalities reveals that the 25-44 age group accounted for 53.3 per cent of the total number of fatalities that occurred in transportation, and 56.7 per cent in construction. A similar cross-section examination of these industries to pinpoint the main concentration of fatalities by occupation shows that craftsmen, production process and related workers accounted for 56.7 per cent of the total number of fatalities that occurred in construction, and 53.8 per cent in manufacturing. Transport and communication workers accounted for 73.3 per cent of the total number of fatalities that occurred in the transportation industries.

An analysis of cross-classifications of industry divisions by main accident-type categories reveals that 90.0 per cent of the fatalities in the fishing industry and 33.3 per cent in the transportation industry were the result of collisions, derailments and wrecks; 77.8 per cent of the fatalities in forestry were the result of being struck by different objects; and 36.7 per cent of fatalities in construction were the result of falls and slips on the same level and to different levels.

During the quarter under review, there were 69 fatalities in January, 59 in February and 83 in March. By province, the largest number of fatalities, 74, occurred in Ontario. In British Columbia there were 42 and in Nova Scotia 29.

*See Table H-1, p. 616

Price Indexes

Consumer, June 1967

The consumer price index (1949 = 100) increased 0.5 per cent to 148.8 at the beginning of June from 148.1 in May, which was 3.5 per cent higher than the June 1966 figure of 143.8.

In the current period, all main component indexes except health and personal care, which recorded a slight decrease, showed increases from the preceding month, with the introduction of a 5 per cent sales tax in Manitoba contributing to the rise.

The food index advanced 0.8 per cent to 144.8 from 143.7. Higher prices were reported for milk, bread, pork, sugar and potatoes. Prices also rose for a variety of other items including cheese, cookies, infants' food, jelly powder, chicken, grapefruit, apples, cabbage, celery, and a number of other fresh vegetables. Prices were lower for ice cream, cake mix, jam, butter and other fats, eggs, oranges, bananas, fresh and frozen strawberries, frozen orange juice, and fresh, frozen and canned fish. The price movements of various cuts of beef were mixed.

The housing index rose by 0.5 per cent to 151.2 from 150.5, largely as a result of general increases in rents. There was also a fractional advance in the household operation component of this index.

The clothing index increased 0.5 per cent to 132.5 from 131.9. Higher prices were reported for most items of men's, women's, and children's clothing, as well as for piece goods, clothing services and jewellery. Footwear prices were generally unchanged.

The transportation index rose by 0.6 per cent to 158.2 from 157.2. Higher prices were recorded for new automobiles, gasoline, and motor oil, and for most other automobile operation and repair items. Increased taxi, train, and inter-urban bus fares also contributed to the upward movement in the index.

The health and personal care index decreased by 0.2 per cent to 190.7 from 191.0, reflecting lower prices for a few personal care supply items. The recreation and reading index advanced 0.3 per cent to 167.1 from 166.6. Price increases in the items comprising the recreation component accounted for this rise. The tobacco and alcohol index increased by 0.2 per cent to 128.1 from 127.9, due to the effect of the Manitoba sales tax on Winnipeg alcoholic beverage prices.

Group indexes a year ago in June were: food 144.2, housing (shelter and household operation) 144.4, clothing 125.3, transportation 151.2, health and personal care 181.2, recreation and reading 159.3, and tobacco and alcohol 125.1.

City Consumer, June 1967

Consumer price indexes (1949 = 100) between May and June advanced in all cities except St. John's, Nfld., where there was no change. The increases ranged from 2.2 per cent in Winnipeg—largely as a result of the introduction of the Manitoba 5 per cent sales tax—to 0.2 per cent in Saskatoon and Regina.

Food index movements were mixed, with increases in six cities and decreases in four. The price of food advanced most in Winnipeg, Toronto, and Ottawa, where rises of 1.8 per cent, 1.6 per cent, and 1.3 per cent, respectively, were recorded. The largest decrease in food prices occurred in Montreal, where the food index decreased by 0.4 per cent. Housing indexes rose in all cities except St. John's, which recorded a slight decrease.

There were also widespread increases in the clothing indexes with advances in all cities except Vancouver; and the indexes for the transportation and the recreation and reading components rose in all ten cities without exception. Health and personal care index movements were mixed, with advances in two cities, decreases in seven and no change in one. The only change recorded in the tobacco and alcohol indexes occurred in Winnipeg, where the effect of the Manitoba sales tax caused a rise of 3.3 per cent.

Regional consumer price index point changes between May and June were: St. John's unchanged at 129.2*; Ottawa +0.8 to 147.0; Toronto +0.9 to 150.7; Winnipeg +3.1 to 145.0; Edmonton-Calgary +0.6 to 139.5; Vancouver +0.5 to 143.5; Halifax +0.4 to 140.7; Saint John +0.5 to 144.4; Montreal +0.4 to 147.6; and Saskatoon-Regina +0.3 to 139.4.

Wholesale, May 1967

The general wholesale index (1935-39 = 100) rose to 263.2 in May, up 0.4 per cent from the April index of 262.0, and 1.7 per cent above the May 1966 index of 258.9. Five of the eight major group indexes were higher in May, while two decreased. The chemical products group index was unchanged at 209.9.

The animal products group index moved up 1.4 per cent in May to 293.2 from the April index of 289.2 on higher prices for livestock, fresh and cured meats, and milk and its products. An advance of 0.7 per cent to 231.8 from 230.1 in the vegetable products group index reflected price increases for sugar and its products, livestock and poultry feeds, and potatoes. The textile products group index rose 0.5 per cent to 252.8 from 251.5 on price increases for imported raw wool, cotton fabrics, rayon yarns, and raw cotton. Increases of 0.2 per cent or less occurred in two major group indexes, wool products to 344.6 from 344.0, and iron products to 272.8 from 272.6.

The non-metallic minerals products group index decreased 0.4 per cent to 197.8 from 198.6 in response to lower prices for coal. The non-ferrous metals products group index moved down 0.3 per cent to 235.9 from 236.6 on price decreases for zinc and tin.

*On base June 1951 = 100.

Farm Products Prices

The index of Canadian farm product prices at terminal markets (1935-39 = 100) increased 0.1 per cent to 250.8 from 250.6. The field products index moved up 1.1 per cent to 173.4 from 171.5, reflecting higher prices for potatoes on both eastern and western markets, and for barley in the east. Lower prices were shown for hay on both markets and for rye and flax in the west. The animal products index decreased 0.5 per cent to 328.2 from 329.7.

U. S. Consumer, May 1967

The United States consumer price index (1957-59 = 100) rose sharply again in May for the second straight month. The May index was 115.6, an increase of 0.3 per cent from the April index of 115.3, and an increase of 2.7 per cent from the May 1966 index of 112.6.

The largest increases were in the prices of apparel, used cars, medical care and the cost of running a house.

British Retail, May 1967

The British index of retail prices (January 16, 1962 = 100) decreased to 119.4 during May from the April index of 119.5, and increased from the May 1966 index of 116.8.

The indexes for three subdivisions of the food group were: 124.6 for items whose prices are affected by seasonal variations, such as fresh milk, eggs, potatoes, and other fresh vegetables, apples and pears, fish and home-killed mutton and lamb; 123.1 for those items that are affected by changes in import prices, such as bacon, cooked ham, butter, cheese and chilled beef; and 118.0 for other items.

Industrial Rehabilitation In Britain

Vocational Rehabilitation Branch
Department of Manpower
and Immigration

The Industrial Rehabilitation Units in Britain had their origin in a recommendation of the Tomlinson Committee which advocated in 1943 "courses of reconditioning" for persons who, on completion of their hospital treatment, were unable to continue in their previous employment or take up some other satisfactory employment.

The Disabled Persons (Employment) Act, 1944 gave statutory authority to the Ministry of Labour to provide for industrial rehabilitation courses for disabled persons who because of disabilities arising from injury, disease or deformity were in need of such courses in order to fit themselves for employment or work on their own account.

Industrial Rehabilitation Units

The Ministry of Labour had established an experimental residential training centre at Egham in 1943. The experience there prompted the Ministry to build a number of non-residential units in combination with Government Training Centres at which accommodation had become available when post-war training schemes ended.

By 1950, fourteen units were in operation. A course was designed to enable the individual's employment problem to be assessed, and to afford an opportunity for him to become gradually accustomed to the mental and physical requirements of a full day's work. The individual's occupational aptitudes were tested, and his confidence and sense of mental and physical well-being were enhanced. Another unit intended for research and development purposes was opened in Waddon (Croydon) in 1954, and two more were opened at Liverpool and Perivale by 1961.

The *Ministry of Labour Gazette* for November 1966, reports on the operation of these 17 Industrial Rehabilitation Units for the period January 1965 to June 30, 1966. During this period, 17,587 people were admitted, 1,893 of them women. The average length of stay was between seven and eight weeks.

The majority, 11,952, were recommended by hospitals, general practitioners or other medical agencies; 1,346 were referred by employment exchanges; 3,132 were unemployed persons with long-standing disabilities but no recent illness; and 1,157 were persons without apparent disability who were considered likely to benefit from a course at an I.R.U.

Number of Admissions

In 1965, 11,538 persons were admitted to Industrial Rehabilitation Units. Not all persons who enter the units complete the full course. During 1965, for example, about 19 per cent left prematurely. Of the remainder, 70.5 per cent entered employment or vocational training within three months of the end of their courses.

Follow-up after six months showed that almost 60 per cent of the trainees were satisfactorily settled in employment. Another 7 per cent were in employment but were not satisfied with their positions. Another 13-14 per cent were unemployed at that time but these persons had worked for varying periods. And approximately 19 per cent of the trainees had not worked since completing the course.

The British Ministry of Labour reimburses the cost of courses of industrial rehabilitation provided by the Royal National Institute of the Blind at the Queen Elizabeth Homes of Recovery for the Newly Blind, Torquay, and by the Edinburgh and South-East of Scotland Society for the Welfare and Teaching of the Blind at Alwyn House, Ceres, Fife. During 1965, 370 blind men and women completed courses at these centres.

Two years ago, an experimental program was set up for the mentally disabled. In this program, the Ministry pays for maintenance allowances for long-term mental patients undergoing rehabilitation in the workshops of Industry Therapy Organizations at Epsom and Hanwell.

Another program—this time for the industrial rehabilitation of spastics—was approved in 1966. By agreement between the Ministry and the Spastics Society, the latter provides residential courses of industrial rehabilitation in place of the sheltered employment and preparatory facilities previously provided. The Ministry reimburses the greater part of the cost of courses for all persons with cerebral palsy who have been accepted for training with Ministry approval. The length of these courses, depending on the needs of the individual subject, runs to a maximum of 52 weeks. The average length of stay is considered to be about six months.

A working party set up by the Minister in September 1964 to consider the present situation and future development of the Industrial Rehabilitation Service has submitted proposals for new and improved facilities. It will meet again this year to review progress.

Provisions for Women In Collective Bargaining

Women's Bureau

Special provisions for women were examined in two recent reports prepared by the Collective Bargaining Division of the Economics and Research Branch, Canada Department of Labour.* Although the number of women workers covered by the agreements was not determined, clauses regarding equal pay, maternity leave, separate seniority unit and rest periods were scrutinized.

Equal Pay

Equal-pay-for-equal-work provisions appeared in only four of the 178 office-employee agreements studied. Of some 20,000 employees affected by these agreements, 190 employees were covered by equal-pay provisions.

Of the 94 agreements covering manufacturing industries, nine contained equal-pay clauses and affected 18,590 employees (7 per cent of the total).

The greater incidence of equal-pay clauses in manufacturing industries may be partially due to the fact that more men and women workers are performing similar jobs in these industries. But office employees are predominantly women, and there does not seem to be the same need for such provisions.

Maternity Leave

Three out of four office-employee agreements studied contained no special provisions for maternity leave. The 44 agreements in which maternity-leave clauses appeared, covered approximately 7,000 office workers and represented 34 per cent of the total.

Maternity-leave provisions in the manufacturing industries appeared in only one out of six agreements reviewed, and affected 14 per cent of the 35,000 employees covered. Again, this is due in part to the fact that women workers are not as concentrated in the manufacturing industries as they are in the office employees' group.

Women's Bureau Study

Further observations on the incidence of maternity-provision clauses in collective agreements emerged from a recent study† based on questionnaires sent to 97 large and small business establishments in various parts of Canada, with a fair distribution to those having large and small proportions of female employees. The results from each of the establishments were divided to distinguish between "office" and "non-office" employees, thus making 194 reporting units with a total of 164,262 employees, of whom 32 per cent were women—a proportion close to the composition of the Canadian labour force.

Of the 120 units that formed the basis of the study and reported some form of maternity leave, 29 units employing approximately 8,000 women had such a provision in their collective agreements. These women represented 15 per cent of the total employed in the reporting units, a proportion very nearly approximating the percentage of women holding union membership in Canada—15.4 per cent (L.G., Jan.-Feb. 1966, p. 31).

Roughly four times as many women were included in the 91 units reporting maternity leave provisions by management decision, and they accounted for 46 per cent of the total. Although labour legislation in four provinces includes maternity leave provisions, only in British Columbia and New Brunswick is the law operative.

Maternity Clause

In view of the paucity of maternity-leave legislation, the Canadian Union of Public Employees, a third of whose membership is composed of women workers, urged locals to include a clause in their agreements along the following lines:

> Upon written request, leave of absence without pay and without loss of seniority shall be granted for pregnancy to a maximum of six months. The employee returning to work after maternity leave shall provide the employer with at least two week's notice. On return from maternity leave, the employee will be placed in a position consistent with the seniority provisions of this agreement.

Seniority Unit and Rest Periods

The emergence of a two-phase, working-life cycle for women, and employment interruptions caused by the family responsibilities of married women, has necessitated the establishment of separate seniority units. Such clauses have been found to appear in 17 of the 94 agreements and to cover 21 per cent of the employees in manufacturing industries. No data on seniority provisions appeared in the office-worker agreements reviewed.

Provision for special rest periods for women workers appeared in three of the office worker agreements studied, affecting 700 employees, and accounted for 4 per cent of the total so protected. No rest-period provisions were recorded for agreements in the manufacturing industries.

**Provisions in Collective Agreements Covering Office Employees in Canadian Manufacturing Industries, 1967*, and *Forty-two Provisions in Major Collective Agreements Covering Employees in Canadian Manufacturing Industries, 1967.*

Better Communications Through Joint Consultation

— Photo by Jac Free Lance Photographer, Ottawa

"So I said, get facts from your L-M Committee." Labour-management joint consultation becomes eye-pleasing as Lizette Larocque and Suzanne Parent demonstrate short-range communications. They acted as hostesses at the St. Vincent Hospital Centennial dinner and dance with which the Ottawa hospital's joint consultation committee recently celebrated Confederation.

Labour-Management Consultation Branch

One company that "needed something" and "gave it a try" is Canada Bread Co. Ltd. of Toronto, Ontario. A joint labour-management consultation committee was formed last year at Canada Bread's Bartley Drive plant. And it has proved a winner. Why?

Robert Urquhart, chief steward of Local 461, Bakery and Confectionery Workers' International Union of America, and an active committee member, explains:

"The meetings are profitable. They've made our relationship with management very good. Before that—before the committee—things just weren't too good."

Clifford St. Pierre, Canada Bread Industrial Relations Manager, who helped introduce labour-management consultation, recalls that "we were a little skeptical at first. But we needed something, so we gave it a try. Since then," he adds, "the whole climate has improved. Joint consultation has lead to better communications in the plant."

The man who personally spearheaded reform of labour-management relations in the plant is Plant Manager Wal Kostka, who joined Canada Bread in June 1966. The Bartley Drive operation—largest of seven Canada Bread plants—employs 250 people, and produces 450 varieties of bakery goods.

Mr. Kostka says that by involving people in the operation of the plant, through joint consultation and other methods, "they begin to care."

"We keep our employees informed of what's going on," he says. "There are no rigid channels of communication in this plant."

Mr. Kostka has found that committee meetings have excellent educational value, and he adds that he personally learns something new at every meeting. How does a group of people who get together once a month find labour-management consultation "profitable?"

At 10:30 a.m. on a Tuesday last May, seven people sat around a table in the conference room of the Bartley Drive plant. In the 90 minutes that followed, their conversations ranged over 10 topics. Here are samples:

Joe Schembri, one of the four union officials present, recommended a ventilator for the packaging area of the plant, where boxes are stored. Otherwise, he said, heat would ruin the glue on the boxes. "You're going to lose money on this," he told Mr. Kostka.

The committee learned that Mr. Kostka was arranging to have background music piped into the plant through 26 speakers. He said it would make working conditions more pleasant. The committee was enthusiastic.

On another point, a union representative asked whether it was true that one production department was laying off temporary help, while the other was recruiting. Mr. Kostka, who promised an answer by the next meeting, said two men had recently been moved to a new department from one that was over-staffed.

Mr. Kostka told the committee that new machinery would be installed to crush garbage collected in the plant.

A few minutes was taken up while Mrs. Margaret Bohazzo, whose job is decorating cakes, described working conditions in her area of the plant. Each committee meeting is attended by an employee who is not a union official.

In the final piece of business, Mr. Kostka drew positive replies from the union representatives when he asked them to comment on supervision in the plant.

Besides labour-management consultation, Mr. Kostka has introduced other methods to bolster intra-plant communications. The key, as in the committee system, is communication between the employee and his boss. Plant foremen make a point of speaking face-to-face with employees under their supervision at least once a month. Although emphasis is placed on safety, it gives the worker the opportunity to speak up if anything about his job is bothering him. "If a man has any complaints, we answer his questions," says Mr. Kostka.

Each week, one of the five foremen or three union officers becomes duty officer. He tours the plant looking for safety hazards and untidy conditions. The duty officer's report—if it calls for action—must be on Mr. Kostka's desk by the end of the week.

"I have nothing but praise for labour-management consultation," said Industrial Relations Manager St. Pierre, in summing up the success of the committee at the Bartley Drive plant.

Employment Problems of Older Workers

Part I

Older Workers' Section
Department of Manpower
and Immigration

The accompanying article is reprinted from the April 1967 issue of *Free Labour World* the journal of the International Confederation of Free Trade Unions, Brussels, Belgium. The opinions expressed by the author are not necessarily those of the ICFTU. The second part of the article will appear in our October issue.

Ageing workers, in the older industrial countries at least, represent a growing proportion of the total active population. One of the aims of the active manpower policies which socially progressive governments are generally pledged to pursue should be to ensure that the knowledge and experience of such workers are used to the best advantage. This is clearly in the interests, not only of the workers concerned, but also of the national economy as a whole.

The Manpower and Social Affairs Committee of the Organization for Economic Co-operation and Development has sponsored studies and discussion conferences on various aspects of the problems arising in the employment of older workers, and has recently issued a series of recommendations to member governments*.

Whether those progressive proposals will be put into general practice will in many cases depend on sustained pressure from the trade unions. For their information we have therefore made the following summary of the OECD reports and recommendations. Those requiring further details will find them in the studies and reports published by OECD†.

We all know the stark tragedy which loss of a job too often means for the older worker. To cite just one example, a recent survey carried out among the former workers of an American meat-packing plant which had closed down revealed that, out of the 2,200 who had been fired, most of those under 40 found new jobs with little or no delay; 90 per cent of those over 40, however, were still out of work a year later.

Physical and Mental Stress

What is perhaps not so well understood is the physical and mental stress to which many older workers are subjected as a result of technological changes to which they find it difficult to adjust. In many cases the new job demands can set up psychological stresses which may go undetected; and even if the older worker knows he is getting beyond his depth, he may want to keep it to himself.

A survey carried out in 1961 among older workers in 20 British manufacturing firms found that there was inadequate appreciation of the cost, in terms of strain, to the ageing worker who stays on a job for which he is obviously unsuited. The only transfers made were usually for men on physically heavy jobs, yet it was shown that stress could be caused by difficult and remediable working conditions: bad lighting, too much noise, dust, pressure in time schedules and inadequate co-operative mechanisms.

This then, in a nutshell, is the problem of the older worker: a higher incidence of unemployment and—what may be worse in terms of mental anguish—the haunting fear of losing his job through inability to keep up the pace. Yet, thanks to the increasing life span, the proportion of older workers in the employable population has steadily increased in almost all industrial countries, and this development is likely to continue for the rest of this century.

Employment Difficulties

Although the employment difficulties of older workers may sometimes become apparent on the job through falling productivity, they more often come to light only when they the workers have to seek new jobs or transfer to occupations requiring training. "The preference for younger persons and the views held by some employers about older workers as a class constitute barriers to a fair appraisal of their personal competence and potentialities," the OECD conclusions point out. Evidence of this kind of attitude is to be found in the formal or informal age limits in hiring and job placement procedures, even if exceptions are made in periods of labour shortage.

Discrimination against older workers sometimes arises from what the OECD calls "institutional rules," such as personnel practices favouring internal promotion or insurance schemes. It is often aggravated by the failure of personnel officers to ascertain the individual's abilities and qualifications. Limited knowledge on the part of some managements of the special techniques of job redesign and of training methods for older workers also tend to reinforce resistance to their employment.

There is certainly no excuse for lack of knowledge now. OECD has published a number of instructive studies by experts which should be of real practical value to all concerned in any way with the employment problems of older workers. In "Age and Employment," for example, Dr. Alastair Heron reports that it is now possible to establish objectively a person's "functional age" as opposed to his "chronological age"—obviously an important factor in deciding a worker's capacity to perform a given job, irrespective of his nominal age.

*The members of OECD are Austria, Belgium, Canada, Denmark, France, the Federal Republic of Germany, Greece, Iceland, Ireland, Italy, Japan, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, the United Kingdom and the United States.

†*Age and Employment*, A. Heron, 1962; *Job Redesign*, S. Griew, 1964; *Training Methods*, R. M. Belbin, 1965; *Placement Techniques*, I. Sobel and R. C. Wilcock, 1966; and the report of an international management seminar on *Job Redesign and Occupational Training for Older Workers, 1965*—all published by OECD, 2, rue André Pascal, Paris XVI.

Employment and Unemployment in June

Employment increased by an estimated 158,000 between May and June, a smaller increase than is usual for this time of year. The labour force, at 7,859,000, was 326,000 or 4.3 per cent higher than a year earlier. Employment was 264,000 higher than in June, 1966.

Unemployment decreased by 12,000 during the month from 304,000 to 292,000 but was 62,000 higher than a year earlier.

Total unemployment in June represented 3.7 per cent of the labour force, compared with 3.1 per cent in June 1966 and 3.5 per cent in June, 1965.

Employment

Employment, at 7,567,000, increased by 158,000 from May to June. It was higher than a year ago in all regions, ranging from 6.9 per cent in British Columbia to 1.3 per cent in the Atlantic region.

About 110,000, or 70 per cent of the May to June increase, was among persons under 25 years of age, about the same number as in previous years, and related to the influx of students into the labour market. Employment of persons 25 years of age and over was slightly below the average for the past few years.

At 7,567,000, employment in June represented an increase of 264,000 or 3.6 per cent over June 1966. There were larger increases in community, business and personal service, transport, communication and other utilities, and trade. Construction employment was lower than a year earlier. The number of women employed increased by 137,000 or 6.2 per cent over the year. The number of employed men was higher by 127,000, or 2.5 per cent.

Unemployment

Unemployment, at 292,000, was 12,000 lower than a month ago, and 62,000 higher than in June, 1966.

Of the total unemployed, 221,000 or 76 per cent had been unemployed for less than four months; 34,000 had been unemployed for four to six months and 37,000 for seven months or more.

NOTE: The classification of labour market areas, and the summary table titled "Labour Market Conditions", are not included in this issue because the statistical basis for these tables is not comparable with a year ago. Beginning September 1, 1966, all registered applicants were asked to contact Canada Manpower Centres every 30 days — instead of the previously requested period of 14 days — to keep their registrations active. Another factor influencing the comparability of registered applicants is the extension of provisions, such as temporary layoffs, for exempting certain classes of unemployment insurance beneficiaries from registration.

Insurance Registrations And Other UIC Statistics

This year, the annual renewal of insurance books took place during the month of May. Consequently, the usual statistics on the number of insurance books and contribution cards issued to employees for the month ending April 30, 1967 are not available. They will again be available with the first monthly report for 1967-68 on May 31, 1967.

On April 30, registered employers numbered 388,115, an increase of 12,502 since March 31, 1967.

During April, 10,735 investigations were conducted by enforcement officers across Canada. Of these, 8,019 were spot checks of claims to verify the fulfilment of statutory conditions, and 829 were miscellaneous investigations. The remaining 1,887 were investigations in connection with claimants suspected of making false statements to obtain benefits.

Prosecutions were begun in 233 cases 83 against employers and 150 against claimants.*

Punitive disqualifications as a result of false statements or misrepresentations by claimants numbered 603.*

Revenue received by the Unemployment Insurance Fund in April totalled $31,994,984.24 compared with $33,613,-446.82† in March and $29,156,842.55 in April 1966.

Benefits paid in April totalled $47,262,-830.11 compared with $53,166,725.31† in March and $37,513,959.68 in April 1966.

The balance in the Fund on April 30 was not released. On March 31, it was $253,912,564, and on April 30, 1966 it was $133,126,052.08.

*These do not necessarily relate to the investigation conducted during this period.

†Figures for March 1967 are subject to revision.

Wage Schedules Prepared In May

During May, the Department of Labour prepared 432 wage schedules for inclusion in contracts proposed to be undertaken by departments of the federal Government and its Crown corporations in various areas of Canada, for works of construction, remodelling, repair or demolition, and certain services.

In the same period, 189 contracts in these categories were awarded. In addition, 129 contracts containing the General Fair Wages Clause were awarded by Central Mortgage and Housing Corporation, Defence Construction (1951) Limited, The St. Lawrence Seaway Authority, and the Departments of Defence Production, Post Office, Public Works and Transport.

A copy of the wage schedule issued for each contract is available on request to trade unions concerned, or to others who have a bona fide interest in the execution of the contract.

Contracts awarded in May for the manufacture of supplies and equipment were:

Department	*No. of Contracts*	*Aggregate Amount*
Defence Construction (1951) Limited	4	$ 57,365.00
Defence Production	156	923,912.00
Post Office	12	399,607.54
RCMP	3	14,454.31

During May, the sum of $8,259.49 was collected from 23 contractors for wage arrears owing their employees as a result of the failure of the contractors, or their subcontractors, to apply the wage rates and other conditions of employment required by the schedule of labour conditions forming part of their contract. This amount is for distribution to the 294 workers concerned.

OLRB appointments

J. H. Brown, Q.C., Toronto, was appointed Alternate Chairman of the Ontario Labour Relations Board in August. Mr. Brown was Deputy Chairman of the OLRB from 1962 to 1966, when he became a Vice-Chairman. As Alternate Chairman he succeeds G. W. Reed, who was made Chairman when Jacob Finkelman resigned, to become Chairman of the new federal Public Service Staff Relations Board.

H. D. Brown, a Burlington lawyer, was appointed a Vice-Chairman of the OLRB, after the appointment of J. H. Brown. The new Vice-Chairman was active in labour relations during his term as legal advisor to the St. Lawrence Seaway Authority, beginning in 1964.

Certification and Other Proceedings Before the Canada Labour Relations Board

Employee Representation Branch

The Canada Labour Relations Board met for three days during June. It granted eight applications for certification, rejected five, and ordered three representation votes. The Board granted one application for revocation of certification and denied another. During the month, the Board received 23 applications for certification and allowed the withdrawal of one.

Applications for Certification Granted

1. *Syndicat National des Employés du Port de Montréal* (*CSN*) on behalf of a unit of cold storage warehouse and refrigeration engineers employed by the National Harbours Board, Montreal, Que. The International Union of District 50, United Mine Workers of America, had intervened (L.G., May, p. 309).

2. International Association of Machinists and Aerospace Workers on behalf of a unit of pilots and co-pilots employed by Northern Wings Limited, Sept-Iles, Que. (L.G., May, p. 309).

3. Chauffeurs, Teamsters, and Helpers, Local Union 395, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America on behalf of a unit of employees of Smeed's Moving & Storage Ltd., Regina, Sask. (L.G., July, p. 415).

4. *Syndicat National des Débardeurs des quais de Baie-Comeau* (*CSN*) on behalf of a unit of employees at Baie-Comeau employed by Terminus Maritime Inc., Quebec, Que. (L.G., June, p. 364).

5. *Syndicat Général de la Radio CSN* (*CKLM*) on behalf of a unit of employees of Radio Laval Inc., Montreal, Que. *The Union des artistes de Montreal* had intervened (L.G., June, p. 364).

6. International Union of Mine, Mill and Smelter Workers (Canada) on behalf of a unit of employees of Anvil Mining Corporation Limited, Whitehorse, Y.T. (L.G., July, p. 416).

7. Truckers, Cartagemen, Construction and Building Material Employees, Local Union 362, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America on behalf of a unit of drivers and other employees of Monarch Transport Ltd., Edmonton, Alta. (L.G., Aug., p. 496).

8. International Union of Operating Engineers, Local 115, on behalf of a unit of maintenance employees of D. S. Scott Transport Ltd., North Vancouver, B.C. (L.G., Aug., p. 496).

Applications for Certification Rejected

1. *Syndicat général du cinéma et de la télévision* (*CSN*), applicant, Canadian Broadcasting Corporation, Ottawa, Ont., respondent (news writers, etc., Quebec Division) (L.G., Dec. 1966, p. 741). The Canadian Wire Service Guild, Local 213, American Newspaper Guild, the Canadian Union of Public Employees and the Association of Radio and Television Employees had intervened. (Reasons for Judgment issued).

2. Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, applicant, and McCabe Grain Company Limited, Winnipeg, Man., respondent (L.G., July, p. 415). The application was rejected for the reason that it was not supported by a majority of the employees affected in a representation vote ordered by the Board.

3. Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, applicant, United Grain Growers Limited, Winnipeg, Man., respondent, and Walter T. Biggar, *et al.*, interveners (L.G., July, p. 415). The application was rejected for the reason that it was not supported by a majority of the employees affected in a representation vote ordered by the Board.

4. Chauffeurs, Teamsters and Helpers, Local Union 395, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, applicant, and the Security Storage Division of Motorways Van Lines Ltd., Regina, Sask., respondent (L.G., Aug., p. 496). The application was rejected for the reason that it was not supported by a majority of the employees affected in a representation vote ordered by the Board.

5. Building Material, Construction and Fuel Truck Drivers' Union, Local 213, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, applicant, H. M. Trimble & Sons Ltd., Calgary, Alta., respondent (L.G., Aug., p. 496). The application was rejected for the reason that it was not supported by a majority of the employees affected in a representation vote ordered by the Board. The Professional Transport Workers' Union of Canada had intervened.

Representation Votes Ordered

1. Transport Drivers, Warehousemen and Helpers' Union, Local 106, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, applicant, Transol Inc., Quebec, Que., respondent (L.G., June, p. 364), and Michel Bernier, *et al.*, interveners. The Board directed that the eligible voters be comprised of employees engaged in the company's urban service postal operations, excepting certain part-time drivers (Returning Officer: R. L. Fournier).

2. National Association of Broadcast Employees and Technicians, applicant, and Radio 1540 Limited, Toronto, Ont.,

---

This section covers proceedings under the Industrial Relations and Disputes Investigation Act involving the functions of the Canada Labour Relations Board, for which the Employee Representation Branch of the Department is the administrative agency.

CORRECTION

Item 8, line 2 of "Applications for Certification Granted" on page 415 of the July issue referred to "Local 2736." This should have read "Millwrights Local 2736."

respondent (Radio Station CHIN) (L.G., July, p. 416) (Returning Officer: H. A. Fisher).

3. *Syndicat des Employés du Transport d'Anjou*, applicant, and *Transport d'Anjou Inc.*, Rivière-du-Loup, Que., respondent (L.G., July, p. 416) (Returning Officer: R. L. Fournier).

Application for Revocation Granted

R. F. McCambley and A. C. Donnell, applicants, Canadian Airlines Link Instructors' Association, respondent, and Trans-Canada Air Lines (Air Canada), respondent. The application was for revocation of the Board's order, dated June 11, 1959, certifying the Canadian Airlines Link Instructors' Association as bargaining agent for a unit of employees of the respondent company employed at Montreal, Que., Toronto, Ont., Winnipeg, Man., and Vancouver, B.C. (L.G. 1959, p. 829).

Application for Revocation Denied

N. Grant and S. T. Hannan, applicants, Canadian Brotherhood of Railway, Transport and General Workers, respondent, and the Canadian National Railways, Montreal, Que., respondent (L.G., Jan., p. 41). The Board rejected the application after giving consideration to evidence and argument presented at a public hearing held March 8, 1967 and to further written argument.

Applications for Certification Received

1. Canadian Brotherhood of Railway, Transport and General Workers, applicant, on behalf of a unit of employees of Cement Cartage Company, Limited, Havelock, N.B. (Investigating Officer: H. R. Pettigrove).

2. *Syndicat National des employés de S.C.H.L. (CSN)* on behalf of a unit of maintenance men and janitors employed by Central Mortgage and Housing Corporation at Domaine Estria and Pavillon Mercier Apartments, Montreal, Que. (Investigating Officer: G. R. Doucet).

3. *Syndicat National des employés de S.C.H.L. (CSN)* on behalf of a unit of maintenance men and janitors employed by Central Mortgage and Housing Corporation at Cloverdale Park Apartments, Montreal, Que. (Investigating Officer: G. R. Doucet).

4. *Syndicat National des employés de S.C.H.L. (CSN)* on behalf of a unit of maintenance men and janitors employed by Central Mortgage and Housing Corporation at St-Michel Terrace, Montreal, Que. (Investigating Officer: G. R. Doucet).

5. *Syndicat National des employés de S.C.H.L. (CSN)* on behalf of a unit of maintenance men and janitors employed by Central Mortgage and Housing Corporation at St-Georges Gardens, Pte-aux-Trembles, Que. (Investigating Officer: G. R. Doucet).

6. Teamsters, Chauffeurs, Warehousemen and Helpers, Local Union 91, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of office employees employed by Hurley Transport Company Limited, Brockville, Ont. (Investigating Officer: H. A. Fisher).

7. Teamsters, Chauffeurs, Warehousemen and Helpers, Local Union 91, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of office employees of McNeil Transport Limited, Brockville, Ont. (Investigating Officer: H. A. Fisher).

8. Canadian Brotherhood of Railway, Transport and General Workers on behalf of a unit of employees of AirWest Airlines, Vancouver and Powell River, B.C. (Investigating Officer: D. H. Cameron).

9. Canadian Brotherhood of Railway, Transport and General Workers on behalf of a unit of employees of Nanaimo Air Lines, Nanaimo, B.C. (Investigating Officer: D. H. Cameron).

10. Cartage and Miscellaneous Employees' Union, Local 931, International Brotherhood of Teamsters, Chauffeurs,

---

Scope and Administration of Industrial Relations and Disputes Investigation Act

Conciliation services under the Industrial Relations and Disputes Investigation Act are provided by the Minister of Labour through the Conciliation and Arbitration Branch. The Employee Representation Branch acts as the administrative arm of the Canada Labour Relations Board in matters under the Act involving the board.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944 and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until superseded by the Wartime Regulations in 1944. Decisions, orders and certificates given under the Wartime Regulations by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the Act.

The Act applies to industries within federal jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the federal Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of conciliation officers, conciliation boards, and Industrial Inquiry Commissions concerning complaints that the Act has been violated or that a party has failed to bargain collectively, and for controlling applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents; the writing of provisions — for incorporation into collective agreements — that fix a procedure for the final settlement of disputes concerning the meaning or violation of such agreements; and the investigation of complaints referred to it by the Minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act, the Regulations made under the Act, and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported here under two headings: (1) Certification and Other Proceedings Before the Canada Labour Relations Board and (2) Conciliation and Other Proceedings Before the Minister of Labour.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, Halifax and St. John's Newfoundland. The territory of the officers resident in Vancouver comprises British Columbia, Alberta and the Yukon and Northwest Territories; officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; officers resident in Toronto confine their activities to Ontario; officers in Montreal are assigned to the province of Quebec; and officers resident in Fredericton, Halifax and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Conciliation and Arbitration Branch and the Employee Representation Branch are in Ottawa.

Warehousemen and Helpers of America on behalf of a unit of employees of H. G. Snyder Trucking Inc., Ville St-Laurent, Que. (Investigating Officer: R. L. Fournier).

11. *Syndicat National des employés de S.C.H.L.* (*CSN*) on behalf of a unit of maintenance men and janitors employed by Central Mortgage and Housing Corporation at Park Royal Apartments, Ville St-Laurent, Que. (Investigating Officer: G. R. Doucet).

12. *Syndicat National des employés de S.C.H.L.* (*CSN*) on behalf of a unit of maintenance men and janitors employed by Central Mortgage and Housing Corporation at Place Benoit, Ville St-Laurent, Que. (Investigating Officer: G. R. Doucet).

13. *Syndicat National des employés de S.C.H.L.* (*CSN*) on behalf of a unit of employees of Central Mortgage and Housing Corporation employed at Pie IX Apartments, Montreal, Que. (Investigating Officer: G. R. Doucet).

14. Canadian Brotherhood of Railway, Transport and General Workers on behalf of a unit of employees of MacCosham Storage and Distributing Company (Saskatchewan) Limited, Saskatoon, Sask. (Investigating Officer: A. E. Koppel)

15. Canadian Brotherhood of Railway, Transport and General Workers on behalf of a unit of employees of Regina Cartage and Storage Company Limited, Regina, Sask. (Investigating Officer: A. E. Koppel).

16. Professional Transport Workers' Union of Canada on behalf of a unit of employees of Grimshaw Trucking and Distributing Ltd., Edmonton, Alta. (Investigating Officer: D. H. Cameron).

17. International Longshoremen's Association, Local 1930, on behalf of a unit of employees of Three Rivers Elevators Ltd., Trois-Rivières, Que. (Investigating Officer: R. L. Fournier).

18. Transport Drivers, Warehousemen and Helpers' Union, Local 106, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of employees of Boyd's Express Ltd., Lachute, Que. (Investigating Officer: G. R. Doucet).

19. International Union of Operating Engineers, Local 115, on behalf of a unit of heavy equipment operators and other employees employed in the Yukon Territory by Western-Freeway Ventures Ltd., Edmonton, Alta. (Investigating Officer: D. H. Cameron).

20. *Syndicat National des employés de S.C.H.L.* (CSN) on behalf of a unit of maintenance men and janitors employed by Central Mortgage and Housing Corporation at Terrasse Villeray, Montreal, Que. (Investigating Officer: G. R. Doucet).

21. Beverage Dispensers, Hotel Service, Culinary and Restaurant Employees' Union, Local 579, on behalf of a unit of employees of Pine Point Hotel, Pine Point, N.W.T. (Investigating Officer: D. H. Cameron).

22. International Association of Machinists and Aerospace Workers on behalf of a unit of service and maintenance employees of Nordair Limited, Dorval, Que. (Investigating Officer: R. L. Fournier).

23. *Syndicat National des employés de S.C.H.L.* (*CSN*) on behalf of a unit of maintenance men and janitors employed by Central Mortgage and Housing Corporation at Terrasse Belleville, St-Vincent-de-Paul, Que. (Investigating Officer: G. R. Doucet).

Application for Certification Withdrawn

International Longshoremen's Association, Local 1930, applicant, and Three Rivers Elevators Ltd., Trois-Rivières, Que., respondent. (L.G., July, p. 416).

Conciliation and Other Proceedings

Before the Minister of Labour

Conciliation and Arbitration Branch

During June, the Minister of Labour appointed conciliation officers to deal with the following disputes:

1. Canadian Pacific Railway Company S.S. *Princess of Acadia*, and Seafarers' International Union of Canada (Conciliation Officer: H. R. Pettigrove).

2. Consolidated Aviation Fueling of Toronto Limited, Toronto International Airport, and Lodge 717, International Association of Machinists and Aerospace Workers (Conciliation Officer: H. A. Fisher).

3. Hudson Bay Mining and Smelting Co. Limited, Flin Flon, Man., and United Steelworkers of America (Conciliation Officer: A. E. Koppel).

4. Atomic Energy of Canada Limited, and Chalk River Technicians and Technologists, Local 1568, Canadian Labour Congress (Conciliation Officer: W. M. Dempster).

5. Atomic Energy of Canada Limited, Chalk River, Ont., and Local 404, Office and Professional Employees' International Union (Conciliation Officer: W. M. Dempster).

6. Eastern Provincial Airways (1963) Ltd., Gander, Nfld., and Lodge 1763, International Association of Machinists and Aerospace Workers (Conciliation Officer: W. J. Gillies).

7. Cape Breton Broadcasters Limited (radio stations CJCB and CJCX, Sydney, N.S.) and International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada (Conciliation Officer: D. T. Cochrane).

8. National Harbours Board, Port of St. John, N.B., and National Harbours Board Employees' Federal Union No. 24 (Conciliation Officer: H. R. Pettigrove).

9. Canadian Pacific Railway Company (Atlantic, Eastern, Prairie and Pacific Regions) and Brotherhood of Locomotive Engineers (Conciliation Officer: C. E. Poirier).

10. Canadian National Railways (Canadian National Newfoundland Steamship Service) and Canadian Merchant

Legal Decisions Affecting Labour

The Alberta Supreme Court (Appellate Division) has quashed a certification order on the ground of an error in law on the face of the record

Legislation Branch

The Manitoba Court of Appeal has affirmed that a trade union, being a legal entity, cannot sue in representative action for breach of a collective agreement

On March 9, 1967 the Supreme Court of Alberta (Appellate Division) allowed an appeal from the judgment of Mr. Justice Dechene (L.G., Jan., p. 44), who dismissed an application for an order of *certiorari* (writ from a higher court for records of a case tried in a lower court) and upheld a certification order issued by the Alberta Board of Industrial Relations. On appeal, the Court quashed the certification order and held that the Board did not certify a "proper bargaining agent" as required by the provisions of the Alberta Labour Relation Act, and that, by giving to the word "proper" a meaning it could not bear, committed an error in law apparent on the face of the record.

Mr. Justice Porter, in rendering the judgment for the Court of Appeal, recalled the following circumstances of dispute.

In June 1965, the Sheet Metal Workers' International Association, Local 414, made an application under Part V of the Alberta Labour Act to the Alberta Board of Industrial Relations to be certified as the bargaining agent for all the employees, except office workers, salesmen and supervisory personnel, of the Stedelbauer Chevrolet Oldsmobile Ltd.

After proceedings before the Board, a body known as the Sheet Metal Auto Body, Motor Mechanics and Allied Production Workers, Local 414, was certified as the bargaining agent for the unit of the company's employees, although it was not the applicant. Then the company applied for an order for *certiorari* to quash the certification order.

The trial judge dismissed the application to quash the Board's order and held that although the order was wrong, he did not have jurisdiction to quash it, because the error was one for which the remedy by way of *certiorari* was not available.

The documents returned by the Board to the *certiorari* proceedings included, among other things: the application for certification by the Sheet Metal Workers' International Association, Local 414; the constitution of the Sheet Metal Workers' International Association and affiliated local unions; the bylaws of Local 414, Sheet Metal Workers' International Association; and letters of January 29, 1965 and March 10, 1965 to Mr. Raymond A. Gall, international organizer, from the Sheet Metal Workers' International Association.

The company objected that the applicant union, Sheet Metal Workers' International Association, did not embrace workmen engaged in the activities of the company's employees and that, therefore, the union could not be said to be a proper bargaining agent within the meaning of Sec. 61 of the Alberta Labour Act.

Mr. Justice Porter noted that it was apparent from the minutes of the Board's hearing that the Board realized that the qualifications for membership in the applicant's union were such as to exclude the company's employees. A letter dated January 29, 1965, written by the general president of the Sheet Metal Workers' International Association and addressed to Mr. Raymond A. Gall, international organizer for the applicant union, had been put before the Board. It read:

> Please be advised that you have my permission under Article 10, Section 2(e) of the International Association's Constitution to organize Auto Body Workers, Motor Mechanics and other Allied production workers in the Province of Alberta, and that all such persons are eligible for membership upon application and the payment of the initiation fee which, pursuant to the said section, is hereby set at one (1) dollar.

Thereafter, the Board seemed to proceed with the matter as if the certified Sheet Metal Auto Body, Mechanics and Allied Production Workers, Local 414, had come into being and was the applicant union for certification. In a certificate dated August 10, 1965 the vice-chairman of the Board stated that the local's charter was received from the Sheet Metal Workers' International Association on February 15, 1965.

The local's bylaws in Para. 3 provided that: "Membership in this local union is open to all Auto Body Workers, Motor Mechanics and all other allied Automotive Workers." Mr. Justice Porter assumed that this paragraph, defining the class of workmen who could be members of the new union, was based on the president's letter, and this seemed to be the view of the Board.

The result was that the body which applied for certification—namely, the Sheet Metal Workers' International Association, Local 414—was not given certification. The Board certified the Sheet Metal Auto Body, Motor Mechanics and Allied Production Workers, Local 414, Edmonton, Alta., which was the union authorized by the general president's letter, although it had not applied for certification.

The constitution of the Sheet Metal Workers' International Association indicates that its membership is made up of

sheet-metal workers who are described in the constitution. Art. 1, sec. 5(a) reads:

> This Association has established and claims full jurisdiction over the manufacture, fabrication, assembling, handling, erection, hanging, application, adjusting, alteration, repairing, dismantling, reconditioning, testing and maintenance of all sheet-metal work made of No. Ten (10) U.S., its equivalent or lighter gauge metals; . . .

The preamble to the constitution contains the following statement:

> Realizing the advantage and necessity of co-operative effort properly and legally directed to fully develop and demonstrate the possibilities of our trade in the various fields of industry, and to protect our rights in connection therewith, we hereby pledge our united efforts and support as members of the Sheet Metal Workers' International Association to the accomplishment of said purposes.

Powers of Union's President

Mr. Justice Porter agreed with the trial judge who, having examined the provisions of this constitution, came to the conclusion that the attempt of the president to extend all the jurisdiction of the union to the men engaged in the dispute at bar was beyond his powers. He quoted with approval the following statement made by the trial judge:

> I am of the opinion, with respect, that the Board's decision is wrong. The general president's authority to 'interpret and decide all points of law and controversies and decide all constitutional questions' (see Art. 3, sec. 1 of the union's constitution above cited), cannot reasonably be wide enough to include an altogether different class of workers than that which is originally covered by the Constitution.

Duty of the Board of Industrial Relations

In the opinion of Mr. Justice Porter, when a union applies to be certified as the bargaining agent for a group of workmen, it is the duty of the Board of Industrial Relations to consider whether "the applicant for certification as a bargaining agent is a proper bargaining agent." The Board may only certify the applicant if it is satisfied that the applicant is a "proper bargaining agent" (Secs. 61(a) and 63(a)). When determining what is "a proper bargaining agent," the Board has to consider whether the union has the capacity to act for the people it seeks to represent under the terms of its constitution.

Mr. Justice Porter stated further that what the Legislature meant by the word "proper" is a matter of law, and that if the Board had given to that word a meaning it will not bear, then the Board had made a mistake in law.

Mr. Justice Porter did not agree with the argument that this was a question of fact solely for the Board's judgment. Regarding the distinction between a question of fact and a question of law, Mr. Justice Porter referred to and quoted from *Edwards v. Bairstow* (1956) AC 14. He also referred to the judgment of the Supreme Court of Canada in *Memorial Gardens Assn. (Canada) Ltd. v. Colwood Cemetery Co.* (1958) SCR 353 where Mr. Justice Abbott stated:

> There was some evidence before the Commission upon which it could make the findings of fact which it did. In my opinion, the majority of the Court of Appeal, in holding that in law the Commission could not find necessity upon the facts recited in its judgment, was merely substituting its opinion for that of the Commission. As this Court held in the *Union Gas* case (*Union Gas Co. v. Sydenham Gas & Petroleum Co.* (1957) SCR 75 . . .) this is not a question of law upon which an appeal is given, and the Court below was therefore without jurisdiction. It would have been otherwise if it had been shown that the Commission had given a meaning to the words of the statute which as a matter of law they could not bear.

Certiorari to Review Board's Decision

In answer to the argument that, on an application to quash by way of *certiorari*, the court cannot review the Board's decision, Mr. Justice Porter referred to the judgment in *Reg. v. Northumberland Compensation Appeal Tribunal; Ex parte Shaw* (1952) 1 KB 338, 1 All ER 122, where Lord Denning stated:

> "The question in this case is whether the Court of King's Bench can intervene to correct the decision of a statutory tribunal which is erroneous in point of law.
>
> No one has ever doubted that the Court of King's Bench can intervene to prevent a statutory tribunal from exceeding the jurisdiction which Parliament has conferred on it; but it is quite another thing to say that the King's Bench can intervene when a tribunal makes a mistake of law. A tribunal may often decide a point of law wrongly, while keeping well within its jurisdiction. If it does so, can the King's Bench intervene?
>
> "There is a formidable argument against any intervention on the part of the King's Bench at all. The statutory tribunals, like the one in question here, are often made the judges both of fact and law, with no appeal to the High Court. If, then, the King's Bench should interfere when a tribunal makes a mistake of law, the King's Bench may well be said to be exceeding its own jurisdiction. It would be usurping to itself an appellate jurisdiction which has not been given to it.
>
> "The answer to this argument, however, is that the Court of King's Bench has an inherent jurisdiction to control all inferior tribunals, not in an appellate capacity, but in a supervisory capacity. This control extends not only to seeing that the inferior tribunals keep within their jurisdiction, but also to seeing that they observe the law. The control is exercised by means of a power to quash any determination by the tribunal which, on the face of it, offends against the law.
>
> "The King's Bench does not substitute its own views for those of the tribunal, as a court of appeal would do. It leaves it to the tribunal to hear the case again, and in a proper case may command it to do so. When the King's Bench exercises its control over tribunals in this way, it is not usurping a jurisdiction which does not belong to it. It is only exercising a jurisdiction which it has always had . . . .
>
> "It is plain that *certiorari* will not issue as the cloak of an appeal in disguise. It does not lie in order to bring up an order or decision for rehearing of the issue raised in the proceedings. It exists to correct error of law where revealed on the face of an order or decision or irregularity, or absence of, or excess of, jurisdiction where shown . . . .
>
> "It will have been seen that throughout all the cases there is one governing rule—*certiorari* is only available to quash a decision for error of law if the error appears on the face of the record. What, then, is the record? . . .
>
> "I think the record must contain at least the document which initiates the proceedings, the pleadings, if any, and the adjudication, but not the evidence, nor the reasons, unless the tribunal chooses to incorporate them. If the tribunal does state its reasons, and those reasons are wrong in law, *certiorari* lies to quash the decision."

Proper Bargaining Agent

Referring to the case at bar, Mr. Justice Porter thought it unnecessary to define the meaning of the word "proper" in the statute. In his view, it could not have been intended to mean that a bargaining unit made up of sheet-metal workers claiming jurisdiction over the whole of that trade was a "proper" union to adequately represent workers with different and divergent interests who were engaged in the activities of the company in question.

The interpretation by the Board of the letter of Janauary 29, 1965, quoted above, as an extension of the capacity of the applicant union to include others than

those encompassed in its constitution, was an exercise by the president of a power which, in law, he did not possess.

Error in Law on the Face of the Record

The examination of the documents and material returned to the Court, and on which the Board's decision was based, led Mr. Justice Porter to the conclusion that the Board gave the word "proper," as it is used in Sec. 63 (a), a meaning it did not bear. The Board thereby committed an error in law, apparent on the face of the record, which precluded it from certifying either Sheet Metal Auto Body, Motor Mechanics and Allied Production Workers, Local 414, or the Sheet Metal Workers' International Association, Local 414, as bargaining agent for the employees of the company in question.

Appeal Allowed

The Court allowed the appeal and quashed the order of the Board. *Stedelbauer Chevrolet Oldsmobile Ltd. v. Board of Industrial Relations and Sheet Metal Auto Body, Motor Mechanics and Allied Production Workers, Local No. 414*, (1967) 59 WWR, Part 5, p. 269.

MANITOBA COURT OF APPEAL

By a majority decision on March 22, 1967, the Manitoba Court of Appeal dismissed an appeal from the judgment of Mr. Justice Hall (L. G., March, p. 192) and ruled that, considering the provisions of the Manitoba Labour Relations Act and court decisions, a trade union is a legal entity capable of suing and being sued in matters relating to the Labour Relations Act, and that in such matters, representative action should not be permitted.

Circumstances of Dispute

The officers of the Amalgamated Clothing Workers of America, Local 459, sued Utility Glove (1961) Ltd. in a representative action brought on behalf of themselves and all other members of the local regarding the monthly deduction of union dues from wages earned by each union worker covered by a collective agreement which the company allegedly failed to deduct in breach of the collective agreement and Sec. 15 (b) of the Manitoba Labour Relations Act.

The company challenged the right of the plaintiffs to sue by way of a representative action, claiming that only the union itself, being a legal entity, could bring the action, and no one else had a necessary status to do so.

The trial judge dealt only with this preliminary issue, and he ruled that the trade union in question had the legal status to bring an action regarding the enforcement of a right or remedy under the Labour Relations Act, that, accordingly, no one else could bring such action, and that the representative action was improper. Having decided that the plaintiffs had no status to bring a representative action, he did not consider it necessary to deal with the other issues raised, and therefore dismissed the action. His decision was appealed by the plaintiffs.

Representative Action

Mr. Justice Guy (with Mr. Justice Monnin concurring), in his reasons for judgment, pointed out that it was agreed that one point only would be the subject of the appeal — namely, whether or not the old and rather cumbersome form of representative action was still available to the plaintiffs when they claimed to represent a legal person, who should, it was argued, be before the court itself.

Mr. Justice Guy referred to the following cases: *Dusessoy's Supermarkets St. James Ltd. v. Retail Clerks Union Local No. 832* (L.G. 1961, p. 818); *Int. Brotherhood of Teamsters, etc. Local No. 213 v. Therien* (L.G. 1960, p. 276); *Boldt v. Seafarers' Int. Union* (L.G. 1961, p. 570); *Hughes v. S.I.U.* (L.G. 1962, p. 863); *Contractors Equipt. & Supply (1965) Ltd. v. Bldg. Material Drivers, Warehousemen & Helpers, Local 914* (L.G. 1966, p. 104 and 173); *Winnipeg Builders' Exchange v. Int. Brotherhood of Electrical Workers, Local Union 2085* (1966) 57 D.L.R. (2nd) 141.

He noted that all those decisions held that a union is a legal entity capable of suing and being sued, certainly in matters relating to the Labour Relations Act as in the case at bar. He stated that those decisions did not go so far as to expressly exclude the possibility for the representatives to sue on behalf of the legal entity. But, in the opinion of Mr. Justice Guy, this was not necessarily an inadvertent ommission. He was not aware of any decisions stating that a corporation may take action through representatives, or that plaintiffs should or may sue the representatives of a corporation rather than the corporation itself. It appeared to Mr. Justice Guy to be trite law that a corporation must sue in its own name and be sued in its own name.

Mr. Justice Guy stated further:

> Quite apart from the fact that it is an artificial person in law (and has been since the decision in *Salomon v. Salomon & Salomon Co.* (1897) AC 22 . . .), the logic of the argument which demands that the "person" appear in court is underlined by factors such as these: (a) The assets of the person should be available to satisfy an adverse judgment; (b) The officers of the entity should be available for examination-for-discovery and production of documents; (c) The question of the domicile of the representatives and the domicile of the legal person may have a bearing on the matter of security for costs. Unless some such rule is enforced, there could be a multiplicity of proceedings which it is the duty of the court to avoid wherever possible.

Referring to the case at bar, Mr. Justice Guy stated that it was inconceivable that the plaintiffs would sue representatives of the defendant Utility Glove (1961) Ltd. rather than sue the corporation itself.

It was inconceivable, equally he said, that the court would entertain an action by alleged representatives of Utility Glove (1961) Ltd. against the union, if the positions were reversed.

Mr. Justice Guy quoted the following statement from 30 *Halsbury*, 3rd ed., p. 312:

> 571. Plaintiffs generally: actions of contract or tort. A person cannot be a plaintiff unless he has a vested interest in the subject matter of the action.
>
> In an action founded on contract, the proper plaintiff is the person with whom or on whose behalf the contract was made, or in whom the rights under the contract are vested.

Provision of the Collective Agreement

The action at bar was for an accounting. It was based on Art. XIII of a collective agreement dated June 1, 1961 and made between Utility Glove Company Ltd. and Amalgamated Clothing Workers of America, Local 459. Art. XIII reads:

> The employer agrees to monthly deductions of Union dues from wages earned by each union worker covered by this Agreement and also to any initiation fee not exceeding Three Dollars ($3.00). All monies so deducted *shall be paid* by the employer *to the office of the Union* at Winnipeg within two days after the pay day from which such money has been deducted.

Mr. Justice Guy noted that the agreement was executed by Amalgamated Clothing Workers of America, Local 459, over the signature of J. James, who did not appear in the list of plaintiffs as one of the representatives of the Amalgamated Clothing Workers of America, Local 459.

In Mr. Justice Guy's view, the accounting was to be made to the union, which is an entity in law or a *persona juridica*.

Form of Action

Mr. Justice Guy noted the reluctance of judges to render any decision that has a tendency to close avenues of redress that might be available to a plaintiff who claims to have suffered an injustice. Consequently, the modern judicial procedure

is to reduce technical formalities to a minimum so that the matters at issue may be examined on their merit. On the other hand, said Mr. Justice Guy, it is most unwise to make the rules so lax that they encourage any number of actions from various quarters, all based, broadly speaking, on the same circumstances and having the same issues. Such a situation might produce an excess of conflicting decisions and thus make it virtually impossible for counsel to determine what rules to follow when advising clients.

Mr. Justice Guy considered the judgment in *Walker v. Billingsley* (L.G. 1952, p. 1095) where Mr. Justice Wilson of the Supreme Court of British Columbia stated:

> If the fact that the union is a *persona juridica* does not preclude, in a proper case, an action against its members through their proper representatives, then I do not see why that same fact should preclude in a proper case (not in an action for damages) an action for the members by their proper representatives.

This last statement was supported by counsel for the plaintiffs in the case at bar. But counsel for the defendant company stated:

> No one disputes that the members of an entity can sue in a representative capacity. But they cannot claim for themselves what belongs to the entity.
>
> The point in the case at bar is not whether a representative action can ever be brought on behalf of the members of a union. Of course it can, *where the members are asserting a cause of action.*
>
> But the members cannot assert a cause of action which belongs to an entity separate from themselves.

Mr. Justice Guy referred also to the Rules of the Court of Queen's Bench and to the index to the rules indicating the fields in which representative actions are properly brought.

Representative Action Not Permitted

Mr. Justice Guy concluded: "In my opinion it is a safe, stable and satisfactory rule to enforce, that where a legal entity or *persona juridica* is, in fact, in existence and claims a wrong done to it, it and it only should appear before the court as a party; and that representative actions should not be permitted in such cases to confuse the law either by having different representatives for different actions, or inviting defences of *res judicata* [a case already decided] as a result of excessive litigation."

Appeal Dismissed

The Court of Appeal by a majority decision dismissed the appeal. *Senkiw et al v. Utility Glove (1961) Ltd.*, (1967) 59 WWR, Part 9, p. 350.

Recent Regulations under Provincial Legislation

In Alberta, new safety regulations for the lumbering industry and for woodworking operations went into force on May 1. In Quebec, new regulations under the Industrial and Commercial Establishments Act established safety standards for falsework used for shoring concrete form-work. In Prince Edward Island, the Rules of Procedure of the Labour Relations Board were revised, and new regulations respecting voting procedures under the Industrial Relations Act were issued. New apprenticeship and licensing regulations were issued in British Columbia and Ontario.

In Alberta, new safety regulations issued by the Workmen's Compensation Board for the lumbering industry and for woodworking operations, went into force on May 1.

The "Lumber Regulations," gazetted May 31 as Alta. Reg. 186/67, replace regulations governing logging, sawmill and woodworking operations issued in 1960. They apply to all employers and workmen concerned with the production of lumber, including logs, laths, shingles, ties and all other forest products the manufacture or production of which is an industry under the Workmen's Compensation Act.

The "Lumber Regulations" set out the responsibilities of employers, supervisors and workmen, specify the personal protective equipment and first-aid supplies to be provided by employers, and lay down general safety precautions to be observed by workmen and employers.

There are also housekeeping rules and special provisions respecting machinery, mobile equipment, ladders and saws. Other subjects dealt with include winching operations, the transportation of workmen, tractor and motor truck operations, and the piling and handling of lumber.

The "Woodworking Regulations" (Alta. Reg. 187/67 gazetted May 31) apply to all employers and employees concerned with the installation, operation and maintenance of woodworking machinery, including the making of veneer.

In addition to general provisions similar to those in the "Lumber Regulations," the "Woodworking Regulations" lay down specific safety rules for various types of saws and for other machines such as wood-shapers, lathes and routers. There are also special rules for veneer machinery.

BRITISH COLUMBIA

Apprenticeship and Tradesmen's Qualification Act

New regulations under this Act, gazetted June 8 (B.C. Reg. 116/67), amended the definition of the refrigeration trade and extended the minimum qualifying time for a certificate of proficiency from 8,000 hours to 10,000 hours.

Another new regulation (B.C. Reg. 115/67) amended the definition of the sheet-metal trade and established 10,000 hours as the minimum qualifying time required for a certificate of proficiency.

A third regulation (B.C. Reg. 114/67) added the trade of dry-wall finisher to the list of designated trades.

MANITOBA

Employment Standards Act

New regulations under the Employment Standards Act amended the requirements with respect to meal periods and rest periods.

As before, an employer is required to allow his employees one hour for meals and to give female employees a 10-minute rest period every three hours, with provision for exceptions. Under the amended regulations, the meal period may be reduced and the 10-minute rest period for women reduced or eliminated only with the approval of the Labour Board or in accordance with a collective agreement.

ONTARIO

Apprenticeship and Tradesmen's Qualification Act

New regulations for the trade of cement mason were gazetted June 10 as O. Reg. 199/67.

In these regulations, the trade of cement mason is designated as a "certified trade," which means that certificates of qualification are now compulsory for persons engaged in this trade. Apprentices and persons already engaged in the trade at the time of designation, are exempted.

The apprenticeship training program for this trade consists of three periods of 2,000 hours each. In the educational day classes and in the practical training, one of the subjects to be taught is safety, in particular the Construction Safety Act, 1961-62, and safety practices of the trade.

The minimum educational requirement for apprentice cement masons—Grade 8 or its equivalent instead of Grade 10—is lower than that in the general regulations.

An apprentice in this trade must enter into a contract with the local apprenticeship committee, which will be responsible for periodic review of his progress, and ensuring that he obtains the prescribed training and work experience.

During the first period of his apprenticeship, the minimum rate of wages payable to an apprentice cement mason is 60 per cent of the rate payable to a journeyman employed by the same employer, and with whom the apprentice is working. This must be increased to 75 per cent during the second period and to 90 per cent during the third. The ratio of apprentices to journeymen is one to four.

PRINCE EDWARD ISLAND

Industrial Relations Act

Revised Rules of Procedure made by the Labour Relations Board, and new regulations governing voting procedures under the Industrial Relations Act, were published on June 3.

The Rules of Procedure contain facsimiles of the forms to be used in connection with certification, specify the information to be submitted with an application for certification, and define membership in good standing.

A member in good standing of a trade union is a person who, in the opinion of the Board, and on the date of application for certification, has: (a) signed an application for membership in the union and (b) on his own behalf paid the initiation fee where applicable and the equivalent of normal membership dues for one month as prescribed by the constitution and bylaws of the union.

The regulations governing votes are the first such regulations to be issued in Prince Edward Island. According to a press report, the Minister of Labour and Manpower Resources said that the new procedures were intended to stabilize voting procedures, in particular those dealing with strike votes. The regulations provide for government supervision of votes, and prescribe the forms for notice of votes, for submitting a voters list and a report form for returning officers.

The Board will appoint the returning officer in the case of a representation vote, and the Minister in the case of a strike vote or a vote on the checkoff of union dues.

QUEBEC

Industrial and Commercial Establishments Act

The Quebec Government has issued new safety regulations governing the shoring of concrete form-work. These new regulations (O.C. 1390) went into force on June 10, the date of publication. They apply to the construction of all falsework used for shoring concrete form-work.

The head of the firm that erects or has falsework erected is responsible for ensuring that the regulations are complied with. If an inspector finds that any provision is not being observed, he may prohibit the pouring of concrete and order other work stopped if need be.

Before work on any falsework is started, the head of the firm must have the drawings approved by an engineer who is a member in good standing of the Corporation of Engineers of Quebec. He must forward one copy of the approved drawings to the nearest office of the Inspection Service of Industrial and Commercial Establishments. Another copy must be kept on file at the construction site for the duration of the work.

Before concrete is poured, there must be a written authorization from an engineer, stating that the falsework meets all the requirements of the approved drawings. The head of the company must immediately file a copy of this statement in the office where the original drawing is kept.

In certain cases, exceptions from these provisions are permitted, provided that the inspector has been notified and the other requirements specified in the regulations have been met.

Other technical provisions set out minimum safety requirements with respect to such matters as strength of materials, bearing surface, telescoping steel jacks, shoring, removal of posts, and dismantling of false work.

Other materials or methods of shoring concrete form-work may be used, but only if they are guaranteed to be as safe as those prescribed by the regulations. In such cases, the other provisions of the regulations will apply, subject to the necessary adjustments.

Smith

and Welfare, and we trust that these recommendations will receive the full effect and force of law applicable to the Canada Labour Safety Code.

The establishment of a Task Force on Labour Relations by the Prime Minister, which is being directed by Professor H. D. Woods, McGill University, is a matter of keen interest to railway labour, and we shall co-operate in every way possible to advance the policy and opinions of railway employees.

We are greatly concerned by the massive application for branch line abandonment again submitted by the railways, and shall make every effort to see that each and every application is most carefully examined before any action is taken, and that adequate protection is guaranteed to all communities that may be adversely affected.

The Canadian Railway Labour Executives' Association welcomes the opportunity to participate more fully in the international field, and it has established an International Affairs Committee that will endeavour to assist in the work of the ILO and the International Transport Workers' Federation. We firmly believe that the establishment of Free Trade Unions in the so-called underdeveloped and developing countries to improve the standard of living and working conditions is the greatest contribution labour can make to promote enduring peace and happiness in the world to-day.

Number of April Claimants Down 10 Per Cent from March Total

Claimants for unemployment insurance benefit on April 28 totalled 492,000, which was 10 per cent fewer than the total of 544,000 on March 31, and 19 per cent more than the total of 414,000 on April 29, 1966. Males accounted for 90 per cent of the decrease from March to April and 70 per cent of the increase over last year's total.

Regular benefit claimants numbered 360,000 on April 28, which is 11 per cent fewer than the total of 407,000 at the end of March, and 25 per cent fewer than the total of a year ago.

Seasonal benefit claimants numbered 132,000 on April 28, which was 3 per cent less than the total of 137,000 on March 31, and 5 per cent more than the total of 126,000 at the end of April 1966.

Initial and Renewal Claims

A total of 148,000 initial and renewal claims were filed during April, which was 19 per cent fewer than the total of 182,000 filed during March, and 24 per cent more than the total of 120,000 filed during April 1966.

Beneficiaries and Benefit Payments

The average weekly number of beneficiaries during April was estimated to be 461,000, compared with 458,000 in March, and 378,000 a year ago. Benefit payments during April totalled $47.2 million, compared with $53.2 million in March and $37.5 million in April 1966. The average weekly payment was $25.63 during April and $25.82 during March, compared with $24.76 in April 1966.

Provincial Data

The total number of claimants at the end of April showed a decrease in all provinces from the total at the end of March. The largest decrease, 17 per cent, occurred in Saskatchewan. The smallest decrease, 6 per cent, occurred in Alberta. The total number of claimants represented a general and substantial increase from a year ago, except in Manitoba. The percentage number of claimants at the end of April showed a smaller decrease from the end of March than those for the same interval a year ago.

All provinces except Prince Edward Island and Alberta had fewer claims in April. The largest increase for claims, 44 per cent—of which 35 per cent was for initial and 73 per cent for renewal—occurred in Ontario. Initial claims in British Columbia were 30 per cent above the figure for a year ago.

A claimant's unemployment register is placed in the "live file" at the local office as soon as the claim is made. As a result, the count of claimants at any given time inevitably includes some whose claims are in process. "Claimants" should not be interpreted either as "total number of beneficiaries" or "total job applicants."

Summary Table

Activity	*April 1967*	*March 1967*	*April 1966*	*Cumulative Data 1967* Jan. to April	*Cumulative Data 1967* 12 months ending April
			(in thousands)

supplementary income, these have not been of major proportions. As far back as 1947 these items accounted for 48.6 per cent of the GNP. By 1961 this figure had risen to 50.7 per cent. The latest available figure is 50.8 per cent. There have been some movements between these years, but they have been very largely within the range of one per cent.

But despite the marked advances made by labour on both the organizational and economic fronts, progress in the field of legislation has been slow. And, although labour has continued to press for much-needed improvements in various forms of social legislation, we have been confronted with intensive drives to introduce legislation of a type that would seriously damage the collective bargaining process and hamper workers in the exercise of their right to have efficiently functioning organizations.

The delay with regard to the introduction of Medicare is indicative of the slow pace at which we move in improving measures designed for the good of all the people. There is a great need in Canada for a broad look at our social legislation as a whole, and the implementation of a much greater degree of co-ordination.

Our record with regard to housing continues to be deplorable. Despite the various figures that have been used in an effort to bolster rosy forecasts, there is obviously no ground for complacency in the Canadian housing outlook. It is highly unlikely that the Government's predictions of 160,000 new homes this year will be achieved; and even this falls short of the 170,000 that the Economic Council of Canada says are required.

As far as the general employment situation is concerned, there are some factors that give cause for serious concern. The completion of many major Centennial projects across the country, as well as Expo, means the end of undertakings that have provided a great deal of work in construction and allied industries. The possibilities of trade revisions having a major impact on some Canadian industries may easily be reflected in employment conditions. The great challenges of technological change are still not being adequately met.

It is therefore obvious that in these, and in many other areas, great challenges confront the labour movement and the Canadian people as a whole. A strong and united labour movement is now more necessary than ever. This Labour Day should be an occasion for trade unionists to re-dedicate themselves to continuing to build on the great traditions and accomplishments which are our heritage.

Decisions of the Umpire Under the Unemployment Insurance Act

CUB 2679

A married claimant applied for benefit and registered for employment as a counter girl. For six months she had worked in that capacity in a restaurant at a salary of $1 an hour, and she voluntarily quit her employment.

Four months after applying for benefit, the claimant was told by the local office of an offer of continuing employment with a restaurant as a counter girl, at $1 an hour. The prevailing rate of pay for such work in the district was reported to be 65 cents an hour. The hours of work in the job offered were 8 a day and 48 a week, night work (5 p.m. to 1:30 a.m.). The restaurant was situated at a distance of two miles from the claimant's residence, and bus service was available at a cost of 40 cents a day.

The claimant refused the job, stating that she had left her previous position because of steady night work. She added that she would prefer a day job between the hours of 7:30 a.m. and 5 p.m. The local office commented that there were possibilities of day work at these hours. The office wrote to her again, and asked if she would be available for work only from 7:30 a.m. to 5:00 p.m. daily. She replied that she preferred day work; but would be willing to work night shifts on alternating weeks.

The insurance officer subsequently disqualified the claimant and suspended benefit for six weeks on the grounds that she had, without good cause, refused or failed to apply for employment that was offered.

In her appeal against the insurance officer's ruling, the claimant told the board of referees that steady night work had kept her away from her children and family responsibilities for almost seven months, and was causing disunity in the house. She added that she would be willing to work any time during daylight hours.

The board of referees heard the case in the claimant's presence, and the majority of the members upheld the insurance officer's decision and dismissed the appeal. In their report, they noted that the claimant had been out of work for four and a half months when she was offered employment at the restaurant. During that long period of time, she did not succeed in finding work, according to her own declaration.

The board noted also that the employment offered was near the claimant's home, was similar to her previous work, and paid a wage higher than the prevailing rate. The board observed that the employment would have been permanent, and that the only reason the claimant refused it was because it interfered with her family life.

The dissenting board member pointed out that the claimant had always maintained that night work was not suitable, and that she was available and willing to work during the day. There was no proof, he said, that she had had an opportunity to work a day shift.

In her appeal to the Umpire, the claimant repeated her wish to work days for the reasons given, and reiterated the statement that, while unemployed, she had made a number of personal efforts to find such work. Day work in her occupation was available, she insisted, because she had actually worked days at a restaurant on various occasions since applying for benefit, and had also worked a day shift in a cafeteria for about nine months.

The one referral made by the Commission while she was unemployed had been unsuitable because of the proposed hours, she said. A more determined effort might have been made to find day work, she thought, because of the number of eating places in the vicinity that are open during mornings and afternoons as well as evenings.

Considerations and Conclusions

The Umpire noted that the employment offered the claimant was suitable within the meaning of the Act, and that, consequently, the disqualification would have to stand, because the claimant's reason for refusing employment was an entirely personal one. If, as the claimant said in her appeal, daytime work in her usual occupation was available in the area, why did she not find such work during her four-month period of unemployment? The claimant must understand, said the Umpire, that she herself has to make real and constant efforts to secure employment.

Because there was evidence that the claimant had, in fact, worked days on various occasions during her period of unemployment, the Umpire decided, after taking into account also the particular nature of her family responsibilities, to reduce the period of disqualification to two weeks. The claimant's appeal was disallowed, with this modification.

CUB 2688

After filing a renewal application for benefit, the claimant registered for employment as an assembler. He had been employed in this capacity with a car manufacturing company during the preceding six weeks at a wage of $2.85 an hour. He gave as the reason for separation from employment, "laid off — work shortage — I was bumped by a senior employee." His claim was allowed.

The local office was notified a month later that, in accordance with the terms of the Training Allowance Act, the claimant was attending a course of technical and vocational training and being paid an allowance effective October 20, 1966. Subsequently the insurance officer advised the claimant that he was disqualified from receiving unemployment insurance benefit for the week of October 16 in accordance with the terms of the Training Allowance Act.

The claimant shortly thereafter appealed the decision to the board of referees, claiming that he was being discriminated against for attempting to retrain for suitable employment. He pointed out that he was being denied unemployment insurance benefits for four days during which he was capable of and available for work, and that he had drawn two days pay from the retraining allowance scheme. He said he believed that the local office had mishandled his claim and that he should be paid for the time he was not attending school.

At the board's hearing, which was held

in the presence of the claimant, it was argued that, if there was a conflict between the Training Allowance Act and the Unemployment Insurance Act, the board should deal only with the latter. To agree with the insurance officer's adjudication would deprive the claimant of his unemployment insurance benefits and his negotiated benefits in S.U.B. It was argued also that, in case of any conflict, the benefit of doubt should be given to the claimant.

The majority of the board believed that Sec. 4 of the Training Allowance Act is quite clear, and that the insurance officer had interpreted the Act correctly. Although the majority believed also that some injustice was being done to the claimant, the members were bound by the unambiguous wording of that section of the Act and could not go against it in order to give the benefit of doubt to the claimant. By majority decision, therefore, the claimant's appeal was dismissed and the adjudication of the insurance officer affirmed.

One member of the board dissented, saying that Sec. 4 of the Training Allowance Act was not clear about providing benefits for part of a week. He urged that the claimant, having been asked to attend school starting on a Thursday, and to take classes on a Friday, be compensated by the UIC for the first three days of the week.

In its appeal to the Umpire, the claimant's UAW local pointed out that the claimant had started a retraining course and had received partial training allowance, the amounts received being less than the unemployment insurance benefits normally paid for a week of unemployment. Because this man was unemployed other than during the time he went to school, the union stated, the administration of the Act by the insurance officer and board of referees was incorrect. The union added that the claimant had been capable of and available for work during the days he did not attend school.

The next to submit observations was the insurance officer. He suggested that the question of the claimant's receiving training allowance under the Training Allowance Act during the week of October 16 was not in dispute — nor was the question of whether the claimant was capable of and available for work during that week relevant under the circumstances. Section 4 of the Training Allowance Act, he said, provides that, notwithstanding anything contained in the Unemployment Insurance Act, an insured person being trained under a program is not entitled to be paid benefit under the Unemployment Insurance Act for any week in which a training allowance is payable to him under that program.

The insurance officer submitted that the majority decision of the board of referees, which was in accordance with the provisions of Section 4 of the Training Allowance Act, should be maintained, and that the decision should also apply to the case of another claimant whose case is similar.

Considerations and Conclusions

The Umpire noted that Sec. 4 of the Training Allowance Act does not explicitly provide for a situation where, as in this case, a lesser period than a week is involved; but he thought its provisions make it sufficiently clear that periods of entitlement to benefit and periods of entitlement to training allowance were meant to be mutually exclusive.

The record showed, he said, that the training allowance became payable to the claimant from October 20. This was the day from which the claimant, pursuant to Sec. 4 of the Training Allowance Act, ceased to be entitled to be paid unemployment insurance benefit. The Umpire considered this to be in accordance with the true intent, meaning and spirit of the said Act, and he so decided.

He noted also that a training allowance for less than a week was ruled to be payable to the claimant, notwithstanding that the Training Allowance Act nowhere specifically provided for it. This ruling, and the fact that it is permissible under the Unemployment Insurance Act to pay benefit in respect of lesser periods than a week, were material considerations in leading to the decision.

The Umpire ruled also that, as requested by the insurance officer in his observations, the decision would apply, with the necessary alterations, to the case of the other claimant whose circumstances were similar.

Conciliation

Continued from page 581

Service Guild (Conciliation Officer: H. R. Pettigrove).

Settlements by Conciliation Officers

1. Canadian Pacific Railway Company S.S. *Princess of Acadia* and Seafarers' International Union of Canada (Conciliation Officer: H. R. Pettigrove) (see above).

2. Atomic Energy of Canada Limited, and Chalk River Technicians and Technologists, Local 1568, Canadian Labour Congress (Conciliation Officer: W. M. Dempster) (see above).

3. Atomic Energy of Canada Limited, Chalk River, Ont., and Local 404, Office and Professional Employees' International Union (Conciliation Officer: W. M. Dempster) (see above).

4. The Owen Sound Transportation Co. Limited, and Seafarers' International Union of Canada (Conciliation Officer: T. B. McRae) (L.G., Aug., p. 498).

5. Quebecair, Rimouski, P.Q., and the International Association of Machinists and Aerospace Workers (Conciliation Officer: C. E. Poirier) (L.G., Aug., p. 498).

6. Northern Industrial Carriers Ltd., Edmonton, Alta., and Locals 362 and 31, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Conciliation Officer: J. D. Meredith) (L.G., July, p. 417).

Conciliation Boards Appointed

1. Canada Coach Lines Ltd., Hamilton, Ont., and Amalgamated Transit Union, Division 107 (L.G., May, p. 310).

2. Bristol Aviation Services, Montreal International Airport and Lodge 869, International Association of Machinists and Aerospace Workers (L.G., July, p. 417).

Conciliation Boards fully Constituted

1. The Board of Conciliation and Investigation established in May to deal with a dispute between Canadian National Railways (Canadian National Newfoundland Steamship Service and Yarmouth-Bar Harbour Ferry Service) and Canadian Brotherhood of Railway, Transport and General Workers, (L.G., Aug., p. 498) was fully constituted in June with the appointment of Magistrate Nathan Green, Q.C., Halifax, as Chairman. Mr. Green was appointed by the Minister in the absence of a joint recommendation from the other two members of the Board, company nominee A. W. Cox, Q.C., Halifax, and union nominee J. K. Bell, Halifax.

2. The Board of Conciliation and Investigation established in May to deal with a dispute between *Radio Iberville Ltée*, Ville Jacques-Cartier, Que., and *Syndicat Général de la Radio CSN (CHRS)* (L.G., Aug., p. 498) was fully constituted in June with the appointment of G. D. LaViolette, Montreal, as Chairman. Mr. LaViolette was appointed by the Minister in the absence of a joint recommendation from company nominee Raymond Lachapelle and union nominee Jean Couvrette, both of Montreal.

Board Report Received

Atomic Energy of Canada Limited, Pinawa, Man., and Lodge 608, International Association of Machinists and Aerospace Workers (L.G., Aug., p. 498).

Publications Received in the Department of Labour Library

List No. 222

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed by making application to the Librarian, Department of Labour, Ottawa. Students must apply through the library of their institution. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the *Labour Gazette*.

Agriculture

1. ATLANTIC PROVINCES ECONOMIC COUNCIL. *Agriculture and the Atlantic Economy*. Halifax, 1966. Pp. 44.

2. HASBACH, WILHELM. *A History of the English Agricultural Labourer*. Translated by Ruth Kenyon, with a preface by Sidney Webb. London, Frank Cass and Co., Ltd., 1966. Pp. 470.

This valuable reference source was first published in Germany in 1894, published for the first time in English in 1908, and reprinted in 1966.

Automation

3. CROSSMAN, EDWARD ROBERT FRANCIS WARD. *Automation, Skill, and Manpower Predictions*. Washington, U.S. Dept. of Labor, Manpower Administration, 1966. Pp. 39.

"Condensed transcript of the seminar held in Washington, D.C., April 15, 1965."

4. HIGGINSON, M. VALLIANT. *Managing with EDP; a Look at the State of the Art*. New York, American Management Association, 1965. Pp. 111.

Contents: The role of EDP and its effects. What is EDP? Why are Companies using Computers? How does Management use Computer Information? Planning with EDP. Administering with EDP. Controlling with EDP. EDP in retrospect: the human element.

5. SILBERMAN, CHARLES ELIOT. *The Myths of Automation* [by] Charles E. Silberman and the editors of Fortune [1st ed.] New York, Harper & Row, 1966. Pp. xii, 148.

"Series of seven articles reprinted . . . substantially as they appeared in Fortune . . . from January 1965 to May 1966."

Mr. Silberman is a member of the Board of Editors of Fortune magazine and a lecturer in economics at Columbia University. He set out "to study how automation and new technologies were affecting the labor market and, through it, American society and culture." The book takes a look at automation and its relationship to the blue-collar worker, teenagers, early retirement, poverty, and the current labour situation, among other things.

Civil Service

6. GREAT BRITAIN. TREASURY. *Staff Relations in the Civil Service*. [4th ed.] London, HMSO, 1965. Pp. 43.

Partial contents: Staff associations. Whitley Councils. Official attitudes to staff activities. Disagreements and arbitration. Government industrial employees. The Appendix lists staff association journals, nationally recognized associations, the constitution of the National Whitley Council, a model constitution for a departmental Whitley Council, Civil Service arbitration agreement, Arbitration Tribunal rules of procedure, etc.

7. GREAT BRITAIN. COMMITTEE APPOINTED TO REVIEW THE ORGANISATION OF THE SCIENTIFIC CIVIL SERVICE. *Report*. London, HMSO, 1965. Pp. [28].

At head of title: H. M. Treasury.

Sir Mark Tennant, chairman.

Commissions

8. CANADA. DEPARTMENT OF JUSTICE. SPECIAL COMMITTEE ON HATE PROPAGANDA IN CANADA. *Report to the Minister of Justice*. Ottawa, Queen's Printer, 1966. Pp. 327.

Maxwell Cohen, chairman. The Committee examined the nature and scope of the hate propaganda problem in Canada and made recommendations on its suppression and control. The Committee concluded "First: there should be new legislation in Canada because of the present deficiencies in the law, so as to forbid the following: (a) advocacy of genocide, (b) incitement to hatred of groups that is likely to occasion breach of the peace, and (c) group defamation. Second: the legislation should be so drafted as to permit the maximum freedom of expression consistent with its purpose and the needs of a free Society."

9. CANADA. ROYAL COMMISSION OF INQUIRY INTO WORKING CONDITIONS IN THE POST OFFICE DEPARTMENT. *Report*. Ottawa, Queen's Printer, 1966. Pp. 363.

The Commissioner, Mr. Justice André Montpetit, inquired into "grievances relating to work rules, codes of discipline and other conditions of employment applying to non-supervisory operating employees, exclusive of salaries" in the Post Office Department. Text in English and French.

Economic Conditions

10. MINGS, TURLEY RAY. *An Inter-Country Comparison of the Factors determining Cyclical Behavior in Sweden, Canada, Austria, and Belgium, 1929-1937*. Ann Arbor, Mich., University Microfilms, 1967. Pp. 326.

Thesis (Ph.D.) — University of California, Berkeley, 1966.

"This 'O-P Book' is an authorized reprint of the original edition, produced by Microfilm-xerography by University Microfilms, Ann Arbor, Michigan, 1967."

11. ORGANIZATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT. *Industrial Production, 1955-1964. Production industrielle, 1955-1964*. Paris, 1966. Pp. 243.

Text in English and French.

On cover: Historical statistics.

12. SLATER, DAVID W. *Perspective on Canada's International Payments, A Background Sketch and Survey*. Ottawa, Queen's Printer, 1966. Pp. 94.

"The purpose of this study is to assess the implications of foreign transactions for a country's international financial position, and the inter-relationships between these transactions and the domestic economy."

13. UNITED NATIONS. ECONOMIC COMMISSION FOR EUROPE. *Economic Survey of Europe in 1965. Part I. The European Economy in 1965*. New York, United Nations, 1966. Pp. 70, 5, 102.

Employment Management

14. MCBEATH, MAURICE GORDON. *Organization and Manpower Planning* [by] Gordon McBeath. London, Business Publications, 1966. Pp. 298.

Partial contents: Business objectives. Business planning. Organization planning. Manpower planning. Career planning. Salary planning. Job information. Job grading. Organization analysis. Manpower standards. Selection and placement. Manpower inventory. Performance appraisal. Potential ability. Training and development.

15. MEADE, J. P. de C. *Supervisory Training, a New Approach for Management*, by J. P. deC. Meade and F. W. Greig, Industrial Training Service. London, HMSO, 1966. Pp. [60].

At head of title: Ministry of Labour, Central Training Council.

Contents: Introduction. Analyzing supervisory jobs. Appraisal. Planning and operating supervisory training programmes. Evaluating the effectiveness of supervisory training. Introducing analytical methods of supervisory training in a company.

Human Rights

16. HELLING, RUDOLF ANTON. *The Position of Negroes, Chinese and Italians in the Social Structure of Windsor, Ontario; a Report submitted to the Ontario Human Rights Commission.* Windsor, Department of Sociology and Anthropology, University of Windsor, 1965. Pp. 124.

17. HENRY, FRANKLIN J. *Perception of Discrimination Among Negroes and Japanese-Canadians in Hamilton; A Report submitted to the Ontario Human Rights Commission.* Hamilton, McMaster University, Department of Sociology and Anthropology, 1965. Pp. 97.

This study was sponsored by the Ontario Human Rights Commission, the Social Planning Council of Hamilton and District, and McMaster University. It is based on 204 interviews conducted during the summer of 1964.

Industrial Relations

18. BROOKBANK, C. ROY. *Causes and Issues in Current Labour Unrest; a Paper prepared for Special Evening Research Seminar, November 10, 1966, Industrial Relations Centre, McGill University.* Montreal, Industrial Relations Centre, McGill University, 1966. Pp. 8.

The author raises some questions about labour relations in Canada and then attempts to answer them.

19. FOENANDER, ORWELL de RUYTER. *Shop Stewards and Shop Committees; a Study in Trade Unionism and Industrial Relations in Australia.* [Carlton] Melbourne University Press; New York, Cambridge University Press, 1965. Pp. 137.

20. INTERNATIONAL CONFEDERATION OF FREE TRADE UNIONS. *Labour Management Relations in Western Europe, with a Special Contribution on The Future of Collective Bargaining in the Common Market Area*, by Bernhard Tacke. [2d Ptg. with additions] Brussels, 1966. Pp. 61.

21. NORTHRUP, HERBERT ROOF. *Boulwarism; the Labor Relations Policies of the General Electric Company, Their Implications for Public Policy and Management Action.* Ann Arbor, Bureau of Industrial Relations, Graduate School of Business Administration, University of Michigan, 1964. Pp. 197.

Boulwarism derives its name from Lemuel R. Boulware, a former Vice-President of General Electric Company. The Boulware concept of collective bargaining is this: "After careful research, and a full exchange of views with the union bargaining agents for many days, or even weeks before an offer is made, the company puts what it believes proper on the [collective bargaining] table and changes it only on the basis of what is considered 'new information' " The author says ". . . the GE approach basically denies unions the political victory of proving that it forced the company to accede to union demands, or at least to seek a compromise." The author, a university professor, was once an Employee Relations consultant at the General Electric Company.

22. STEINMETZ, LAWRENCE LEO. *Grass-Roots Approach to Industrial Peace: Planning and Promoting Area Development through the Labor-Management Community Council.* Ann Arbor, Michigan, Bureau of Industrial Relations, Graduate School of Business Administration, the University of Michigan, 1966. Pp. 52.

The case study of the Jackson, Michigan, Labor-Management Relations Conference Board which was set up in 1958 to improve industrial relations in the community. The Jackson board, composed of 15 men (seven management representatives, seven union representatives, and one moderator from outside labour and management) meets once a month to discuss topics of concern to the local industrial community.

23. U.S. BUREAU OF LABOR STATISTICS. *Major Collective Bargaining Agreements; Management Rights and Union-Management Co-operation.* Washington, GPO, 1966. Pp. 68.

Based on a study of 1,773 major collective agreements this study deals with the prevalence of the management rights provision, its form, the rights retained by management, and the limitations placed on management action. The study also discusses "collectively bargained co-operation pledges and committees dealing with issues in which management normally reserves the right to act unilaterally."

Industry — Location

The following four surveys were prepared by the Industrial Development Branch, Alberta Department of Industry and Development, and published in Edmonton in 1966.

24. *Town of Falher.* Pp. 13.
25. *City of Medicine Hat.* Pp. 17.
26. *Town of Peace River.* Pp. 16.
27. *Town of Westlock.* Pp. 12.

Labour Organization

28. INTERNATIONAL LABOUR OFFICE. FACT-FINDING AND CONCILIATION COMMISSION ON FREEDOM OF ASSOCIATION. *Report concerning Persons employed in the Public Sector in Japan.* Geneva, International Labour Office, 1965. Pp. xxxviii, 758, 13.

Commissioners: Erik Dreyer (Denmark), chairman, David Cole (U.S.), and Sir Arthur Tyndall (New Zealand).

A panel of three commissioners representing the International Labour Office was appointed "to examine the complaints of alleged infringements of trade union rights in Japan submitted by 11 trade union organisations, and referred to the Fact-Finding and Conciliation Commission by the Governing Body of the International Labour Office with the consent of the Government of Japan." Text in English and French.

29. TRADES UNION CONGRESS. *Trade Unionism: the Evidence of the Trades Union Congress to the Royal Commission on Trade Unions and Employers' Associations.* London, 1966. Pp. 186.

Contents of 5 sections: 1. Trade union principles. 2. Trade union function. 3. Trade unions and the community. 4. Trade unions and employers. 5. Trade unions' internal affairs.

30. TURNER, IAN. *Industrial Labour and Politics: the Dynamics of the Labour Movement in Eastern Australia, 1900-1921.* Canberra, Australian National University; Cambridge, U.P., 1965 [i.e. 1966] Pp. 272.

Labour Supply

31. QUEBEC (CITY). UNIVERSITÉ LAVAL. DÉPARTEMENT DES RELATIONS INDUSTRIELLES. *Une politique globale de la main-d'oeuvre* [par] André Raynauld [et al.]

Québec, Les Presses de l'Université Laval, 1966. Pp. 165.

Report of the 21st Congrès des relations industrielles de l'Université Laval held in Quebec City, April 18 and 19, 1966.

Contents: Les objectifs d'une politique de main-d'oeuvre [par] André Raynaud. Nature et contenu d'une politique globale de main-d'œuvre [par] Roland Parenteau. Mise en oeuvre d'une politique globale de main-d'œuvre [par] Laurent Bélanger. Politique de main-d'œuvre et négociation collective [par] Pierre-Paul Proulx. Politique fédérale et politique provinciale de main-d'œuvre — table ronde. Croissance économique et politique de main-d'œuvre [par] Louis Couillard.

Labouring Classes

33. BRODY, DAVID. *Labor in Crisis: the Steel Strike of 1919*. [1st ed.] Philadelphia, Lippincott, 1965. Pp. 208.

This book assesses the roles of management, the trade unions, workers, the government, and the public in the Steel Strike of 1919 in the United States.

34. INTERSTATE CONFERENCE ON LABOR STATISTICS. 23rd, STORRS, CONNECTICUT, 1965. *Proceedings, June 15-18, 1965. Storrs, Connecticut*. Washington, GPO, 1966. Pp. 262.

Co-sponsored by the Connecticut Labour Department and the University of Connecticut and the U.S. Bureau of Labor Statistics.

Partial contents: Provisions for job opportunities and employability in manpower legislation. Government and community participation in the program of economic opportunity. Yardsticks for counting the poor. Community and government co-operation for disadvantaged groups. Current economic situation and outlook. Developments in state and federal statistics and research roundtable. Productivity and automation. Statistics for industry and government safety programs.

35. LABOUR COLLEGE OF CANADA. *Report of the Fourth Term of the Labour College of Canada, May 30-July 22, 1966*. Montreal, 1966. Pp. 32.

Text in English and French

36. MCKEAN, EUGENE C. *The Taxable Wage Base in Unemployment Insurance Financing*. Kalamazoo, W. E. Upjohn Institute for Employment Research, 1965. Pp. ix, 96.

A study of the financing of state unemployment insurance systems with an examination of the arguments for a higher taxable wage base.

37. PATCHEN, MARTIN. *Some Questionnaire Measures of Employee Motivation and Morale; a Report on Their Reliability and Validity*, by Martin Patchen with the collaboration of Donald C. Pelz and Craig W. Allen. Ann Arbor, Survey Research Center, Institute for Social Research, University of Michigan, c1965. Pp. 82.

The authors "evaluated the reliability and validity of questionnaire items intended to be an indicator of that characteristic" for five employee characteristics: 1. Job motivation: level of aroused motivation on the job. 2. Interest in work innovation: in finding new ways of doing things on the job. 3. Willingness to express disagreement with supervisors. 4. Attitude toward changes introduced into the job situation. 5. Identification with the work organization. "The authors combined the best items bearing on each characteristic to form an index measure of that characteristic."

38. ROSS, PHILIP. *The Labor Law in Action; an Analysis of the Administrative Process under the Taft-Hartley Act*, Washington, National Labor Relations Board, 1966. Pp. 357.

A study of cases which came before the National Labor Relations Board during a five-year period (July 1, 1957 to June 30, 1962) in which it was alleged that employers had violated the section in the Taft-Hartley Act covering the duty to bargain. The author is on the faculty of the University of Pittsburgh Graduate School of Business.

39. U.S. BUREAU OF LABOR STATISTICS. *BLS Handbook of Methods for Surveys and Studies*. [3d ed] Washington, GPO, 1966. Pp. 238.

"For each major program there is a brief account of how it came into being and what it attempts to do. Where the original data comes from is noted, terms are defined, and the concepts adopted are outlined. The statements which follow describe how the data are put into final form, tell how the results may be used, and state the limitations to be kept in mind in using the information."

40. U.S. BUREAU OF LABOR STATISTICS. *Labor Digests on Countries in Europe*. Washington, GPO, 1966. 1 volume (various pagings).

Contains digests on labour conditions in 29 European countries, prepared in the spring of 1965.

Negroes

41. NATIONAL INDUSTRIAL CONFERENCE BOARD. *Company Experience with Negro Employment*, by Stephen Habbe. New York, 1966. 2 volumes.

Forty-seven companies of different size supplied the information from which this report was prepared. Information is given concerning executive attitudes about the employment of Negroes and about company experience and practice in employing Negroes. Personnel practices such as recruitment, interviewing, testing, training, supervising, and promoting are examined. Includes 47 case studies.

42. U.S. BUREAU OF LABOR STATISTICS. *The Negroes in the United States; Their Economic and Social Situation*. Washington, GPO, 1966. Pp. 241.

Contents: The Negro population. Employment, unemployment, and the labor force. Income, earnings, and the incidence of poverty. Estimated effects of selected Federal programs on employment and unemployment.

Occupations

43. CANADA. DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH BRANCH. *Mechanical Repair Occupations*. 1st ed. Ottawa, Queen's Printer, 1965. Pp. 120.

Information is given regarding 26 different kinds of mechanics, including nature of work, preparation and training, working conditions, advancement, and future outlook.

44. ELDER, JEAN. *Spotlights in Guidance* (by) Jean Elder, H. John Brewer [and] Elmer E. Huff. Toronto McGraw-Hill Co. of Canada, 1966. Pp. 346.

Intended for Grade 9 students as a guide for their educational and career planning.

Prices

45. HULTGREN, THOR. *Cost, Prices, and Profits. Their Cyclical Relations* [by] Thor Hultgren, assisted by Maude R. Pech. New York, National Bureau of Economic Research; distributed by Columbia University Press, 1965. Pp. 229.

This study reports the author's findings about seven related variables in a number of industries: man-hours per unit of product, hourly earnings, labour cost, total cost, prices received, profit margins, and aggregate profits.

46. U.S. BUREAU OF LABOR STATISTICS. *The Consumer Price Index: History and Techniques*. Washington, GPO, 1966. Pp. 118.

". . . Presents an historical summary covering the scope and method of compiling the Consumer Price Index since its

inception, a rather detailed explanation of present techniques, and a description of the 1964 comprehensive revision of the index. A bibliography of publication on methodology and analysis of price trends is included."

Seasonal Trades

47. CANADA. DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH BRANCH. *The Impact of Winter on the Canadian Worker: and Examination of Seasonal Variations in Employment and Unemployment in Canada.* Ottawa, Queen's Printer, 1966. Pp. 41.

"The pamphlet is concerned with certain economic problems associated with seasonal unemployment, the extent of seasonal variations in employment and unemployment in Canada and its five regions, with the characteristics of the seasonally unemployed workers."

48. U.S. BUREAU OF LABOR STATISTICS. *The BLS Seasonal Factor Method (1966): Description; Application on an Electronic Computer, Washington,* GPO, 1966. Pp. 44.

Wages and Hours

49. GREAT BRITAIN. NATIONAL BOARD FOR PRICES AND INCOMES. *Productivity and Pay during the Period of Severe Restraint.* London, HMSO, 1966. Pp. (22)

"We [the National Board] confine ourselves in the present Report to an assessment of the potential value of productivity agreements and to an elaboration of the guide-lines by which we consider that increases in pay on grounds of productivity and efficiency should be judged during the period of severe restraint."

50. U.S. BUREAU OF LABOR STATISTICS. *Salary Trends: City Public School Teachers, 1925-65.* Washington, GPO, 1966. Pp. 41.

Miscellaneous

51. BROWN, DAVID GRANT. *The Market for College Teachers; an Economic Analysis of Career Patterns among Southeastern Social Scientists.* Chapel Hill, University of North Carolina Press, 1965. Pp. 301.

Based on a survey of about 150 faculty members in departments of economics, sociology, and history in 18 of the largest American Southeastern universities and colleges, this is a study of the labour markets in which faculty members are supplied and demanded. The author attempts to answer these questions: "what are the channels of communication in academic labor markets? What are the characteristics of the supply of college professors? What is the nature of the demand for college faculty? What are the sources of imperfection in labor markets? Do the observed imperfections cause a misallocation of teaching manpower?"

52. DEANE, PHYLLIS. *The First Industrial Revolution.* Cambridge [Eng.] University Press, 1965. Pp. 295.

This book, originating in a course of lectures given for undergraduates studying Economics at Cambridge University, covers the development of British economy between 1750 and 1850.

53. LAWRENCE, ROBERT JOHN. *Professional Social Work in Australia.* Canberra, Australian National University, 1965. Pp. xvii, 241.

This study examines the development of social work training bodies and their course, the movement of qualified social workers into various employment fields, and the growth of professional associations. The history of social work in Australia begins in the early 1930's.

54. MASSE, BENJAMIN LOUIS. *The Church and the Antipoverty Program,* Washington, U.S. Dept. of Labor, Manpower Administration, 1966. Pp. 21.

"Condensed transcript of the seminar held in Washington, D.C., May 27, 1965."

55. NATIONAL INDUSTRIAL CONFERENCE BOARD. *Setting Advertising Objectives,* by Saul S. Sands. New York, c1966. Pp. 92.

Discusses the practices of companies that set advertising objectives and measure advertising results. Fifteen case histories are included.

56. REGIONAL SCIENCE ASSOCIATION. *Papers, Volume XVI, 1966; European Congress, Cracow, 1965.* Philadelphia, Published by the Regional Science Association in cooperation with the Department of Regional Science, Wharton School, University of Pennsylvania [1966] Pp, 171.

Contains most of the papers presented at the Fifth European meeting of the Regional Science Association held in Cracow, Poland, September 1965.

57. U.S. BUREAU OF LABOR STANDARDS. *Demolition.* Washington, GPO, 1966. Pp. 67.

58. VANDE VEGTE, JOHN. *New Technology in Materials and Processes:* [a] *Paper . . . prepared . . . for the Conference on Productivity Through New Technology . . . held in Winnipeg, February 15-16, 1966.* Ottawa, Queen's Printer, 1966. Pp. 49.

This is a study of developments in certain fields in materials and processes, giving examples of new and improved products.

The Origin of "Boycott"

The word "boycott," which has a deeply personal meaning for organized labour, evolved from the 19th century when absentee English landlords demanded exorbitant rents from impoverished tenant farmers in Ireland, and evicted them when the rents were not paid.

One rent collector, Captain Charles Boycott, acting for the Earl of Erne, refused to accept the reasonable rents that were offered him, and evicted his tenants. In retaliation, the farm workers imposed upon the captain a state of isolation. No man would save his crops or drive his cart. The smith would not shoe his horses, the grocer would not supply him with goods, the laundress would not wash for him, and the postman would not deliver his letters.

The device had been suggested by Charles Stewart Parnell, the great Irish patriot, who denounced any man who took over farms from which others had been evicted. Such a man, he said, should be placed "in a moral Coventry, by isolating him from his kind as if he were a leper of old." And Parnell concluded: "You can be sure that there will be no man so full of avarice, so lost to shame, as to dare the public opinion of all right-thinking men and to transgress your unwritten code of law . . ."

Captain Boycott dared to face the isolation imposed upon him. He imported labourers, and guarded them with British cavalry and constabulary. But the situation grew intolerable, and in the end he was forced to return to England defeated and ruined, leaving behind his infamous name as a warning to all those who would trample on the rights of others.

*Revised. †Preliminary.

‡Includes post office wages and salaries. **Figures in this column are for total labour income, Canada, but are not totals of the figures in the remaining columns of this table, which do not show labour income in Agriculture, Fishing and Trapping.

NOTE: Monthly figures may not add to annual totals because of rounding.

SOURCE: *Estimates of Labour Income*, DBS.

Tables C-1, C-2 and C-4 are based on reports from employers having 20 or more employees in any month of the year; at February 1967, employers in the principal non-agricultural industries reported a total employment of 3,474,288. At March 1967, total employment was reported at 3,485,975. Table C-3 gives estimates of total employment, by industry divisions, for the provinces and Canada, derived from the survey of establishments employing 20 or more persons and from a sample survey of establishments employing less than 20 persons. Tables C-5 to C-7 are based on reports from a somewhat smaller number of firms than Tables C-1, C-2 and C-4. They relate only to wage earners for whom statistics of hours of work are also available, whereas Tables C-1, C-2 and C-4 relate to salaried employees as well as to all wage earners in the reporting firms.

Due to a speed-up in the processing of data at the Dominion Bureau of Statistics, this issue carries C Tables covering both February and March.

D—Manpower Division

The reorganization of manpower activities under the Department of Manpower and Immigration has led to a number of administrative changes which have, in turn, altered the significance of D Table statistics about employment placements and unfilled job vacancies.

The result is that valid comparisons with previous periods are not possible on the basis of these statistics. Accordingly, their publication is being suspended.

New statistical series are being developed to give more significant information about persons using the services of Canada Manpower Centres. The results will be published as they become available.

E—Unemployment Insurance

Unemployment insurance statistics emanate from the operations of the Unemployment Insurance Act, and relate to persons in contact with the Unemployment Insurance Commission, either as contributors or claimants. The data are compiled in the Unemployment Insurance, Pensions and Manpower Section, DBS, from information supplied by the UIC. The source for Tables E-1 to E-4 is *The Statistical Report on the Operation of the Unemployment Insurance Act*. For further information regarding the nature of the data see Technical Note, page 404, June issue.

TABLE E-1—Estimates of the Insured Population under the Unemployment Insurance Act

End of	*Total*	*Employed*	*Claimants*
1967—March	4,799,000	4,255,200*	543,800
February	4,681,000	4,129,200	551,800
January	4,684,000	4,152,100	531,900
1966—December	4,633,000	4,209,600	423,400
November	4,591,000	4,324,700	266,300
October	4,521,000	4,336,700	184,300
September	4,528,000	4,363,100	164,900
August	4,577,000	4,389,800	187,200
July	4,512,000	4,316,000	196,000
June	4,500,000	4,318,700	181,300
May	4,404,000	4,186,400	217,600
April	4,465,000	4,051,100	413,900
March	4,498,000	4,000,000	498,000

*Estimate is based on total employed workers, as coverage was extended to certain farm workers as of April 1, 1967.

TABLE E-4—Benefit Payments, by Province, April 1967

Province	*Weeks Paid**	*Amount of Benefit Paid*
Newfoundland	118,725	$ 3,168,706
Prince Edward Island	22,097	542,340
Nova Scotia	112,244	2,736,376
New Brunswick	125,021	3,167,102
Quebec	590,463	15,364,602
Ontario	517,903	13,093,017
Manitoba	57,493	1,449,147

*St. John's index on the base June 1951 = 100.

NOTE: Indexes above measure percentage changes in prices over time in each city and should not be used to compare actual levels of prices as between cities.

G—Strikes and Lockouts

Statistical information on work stoppages in Canada is compiled by the Economics and Research Branch of the Canada Department of Labour on the basis of reports from the Manpower Division, Department of Manpower and Immigration. The first three tables in this section cover strikes and lockouts that amount to ten or more man-days. The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the union directly involved in the disputes leading to the work stoppages. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included. For further notes on the series, see page 336, May issue.

TABLE G-1—Strikes and Lockouts, 1962-67

Month or Year	*Strikes and Lockouts Beginning During Month or Year*	*Strikes and Lockouts in Existence During Month or Year*		*Duration in Man-Days*

Annual Report of the Department of Labour (Covers fiscal year ending March 31). (English or French). Cat. No. L1-1966.

Report of the Industrial Inquiry Commission on Canadian National Railways "Run-Throughs." Report of Hon. Mr. Justice Samuel Freedman, Commissioner. (English or French). Price $1.50, Cat. No. L35-965/1.

Supplements to Labour Gazette

Collective Bargaining Review. Prepared by the Collective Bargaining Section, Economics and Research Branch, Canada Department of Labour. Obtainable from the Canada Department of Labour. Free to LABOUR GAZETTE subscribers.

Reports of Boards of Conciliation established under the Industrial Relations and Disputes Investigation Act together with reasons for judgment of the Canada Labour Relations Board. Obtainable from the Canada Department of Labour. Free to LABOUR GAZETTE subscribers.

Economics and Research Branch

Labour Organizations in Canada (annual). Contains a brief commentary, the latest statistical data on union membership, and a directory of labour organizations with names of their principal officers, publications, and the geographic distribution of their local branches in Canada. (English or French). Price 50 cents, Cat. No. L2-2/1966.

Industrial and Geographical Distribution of Union Membership in Canada, 1966. (English or French). Price 15 cents, Cat. No. L31-766.

Strikes and Lockouts in Canada (annual). Furnishes a record of strikes and lockouts occurring in Canada during a year. Tables and related texts showing strikes and lockouts by years, by areas, by industries, including time lost, number of workers involved, duration, etc. Price 35 cents, Cat. No. L2-1/1965.

Wage Rates, Salaries and Hours of Labour, 1965. An annual report published in loose-leaf form and followed later by a paper-bound volume. Contains the results of an annual survey at October 1 of occupational wage rates and standard hours of work in most industries. Averages and predominant ranges of wage rates for selected occupations are tabulated separately on a regional basis for some 90 industries including logging, mining, manufacturing, construction, transportation, trade and service groups. Weekly salaries for office occupations and hourly wage rates for maintenance of service occupations and for labourer for several broad industry groups are shown, on a community basis, in 52 communities. Trends in wage rates are included in tables of index numbers by industry. First year service including attractive binder with index tabs and paper-bound volume, $9.50; service without indexed binder, $7.00; individual tables, 15 cents. Paper-bound volume, $2.50. (Bilingual). Cat. No. L2-548.

Working Conditions in Canadian Industry, 1966. (Bilingual). Price $1.00, Cat. No. L2-15/1966.

Répertoire de termes et expressions utilisés en relations industrielles et dans des domaines connexes. A catalogue, in French, of terms currently in use in the labour relations field. Prepared by the Economics and Research Branch. Price $4.50, Cat. No. L31-967F.

Labour-Management Research Series

Shiftwork and Shift Differentials in Canadian Manufacturing Industries. Price 35 cents, Cat. No. L2-22/2.

Vacations with Pay, 1951-61: An Examination of Vacation Practices in Canadian Industries. (English or French). Price 35 cents, Cat. No. L2-22/4.

Collective Agreement Provisions in Major Manufacturing Establishments, 1964. Price 35 cents, Cat. No. L2-22/5.

Labour Day Message

By Hon. John R. Nicholson
Minister of Labour

Hon. John R. Nicholson

A New Sense of Energy and Confidence

On Labour Day, in this our Centennial Year, I am pleased, as Minister of Labour, to extend greetings and best wishes to all working Canadians and their families.

Employment continues to expand in Canada, and working and living conditions are steadily improving. There are, however, still crucial problems to solve—the need to increase productivity, underdevelopment and underemployment in some areas, and the disturbances in working conditions and relationships caused by the introduction of technological change and automation, to mention just a few.

There is, fortunately, a new sense of energy and confidence emerging from most, if not all regions of Canada. Nowhere is this more evident than in industrial relations. Unions are examining critically their structure and their changing roles. Employers and employer organizations are increasingly conscious of the vital importance of human resources and are reviewing their tasks and responsibilities in collective bargaining.

An increasing number of union and management leaders are engaging in more frequent dialogue about matters of direct interest not only to themselves but to the country as a whole.

This more critical look at the important parts they play in the functioning of our economic and social life, and the closer relationships developing between unions and employers are signs of growing maturity in dealing with increasingly complex problems.

This closer relationship should not, however, be interpreted as evidence that industrial conflicts are likely to be removed. There will continue to be strong differences in viewpoint, but I am convinced that, through intelligent and mature participation in bargaining, most of these can be resolved.

It is significant that so far this year there have been relatively few stoppages of work in industries under federal jurisdiction.

As I write this, on August 25, Canada has benefited from eight months of reasonably good industrial relations. At the moment, the only significant dispute not yet resolved in the federal jurisdiction is in the shipping industry on the Great Lakes and St. Lawrence Seaway.

Not unnaturally, work stoppages or threats of work stoppages tend to attract a great deal of public attention. It is important, however, to view these events in perspective. It is important to be reminded that the great majority of collective agreements in Canada are concluded without work stoppage.

This underlines the most critical feature of our free collective bargaining system—that the will and determination to resolve differences between management and unions are very much alive in this country.

However, the parties cannot always find common ground. Some negotiations do break down. When they do, Government conciliation services must be invoked in an effort to resolve the problem without a work stoppage and its obvious hardships. In the vast majority of cases, these efforts have been successful.

Up to mid-July this year, 53 disputes in federal jurisdiction were carried to finality by the conciliation services of the Department of Labour. Of these, 44, or 83 per cent, were settled with the help of conciliation officers; seven others were settled on the basis of Conciliation Board proposals.

Thus 96 per cent of the disputes brought to the Department were settled without work stoppage. This is a good record—a very good one. It is evidence that our industrial relations system does and can work effectively when the will to make it work is there.

In the Department of Labour we are taking a hard look at all our policies and programs. We have already expanded our activities in support of labour-management joint consultation, and we are increasing our efforts on behalf of fair employment practices. Steady progress is being made in the application of minimum labour standards. We will soon be active in the field of industrial safety and accident prevention, as the new Canada Labour (Safety) Code goes into effect.

I can foresee the need for more new services in my department—services which could help both labour and management to deal with the difficulties and complications that modern changes have created for labour-management relations. Where such services are required, they will be provided.

Our aim is to assist and support where we can, with the least interference in the normal course of negotiation and consultation. Industrial relations is the business of labour and management. In the final analysis, only they can make it work.

50 Years Ago

From the Labour Gazette, October 1917

A Trades and Labour Congress convention in Ottawa opposed conscription unless "wealth" and natural resources were also conscripted. Delegates asked that the 8-hour day be introduced in all industries to coincide with the signing of peace treaties.

Conscription for military service was strongly opposed by the Trades and Labour Congress of Canada at its 33rd convention, held in Ottawa in September 1917. In a vote taken to test the feeling of the convention, all but 20 of the 288 delegates rose to vote in opposition to such a measure.

At that time, Parliament had already passed a Military Service Act that authorized conscription; and although the Act had not yet been applied, its terms rendered anyone who criticized its provisions liable to prosecution. Consequently, the question was raised at the convention whether the Act would prohibit delegates from discussing the matter; and it was asked, What protection would the Congress give to anyone who transgressed the law? The president's reply to this was that he did not know of any protection that it could give.

Notwithstanding this uncertainty, a number of resolutions were proposed, all of which were opposed to conscription. One of the objections raised was that if conscription were applied to men, it should also be applied to "wealth" and natural resources. In one of the resolutions, this was turned into an argument for the nationalization of the railways, and in another for the nationalization of all natural resources industries, all transport industries, and "all industrial organizations dealing more particularly with the necessities of the people."

One of the resolutions went so far as to urge the delegates to "formulate plans for a general strike of organized labour from the Atlantic to the Pacific; strike to continue until such time as the Dominion Government does conscript the wealth and nationalize the industries, this being a national necessity more than conscription of manpower is a military necessity."

Another resolution proposed that the TLC should take a referendum among its affiliates to find out whether, if the conscription measure became law, they would be prepared to take part in a Dominion-wide strike, "having for its aim and object the conscription and utilization for national purposes of the wealth of the country."

Other resolutions protested against the enforcement of conscription without the Government's having previously consulted organized labour.

The report of the executive council of the TLC contained a statement on the subject of conscription. This statement referred to the "unqualified opposition to conscription" expressed at the Congress's convention in 1915 and reaffirmed at the 1916 convention. The law that had now been passed, the statement said, "contains provisions that impose heavy penalties upon all and sundry who make use of any form of opposition to the principle that might frustrate the carrying into effect of the Act now in existence.

"While the Congress cannot stultify itself to the degree of either withdrawing or contradicting this year its firm and carefully thought-out views on the question of conscription, as embodied in the resolutions of 1915 and 1916, still, under our representative form of government, it is not deemed either right, patriotic, or in the interests of the Dominion or of the labour classes, to say or do aught that might prevent the powers that be from obtaining all the results that they anticipate from the enforcement of such law."

The officers' reports committee recommended the following as a substitute for the latter part of the executive council's report, and moved the adoption of the declaration as amended: "Still, under our present form of government, we do not deem it right, patriotic, or in the interests of the labour movement or the Dominion of Canada, to say or do anything that might prevent the Government of Canada from obtaining the result they anticipate in the raising of reinforcements for the C. E. Forces by the enforcement of the law. This Congress is emphatically opposed to any development in the enforcement of this legislation which will make for industrial conscription, or the interference with the trade union movement, in the taking care of the interests of the organized workers of this Dominion."

Several further amendments to the committee's report were proposed. One of these was that all affiliated bodies should do their best to obtain repeal of the conscription law. Another was that "this Congress will at once demand of the Government the immediate repeal of the conscription law."

After the debate on the subject had been going on for a long time, it was proposed that a vote should be taken, and that if repeal were to be asked for, the delegates should proceed in a body to the House of Commons and demand action before Parliament was prorogued.

This proposal, however, did not come to a vote; and the various amendments other than that recommended by the officers' reports committee were defeated. The report of the executive council, as amended, was finally approved by 154 votes to 53.

The executive council strongly recommended that steps should be taken to form an Independent Labour Party for Canada on the same lines as the British Labour Party. "With a view to giving effect to this recommendation, we would strongly urge that all working class political organizations in each province call a conference of the respective organizations entitled to partnership in such a Labour Party, and proceed to co-operate for political action."

Two resolutions concerning the eight-hour day were approved, one of which asked the Congress to petition the Government to pass legislation in the immediate future, "making an eight-hour working day compulsory for all men and women employed in, or on, public works, such as railroads, mills, mines, and factories, etc." The other resolution said that the Congress, at its last convention, had urged the Government "to adopt an eight-hour day policy in all industries;" and whereas the Government had "neglected" to do so "in the interests of humanity," the matter should be vigorously pressed upon it again. Further, a demand should be made that at least an act should be placed on the statute books "by which all industries would automatically revert to an eight-hour day, the date to coincide with the date of the signing of peace treaties."

News Briefs

Full employment vs. price stability is topic of address by Dr. John Deutsch

Conflict exists in Canada between full employment and the maintaining of a reasonable price stability, John J. Deutsch, chairman of the Economic Council of Canada, told a joint meeting of the American Farm Economics Association and the Canadian Agricultural Economics Society at the University of Guelph on August 14.

At the Government's request, he said, the Council carried out a comprehensive study into prices, costs, incomes and productivity, and their relationship to sustained economic growth. Its conclusion was that, except for emergency purposes, a formal incomes policy was not the answer. Other approaches involving the more basic demand-and-supply policies, would probably be more fruitful, Dr. Deutsch said.

The Council noted that over the last 10 or 15 years, Canada's rate of productivity improvement has been slower than that of other industrial countries—an important factor, because productivity growth is the basis for advances in incomes and earnings. In recent years there have been increasing pressures to reduce the per capita incomes gap between Canada and the United States, but this could be accomplished only by more rapid increases in productivity.

Dr. Deutsch explained that productivity growth is the result of the combined effect of many different factors, including advances in industrial technology, the skills, education and training of manpower, increased scale and specialization in production, increased capital per worker, and a ready flexibility and adaptability of manpower and capital that would permit resources to shift from less productive to more productive areas of employment.

In its First Review, published in December 1964 (L.G. 1965, p. 217), the Council explored the reasons for Canada's relatively poor use of manpower, and recommended a number of comprehensive measures that would improve the use of human resources in the economy.

It examined the role of education in its Second Annual Review published in December 1965 (L.G., March 1966, p. 84), and concluded that the economic benefits of improving the educational stock of the Canadian labour force would be substantial for the individual and the economy. Dr. Deutsch revealed that the Fourth Review, to be published shortly, will be an examination of the role of scale and specialization in manufacturing as a factor affecting productivity.

He cited the problem of serious regional imbalance within Canada, and pointed out that, since the 1920s, there has been relatively little progress toward the achievement of a better balance in the economic development of the various regions. "Better regional balance will undoubtedly involve major improvements in productivity in particular areas of the country."

Dr. Deutsch pointed out that, in addition to the foregoing factors, there are many other aspects to Canada's productivity performance, and he said that the Council will continue to study them.

Income gap studied in Atlantic Provinces

The Atlantic Provinces Economic Council has recently published a booklet on the findings of a study concerning the problems associated with the lagging economic growth rate of these provinces.

Titled *Productivity, the Use of Human Resources, and the Income Gap*, the 30-page booklet investigates the relationship between economic growth and productivity and the causes of the income gap.

The first purpose of the booklet is to show the nature, magnitude, and persistence of the difference in personal income per capita between the Atlantic Provinces and Canada as a whole. The second purpose is to investigate the reasons for the income gap. The third purpose is to determine the influence of productivity on economic growth and income levels.

The recommendations of the study call for policies designed to produce a rapidly expanding number of productive employment opportunities. The booklet cautions, however, against policies designed to increase productivity only, without providing for increased employment opportunities for members of the labour force. The booklet suggests that a rapidly growing demand for labour in productive occupations will contribute significantly to a higher rate of economic growth.

The APEC booklet is the eleventh in a series and was published in July. Copies may be obtained from the APEC Central Office, 1591 South Park St., Halifax, N.S.

Arthur Smith to head Economic Council

Arthur J. R. Smith, 41, was named by Prime Minister Pearson to succeed John J. Deutsch as Chairman of the Economic Council of Canada. The appointment was effective on September 1, 1967. Mr. Smith has been a director and full-time member of the Council since its formation in 1963.

Mr. Deutsch, 66, left as head of the Government-appointed agency to return to Queen's University, where he will take up duties as principal of the University in September 1968.

—Photo by Warrender Studio

Arthur J. R. Smith

Mr. Smith was born in Simcoe, Ont., and educated in India, at McMaster University, Hamilton, and at Harvard, where he earned his Ph.D. in economics.

Before joining the Council, he worked with the Federal Reserve Bank of New York, with the Canadian-American Committee, and with the Canadian office of the National Industrial Conference Board. He also was the first Secretary and Director of Research of the Private Planning Association of Canada.

Married women clause dropped by education board

The Board of Education of Port Arthur, Ont., recently dropped its "married women's clause" to bring about equality in hiring practices. Until this amendment was passed, the policy of hiring married women teachers for one year only gave single teachers an advantage over their married colleagues. The preference for single women teachers goes back to the years when the number of teachers exceeded the number of vacant positions.

Minister addresses government labour officials in Denver

"In Canada, the federal Government is the largest single employer in the country. From the standpoint of sophistication of organization and range of diversity amongst its employees, it is in a league by itself. That being so, it is not too difficult to anticipate that the impact of extending collective bargaining to such a significant and influential group of labour will have profound effects throughout all aspects of our socio-economic life."

This statement was made by Hon. John R. Nicholson, Minister of Labour, in an address delivered to a meeting of the International Association of Governmental Labor Officials, in Denver, Colo.

The Minister remarked that in the passing of legislation giving public servants collective bargaining rights, "Canadians witnessed a truly amazing manifestation of the degree to which public values have changed over the past few years." He pointed out that "nearly all the debate and the submissions in respect to the collective bargaining bill were concerned with how it would affect the employees, with not a single suggestion that it might bring the country to the brink of anarchy, as one might, perhaps, have expected."

He cited this as a reason why "the Government now feels certain that it has done what the Canadian public feels is right," and he went on to say: "In this respect, we have . . . met our pledge to be a really good employer in Canada, and a competitor for the services of the best brains and skills in the country."

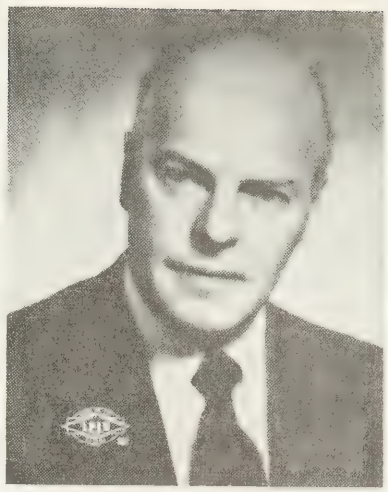
In connection with the introduction of collective bargaining in the public service, Mr. Nicholson made four points:

- in labour disputes in the public service, unlike most of those in private industry, society itself was generally involved, and it might have difficulty in not becoming a party to certain disputes;
- the addition of more than 200,000 federal employees to the collective bargaining community and to the membership of organized labour could not help but give an impetus to unionism;
- this predominantly white-collar addition to the membership of organized labour was bound to make new and complex demands on established union value systems, organization and leadership;
- the entry of such a sophisticated work force into full union membership would mean the death blow to the social and prestige arguments against unionism still found among some white-collar, scientific, administrative and professional persons in the private sector.

The Minister said he had no doubts that the new world of labour affairs would be a difficult world. Managements, unions and governments would be forced into "new inter-relationships, into undreamed of partnerships, and into many areas of co-operation." But he expressed confidence that "we can bring the benefits of our experience and stature to establish new values and methods and order to this wonderous world of work."

New members appointed to public service board

Three new members have recently been appointed to the federal Public Service Staff Relations Board. E. P. O'Connor, Vancouver, General Secretary of the British Columbia Government Employees' Association, will be one of the four employee representatives on the 10-man board, which also includes four employer representatives as well as a permanent chairman and a vice-chairman. The post is not a full-time one, and Mr. O'Connor will continue to be General Secretary of the Association.



Miss Hilda Cryderman, Vernon, B.C., has been appointed as one of the employer members of the Board. Miss Cryderman was a school principal for 13 years, and she was a member of the first arbitration board on a teachers' salary dispute in the Okanagan Valley in 1946. She was the first woman to be elected president of the British Columbia Teachers' Federation.

René Doucet, Montreal, has also been appointed as an employer member of the Board. Mr. Doucet has been engaged in private practice as a lawyer and has recently been employed with Domtar Ltd., Montreal, as a labour relations counsellor.

Destroyer tender named after U.S. labour leader

The *USS Samuel Gompers*, the ship that bears the name of the leader of American labour movements (L.G. 1924, p. 1020), officially joined the United States Navy's Pacific fleet on July 1 in commissioning ceremonies at the Puget Sound Naval Shipyard, Bremerton, Wash.

A legend in his time, Samuel Gompers was internationally recognized as the most outstanding figure in the North American labour movement. He served as President of the American Federation of Labor since its inception in 1881, and at the time of his death on December 13, 1924, had just recently been elected for the forty-third term. Born in England, he came to the United States at the age of 13, and as a young man was instrumental in organizing the Cigar Makers' International Union.

Charles R. McCord

Annuities Director dies at 62

Charles Russell McCord, Director of the Industrial Pensions and Annuities Branch of the Department since 1949, and one of the oldest members of the Department in length of service, died early in August, after a lengthy illness, at the age of 62.

Mr. McCord, who was born in Ottawa, began his career as an employee of the Bank of Nova Scotia. He entered the civil service as a bookkeeper in the Dominion Unemployment Relief Branch of the Department in 1931. Later, he was successively Departmental Accountant and Director of the Administrative Services Branch before moving into the Dominion Government Annuities Branch, as it was then called, in 1949.

At the time of his death, Mr. McCord was a member of the United Nations Joint Staff Pensions Board, on which he had served as Vice-Chairman from 1962 to 1964. He was also a member of the International Labour Organization Staff Pensions Committee of the UN Joint Staff Pension Fund and of the ILO Administrative Board of the Staff Pensions Fund.

Commission appointed for B.C. lumber dispute

Mr. Justice F. Craig Munroe of the British Columbia Supreme Court was appointed an Industrial Inquiry Commission on August 11 to look into the province's interior lumber dispute. He settled a grain workers strike in 1960, and has acted as commissioner in several railway strikes.

The dispute involved the International Woodworkers of America and 68 interior employers. The union is demanding wage parity with coastal workers.

Joseph R. Parrott

New deputy minister of labour for Saskatchewan

The appointment of Joseph R. Parrott as Saskatchewan's Deputy Minister of Labour was announced in July by Hon. Lionel P. Coderre, Minister of Labour.

Mr. Parrott will succeed C. K. Murchison, who is retiring after 30 years in the civil service.

Mr. Parrott, who is 32 years of age, was born in Saskatoon and received his elementary and high school education there. He attended the University of Saskatchewan, Saskatoon, first obtaining his Bachelor of Arts and then graduating with the degree of Bachelor of Laws in 1962. He did postgraduate work at the University of Wisconsin in labour law. He joined the provincial Government in October 1964 as Clerk of the Executive Council and Cabinet Secretary.

During 1965 and early 1966, Mr. Parrott was Secretary of a special committee established by the provincial Government to look into Saskatchewan's labour legislation. The recommendations that the Labour Management Legislative Review Committee submitted were the basis of amendments to the Trade Union Act passed by the Legislature in 1966.

Mr. Parrott's appointment as Deputy Minister of Labour became effective on September 1.

Merger of Steelworkers and Mine-Mill approved

In a vote of the membership of the International Union of Mine, Mill and Smelter Workers across Canada, held early in August, overwhelming approval was given to a merger between that union and the United Steelworkers of America. The voting in the Sudbury district, where the MineMill union represents employees of Falconbridge Nickel Mines Ltd. and some smaller operations, was an exception, the vote being against the merger by 1,135 to 646.

Any local had the right to appeal before August 17 if it believed that the referendum had not been properly conducted, and official results were released on that date.

In spite of the heavy adverse vote in the Sudbury district, voting throughout the country was said to be about three to one in favour of the merger.

Terms of a merger between the two unions were signed in Toronto on April 29 by head officers of the two organizations. The merger had been approved by a resolution passed by the United Steelworkers' international convention and its executive board, and the Canadian section of the Mine-Mill union had discussed the terms of the amalgamation at a special convention held in Winnipeg on June 23. The referendum among Mine-Mill members was the final step in the preliminaries.

According to a statement by Kenneth Smith, National President, at the Winnipeg meeting, the merger was to become effective immediately if it was ratified by the members in the referendum. When the vote was held, Mr. Smith said that, according to the union's constitution, the results of the referendum were binding on all locals. But Joseph Astgen, Vice-President of the Sudbury local, said that the group known as the Nickel Belt Labour Club would remain independent, and would seek a merger with other unions only if it was helpful to the members.

Arbitrators reject shopcrafts' demands

With the exception of additional bereavement privileges, the demands made by the 28,000 members of the shopcraft unions were rejected in July by a three-man arbitration board headed by Mr. Justice Wilfrid D. Roach, retired Ontario Appeal Court judge. The unions were the last holdout to a general settlement reached last fall between the railroads and non-operating employees.

In effect, the union has no recourse but to accept the proposals made earlier by government mediator H. Carl Goldenberg (L. G., Feb., p. 86), which called for a three-year contract running to the end of 1968, with a total pay increase of 24 per cent in five stages. The seven shopcraft unions will receive a 4-per-cent increase retroactive to January 1, 1966, and an additional 4 per cent retroactive to July 1, 1966, 7 per cent retroactive to January 1, 1967, and 3 per cent retroactive to July 1, 1967. They will get an additional 6 per cent on January 1, 1968. The average hourly rate for railway tradesmen by the end of the contract was estimated at $3.03.

Using the standard for maintenance tradesmen as a guide, the board rejected the unions' request to have the shopcraft employees' pay scales calculated on the basis of prevailing rates in durable goods industries. It also rejected requests for pay differentials for shift work, longer vacations (extended to six weeks after 20 years service), an extra paid holiday, a two-year contract and the extension of various employee benefits.

The general railway strike began on August 26, 1966, ending with the passing of The Maintenance of Railway Operation Act, 1966 on September 1 (L. G., Nov. 1966, p. 630). By mid-January the general conference committee of the residual non-ops had agreed to accept Mr. Goldenberg's proposals. At that time the 20,000-member Canadian Brotherhood of Railway, Transport and General Workers (CLC) and the 28,000-member federated shopcraft unions had refused to accept the contract settlement. But last April, members of the CBRT finally voted in favour of these terms.

Building trades unions sign 8-year no-strike pact

Construction workers at the $800,000,000 Churchill Falls project in Labrador will receive unique treatment under an eight-year, no-strike labour agreement signed August 10. The agreement, signed by 11 international unions and all contractors working on the hydro project financed by the Churchill Falls Corporation, provides paid trips home every six months, and two weeks paid holidays annually. The vacation pay will be in the form of a 4-per-cent salary bonus each week instead of lump sums at the start of vacations.

Workers who wish to stay in Labrador for a year or longer will get the equivalent of their fare home in six monthly payments.

The Churchill work force now averages 620 men and will rise to about 5,000 within two years. Of the present workers, 64 per cent come from Newfoundland, 20 per cent from Quebec, and the rest from other provinces. Under Newfoundland law, all of them must join one of the signatory unions as a condition of employment.

Project managers hope the contract will insure labour peace until the completion date of August 31, 1975, and attract Newfoundland workers, who have priority in hirings.

New job vacancy survey launched by DBS

A new study to pinpoint precisely where unfilled jobs are in Canada has been launched by the Dominion Bureau of Statistics on behalf of the Department of Manpower and Immigration. It began in September and will continue on a monthly basis. When fully established, it will be one of Canada's largest continuing national surveys.

The survey will provide new information for private as well as public use on where job vacancies are by location and by job description. It also will measure national demand for labour.

As well as yielding a new series of statistical facts for economic analysts, the survey will provide information on local manpower needs for use in individual counselling services by the regional Canada Manpower Centres. The Department of Manpower and Immigration will co-operate closely in interpretation of results.

The survey is being done by mail and is supported by personal interviews. It includes about 5,000 larger firms every month and a sample of about 30,000—or 10 per cent—of the smaller firms every quarter.

Potential uses are highly significant for continuously updated information on where labour shortages are and the kinds of skills needed in various areas. Because industrial production depends heavily on availability of the right skills in the right places and the skills of individuals are best marketed when information is available on what and where the demand is, job vacancy data can be basic to decisions:

- by industry on long-term recruitment policies, training plans and capital expansion projects;
- by governments on programs for training and retraining of workers, on immigration programs and to facilitate movement of persons in the labour force from one area to another if and as they desire;
- by individuals in choosing a career or moving to another part of the country.

The survey will fill a significant gap in statistical information that has existed for some time. The existing monthly Labour Force Survey by the Dominion Bureau of Statistics finds out where the labour is by detailing the supply of manpower. The job vacancy survey will determine the labour demand by finding out where the jobs are.

The survey questionnaire itself will be as simple as possible, conforming generally to company records, so that personnel executives across the country will be able to provide the information to DBS with a minimum of difficulty. The questionnaire will ask for the number and kind of job vacancies, the job titles and the pay offered.

The survey will cost about $900,000 in the first year. Thereafter, it will cost between $500,000 and $700,000 annually. It will include the demand for part-time, seasonal, casual, and hard-to-fill jobs as well as routine, permanent jobs.

Thorough testing of results will be needed before they are published on a continuing basis. A similar survey has been tried in the United States and there have been recommendations to Congress that a comprehensive program be implemented. Establishment of a full program in the U.S., however, has been postponed because of opposition from some trade unions.

Both DBS and the Manpower Department emphasize that considerable experience will be needed before the survey realizes its full potential. For this reason, it is not expected that regular reports will begin until the survey's accuracy is fully tested.

OECD publishes book on change and manpower

Technical Change and Manpower Planning, a set of case studies investigating the problems and subsequent personnel procedures surrounding a particular event in that country in which an industry adopted a technological change, has been released by the Organization for Economic Co-operation and Development.

The studies were submitted by organizations within OECD-member countries, and were edited by Solomon Barkin. Canada's contribution, by the Economics and Research Branch of the Department, was a report on a 1962 study, *Electronic Data Processing Occupations in a Large Insurance Company*, which was made in co-operation with federal and provincial government agencies and other groups, and published by the Department (L. G. 1962, p. 15).

The Canadian case study investigates the adjustments made by the company managers and employees, and it reveals that total staff was increased, after the technological change was completed, because of an accompanying increase in business.

UIC rules change affects casual workers on farms

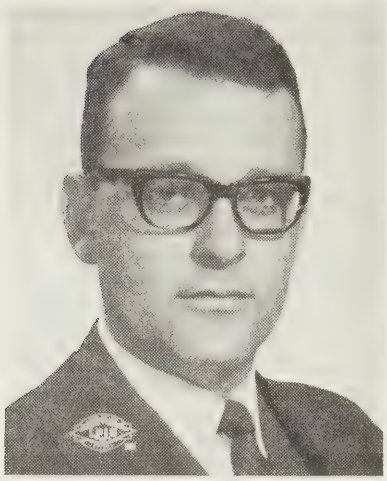
A significant change in the Unemployment Insurance Regulations affecting temporary and casual employment in agriculture and horticulture was announced at the end of August.

Effective immediately, temporary and casual workers in agriculture and horticulture will not be insured unless their employer is satisfied that, during the calendar year, they will work for him for at least 25 days and earn at least $250 in cash wages.

No declaration will be required from such workers.

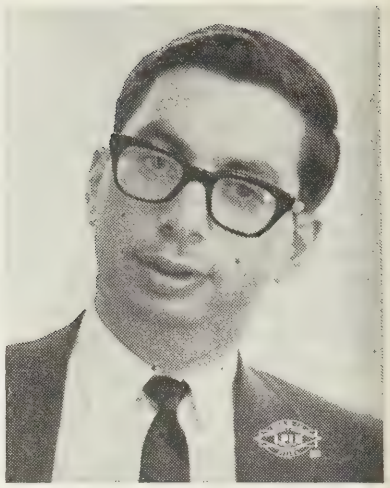
This change is designed to bring the Unemployment Insurance Regulations into line with the provisions of the Canada Pension Plan, a step strongly advocated by agricultural and horticultural organizations. It was made to ease the administrative burden on employers who hire casual workers for harvesting such crops as tobacco, fruit and vegetables.

Ammunition employees choose United Mine Workers



In a July representation vote to determine their bargaining agent, 925 ammunition workers at a CIL plant in Brownsburg, Que., chose the United Mine Workers of America, District 50, over the United Steelworkers of America (CLC).

District 50 had been the bargaining agent for the Brownsburg workers since 1945, and was in the midst of contract renewal talks when the Steelworkers started a campaign in the local weekly newspaper. Although it was contended that the CIL workers wanted to be represented within the Canadian Labour Congress, the vote gave the Mine Workers a solid victory of 617 votes to 285.



Unemployment rises in Britain

Britain's unemployment total rose to more than 500,000 in August, the highest total in 27 years, the British Labour Ministry reported. It is believed that unemployment has been rising because the Government applied braking measures to the economy 13 months ago (L. G., Dec. 1966, p. 715) in an effort to reduce imports, spur exports and relieve inflationary pressures.

Allowing for the rise in unemployment that the onset of cold weather brings, the new figures tended to support forecasts that by early 1968 the jobless total is likely to reach 750,000.

Dr. John Crispo

Prof. H. W. Arthurs

Diagnosing Industrial Unrest

LABOUR-management conflict "seems to be the unavoidable by-product of industrialization in a free society," was the concerted opinion expressed by Dr. John H. G. Crispo, Director, Centre for Industrial Relations, University of Toronto, and Prof. H. W. Arthurs, Osgoode Hall Law School, in their paper, *Industrial Unrest in Canada: A Diagnosis of Recent Experience*. The paper was prepared for a Joint Meeting of the Canadian Political Science Association and the Canadian Law Teachers Association.

"To begin with," say Messrs. Crispo and Arthurs, "much of the unrest is characterized by militancy that is less the product of labour leadership than the spontaneous outbreak of rank and file restlessness." And they add that the unrest might be nothing more sinister than a healthy sign of renewed trade union vitality.

They say it would be naïve to suggest that law and order would ever have the undivided respect of labour and management, "if only because historically the trade union movement feels that it could not have secured many of its present rights without deliberately defying legal restraints placed upon it." But if the present difficulties are merely part of the price of prosperity, they think that this feature in itself is disturbing, for it suggests that a free society could not maintain a period of sustained economic advance without engendering serious industrial unrest.

"To the extent that this unrest can only be relieved by round after round of generous settlements, the problem of maintaining price stability during a period of full employment can be aggravated," they say. "Thus it can be made increasingly difficult to achieve these two goals, let alone our other economic objectives, at one and the same time."

The authors think, however, that although collective bargaining might sometimes appear to result in a desperate and never-ending succession of crises, it is an essential part of industrial organization in a free society, and trade unionism is an indispensable participant in the collective bargaining process.

After analyzing in some depth the legal framework within which collective bargaining and trade unionism function, the authors conclude that there are diverse, conflicting strains within the law. "The older policy favours protection of entrepreneural activity against union interference, and the newer policy favours protection of collective bargaining against employer hostility."

Since collective bargaining statutes accept, as legitimate, occasional "disorders" that the common law condemns, and since the quality of the bargain struck under the two systems is likely to be very different, labour and management have each acquired a vested interest in preserving and expanding those laws that reinforce their power position. "Labour relations law, then, has become as much a tool of contending groups as an expression of social consensus."

The authors admit that lawyers skilled in the use of legal techniques frequently win critical battles before boards and courts, leaving behind a residue of resentment. But lawyers could, and increasingly do, operate in a constructive and creative way. "Through skill at negotiation, ability to resolve conflict by constructive compromises, and instinct for reasoned, rather than arbitrary solutions, lawyers can contribute much to good labour relations."

The authors outlined six specific features of unrest:

- the unseating of long-time union leaders;
- the failure to ratify collective agreements;
- wildcat strikes;
- inter-union raiding and breakaway movements;
- union breakthroughs in new sectors of the economy; and
- lost time due to strikes.

Analyzing the reasons for rank and file militancy, the authors point out that society had institutionalized the business of

creating discontent by having developed a whole new profession whose members might be described as "merchants of discontent." They said that they were not implying that acquisitive instincts would disappear if not constantly bombarded by hidden and not-so-hidden persuaders. "We merely point out that middle-class mores have been accepted by the organized worker . . . and that middle-class purchasing power is his immediate objective in collective bargaining."

Related to this first point is the role of inflation and the rising cost of living. "Once the cost of living starts to rise, the scramble for more intensifies, because it then takes more in money terms just to hold one's own in real terms." Although inflation and the rising cost of living explained much of the unrest among workers today, the authors claim, they are not the underlying causes; they are merely symptoms or aggravating factors that reflect general disagreement about the distribution of economic fruits. "This lack of consensus, rather than inflation and the rising cost of living, is surely a more fundamental cause of difficulty."

A third facet explaining "rank and file militancy" is the public's false impression of "the abnormally high level" of settlements made through government intervention — an impression aggravated by faulty reporting in the mass media as to the exact nature of the settlements. The essential point is that although government intervention might have been unavoidable, the results encouraged a wide variety of groups to adopt extravagant bargaining demands in the hope of benefiting from benevolent government intervention.

Job insecurity is another issue. The fear haunting many workers is not that of losing jobs through automation or the new technology, but having to cope with adjustment, even though it might not involve external displacement. Older and less educated workers, in particular, favour the status quo because they are constantly being reminded of their own disadvantages in an age of rising skill requirements. Many of these workers are demanding protection from their unions.

Management secretiveness also generates job insecurity. An employer's sudden unilateral action affecting employees can breed discontent, add to their anxiety, and thereby induce them to pressure their unions to win job security safeguards.

Crispo and Arthurs criticize the rigidity of the collective agreement in the face of changing working conditions. "When a new machine is introduced, which requires the performance of a new range of duties, the company will unilaterally fix the rates for those duties. There is nothing in the agreement that is violated by this action; probably the agreement specifically preserves management's rights to decide upon the processes and machines to be used. Consequently the union is powerless to stop this erosion of its hard-won structure."

Canadian boards have yet to adopt even the minimal requirement that an employer bargain with the union over the possible effects of technological change in an effort to minimize worker dislocation. The majority of Canadian arbitrators support the "residual rights" theory that reserves to management all of the rights it enjoyed before the advent of collective bargaining, with the exception of those that are specifically surrendered in the precise language of the collective agreement — among them, the right to make technological and corporate changes, and to establish new wage scales for new jobs.

"In our view, this doctrine . . . has lessened the value of the arbitration process as an administrative safety valve, and has reduced the workers' faith in it," the authors contend. "Suffice it to say that, while the prevailing practice may seem to be sound conventional legal doctrine, and to favour management, it may for those very reasons be an important factor in aggravating worker restiveness." Workers might try to win by an unlawful strike what they could not achieve through legal remedies. And a doctrine that tends to induce workers to revert to the law of the jungle is hardly in the interests of either management, labour or the public.

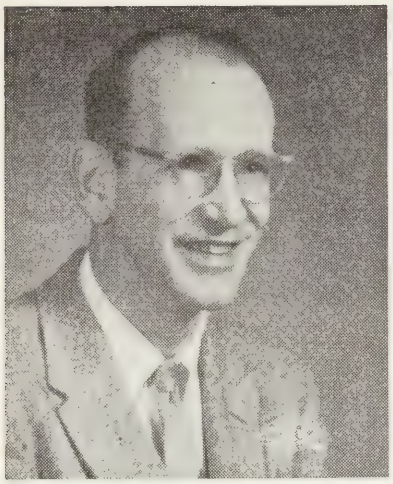
Both sides have learned that arbitrators give a great deal of weight to past practice, at least in the event of ambiguity in the language of the agreement. To protect its interests, and to guard against setting precedents that could prove harmful in arbitration, management has frequently stripped its first-line supervisors of the power to make any significant contract interpretations lest they concede something they should not. And under these circumstances, the authors contend, it doesn't take long for the union steward and ultimately the union members to discover that no one around them has the power to settle their grievances.

"In large organizations, the delays that are inherent in more centralized handling of such problems can easily lead to a frustrating accumulation of unresolved issues," they claim. "Both grievors awaiting an answer to their complaint and supervisors humiliated by the need to confess their lack of effective authority are thus subjected to unnecessary tension."

Newly organized groups of workers possessed of unrealistic expectations about the potential of concerted action to solve their problems, can produce an unhealthy combination of naïvete and strike-happiness. Further complicating the situation is the tendency to sign two-, three- or even four-year agreements. Many unforeseen issues could accumulate during the life of the agreement and make it difficult to satisfy the pent-up demands of members in the next round of negotiations.

Internal factors within the labour movement are other causes of unrest. The authors cite the lack of communication between leadership and membership, the widening conflict of interest between skilled and unskilled workers, job dissatisfaction, inter-union rivalry, and ambitious "young turks," eager aspirants to full-time union office. Then there is the conflict between generations; younger workers want more in their pay cheques, and older workers favour increased pension plans and other fringe benefits. There are also younger members who regard the possibility of a strike "as something of a lark."

The authors point to the fact that the average level of education in the labour force is steadily increasing. This produces high expectations, both in a material and in a job-satisfaction sense, and makes workers aware of their enhanced bargaining power in a period of prosperity. Increased educational opportunities might also divert intelligent and capable members of the work force away from the factory into "white collar" occupations, thus diluting the indigenous stock of potential leaders.



"Where, a generation ago, union office might be one of the few outlets for a bright youngster who was obliged to leave school prematurely . . . today's educational opportunities equip such persons for many other roles."

One of the most obvious reasons for the continuing militancy among union members is that it pays off. "In numerous recent cases . . . workers have discovered that after they have turned down a company offer, their leaders are able to extract further concessions." The temptation to use this ploy regularly is irresistible. Even union leaders themselves have been embarrassed by the availability of alternative employment during a strike. On occasion, workers have refused a substantial increase because they were under no real pressure to see the end of the strike.

In terms of expediency, the authors say, it is quite understandable that management should often attempt to buy peace, especially when rank and file militancy is channelled through formal union action. But this policy of appeasement is dangerous when worker resentment is being directed as much against the union as against management. In that kind of

Collective Bargaining In the Public Service

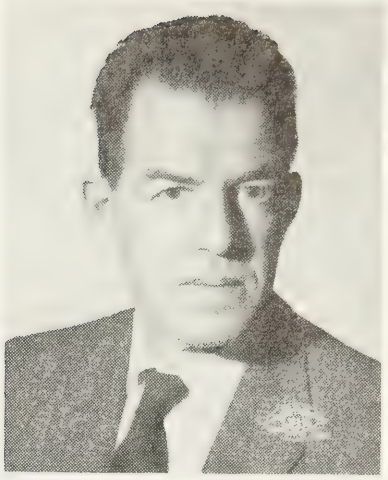
Prof. W. R. Cunningham

The two following articles are summaries of papers presented at a symposium in Ottawa earlier this year by Prof. W. R. Cunningham, Head of the Department of Economics and Political Science, University of British Columbia, and Prof. Stuart Jamieson, Department of Economics, Mount Allison University, New Brunswick. The symposium was sponsored jointly by the Canada Department of Labour and the Ottawa Branch of the Canadian Political Science Association. Both papers were based on research carried out by the two senior scholars during their stay at the International Institute for Labour Studies, Geneva, in 1966-67. The research was financed by Canada International Labour Fellowships awarded under the Department of Labour-University Research Program (L.G., Aug. 1966, p. 428).

THERE seemed to be no reason why a collective bargaining system should not work in the federal public service, said Prof. W. B. Cunningham, "Canadian civil servants and governments do not differ so greatly from their counterparts in countries where a bargaining system governs the employment relationship," he pointed out. Moreover, those who would be most responsible for making the system work were also the ones with the greatest incentive to avoid its collapse. Prof. Cunningham declined, however, to predict that the new system would function better than its predecessor, because such an assessment could be made only when "the experience with the new system has provided a foundation of factual evidence of assessment."

Prof. Cunningham used the recommendation of the Heeney Report against which to assess and contrast the usefulness and applicability of foreign experience to the proposed Canadian system. He agreed with the fundamental principle of the Heeney Report that, "As far as possible, the system of collective bargaining and arbitration in the Public Service of Canada should be rooted in the principles and practices governing employer-employee relations in the Canadian community at large." Since the social environment of each community (nation) differed, he believed that "the experience of other countries cannot be expected to provide much of a direct value for the construction of a Canadian system." The only instance of foreign influence on the Committee's recommendation, he said, was found in the proposed arbitration tribunal, a body similar to that found in the United Kingdom.

Even the two countries that have in the past exerted the greatest influence on Canadian development—the United States and Britain—provide little help. Bargaining procedures in Britain cannot be adapted to serve the Canadian system, since the legal framework in Canada owes its existence to the fusion of the former IDI Act with ideas imported from the United States Wagner Act. Conversely, the American "political system of separate and counterbalancing powers has left that country far behind in the development of a bargaining system for federal and state employees."



Prof. Cunningham briefly examined the nature of the present public employment systems of several European countries, and he reached the conclusion that there was a large variation in the possible ways of determining the conditions of employment in the public sector. For example, civil servants may be represented by one organization, as in Austria; or by a mosaic of small corporate groups, as in France; or by several federations, each consisting of many public services associations, as in Holland. Strikes by European civil servants may be either prohibited or permitted by the constitution, by legislation or by judicial bodies. In countries where strikes by civil servants are not authorized, they are nevertheless often tolerated by the governments concerned as a political necessity.

The speaker found that the recommendations of the Heeney Commission on the subject of strikes approximated most closely the law in Britain, which neither forbids nor recognizes the right to strike by civil servants. A careful reading of the recommendations of the Heeney Commission and of relevant sections of the draft act would seem to indicate that, if neither party to a dispute requested arbitration, then "presumably there would be no change from the position at the present time."

He pointed out that although the problem of the right to strike was by far the most dramatic, it was by no means the only difficulty found in employer-employee relationships in the public sector. In some European countries, public service associations are affiliated with political parties; the Heeney Report is silent on this point, although the draft act would seem to prohibit such affiliation. And although the Heeney Report recommends the exclusion of the Armed Forces and the RCMP from the proposed bargaining system, European experience seems to demonstrate that collective bargaining for law enforcement officers and for members of the Armed Forces is a workable arrangement.

In conclusion, Prof. Cunningham reiterated the reasons why the nature of a system of collective bargaining could not help being peculiar to each country.

"Bargaining structures tend to be messy, in public as well as in private employment. They are not neat, orderly structures logically suited to bring forth ideal results. For any country the organizations of the bargaining parties, the legal framework within which they function, and their patterns of behaviour reflect the conflicts and pressures that have flowed from the aspirations, ideals, convictions, attitudes, customs and traditions of its people in the past and in the present. There should be no surprise to find severe limits on the useful transferability between countries of practices successful in any one."

Prof. Stuart Jamieson

Industrial Harmony And Conflict

A CRITICAL analysis of the higher incidence of industrial conflict in North America as compared with Western Europe was given by Prof. Stuart Jamieson. The speaker provided a method of testing the validity of various hypotheses by selecting five countries—Sweden, Switzerland, Holland, Belgium and Canada—and ranking them according to their comparative freedom from industrial conflict and the degree to which numerous variables deemed favorable to industrial harmony apply to them.

Prof. Jamieson explained the criteria used in selecting the five countries. For instance, they are all industrially developed countries with relatively stable democratic political systems. They were industrialized by a "middle class elite" rather than by a "dynastic-feudal" or a "revolutionary-intellectual" elite.

Furthermore, "The five nations chosen as a sample in this study have certain other features in common besides their comparatively small size of populations. They are all relatively 'developed,' high income and highly industrialized nations, having less than 20 per cent of their populations engaged in agriculture; and they are highly dependent upon foreign trade, which accounts for more than 20 per cent of their gross national products.

"With the exception of Sweden, which is taken as a 'model' to test numerous variables presumed to encourage harmonious industrial relations, they have deeply imbedded internal divisions in language, religion or political ideologies, which are reflected in labour and employer organizations; and they have widely differing structures of government, patterns of collective bargaining, methods of regulating industrial disputes, and systems of industrial relations generally."

Having thus explained considerations in the choice of the sample, Prof. Jamieson discussed the various possibilities of measuring industrial conflict. Covert, or hidden expressions of conflict, such as high turnover, tardiness or absenteeism, carelessness and conscious sabotage, thefts of company property, and the like, may sometimes be more important in the aggregate than overt conflict, in such forms as strikes and lockouts, political action, riots and demonstrations, and crime.

Measurable testing of all types of covert and overt conflict was found to be impossible. It was for this reason that the author concentrated on strikes and lockouts as the relevant forms of industrial conflict for which data were available in all the countries included in the sample.

The speaker dealt critically with Georg Simmel's and Lewis Coser's theories of conflict (discussed briefly further on). He pointed out various examples in which overt and covert forms of conflict did not explain the contrasting situations in Western Europe and North America. For example, "Suicide rates are notoriously high in Sweden and Switzerland, the two countries with the lowest incidence of strikes, but the U.S.A. is not far behind. Holland, by contrast, has a very low incidence of strikes, and one of the lowest suicide rates of any country.

"Again, alternative forms of overt conflict, such as political partisanship, riots and demonstrations, antagonism and conflict between racial, language and religious groups appear to be more prevalent in the United States, and perhaps Canada, than in most West European countries."

Prof. Jamieson therefore rejected Simmel's implicit assumption that conflict was a fixed or given propensity in all human societies, and that labour-management conflict was inherent in the industrial scene. On the contrary, he argued, the frequency and intensity of conflict, industrial or non-industrial, depended upon numerous economic, political and social-environmental factors that influenced the actors in the industrial relations system, including the different values placed on conflict itself by different national traditions or cultures.

With this note of dissent on Simmel's theory, and recognizing that a wide range of variables affected industrial conflict in the selected countries, Prof. Jamieson presented in a tabular form a cross-section of no less than 32 variables, under four broad categories. These are shown in the accompanying table.

Measurability of some of these variables in the economic category is possible with a fairly high degree of accuracy. Detailed statistical sources from various governmental and international agencies have also been helpful in the measurement of social and socio-economic variables as well. But measurement and procurement of data for such variables as degree of class differentiation, employer acceptance of trade unions, involvement of trade unions in government and politics, stability of political parties and governments, and degree of conflict on account of language, religion and ideology, have been extremely difficult.

The first group of eight variables listed under "A" pertains to broad features of the political and social structure of the countries in the sample. It may be noticed that "with the exception of regional divisions in population and industry, Sweden stands highest in rank, followed in most of these by Holland, and then, much further behind, by Belgium. Judging by rank in individual items and totals, there does appear to be a rough correlation between these variables on the one hand, and the relative incidence of industrial conflict on the other, among the five nations under study."

A similar pattern of ranking largely applies to the group of five variables listed under "B"—"Organization and Collective Bargaining." The ranking is determined with the help of a number of research studies and comparative surveys of industrial relations and conflict in Western Europe and North America. It will be observed once again that Sweden and Canada are at the two extremes of the continuum for the first four variables in this category. The only departure from this pattern is noticed in the variable concerning governmental intervention in, or control over collective bargaining and industrial disputes.

Prof. Jamieson selected a set of five variables under "C" to test Seymour Lipsett's hypothesis concerning the influence of class and ideology on industrial conflict. Lipsett's view is, basically, that conflict is somewhat inhibited in the West European countries as compared with North America. The reason, according to him, is a survival of class traditions, and patterns of attitude and behaviour in the social structure of the European countries examined in the sample.

Discussing further the contrasts in class consciousness, ideology and philosophy of the labour movement in Europe and North America, he observes that there is an emphasis on the virtues of achievement in the North American culture. The status and prestige of the individual in this culture are measured in terms of income and possession rather than family or class identification.

Such a value system encourages militancy and somewhat aggressive behavior among individuals and groups, resulting in a higher incidence of conflict. It may be observed from the table that there is a rough correlation between industrial conflict and the totals of the variables in the Lipsett hypothesis, with Canada having the highest incidence of conflict, and Holland and Sweden being at the other end of the range. Switzerland, however, stands out as an exception.

The author has included the largest number of variables in the category of economic factors for the purpose of inter-country comparison, but "the results seem equally mixed or inconclusive." Such inconclusiveness, in his opinion, supports the contrary hypotheses advanced by different authors. For instance, one of the hypotheses is that the workers in a rich economy are expected to be relatively complacent and conservative and therefore less inclined to engage in strikes.

A contrary hypothesis by Ross and Hartman suggests that the workers in wealthy and high-income countries can afford to build up adequate strike funds and thereby engage relatively frequently in strikes of long duration. The latter hypothesis tends to explain the high incidence of industrial conflict in Canada and the United States in terms of relative wealth and higher per capita income in these countries.

Prof. Jamieson, in the first set of economic variables dealing with the industrial structure, has examined hypotheses by Reynolds, Kerr and Siegal, and Marx concerning earliness of industrialization, specialization in "low-strike" industries, and decentralization. He has also used a number of other exploratory variables, such as dependence upon foreign trade, capital and labour, per capita income, unemployment, and rate and stability of economic growth.

Having taken into consideration such a wide spectrum of variables, the writer concluded: "These nations exhibit opposing characteristics as regards many or most of these variables, even where they have had similar strike experience. To reach some sort of conclusion in this survey, perhaps it could be boiled down to asking: What characteristics or variables have the three relatively strike-free nations—Sweden, Switzerland and Holland—in common, despite their numerous differences? And the same for the two relatively 'strike-prone' nations, namely Canada and Belgium."

As may be seen from the table, there appears to be eight variables in which these two groups of countries tend to be at opposite ends of the range. These are:

- political and governmental participation by organized labour;
- lack of "conspicuous display";
- degree of organization among occupational groups generally;
- employer acceptance of unions and collective bargaining;
- specialization in predominantly "light," "strike-free" industries;
- decentralization of industry, by firm;
- decentralization of industry, by region;
- rapid, sustained rate of growth in output per man-hour and in real wages;
- stability of growth and avoidance of severe cyclical fluctuations;
- full employment, or at least avoidance of severe unemployment.

Although Prof. Jamieson has analyzed industrial conflict in a cross-country comparison by selecting a very large number of variables, he warns the reader of the limitations of this study. The first is the fact that only those variables were included that had the data common to all five nations under study. Second, it is quite possible that out of the large number of variables selected, only one or two are the primary factors explaining the circumstances responsible for the incidence of industrial conflict.

For example, the low strike rate in Switzerland may be primarily due to the unique composition of its labour force, more than one third of which comprises foreign workers having only temporary employment and residence in the country. On the other hand, the relatively high incidence of strikes in Canada may be largely due to her unique relationship to the United States.

Prof. Jamieson concludes his paper with the note that an adequate comparative survey of the selected countries "would have to take full account of various strategic factors unique to each country, as well as those common to all."

Factors Favourable to Industrial Peace

Factors	*Sweden* 1	*Switzerland* 2	*Holland* 3	*Belgium* 4	*Canada* 5
A. Political and Social Unity & Stability (Sweden as "model)					
Governmental structure: Unitary vs. federal and decentralized	1	5	2	3	4
Political parties and governments: unity and stability	1	5	4	3	2
Political and governmental participation by organized labor	1	3	2	3	5
Degree of economic planning	1	4	2	3	5
Comprehensiveness of social security	1	5	3	2	4
Ethnic and lingual homogeneity*	1	5	2	3	4
Religious and ideological homogeneity*	1	4	5	3	2
Relative lack of regional divisions*	2	4	1	3	5
TOTAL	9	35	21	23	31
B. Organization and Collective Bargaining (Ross and Hartman, mainly)					
Degree of organization, occupational groups generally	1	1-2	2-3	2-3	5
Degree of organization, workers and employers	1	4	3	2	5

*Particularly as affecting labour organizations and "political action."

Numbers shown in the heading under each country denote degree of freedom from strikes. The numbers in the table denote rank or weight of the various factors. In each case, 1 is the highest and 5 the lowest rank. Bracketed numbers not to be included in totals.

Human Rights

The purpose of the 19th Annual Conference of Commissions for Human Rights was to exchange experiences regarding the administration of human rights legislation, and to discuss matters of mutual concern in relation to human rights.

DELEGATES from human rights commissions in Canada and the United States met in Toronto in July for the Conference of Commissions for Human Rights. Representatives from Great Britain and the International Labour Organization also were in attendance.

During the five-day conference, the delegates heard speeches concerning the problems associated with discrimination on racial or religious grounds, and the need for improved social legislation to deal with the problems of alienated communities. Following each session, workshop groups met to discuss and assess the achievements of human rights legislation.

The guest speaker at the official banquet was Hon. Mr. Justice Bora Laskin, who discussed what he called the next phase of action needed from human rights commissions. The problems that must be tackled by human rights agencies go beyond the composition of individual instances of illegal discrimination, he said. The need now is for a full-time administrative staff to enforce its human rights legislation. He commended the steps taken by the Government of Ontario to accept responsibility for, and to enforce, fair accommodation practices.

"We need more, however, than piecemeal approaches prompted by a concentration of political pressure or by some dramatic individual instance of discrimination. We need to examine the data on the deployment of our human resources or to gather it, if it is lacking, in order to provide a factual basis for assessing our patterns of employment to see if they exhibit collective discrimination. Positive programs of amelioration will then draw readier support, and we should be in a position to combat the stereotyping of this group or that group as being unsuitable or congenitally incapable of this or that kind of labour."

Speaking on discrimination, he said: "An inextricable circle of frustration is created by individual discrimination. When it forecloses opportunity in certain kinds of employment it diminishes hope for such employment by others, and thus dissuades them and others like them from striving to qualify for that kind of employment. A social pattern of exclusion begins to form that is more difficult to break down than any individual instance that contributed to it."

Mark Bonhan Carter, Chairman of the Race Relations Board of Great Britain, described to the delegates some of the features that contribute to the race situation in Britain, and he compared them with the positions in the United States. In Britain, immigration from the West Indies, India, and Pakistan is a relatively new phenomenon, and the coloured population comprises only 2 per cent of the total population, he explained.

He quoted the Home Secretary of Great Britain as stating that the objectives of Government policy are integration; "not a flattening process of assimilation, but equal opportunity, accompanied by cultural diversity, in an atmosphere of mutual tolerance."

At present, Britain's human rights code applies only to public accommodation. "We have the benefit of the North American experience as a warning and as an example," he said.

Walter Currie, Chairman of the Committee on Education for the Indian-Eskimo Association of Canada charged that "legislated discrimination," as found in the Indian Act of 1951, "is the major cause of this shameful mess" in which the Indians today find themselves.

Mr. Currie cited reports that "the Indian is the fastest growing ethnic group in Canada — a 55 per cent increase from 1949 to 1964." He then described several features in the Indian way of life that attest to their poverty. "The people on these reservations have a culture of poverty."

He pointed out that, when the Indian Act was passed by Parliament in 1951, the Treaty Indians of Canada could not vote in federal elections. "This right of a Canadian citizen was not given to the Treaty people of Canada until 1960."

He charged that the Indian Act treats the people paternalistically and excludes them from the Canadian way of life. "The Indian people believed and still believe, in too many cases, that what the Indian agent says is law. They do not realize their own human rights."

Kalmen Kaplansky, Director of the Canada Branch of the International Labour Organization, spoke on international concepts of human rights. He outlined the history of the United Nations Universal Declaration of Human Rights, many tenets of which were based upon the Declaration of the Rights of Man and of the Citizen, proclaimed in France in 1789, at the time of the French Revolution.

Employment Security: New Manpower Concepts

At the 54th annual IAPES convention, Deputy Minister Tom Kent told delegates that the Department of Manpower and Immigration aims to create "by far the best employment service in the world."

Extension of University of Toronto correspondence courses on certain subjects to Association members throughout the world was approved by delegates to the 54th annual convention of the International Association of Personnel in Employment Security, held in Richmond, Va., June 27 to 30. More than 1,400 delegates attended the meetings. The theme of the convention was "Employment Security — New Manpower Concepts."

H. A. Haugness, Idaho, was elected president of the Association for the 1967-68 year.

Tom Kent, Deputy Minister, Department of Manpower and Immigration, Canada, gave the keynote address, in which he outlined his department's plans for re-organizing the employment service of Canada. He was introduced by Marcel Guay, Assistant Director General of the Department of Manpower and Immigration, and a past president of IAPES.

Mr. Kent told the delegates that he and his colleagues were trying to create "by far the best employment service in the world, and he expressed confidence that their efforts would succeed. Referring to the change in the name of the employment service that was made after it was taken over by his Department from the Department of Labour, the Deputy Minister said that "the contemporary label for the job we have to do has come to be expressed in the phrase 'an active manpower policy'," which conveyed a sense of drive and purpose. But the Department's concern was still with employment — with matching people and jobs.

"The change that has developed over recent years is not a change in this fundamental purpose. What has happened is that the context in which we pursue that purpose has changed. It has changed in two main ways. First, we have come to see a closer connection between the qualifications of our labour force and the rate of our economic growth. And secondly, what the individual can best do, in order to make the most of the opportunities of the modern economy, has become a much more complex decision-making process, for the individual and for society."

For some time, Mr. Kent said, things had been getting more complicated. The pace of technological change had become entirely different from anything that we used to know, and it was increasing all the time. This kind of change compelled people to adjust themselves to it. There was no choice.

It would be fatal to try to put restraints on industrial change. "On the contrary, our welfare depends on making the most of new technology, responding quickly, taking new opportunities, building new plants, adopting new methods, learning new jobs.

"That is economic progress. It provides us with higher standards of living. But, like everything else, it has a price. It does a great deal for people, but it also requires a great deal from them. What it requires is adaptability. It requires people to change their jobs, to learn new methods of working, to develop new skills."

Manpower policies, the Deputy Minister said, were designed to help people to adjust to changing employment. In order to help people to understand what was required of them, a first-class service of information and advice was essential. Without it, manpower programs would be of limited use.

"They will be truly effective only when we have in every community a manpower centre that people of all kinds naturally turn to for information and advice and assistance about employment; a genuine focal point that the businessman uses as naturally as he uses his bank, and that the community as a whole sees as a vital element in its working life." Mr. Kent admitted, however, that "we are all quite a way from that kind of organization."

He said it was important to break down the public's old idea that an employment office was a place you went to when you were on unemployment insurance, and not otherwise. "Instead of limited information, our Manpower Centres have to know about the labour market as a whole. The manpower counsellor has to know what is really going on." He had to know where the job vacancies were, what were the underlying industrial, occupational and employment trends to which people could be advised to adjust themselves. He had to try to foresee changes and keep a step ahead of the game.

"As a basis for this kind of service, we are having to establish an entirely new kind of information system. It will call for careful surveys and a skilled staff of manpower analysts, statisticians and economists who can analyze current and prospective job opportunities and manpower supplies. Whether people use us depends on the quality of our service. We have to win confidence by doing a better job."

No matter how good the organization, it would not always be possible to find jobs for people "as and where they are. There will be many instances when the

Federations of Labour Conventions

The annual conventions for three provincial Federations of Labour were held during the summer in New Brunswick, in Manitoba, and in Newfoundland. Delegates heard addresses concerning the labour movement, and discussed policies and resolutions of the Federations for the coming year.

The theme of the New Brunswick Federation's 1967 annual convention was "Should labour participate in politics?" The 300 delegates, meeting in Fredericton from June 4-7, heard addresses given by representatives of three political parties, and directed questions to them concerning political education.

The discussion of political action was the result of a resolution adopted by the convention of the New Brunswick Federation in St. John last fall. A political education committee was subsequently established by the convention under the chairmanship of Vice-President Greg Murphy. The Committee planned the Political Education Night, which was held on the day preceding the official opening of the conference. The speakers were: Hon. William R. Duffie, New Brunswick Minister of Natural Resources, representing the Liberal Party; J. Stewart Brooks, provincial MLA, representing the Progressive Conservative party; and David Lewis, federal MP, representing the New Democratic Party. The chairman of the annual conference this year was George Home, Director of Political Education for the Canadian Labour Congress.

The delegates were addressed by the presidents of two labour federations, who called for greater political interest and action by trade unionists. John F. MacMillan, Past President of the New Brunswick Federation of Labour, and Louis Laberge, President of the Quebec Federation of Labour, spoke about the need for union members to concern themselves about who shall carry on the daily affairs of government.

The delegates agreed to a decision to submit to the provincial Government a brief containing the findings of a special committee on workman's compensation. Some of the principal requests included in the brief concerned changes in the Workmen's Compensation Act to provide for coverage for industrial deafness, for injuries sustained while assisting police and firemen in the performance of their duties, and for heart and lung disease. Other recommendations included the elimination of the present ceiling on pensions, the basing of pensions on the cost-of-living index, and an increase in the pensions payable to employees and their dependents.

Resolutions passed by the Federation included a call for the provincial Government to establish a Royal Commission to investigate medical services. The motion said that the medical profession is a closed shop in the matter of fees. The delegates passed a resolution urging the New Brunswick Government to open all waters in the province to anglers at a standard license fee. They also adopted a resolution asking the Government to increase reforestation of Crown lands and to prevent unnecessary destruction of forests.

Paul LaPage was elected President of the Federation for the coming year. Mr. LaPage has been a representative of the United Steelworkers of America since 1956. Other members of the executive elected at the conference were: Gregory Murphy, Albert Wilks, Michael Kenny, Rolland Blanchette, Phillip Booker, Francis Crilley, and Lloyd Basque, Vice-Presidents; and Valerie Bourgeois, Secretary-Treasurer.

MANITOBA

Delegates to the 13th annual convention of the Manitoba Federation of Labour heard a strong plea for greater recognition of rising industrial productivity by Canadian politicians and businessmen.

William Mahoney, General Vice-President of the Canadian Labour Congress and Director of the Canadian branch of the United Steelworkers of America, addressed the 300 delegates meeting in Winnipeg from June 2-4 on the subject of productivity. He said that maximum productivity and a maximum reward based on it must be a major Canadian goal, if Canada is to achieve greatness in the years ahead.

The delegates represented about 50,000 organized workers across the province and spent the major portion of the three-day convention in dealing with about 120 resolutions.

One of the major resolutions passed at the convention supported the drive for a minimum wage of $1.75 an hour throughout the province.

The Federation endorsed its stand to have medicare introduced at once. In addition, it asked that the federal Government be encouraged to adopt lotteries to aid hospitals.

The delegates passed a resolution calling on the provincial Government to amend the Manitoba Labour Relations Act so that a simple majority would be sufficient to determine certification of a union as bargaining agent in a given plant. The resolution urged the Government to adopt a 40-hour, five-day week as the legal standard work week.

A resolution adopted by the delegates demanded redistribution by population for provincial voting at elections. In a further resolution, the Federation condemned the recently introduced five per cent sales tax in Manitoba. Another resolution asked that everybody be forced

to contribute to unemployment insurance. It called for a lifting of the ceiling of income at which people are compelled to contribute, and for an increase in unemployment insurance benefits.

The Federation adopted a resolution asking the provincial Government to allow all government employees to join a union of their choice.

The President of the Federation, R. J. Henderson, told the delegates that Manitoba offers lower average weekly incomes than Saskatchewan or Alberta and that, in 1967, Winnipeg is no longer among the highest paid urban wage areas in Canada. In 1966, there was a migration from Manitoba to other provinces and, as a result, the province now faces an acute labour shortage, Mr. Henderson said.

The monthly per capita tax for affiliated unions of the Federation was increased by two cents to seven cents. Bernard Christophe, representative of the Retail, Wholesale and Department Store Union, said that the increase was necessary to avoid having to cut staff salaries for the coming year.

R. J. Henderson, Regional Supervisor for the Canadian Union of Public Employees, was re-elected to a third term as President of the Federation. Other officers elected to the executive were: Joseph Wilford, United Packinghouse Workers, First Vice-President; Bernard Christophe, Retail Store Employees, Treasurer; Gordon Ritchie, Retail, Wholesale and Department Store Union; and John Pullen, Electrical Workers, Winnipeg, Vice-President.

Provincial Vice-Presidents are: William Hanna, Flin Flon; H. V. McKee, Thompson; A. Atkinson, Brandon; Albert Pohl, Pine Falls; and William A. Hendry, Selkirk.

Joseph James, Executive Secretary of the Federation since 1962, announced his retirement during the convention. He will remain in office until the end of the year, during which time a replacement is to be found for him.

NEWFOUNDLAND

About 80 delegates to the 31st annual convention of the Newfoundland Federation of Labour met in Corner Brook from July 24-27 to consider several resolutions and to elect new officers.

One resolution called for repeal of the Hospital Employees Act (L.G., April, p. 228), which was passed last January. The Act forbids strike action by hospital employees. The convention suggested that the Federation executive seek the establishment of compulsory conciliation for hospital workers, although the union movement is opposed to this method.

The delegates approved a resolution urging the provincial Government to enact legislation permitting union representatives or business agents to enter working areas, and to oblige employers to provide food and shelter for employees at a fixed price. The delegates passed a resolution calling for legislation to provide for effective collective bargaining for civil servants in Newfoundland. The Federation planned to ask the Government to institute a safety program that would require all trucks of one ton or more to be manned by a driver and a helper.

In addition, the delegates decided to petition the Government for a "truth-in-lending" bill that would require loan companies, credit houses, and retail merchants to disclose to customers the true rate of interest before a purchase or loan is concluded.

David Jones was elected President of the Federation for the coming year. Mr. Jones is also President of the Office Workers and Professional Employees International Union, and chairman of the Joint Mills Union Committee in Grand Falls.

The convention approved a resolution to reduce the number of vice-presidents to four from five. The newly elected executive members are Vice-Presidents Frank O'Reilly, eastern region; John MacKenzie, central region; Linton Sheppard, western region; and William Parsons, northern region. James Walsh was elected as Secretary-Treasurer.

Human Rights

Continued from page 630

To him, the ILO is a model of the "interdependence between words and deeds." He said, "Most countries are still reluctant to admit to the existence of inequality, intolerance, and discrimination in their own midst although rather eager to criticize these malpractices elsewhere."

He related the activities of the ILO in the human rights field to the work of the Commissions. He reminded the delegates that the United Nations General Assembly has proclaimed 1968 to be International Human Rights Year, and asked that the representatives of the Commissions and Organizations take the opportunity to make it a focal point of advancing the principles of international decency.

Oppressed groups must acquire the power to hurt society if they are to push their way to a better life, A. Alan Borovoy told the delegates. Mr. Borovoy, Associate Secretary of the National Human Rights Committee, Canadian Labour Congress, said that Indians, Negroes, and other poverty-striken minorities must learn to swing the big stick of political and economic power. "An ounce of consumer boycott may be worth a pound of Government pleading."

Willard L. Bowman, Executive Director of the Alaska Commission for Human Rights, said that human rights officers should be troublemakers, even if it means losing their jobs.

The Executive Director of the Human Relations Committee in Gary, Ind., Charles H. King, warned the delegates that time is running out for the Negroes in the United States. He called for more time to be spent in draining off "the poison of the Ghetto" through the enforcement of human rights, rather than through the education of the rest of society.

Human Rights laws are no help to most of the poor Negroes and North American Indians, the human rights officials of Canada were told. Ben D. Segal, a Director of Liaison for the United States Equal Opportunity Commission, said "The progress that we have made in equal employment opportunity, for the most part, has benefitted only the Negro middle class."

He stated that no solution can be reached until the problems of employment, housing, education, transportation, and poverty are attacked on a metropolitan-wide basis.

Kenneth A. MacDonald, Chairman of the Washington State Board Against Discrimination, warned that human rights commissions may go out of business because they lack the legal muscle to do the job. He called for a direct administrative pipeline to mayors and governors to speed up hearings and to give more legal power to poverty programs.

Representing the Fair Employment Practices Branch of the Canada Department of Labour, Director George G. Blackburn informed the meeting of the steps that the Branch had taken to strenghthen its power for administration of federal anti-discrimination legislation. It had provided for five positions and was now in the process of recruiting personnel to fill them. He said that the Branch had what he called an adequate case-investigation service available through industrial relations officers posted at strategic points from coast to coast.

The conference passed a resolution to form a new international association of human rights commissions to replace the annual conference structure.

Dr. Louis Fine, the Chairman of the Ontario Human Rights Commission, was elected to the Executive Committee.

51st International Labour Conference Part III

The conference engaged in an initial discussion of the question of the improvement of conditions of life and work of tenants, share-croppers and similar categories of agricultural workers.

The conclusions adopted by the conference will serve as the basis for the preparation, after consultation with governments, of a draft recommendation to be submitted to next year's session of the conference for final decision.

The discussions took place within the general framework of the program of the United Nations and its specialized agencies on agrarian reform. The Food and Agricultural Organization, in particular played an active part at the Conference in covering the technical aspects of the problem.

First Draft Adopted

The first draft of the Recommendation applies only to agricultural workers who are not remunerated by a fixed wage. The conference adopted the first draft of the Recommendation by 221 votes, with two against and eight abstentions.

Its objective is to promote a progressive increase in the well-being of tenants, share-croppers and similar categories of agricultural workers who pay a fixed rent in cash, in kind, or in labour, or who pay rent in kind consisting of an agreed share of the produce; or who are paid in a share of this produce.

The recommendation calls for a level of rent that permits an acceptable standard of living for the occupant, compatible with human dignity, while giving each of the parties concerned a just and equitable return and promoting progressive husbandry. It provides for the reduction in rent or the postponing of its payment in case of crop failure due to natural causes, insofar as these result from unforeseen circumstances, or circumstances beyond the control of the agricultural worker. Agricultural workers are to be protected against the imposition by landowners of personal services in any form, paid or unpaid.

The first draft of the instrument provides for the encouragement of the founding of co-operative institutions, such as production co-operatives, processing co-operatives for agricultural produce, credit co-operatives, marketing co-operatives, and purchasing co-operatives. Adequate low-cost credit should also be made available to agricultural workers.

Such an ILO standard would represent a step towards the resolution of one of today's bitterest paradoxes. In a world short of food, the men who till the soil are among the poorest on earth.

Technical Co-operation

The agenda included a discussion on "The ILO and Technical Co-operation." This included the role of the ILO in the industrialization of developing countries. To provide a background to the discussion, a report on this topic was prepared for the delegates at the conference.

Programs designed to deal with production problems of developing countries have to be conceived in such a way that the broader human, social and institutional aspects of the labour problems encountered in the modernization and industrialization process may be properly taken into account and resolved, the report says.

Its main themes deal with the ILO's role in helping to advance industrialization in needy countries, and current and future ILO efforts to aid development.

In addition to the discussion, the delegates passed a resolution covering ILO technical co-operation, which was accompanied by a series of conclusions.

Additional Resources

The resolution noted the progress achieved by the ILO in technical co-operation, but it indicated that the situation of developing countries continued to deteriorate in terms of international trade.

It called for greater efforts by member-states to provide additional resources. This would allow the ILO to intensify its technical co-operation activities in three fields: human resources development; conditions of life and work; and social institutions.

The conclusions emphasized that ILO technical co-operation activities should continue to derive from, and ensure progressive application of ILO principles and aims. These aims look to the improvement of conditions of labour leading to social justice and the right of all human beings to pursue both their material well-being and their spiritual development in conditions of freedom and dignity, economic security and equal opportunity.

Among other points, the conclusions underscore the advantages of planning

technical co-operation programs to cover as long periods as possible; and, where circumstances permit, to prepare projects that include a certain number of neighbouring countries with common problems.

Industrialization Needed

The conference also adopted a series of conclusions on industrialization. Industrialization was described as "a process of economic development in which a growing part of the national resources is mobilized to develop a technically up-to-date, diversified, domestic economic structure characterized by a dynamic manufacturing sector having and producing means of production and consumer goods, and capable of assuring a high rate of growth for the economy as a whole, while achieving economic and social progress."

Direct practical assistance through technical co-operation should continue to take first place, the conclusions stressed. It was agreed that the conference itself could make useful contributions if the topic of industrial development were placed on the agenda at regular and more frequent, intervals.

The conference agreed that it was desirable that full use should be made of the opportunities offered by the International Centre for Advanced Technical and Vocational Training at Turin, and that the Centre should be enabled to widen its activities (L.G., April 1966, p. 144).

For many years to come, training in industrial skills would remain an urgent need in developing countries. Consequently, within the framework of its main program in the field of human resources, the ILO should strengthen its contribution in manpower-planning and assessment. This should include the training of managers, supervisors, instructors and the widening of the scope for accelerated training.

C. Wilfred Jenks Named Deputy Director-General

On the proposal of Director-General David A. Morse, consulting officers of the Governing Body agreed to designate Deputy Director-General C. Wilfred Jenks as Principal Deputy Director-General of the International Labour Office for a five-year period.

In this capacity Mr. Jenks will deputize for the Director-General as required, and will take charge of the Office in the absence of the Director-General. He will retain his present functions, which deal with international labour standards and relations.

Mr. Jenks, born in 1909, began his career at the ILO as a member of the Legal Section in 1931, and has served successively as Legal Adviser, Assistant Director-General and Deputy Director-General. He is a Member of the Institute of International Law and is the author of *The Common Law of Mankind*, and other standard works on international law.

UNDP Projects

During the conference, Paul G. Hoffman, Administrator, United Nations Development Program, addressed the Committee on Technical Co-operation and Industrialization, reporting to the delegates on the current position of UNDP projects under the responsibility of the ILO.

Mr. Hoffman emphasized, in particular, the contribution by the developing countries of their own resources to the projects. He said that this was a test of their determination to help themselves.

Two big questions facing the ILO and the UNDP, Mr. Hoffman said, were whether the ILO could expand its services rapidly enough to meet this insistently growing demand, and whether the UNDP could obtain the necessary funds to finance the expanded program needed. Although the first question could be answered in the affirmative, the second remained unanswered, he said.

Mr. Hoffman concluded: "Among the peace builders of this world, the members of ILO occupy a unique place. The major load for training falls on ILO. You are in a key position in this global war on poverty because what you are striking at is poverty of opportunity. None of us should rest too easily until everyone on this globe has an opportunity for a life of decency and dignity."

The conference also adopted a number of Resolutions not directly related to items on its agenda:

- occupational health, occupational diseases in general, and the special measures to be taken for the prevention and control of occupational cancer;
- international co-operation for economic and social development;
- the influence of rapid growth of population on opportunities for training and employment, and on the welfare of workers;
- action by the International Labour Organization for migrant workers;
- condemnation of the racial discrimination in respect of employment, occupation and freedom of association practised by the illegal regime of Southern Rhodesia; and
- the international covenants on human rights and the measures that the ILO should adopt regarding them.

Employment and Unemployment In July

Employment increased by 274,000 to 7,841,000 between June and July, an unusually large increase for the month. The labour force, at 8,125,000, was 338,000, or 4.3 per cent higher than a year earlier. Employment was 298,000, or 4.0 per cent higher than in July, 1966.

Unemployment decreased by 8,000 during the month from 292,000 to 284,000, but was 40,000 higher than a year earlier.

Total unemployment in July represented 3.5 per cent of the labour force, compared with 3.1 per cent in July 1966, and 3.3 per cent in July 1965. The June-to-July increase in the labour force and in the number of employed was related to the number of students entering the labour market at the end of the school term. An estimated 296,000 teenagers entered the labour force during the month; a slightly larger number of persons in this age group found employment.

Employment

Employment, at 7,841,000, increased by 274,000 from June to July. It was higher than a year ago in all regions, ranging from 1.3 per cent in the Prairie region to 5.1 per cent in British Columbia.

At 7,841,000, employment in July showed an increase of 298,000, or 4.0 per cent over July 1966. Agriculture accounted for 76,000 or about 25 per cent of the June-to-July increase; non-farm employment increased by 198,000, a substantially larger gain than usual at this time of year. There were large increases in community, business and personal service (136,000), trade (69,000) and transportation, and communication and other utilities (46,000). Employment on construction was 48,000 lower than a year earlier.

Unemployment

Unemployment, at 284,000, was 8,000 lower than a month ago, and 40,000 higher than in July 1966. Of the total unemployed, 221,000 or about 80 per cent, had been unemployed for less than four months, 30,000 had been unemployed for four to six months, and 33,000 for seven months or more.

NOTE: The classification of labour market areas, and the summary table titled "Labour Market Conditions", are not included in this issue because the statistical basis for these tables is not comparable with a year ago. Beginning September 1, 1966, all registered applicants were asked to contact Canada Manpower Centres every 30-days — instead of the previously requested period of 14 days — to keep their registrations active. Another factor influencing the comparability of registered applicants is the extension of provisions, such as temporary layoffs, for exempting certain classes of unemployment insurance beneficiaries from registration.

U.S. rail strike ended through legislation

Within a day of the start of a strike by the International Association of Machinists and five other shopcraft unions against the United States railways on July 17, Congress passed legislation to end the strike and settle the dispute. The bill was substantially the same as one approved earlier by the Senate, but not passed by the House of Representatives.

The strike was the first coast-to-coast railway strike in the United States for 20 years (L.G. 1946, p. 721). Although there was some resistance to the return to work after the two-day stoppage, and some talk from union sources of waiting for a court order before issuing any back-to-work instructions, in general the railways were able to start operating again without serious difficulty.

The bill ending the strike called for an immediate return to work, and then provided for the setting up of another 90-day period for mediation of the wage dispute by a five-man panel. During the first 30 days of this period, intensive mediation was to be conducted in an effort to reach voluntary agreement. During the next 30 days, the panel was to hold hearings to bring about a clearer understanding of the disputed issues, and at the end of this 30-day period it was to make its own recommendations for settlement. The last 30 days were to be used in trying to get the parties to accept the board's recommendations; but if these efforts failed, the recommended terms were to be imposed upon them on the 91st day, to take effect until as late as January 1, 1969.

This was the fourth mediation board that has been engaged in trying to settle the dispute between the shopcraft unions and the railroads. The central issue in the dispute was a demand by the unions for a wage increase of more than the 5 per cent agreed to in negotiations between the railways and most of the other unions involved.

Insurance Registrations And Other UIC Statistics

On May 31, insurance books or contribution cards had been issued to 3,608,342 employees who had made contributions to the Unemployment Insurance Fund since April 1, 1967.

On the same date, registered employers numbered 392,343—an increase of 4,228 since April 30, 1967.

During May, 11,530 investigations were conducted by enforcement officers across Canada. Of these, 8,864 were spot-checks of claims to verify the fulfilment of statutory conditions, and 812 were miscellaneous investigations. The remaining 1,854 were investigations in connection with claimants suspected of making false statements to obtain benefits.

Prosecutions were begun in 344 cases, 115 against employers and 229 against claimants.*

Punitive disqualifications as a result of false statements or misrepresentations by claimants numbered 759.*

Revenue received by the Unemployment Insurance Fund in May totalled $33,979,-902.35 compared with $31,994,984.24 in April and $33,434,138.52 in May 1966.

Benefits paid in May totalled $37,192,-065.10 compared with $47,262,830.11 in April and $29,991,590.13 in May 1966.

The balance in the Fund on May 31 was $239,723,003.18. On April 30, it was $242,935,165.93 and on May 31, 1966 it was $136,568,600.97.

Winter works program to continue in 1967-68

Continuation of the Municipal Winter Works Incentive Program for the winter of 1967-68 was announced by the Minister of Manpower and Immigration at the end of August.

The program will be the same as last winter's except for two changes: (a) it will be for five consecutive months instead of six, but each province will have the option of choosing whether it is to begin on November 1 or on December 1; and (b) it will apply to capital projects only—that is, purely maintenance work, such as brush-clearing, will not be covered.

The new terms were announced by the Minister after a meeting with the provincial Ministers of Municipal Affairs, at which it was agreed that the federal Government and the provinces would hold a meeting this fall to discuss ways of making the program as effective as possible.

*These do not necessarily relate to the investigations conducted during this period.

Price Indexes

Consumer, July 1967

The consumer price index (1949 = 100) increased 0.9 per cent to 150.2, at the beginning of July, from 148.8 in June. It was 4.1 per cent higher than the July 1966 level of 144.3.

In the current period, all main component indexes, except clothing and tobacco, increased.

The food index increased 2.6 per cent to 148.5 from 144.8. Higher prices were reported for dairy products, including butter, fresh fruits and vegetables, and most meats — particularly grapefruit, grapes, apples, bananas, potatoes, lettuce, tomatoes, most beef cuts, bacon, lamb leg roast and weiners. Decreases were recorded for jam, tea, tea bags, instant and regular coffee, peanut butter, margarine, lard, salad dressing, poultry and eggs.

The housing index rose 0.5 per cent to 151.9 from 151.2 as a result of general increases in rentals, home ownership and home furnishings.

At 132.5, the clothing index was unchanged. Increased prices in women's wear, children's wear and footwear were offset by decreases in the men's wear component.

The transportation index moved up 0.1 per cent to 158.3 from 158.2; higher prices were recorded for gasoline and motor oil in various cities.

The health and personal care index rose 0.4 per cent to 191.5 as a result of the increased costs of prepaid medical care. The recreation and reading index advanced 0.4 per cent to 167.8 from 167.1, reflecting increased prices for radios, console televisions, phonograph records, bicycles and newspapers. The tobacco and alcohol index was unchanged at 128.1

Group indexes a year ago in July were: food 146.0, housing (shelter and household operation) 144.8, clothing 125.2, transportation 151.2, health and personal care 181.0, recreation and reading 159.3, and tobacco and alcohol, 125.1.

City Consumer, July 1967

The consumer price indexes (1949 = 100) advanced in all 10 regional cities between June and July. The increases ranged from 0.9 per cent in Montreal and Edmonton-Calgary to 0.1 per cent in Saint John.

Food indexes moved up in all but one of the 10 cities, a decrease of 0.4 per cent being recorded in St. John's, Nfld. Increases ranged from 0.5 per cent in Saint John, to 2.7 per cent in Montreal. Housing indexes rose in all cities except Saint John which remained unchanged.

Changes in the clothing indexes were lower in three cities, higher in two, and constant in five. Transportation indexes increased in seven cities and declined in three. Movements in the indexes of health and personal care were higher in seven cities, lower in two, and unchanged in one. Recreation and reading indexes declined in four cities and advanced in six. The tobacco and alcohol index was unchanged in all 10 cities.

Regional consumer price index point changes between June and July were: Montreal +1.4 to 149.0; Edmonton-Calgary +1.2 to 140.7; Toronto +1.0 to 151.7; Ottawa +0.9 to 147.9; Winnipeg +0.8 to 145.8; Saskatoon-Regina +0.8 to 140.2; Halifax +0.7 to 141.4; Vancouver +0.6 to 144.1; St. John's* +0.2 to 129.4; Saint John +0.2 to 144.6.

Wholesale, June 1967

The general wholesale index (1935-39 = 100) moved up 0.2 per cent in June to 263.6 from the May index of 263.2 and was 1.5 per cent higher than the June 1966 index of 259.8. Six major group indexes were higher, while two declined.

The animal products group index rose 0.6 per cent to 295.1 from 293.2 on higher prices for fresh and cured meats, and livestock. The non-metallic minerals products group index rose 0.4 per cent to 198.6 from 197.8. In response to price increases for drugs and pharmaceuticals, and paint materials, the chemical products group index moved 0.4 per cent higher to 210.9 from 209.9.

The vegetable products group index advanced 0.3 per cent to 232.4 from 231.8 on price increases for sugar and its products, vegetable oils and their products, and potatoes; slight increases occurred in two major group indexes, textile products to 253.1 from 252.8, and non-ferrous metals products to 236.0 from 235.9.

Decreases of 0.2 per cent or less occurred in the following two major groups: wood products, 343.9 from 344.6, and iron products, 272.5 from 272.8.

*On base June 1951 = 100

Farm Products Prices

The index of Canadian farm products at terminal markets (1935-39 = 100) increased 0.3 per cent to 250.5 from 249.8 in the three-week-period June 30 to July 21. The field products index moved up 1.6 per cent to 176.0 from 173.3 and the animal products index decreased 0.4 per cent to 325.1 from 326.3.

U.S. Consumer, June 1967

The United States consumer price index (1957-59 = 100) rose by 0.3 per cent between May and June. The index in June was 116.0 and for May it was 115.7.

Food prices accounted for the largest increase, rising 1.1 per cent. The over-all consumer prices were 2.7 per cent above those of a year ago.

British Retail, June 1967

The British index of retail prices (Jan. 16, 1962 = 100) was 119.9 at June 20, 1967, compared with 119.4 at May 16 and 117.1 at June 21, 1966.

Reduction in the prices of tomatoes and onions were offset by increases in the prices of most fresh vegetables and apples. The index for the food group as a whole rose by nearly 1.5 per cent to 121.8, compared with 120.1 in May.

In the remaining nine groups there was little change in the general level of prices.

Food Technology: A New Career for Women

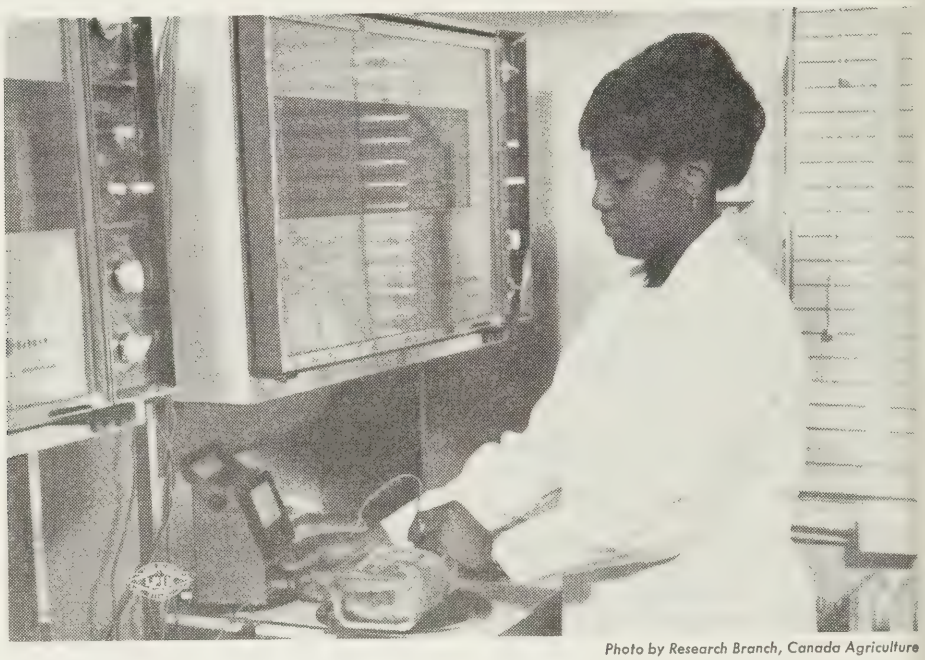

Photo by Research Branch, Canada Agriculture

Research trainee from Jamaica measuring tenderness of meat

Women's Bureau

"Food science and technology may be defined as the application of modern science and engineering to the processing, handling and storage of foods."*

It is important to understand that the food technologist is neither a home economist nor a dietitian, but something of both with a great deal of scientific objectivity added. Food scientists and food technologists will continue to improve the quality of foods, to develop new foods and sources of food, and to make both food and technology available to the hungry people of the world.

It is the food scientist and food technologist who process, preserve and develop new food from raw products. This work may be done in the laboratories of academic and government institutions (e.g. The Food Research Institutes of the Federal Department of Agriculture and National Research Council) and in industrial research laboratories.

One of the largest firms in the food industry has two research centres in Canada, the larger and newer being at Cobourg, Ont., and the other at Montreal. Between them, the two laboratories employ 50 food technologists, men and women.

The laboratory equipment ranges from ordinary pots, pans and kitchen mixers to the most modern of atomic absorption spectrophotometers and micro-wave ovens. With this equipment, technologists carry out a variety of research projects: microbiological experiments, analytical work, and pilot plant testing of new products and equipment.

Who has not at some time wondered from where and how we get the dried soups, instant potatoes, cake mixes and many of the other articles that are constantly fighting for space on food-market shelves? These are the miracles of food science. The supermarket of twenty years ago carried some 1000 food items. Today the number is 8000 — with 12,000 predicted for 1970.

The demand for food technologists in both government and industrial fields far exceeds the supply. Just recently, General Foods instituted a scholarship program to promote interest in food science careers. These include three undergraduate scholarships of $2000 each and four of $1000, open to men and women. (Eight Canadian Universities now offer degree courses in food science, and three technological institutes have shorter diploma courses in food technology.)*

Several categories of workers are found in these laboratories, and they are listed here in descending order of job responsibility, capability and training. In the top echelon are the trained university graduates. These men and women may be properly termed the scientists, as they must possess specialized knowledge of a number of disciplines — nutrition, chemistry, physics, microbiology and often engineering technology. And they, too, are the people who initiate, plan and coordinate specific research projects.

Below the scientist in rank, but acting as vital intermediaries between top management and plant personnel are:

- senior research technologists;
- research technologists;
- technicians; and
- laboratory assistants. Remuneration in all cases is comparable with that in other types of scientific work.

Promotion and up-grading of responsibility is encouraged in three ways:

- on-the-job training;
- seminars for all groups of workers;
- extra-mural studies are subsidized, and frequently the total cost of tuition is paid.

One large industrial organization emphasizes as part of its policy equal pay for men and women, and equal opportunity as regards employment and promotion. The Vice-President of General Foods Corporation is a woman, Miss Ellen Dunham; and two high executive posts in the same firm, those of manager of General Foods testing kitchens, and assistant manager of the quality control section are both held by women.

*Dr. D. M. Irvine, *Canadian Food Industries*, May 1967.

*Universities of British Columbia, Alberta, Saskatchewan, Manitoba, Laval, Guelph and Macdonald offer a 4-year (B.Sc.) food science course. B.C. Institute of Technology, Ste. Hyacinthe and Ryerson Institute offer diploma courses in food technology.

Growth in Rehabilitation Services, 1966-67

The provinces report that 3,159 persons reached rehabilitation status in 1966-67. The total reported since 1957 is now 19,692.

Vocational Rehabilitation Branch
Department of Manpower
and Immigration

The number of persons reported by provincial authorities to have reached "rehabilitation status" during 1966-67 totals 2,687, an increase of nearly 10 per cent over the previous year. This means that since 1957, when reporting first began, 19,240 persons have been enabled to return to work or to undertake their own care rather than require the services of another person.

When the details are obtainable, provincial rehabilitation authorities submit reports regularly on those cases which have required the specialized services of rehabilitation, and which have been followed for a suitable length of time to assure that their rehabilitation has been maintained. The reports do not include the considerable number of disabled persons who were placed in employment by counsellors of the Canada Manpower Centres, by other services, or by their own efforts, and who were not referred for special services under the rehabilitation program.

Of the 2,687 persons reported as rehabilitated in 1966-67 more than 72 per cent were dependent on relatives or public assistance. There were 2,907 dependents involved. The annual cost of maintenance was estimated to be approximately $2,000,000.

After rehabilitation, the estimated total annual income for the group was approximately $7,000,000. The contribution of the housewives or family home-makers is in addition to this.

Many Had No Work Record

Before their acceptance for rehabilitation service, approximately 1,000 of these persons had no previous work record, about 16 per cent had been employed as unskilled workers, nearly 7 per cent in semi-skilled occupations and over 7 per cent as skilled workmen. One hundred and forty-nine were engaged in agriculture, fishing or forestry.

Service occupations gave employment to 12 per cent with an equal number engaged in sales and clerical work and 3 per cent in the professional or managerial field. Wives and home-makers made up the remainder. A small number did not report their previous occupation.

With rehabilitation complete, the reports indicate that 7 per cent are now employed in the professional or managerial field, 20 per cent in sales and clerical work, slightly more in service occupations, 4 per cent in agriculture, fishing or forestry, 10 per cent as skilled, about 12 per cent as semi-skilled and about 20 per cent as unskilled workers. One hundred and seventy-five are housewives or family home-makers. Eighty were not able to undertake employment, but were able to dispense with help and look after themselves.

Educational Standing

A study of the educational qualifications of the group shows that almost half had not gone beyond elementary school, and of these, 424 had achieved only grade four or less. Although 1,500 had had some high school education, only 429 of them had passed matriculation, and 107 had then gone on to receive some university training.

Comparison of Disability Groups

	1957-58	*1966-67*
Amputations	6	5
Neuro-muscular skeletal impairments	19	24
Deaf and hearing impairments	3	6
Blind and visual impairments	18	6
Neurological impairments	14	4
Tuberculosis and respiratory disorders	27	5
Cardio-vascular diseases	3	4
Neuro-psychiatric disorders	5	36
Other conditions	5	10

Of the group, 559 had received some form of vocational training, 169 were in commercial work, 613 in trades training and 87 in service occupations. Fifty-seven had professional training, 43 had technical training and 40 had gone on to take some form of academic work.

In carrying out their rehabilitation, 155 members of the group received further academic training and 59 received training in a professional field. Fifty-seven were given training in a technical field, 366 in commercial work, 333 in trades and 589 in service occupations. Sixty-four received training but failed to specify the type.

In addition to vocational training, many received medical, social and vocational assessment and counselling. A variety of treatment services were provided to almost 60 per cent of the group, and prosthetic appliances and devices were secured for 491. The tools and equipment required to carry on their new trade or occupation were provided for 38 persons.

Age Distribution

The age distribution of those rehabilitated extends from youth to old age. Over 50 per cent were under 30 years of age, many of them new entrants into the labour market. It is interesting to note that just over 30 per cent of those rehabilitated were over 40 years of age, with more than half of them in the 40-49 age group. Women comprise just over one-third of the total.

These 2,687 persons suffered from a variety of disabling conditions. A comparison with statistics for 1957 shows an interesting shift in the percentage of each group served, and reflects the increasing attention that is being given to persons suffering from mental and emotional disorders.

It is estimated that the 19,242 persons rehabilitated since 1957 are now earning approximately $39,000,000 per year, with an accumulated total for the ten-year period of $183,000,000. This is in contrast to the annual cost of support for these individuals of about $13,000,000, with an accumulated cost for the period of approximately $66,000,000.

Better Service, a Move and a Charitable Act

Labour-Management Consultation Branch

In St. Vital, Man., labour and management of the city's Public Works Department plot together to give ratepayers improved service.

The eight-member labour-management committee serves as a strategy board for weighing the value of and often putting into action new ideas for the department, which services a city of 30,000 in greater metropolitan Winnipeg.

"We (management) lay our plans on the table and the people on the labour side come up with valuable suggestions which often alter our plans," explains Anthony Cliteur, director of public works.

The committee will discuss a proposal before it is tested, on an experimental basis. After a trial period, the proposal is brought back to the committee where it is either adopted, refined or discontinued.

An example is an experiment last winter to increase the efficiency of the snow-plowing fleet. The idea originated in a conversation between a group of garage mechanics and Mr. Cliteur, who brought it to the next committee meeting. The committee refined the idea and approved it for a trial period. As it turned out, when the committee assessed the results of the experiment, one part of the plan was dropped and second adopted.

St. Vital Alderman Syd McMurray reflects city hall's attitude toward the committee. "The city appreciates anything the committee asks for," he says.

Mr. Cliteur finds the committee a good place to get management to try out new ideas. Unionists are encouraged "to make suggestions they might otherwise not consider discussing with management. As long as we're talking, we get to know each other's viewpoint," he says.

Committee member Louis Maurice, garage mechanic and Vice-President of Local 500, Canadian Union of Public Employees, CLC, has worked for the municipality for 16 years. He is a strong supporter of the committee.

"It's helping both sides and the municipality as well," says Mr. Maurice. "We're able to thrash out our problems, and I've found that management tries out many of the suggestions we bring to the meetings."

The department's 50 employees are represented by Local 500.

* * *

Prior consultation with employees helped National Grocers Co. Ltd. to consolidate two Niagara peninsula warehouses into one operation.

The company brought its employees into the picture three months before closing the two warehouses in favour of a new $1 million, computerized building on the outskirts of Niagara Falls.

Employees of the soon-to-be-abandoned St. Catherines warehouse (25 miles from Niagara Falls) met with Niagara Falls Branch Manager D. A. Matthews three months before the scheduled move. "We cleared away a lot of doubts," Mr. Matthews recalls. "We explained that jobs would be available in the new warehouse."

All but a few of the St. Catherines workers accepted jobs at the new site, which now employs 94 people.

Jake Unrau, chief steward, Local 879, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America—(Ind.), is one of those who made the move from St. Catherines. He claims that meetings with management have kept the employees aware of future company plans, and helped them adjust to the new work situation.

* * *

An employee of Rolls-Royce Canada Ltd., Montreal, has been able to continue working despite costly medical treatment, thanks to a good turn by fellow-employees.

Two years ago, doctors told Al Glover, a stores department employee with Rolls-Royce for 11 years, that he was suffering from kidney failure. The ailment necessitated costly and time consuming appointments at a downtown Montreal hospital to have Mr. Glover's blood cleansed by an artificial kidney machine. Mr. Glover's work schedule was disrupted, and he found that the treatment routine was eating into the family life he enjoyed with his wife and three children.

At this point, Rolls-Royce's joint labour-management committee stepped in. It supervised a fund-raising campaign that Mr. Glover could have his own home-installed, artificial-kidney equipment. In two days of canvassing, most of the 800 employees in the plant contributed. The committee raised $8,500—donations averaged $12—and the company added $3,000, thereby enabling Mr. Glover to buy a kidney machine, and to live a normal, useful life. Because of the machine, Mr. Glover is back at work full time.

The shop committee of Local 869, International Association of Machinists and Aerospace Workers, canvassed its members in the plant. Nine out of 10 contributed

"With the equipment now installed in the Al Glover household, a highly difficult and serious situation has been resolved, thanks to the altruistic attitude of many who have worked with Al," comments the *Rolls-Royce News*.

Employment Problems of Older Workers

Part II

This is the concluding half of a two-part article, the first half of which was published in our September issue.

Older Workers' Section
Department of Manpower
and Immigration

Job redesign — or, roughly speaking, adapting the job to the worker — is examined in great detail in an Organization for Economic Co-operation and Development report by Stephen Griew.

Surprising results can sometimes be obtained with comparatively minor modifications, he points out. One firm, for example, bolted all its smaller centre lathes to the walls of the machine shop instead of to the floor. Older machinists immediately started to suffer far less from backache, and the former labour turnover virtually disappeared.

For management, too, job redesign has obvious advantages over the alternative of moving workers. It obviates difficulties likely to be met in filling skilled jobs, as well as avoiding frustration among older workers who are almost bound to feel they have been demoted. Redesigning jobs to suit older workers, moreover, will obviously reduce the strain on all workers, with consequent improved efficiency.

Training Methods

The report on training methods presents a comprehensive survey of current scientific knowledge on changes in human activities with advancing age, particularly in regard to learning ability and the power of adaptation. Its conclusions reflect the growing evidence that learning and training are possible even in the higher age groups, provided that the necessary conditions are established.

Finally, the report on placement techniques provides an extremely useful review of methods employed in OECD countries. It makes a number of practical suggestions for improving the value of employment services to older workers, and does not hesitate to criticize shortcomings in those services in a number of countries.

The OECD recommendations are addressed in the first place to member governments who are advised to consider measures seeking to prevent older workers from being forced into unemployment, less remunerative employment and premature retirement, and to extend their opportunities for productive employment. Such measures will naturally be of most interest to countries with relatively full employment. Countries less fortunately placed, however, could consider whether, in order to make the best use of the whole labour force, they might not extend the training of younger people and provide more leisure for all, rather than enforce or encourage retirement of older men and women able and willing to work.

General programs for health, education and vocational training should be available to workers of all ages to promote mental and physical adaptability to changing job requirements and social needs. Some older workers, however, have social and psychological problems that call for specialized vocational rehabilitation programs, in addition to special health, social, consulting, and educational services.

What Kind of Service?

A comprehensive and efficient employment service is essential for dealing effectively with hard-to-place cases. It should provide interviewing, consulting and testing facilities, together with placement procedures to ensure that the abilities of older workers are brought to the attention of management. Advisory services should be available for management, too, on such matters as job redesign, arrangement of work schedules, training of older workers, and methods of overcoming institutional and insurance barriers to their employment. The training methods employed should be adapted to the needs of older persons. Where jobs are not immediately available, multi-occupational training may be very useful.

Employers should be discouraged from imposing general maximum age limits in engaging new employees. They should be encouraged to consider older applicants on their individual merits. Some countries have even adopted legislation against discrimination of the basis of age (L. G., Oct. 1966, p. 599).

Pension systems should, wherever possible, allow for flexible retirement from work, and facilitate greater personal choice as to age of retirement.

Special job development programs should be considered, both in the public services and in private industry, to open up job opportunities suited to the abilities of older workers. Shorter daily and weekly work schedules are sometimes appropriate for people nearing retirement.

Individual enterprises should promote the continued utilization of their older employees through personnel policies which minimize redundancy by internal job transfers, job redesign and training techniques adapted for older workers. Institutional policies and insurance rules that limit the employment of older workers should be modified without impairing the value of these benefits to all employees.

Research into the capacities, performance and methods of extending the productive employment of older workers should be encouraged; and its findings should be presented by governments, employers' and workers' organizations and experts, in forms easily understandable to those expected to implement them.

The OECD committee recognized that developing countries with persistent unemployment or under-employment would need to make a further examination of how to apply such policies. But it is no exaggeration to state that the committee's recommendations constitute a veritable older workers' charter. It is now up to the trade unions in the member countries to ensure that it is applied without delay.

Certification and Other Proceedings Before the Canada Labour Relations Board

Employee Representation Branch

The Canada Labour Relations Board met for five days during July. It granted five applications for certification, rejected seven, and ordered one representation vote. During the month, the Board received four applications for certification and one application for revocation of certification. The Board allowed the withdrawal of one application for certification.

Applications for Certification Granted

1. *Syndicat National des Employés de Bureau du Port de Montréal* (*CSN*) (National Syndicate of the Port of Montreal Office Employees (CNTU), on behalf of a unit of office and certain other employees employed by the National Harbours Board at the Montreal Harbour. The Public Service Alliance of Canada had intervened (L.G., Apr., p. 247).

2. International Union of Operating Engineers, Local 115, on behalf of a unit of crane operators on a self-dumping log barge operated by Island Tug & Barge Limited, Vancouver, B.C. International Woodworkers of America, Local 1-85, had intervened (L.G., July, p. 416).

3. Canadian Brotherhood of Railway, Transport and General Workers on behalf of a unit of drivers and other employees of Northern Distributing & Warehousing Ltd., Saskatoon, Sask. (L. G., Aug., p. 497).

4. International Union of Operating Engineers, Local 115, on behalf of a unit of crane operators on a self-dumping log barge operated by RivTow Marine Ltd., Vancouver, B.C. (L.G., Aug., p. 497).

5. Truckers, Cartagemen, Construction and Building Material Employees, Local 362, and General Truck Drivers' and Helpers' Union, Local 31, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of truck drivers employed by Tiger Transfer Ltd., Calgary, Alta. (L.G., Aug., p. 497).

Applications for Certification Rejected

1. Transport Drivers', Warehousemen and Helpers' Union, Local 106, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, applicant, Transol Inc., Quebec, Que., respondent (Royal Mail), and Michel Bernier, *et al.;* interveners (L.G., Sept., p. 579). The application was rejected for the reason that it was not supported by a majority of the employees eligible to cast ballots in a representation vote conducted by the Board.

2. National Association of Broadcast Employees and Technicians, applicant, and Radio 1540 Limited, Toronto, Ont., respondent (Radio Station CHIN) (L.G., Sept., p. 579). The application was rejected because it was not supported by a majority of the employees eligible to cast ballots in a representation vote conducted by the Board.

3. International Longshoremen's Association, applicant, and Eastern Canada Stevedoring Limited, Montreal, Que., respondent (L.G., July, p. 416). The application was rejected because it did not comply with the provisions of the Industrial Relations and Disputes Investigation Act and the Board's Rules of Procedure.

4. International Longshoremen's Association, applicant, and Brown & Ryan Limited, Montreal, Que., respondent (L.G., July, p. 416). The application was rejected because it did not comply with the provisions of the Industrial Relations and Disputes Investigation Act and the Board's Rules of Procedure.

5. Letter Carriers' Union of Canada, applicant, and J. Dykes, Mail Contractor, Winnipeg, Man., respondent (L.G., July, p. 416). The application was rejected because the constitution of the Letter Carriers' Union of Canada does not permit the employees affected to be members of that union.

6. Letter Carriers' Union of Canada, applicant, and Jessiman Bros. Cartage Ltd., St. James, Man., respondent (L.G., July, p. 416). The application was rejected because the constitution of the Letter Carriers' Union of Canada does not permit the employees affected to be members of that union.

7. *Syndicat général du cinéma et de la télévision* (*CSN*), applicant, Canadian Broadcasting Corporation, respondent (TV Production Centres, Montreal and Quebec City) (L.G., Apr., p. 246), Canadian Union of Public Employees, intervener, International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada, intervener, and Association of Radio and Television Employees of Canada, intervener.

In rejecting the application, the Board stated, *inter alia*, that it affirms that, in dealing with an application for certification embodying a proposal that involves the fragmentation of an existing system-wide bargaining unit, convincing grounds be put forward in support thereof. The Board points out also that, in the proceedings in the present application, although new evidence has been brought forward to indicate changed circumstances since the time of the prior application by this applicant, the Board is of the opinion that this new evidence is not at this time sufficiently decisive to warrant the fragmentation of the existing system-wide unit in the present circumstances. (See Other Revocation Proceedings, below).

Representation Vote Ordered

National Association of Broadcast Employees and Technicians, applicant, Bushnell TV Co. Limited, Ottawa, Ont., respondent (CJOH-TV, Ottawa and CJSS-TV, Cornwall) (L.G., June, p. 364), James Wright, *et al.*, interveners, and Paul W. Kudla, *et al.*, interveners. The Board directed that only the name of the applicant appear on the ballot (Returning Officer: A. F. Tulloch).

Applications for Certification Received

1. Seafarers' International Union of Canada on behalf of a unit of deckhands and cooks employed aboard the M. V.

This section covers proceedings under the Industrial Relations and Disputes Investigation Act involving the functions of the Canada Labour Relations Board, for which the Employee Representation Branch of the Department is the administrative agency.

Canadian Tide and M. V. *Min Tide* by Pacific Tidewater Marine Ltd., Port Alberni, B.C. (Investigating Officer: D. H. Cameron).

2. Federation of Telephone Workers of British Columbia on behalf of a unit of employees of Canadian Telephone and Supplies Limited, Burnaby, B.C. (Investigating Officer: D. H. Cameron).

3. Brotherhood of Locomotive Firemen and Enginemen on behalf of a unit of locomotive engineers employed on its Canadian Division by the Chesapeake & Ohio Railway Company, St. Thomas, Ont. (Investigating Officer: H. A. Fisher).

4. Cartage and Miscellaneous Employees' Union, Local 931, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of drivers employed by J. E. Fortin Transport, Inc., Blackpool, Que. (Investigating Officer: G. R. Doucet).

Application for Revocation Received

Martel Express Ltée., Farnham, Que., applicant, and Transport Drivers', Warehousemen and Helpers' Union, Local 106, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, respondent. The application is for the revocation of the Board's Order of July 4, 1966, certifying the respondent union as bargaining agent for a unit of drivers, helpers and mechanics employed by the applicant company. (L.G., Sept. 1966, p. 521).

Other Revocation Proceedings

Proceedings affecting the International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada, respondent, and the Canadian Broadcasting Corporation, respondent, involving the Order of certification issued by the Board to the said International Alliance under date of August 6, 1953, certifying it as the bargaining agent for a unit of employees of the Canadian Broadcasting Corporation comprising production employees in various centres.

The revocation proceedings followed the Board's decision, issued on July 21, 1967, rejecting an application for certification affecting the *Syndicat général du cinéma et de la télévision* (*CSN*), applicant, Canadian Broadcasting Corporation, respondent (TV Production Centres, Montreal and Quebec City), Canadian Union of Public Employees, intervener, International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada, intervener, and Association of Radio and Television Employees of Canada, intervener.

In deciding the aforesaid application for certification, the Board stated, *inter alia*, that the evidence which has been adduced at the hearing in this case, coupled with the result of the vote taken in the application for certification made earlier by the Canadian Union of Public Employees for employees in the entire unit of employees of the Canadian Broadcasting Corporation comprised of so-called IATSE classifications, satisfies the Board that the International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada no longer enjoys the support of a majority of the employees in the certified bargaining unit, and that, in the circumstances, the Board has decided to review the initial Order of certification issued to the International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada on August 6, 1953, with a view to the revocation thereof; and further, that the International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada be given an opportunity to show cause, if it wishes to do so, why an Order of revocation should not be made (See also Item 7, Applications for Certification Rejected, above.)

Application for Certification Withdrawn

Canadian Brotherhood of Railway, Transport and General Workers, applicant, and MacCosham Storage and Distributing Company (Saskatchewan) Limited, Saskatoon, Sask., respondent (L.G., Sept., p. 581).

Scope and Administration of Industrial Relations and Disputes Investigation Act

Conciliation services under the Industrial Relations and Disputes Investigation Act are provided by the Minister of Labour through the Conciliation and Arbitration Branch. The Employee Representation Branch acts as the administrative arm of the Canada Labour Relations Board in matters under the Act involving the board.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations. P.C. 1003, which became effective in March, 1944 and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until superseded by the Wartime Regulations in 1944. Decisions, orders and certificates given under the Wartime Regulations by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the Act.

The Act applies to industries within federal jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the federal Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of conciliation officers, conciliation boards, and Industrial Inquiry Commissions concerning complaints that the Act has been violated or that a party has failed to bargain collectively, and for controlling applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents; the writing of provisions—for incorporation into collective agreements—that fix a procedure for the final settlement of disputes concerning the meaning or violation of such agreements; and the investigation of complaints referred to it by the Minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act, the Regulations made under the Act, and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported here under two headings: (1) Certification and Other Proceedings Before the Canada Labour Relations Board and (2) Conciliation and Other Proceedings Before the Minister of Labour.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, Halifax and St. John's, Newfoundland. The territory of the officers resident in Vancouver comprises British Columbia, Alberta and the Yukon and Northwest Territories; officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; officers resident in Toronto confine their activities to Ontario; officers in Montreal are assigned to the province of Quebec; and officers resident in Fredericton, Halifax and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Conciliation and Arbitration Branch and the Employee Representation Branch are in Ottawa.

Conciliation and Other Proceedings Before the Minister of Labour

Conciliation and Arbitration Branch

During July, the Minister of Labour appointed conciliation officers to deal with the following disputes:

1. Hudson Bay Mining and Smelting Co. Limited, Flin Flon, Man., and the Association of Flin Flon Trade Unions (Conciliation Officer: A. E. Koppel).

2. Canadian Broadcasting Corporation, Montreal, P.Q., and *Le Syndicat Général du Cinéma et de la Télévision* (Conciliation Officer: R. L. Fournier).

3. Blue Peter Steamships Limited, St. John's, Nfld., and Canadian Merchant Service Guild (Conciliation Officer: W. J. Gillies).

4. Canadian National Hotels Limited (Fort Garry Hotel, Winnipeg, Man.) and Canadian Brotherhood of Railway, Transport and General Workers (Conciliation Officer: A. E. Koppel).

5. Canadian National Hotels Limited (Bessborough Hotel, Saskatoon, Sask.) and Canadian Brotherhood of Railway, Transport and General Workers (Conciliation Officer: A. E. Koppel).

6. Porter Shipping Limited, Toronto, Ont., and Canadian Marine Officers' Union (Conciliation Officer: T. B. McRae).

7. Eastern Canada Flour Mills Ltd., Montreal, P.Q., and *Le Syndicat National des Employés des Minoteries Phénix* (*CSN*) (Conciliation Officer: C. E. Poirier).

8. Western Ontario Broadcasting Company Limited, Windsor, Ont., and National Association of Broadcast Employees and Technicians (Conciliation Officer: T. B. McRae).

Settlements by Conciliation Officers

1. Cape Breton Broadcasters Limited (Radio Stations CJCB and CJCX, Sydney, N.S.) and International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada (Conciliation Officer: D. T. Cochrane) (L. G., Sept., p. 581).

2. National Harbours Board, Port of Saint John, N.B., and National Harbours Board Employees' Federal Union No. 24 of Saint John (Conciliation Officer: H. R. Pettigrove) (L. G., Sept., p. 581).

3. North American Elevators Limited, Sorel, P.Q., and *Le Syndicat Catholique et National des Débardeurs de Sorel Inc.* (*CSN*) (Conciliation Officer: C. E. Poirier) (L. G., Aug., p. 498).

4. Canadian Pacific Railway Company (British Columbia Coast Steamship Service) Vancouver, and Seafarers' International Union of Canada (Conciliation Officer: D. S. Tysoe) (L.G., July, p. 417).

5. B.C. Towboat Owners' Association, and Canadian Merchant Service Guild (Conciliation Officer: D. S. Tysoe) (L.G., July, p. 417).

6. Clarke Steamship Company Limited; Eastern Canada Stevedoring (1963) Limited; Agence Maritime Inc.; Sept-Iles, and Local 5197, United Steelworkers of America (Conciliation Officer: G. R. Doucet) (L.G., Aug., p. 498).

Conciliation Boards Appointed

1. E.M.I.-Cossor Electronics Ltd., St. John's, Nfld., and National Association of Broadcast Employees and Technicians (L.G., Aug., p. 498).

2. Consolidated Aviation Fueling of Toronto International Airport, and Lodge 717, International Association of Machinists and Aerospace Workers (L.G., Sept., p. 581).

3. Hudson Bay Mining and Smelting Co. Limited, Flin Flon, Man., and United Steelworkers of America (L.G., Sept., p. 581).

Conciliation Board Fully Constituted

The Board of Conciliation and Investigation established in June to deal with a dispute between Canada Coach Lines Ltd., Hamilton, Ont., and Amalgamated Transit Union, Division 107 (L.G., Sept., p. 589) was fully constituted in July with the appointment of F. J. Ainsborough, Toronto, as Chairman. Mr. Ainsborough was appointed by the Minister in the absence of a joint recommendation from the other two members of the Board, company nominee C. A. Morley and union nominee L. C. Arnold, both of Toronto.

Board Reports Received*

1. Canadian Pacific Air Lines, Limited, Vancouver, B.C., and Lodge 764, International Association of Machinists and Aerospace Workers (L.G., Aug., p. 498).

2. Canadian Lake Carriers' Negotiating Committee (26 companies) and Seafarers' International Union of Canada (L.G., Aug., p. 498).

3. Cargill Grain Company Limited, Baie Comeau, Que., and National Syndicate of Employees of Cargill Grain Company Limited (CNTU) (L.G., Aug., p. 508).

4. Canadian National Railways (Borden Cape Tormentine Ferry Service) and Canadian Merchant Service Guild (L.G., July, p. 417).

5. National Harbours Board, and National Syndicate of Employees of the Port of Montreal (CNTU) (L.G., May, p. 310).

Settlement After Board Procedure

Atomic Energy of Canada Limited, Pinawa, Man., and Lodge 608, International Association of Machinists and Aerospace Workers (L.G., Aug., p. 498).

Settlement During Board Procedure

National Harbours Board, and National Syndicate of Employees of the Port of Montreal (CNTU) (see above).

This section covers proceedings under the Industrial Relations and Disputes Investigation Act involving the administrative services of the Minister of Labour and the Conciliation and Arbitration Branch of the Department.

*The texts of reports of Conciliation Boards are published in a LABOUR GAZETTE supplement.

Legal Decisions Affecting Labour

The Manitoba Court of Appeal has confirmed the jurisdiction of the Court to review the award of a non-statutory arbitration board under a collective agreement by originating a motion under the Queen's Bench Act.

The Ontario Court of Appeal has ruled that the arbitration board had jurisdiction to substitute suspension for dismissal of workers for a breach of the collective agreement.

Legislation Branch

On March 22, 1967 the Manitoba Court of Appeal confirmed that, when the relations between the employer and the union are governed by the federal Industrial Relations and Disputes Investigation Act, and the award of an arbitration board under the collective agreement cannot be challenged in *certiorari* proceedings, such an award is subject to review by the court by originating a motion under the Queen's Bench Act and Q.B.R. 537. The Court, however, by a majority decision allowed the appeal from the decision of Mr. Justice Dickson (L.G., July 1967, p. 418) and quashed the arbitration award on the ground that the arbitration board, by preventing the integration of the company's retirement pension plan with the Canada Pension Plan, amended, in fact, the terms of the collective agreement and thus exceeded its jurisdiction.

Circumstances of Dispute

Mr. Justice Guy, rendering the majority decision, reviewed the circumstances of the dispute. Hudson Bay Mining and Smelting Co. Ltd. had a collective agreement with Flin Flon Base Metal Workers' Federal Union No. 172 (and other unions) which also dealt with welfare plans. The company decided to integrate its retirement pension plan with the Canada Pension Plan. The union thought that, under the terms of the collective agreement, the two plans should be stacked.

Provisions of the Collective Agreement

The source of controversy between the parties was the interpretation of Article XIV of the collective agreement, which reads as follows:

> Article XIV. Welfare Plans. The Company agrees to continue, in accordance with the terms of the present agreements, its support of the welfare plans now available to the employees, namely: Apprentice Plan, Vacations-with-Pay Plan, Group Life Insurance, Retirement Pension Plan, Non-occupational Accident and Sickness Benefit Plan, Hudson Bay Mining Employees' Health Association, Hudson Bay Mining Employees' Death Benefit Plan.

The unions argued that the words "to continue . . . its support of the welfare plans" meant "to continue without change." The company, however, drew attention to the welfare plans as outlined in a booklet and, in particular, referred to the section dealing with the retirement pension plan, which reads as follows:

> (a) The company shall administer the Plan and have the power to decide all matters with respect thereto, insofar as there is no conflict with the rules, regulations and practices of the Canadian Government Annuities Branch and the North American Life Assurance Company.
>
> (b) The company reserves the right to change or discontinue the Plan at any time if, in the sole opinion of the Company, conditions require. In the event of it being necessary to discontinue the Plan, contributions deposited up to such time by both employee and Company shall vest solely with the employees.

The company maintained that the "present agreements," mentioned above, have not been violated by the proposal to integrate the company plan with the Canada Pension Plan.

Arbitration Award

In due course, the dispute was submitted to an arbitration board, pursuant to Art. XXIII of the collective bargaining agreements, and the majority of that board decided that by proposing to integrate the pension schemes rather than stack them, the company was not abiding by the terms of the collective agreement.

Sec. 3 of Art. XXIII of the collective agreement that was relevant to the dispute at bar, reads:

> The decision of a majority of the arbitration board shall be in writing and delivered to the parties hereto. It shall be final and binding upon the parties hereto, subject to the condition that the decision shall not, without the consent and approval of the parties hereto, rescind or amend any of the terms or conditions of this collective bargaining agreement, but shall be in general accord with the scope and terms thereof.

The company challenged the award on the ground that the majority of the arbitration board disregarded the words of Sec. 3 — namely, "subject to the condition that the decision shall not, without the consent and approval of the parties hereto, rescind or amend any of the terms or conditions of this collective bargaining agreement, but shall be in general accord with the scope and terms thereof." In the view of the company, these words have to be constructed strictly, and the arbitrators should not, in their decision, make a new agreement between the parties by amending or rescinding the original agreement. The company contended further that the effect of the majority decision was to make a new agreement between the parties, and this exceeded the jurisdiction given to the arbitrators.

Court Action

The alleged excess of jurisdiction was the basis of the company's application before Mr. Justice Dickson (L.G., July- p. 418) who rejected the company's argu, ments and upheld the arbitration award on the ground that the task of the arbitra-

tors was to interpret Art. XIV of the collective agreement, and said that, in his view, the interpretation given by the board was one that the language of Art. XIV might reasonably bear. The decision of Mr. Justice Dickson was appealed by the company.

Excess of Jurisdiction

In the Court of Appeal, the issue to be decided was whether the majority of the arbitration board exceeded its jurisdiction by, in fact, amending the contract between the parties. Mr. Justice Guy (with whom Mr. Justice Monnin concurred) held that the board of arbitration did in fact amend the contract between the parties, and in doing so, exceeded its jurisdiction. He stated that, when the collective bargaining agreement and the booklet outlining the welfare plans are read together (as they must be to determine the real *consensus ad idem* between the parties), it is abundantly clear that the signatories to the collective agreement were fully aware of the fact that the welfare plans would have to be adjusted from time to time as conditions demanded. Then, Mr. Justice Guy added:

> Viewed in this light, it is apparent to me that when the new agreement became effective in 1965, the words above, 'The Company agrees to continue in accordance with the terms of the present agreements, its support of the welfare plans now available to the employees', did not in any way limit that support to the exact formulae which had been previously followed, but simply provided that the support of any particular welfare plan would not be withdrawn. As I have indicated, the proposed integration of the pension welfare plan with the new Canada Pension Plan is certainly contemplated by the parties to the dispute.

Mr. Justice Guy agreed with the trial judge that the award of a nonstatutory arbitration board could be brought for judicial review on notice of motion under the Manitoba Queen's Bench Act and Q.B.R. 537.

Appeal Allowed

The Court, by a majority decision (Mr. Justice Freedman dissenting), allowed the appeal, and quashed the award of the majority of the board of arbitration on the ground of excess of jurisdiction. *Hudson Bay Mining and Smelting Co. Limited v. Flin Flon Base Metal Workers' Federation Union 172 et al* (1967) 59 WWR, Part 8, p. 472; (1967) 61 D.L.R. (2nd) Part 5, p. 429; 67 CLLC para. 14,027.

ONTARIO COURT OF APPEAL

On March 13, 1967 the Ontario Court of Appeal, by a majority decision in allowing an appeal from a decision that quashed an artibration award on *certiorari*, stressed that the common law rights of employers to hire and discharge at will were replaced under the collective bargaining system by the employment security provisions of a collective agreement, and that the employer's freedom to discipline or discharge an employee was limited to "proper cause." A dissatisfied employee had a recourse to grievance procedure culminating in arbitration. The court held that it was for the arbitration board to decide whether the discharge was for a "proper cause," and that it was within the board's jurisdiction to substitute suspension for discharge as a proper punishment for breach of a collective agreement.

Circumstances of Dispute

Port Arthur Shipbuilding Company discharged three employees on the ground that they had absented themselves from their work for the company in order to take employment with another employer. Two of the employees falsely used sickness as an excuse and worked for three successive night shifts for other firms before returning to their jobs as welders with the company. The third employee took a week off without pay and spent the five working days in the employ of another firm. Art. 11.03 of the collective agreement expressly states that "leave of absence shall not be granted to any employee for the purpose of engaging in employment elsewhere or to engage in his own business."

All of the employees involved were aware that they had been absent in breach of the collective agreement. Two of the employees concerned had 15 years, and the third one 24 years seniority with the company. The company discharged all three of them, relying on article 3.01 of the collective agreement, which recognized its authority to "demote, suspend and discharge for proper cause any employee." The discharge of employees was submitted through grievance procedure to an arbitration board. The decision of the board, substituting suspension for dismissal of the employees concerned, was quashed on *certiorari* by Mr. Justice Brooke, whose ruling was appealed by the union.

Management Rights, Grievance Procedure

In the Court of Appeal, Mr. Justice Laskin referred to the provisions of the collective agreement regarding the rights of management, grievance procedure and arbitration. The relevant clauses read:

> The Union recognizes the Management's authority to manage the affairs of the Company, to direct its working forces, including the right to hire, transfer, promote, demote, suspend and discharge for proper cause any Employee, and to increase, or decrease the working force of the Company, provided that the Company shall not exercise these rights in a manner inconsistent with the terms of this Agreement.
>
> An employee affected by the exercising of this authority, who feels that he has cause for dissatisfaction, may have the complaint dealt with in accordance with the "Grievance Procedure."
>
> The Board of Arbitration shall hear and determine the grievance and then shall issue a decision, and the decision shall be final and binding upon the parties and upon any person affected by it. The decision of the majority shall be the decision of the Board of Arbitration, but if there is no majority, the decision of the Chairman shall govern.
>
> The Board of Arbitration shall not alter, modify, amend or make any decision inconsistent with the terms of this agreement.

Mr. Justice Laskin held that, under the provisions quoted above, the company does not have complete freedom to discipline or discharge; it is limited to "proper cause"; and a dissatisfied employee whom the company has discharged for what it deems to be proper cause is entitled to challenge the company's judgment through grievance machinery culmating in final and binding arbitration.

Scope of Arbitration

Mr. Justice Laskin stated that the key question in the case at bar concerned the scope of the arbitration board's powers in dealing with the union's contention that the company's action did not constitute discharge for proper cause. According to Mr. Justice Laskin, the arbitration board had first to decide whether the facts on which the discharges were founded were true; and second, whether those facts constituted proper cause for discharge. Further, Mr. Justice Laskin rejected the contention that the company's judgment that the neglect of duty in breach of collective agreement by the employees concerned merited discharge was beyond review of the arbitration board. Such assertion would, in his view, empty an arbitration board's function in discharge cases of any substance once misconduct was proved. He added that the collective agreement clearly made "proper cause" an arbitrable issue.

The arbitration board reviewed the circumstances surrounding the unauthorized absences of the three employees to go to work for other employers, and their employment record with the company, and reached the conclusion that proper cause for discharge was not made out. The

Board ordered reinstatement of the employees, and substituted temporary suspension for dismissal as a proper punishment for breach of the collective agreement.

Certiorari to Quash the Award

The arbitration award was challenged on *certiorari* and quashed by Mr. Justice Brooke on three grounds. First, he found an error in law in the use by the arbitration board of the words "just cause" when the collective agreement used the expression "proper cause"; this, in his view was contrary to the provision of the collective agreement against making any decision inconsistent with the terms of the collective agreement. Second, Mr. Justice Brooke found that the arbitration board was wrong in law in assessing proper cause by reference to "equitable considerations." This argument was developed before the Court of Appeal through assertions that the strict common law positions of dismissal for cause as between master and servant must be taken, and that factors such as an employee's previous good record and length of service were irrelevant. Third, the trial judge found an excess of jurisdiction in the substitution by the arbitration board of suspension for discharge.

No Error in Law

Mr. Justice Laskin disagreed with the statement made by the trial judge that "at no place in the award has [the arbitration board] addressed itself to the words of the collective agreement and any distinction which they might have in their meaning from those which the board has applied." Mr. Justice Laskin noted that, in its reasons, the arbitration board concluded in respect of two employees that "we find that these two employees were not discharged for proper cause." The same finding was implicit in the award with respect to the third employee.

Mr. Justice Laskin admitted that the arbitrators (including the one who dissented) convassed the matter before it in terms of "just" cause. But, in his view, they were acting within their jurisdiction in treating the words "just" and "proper" as equivalents and as interchangeable, and, in viewing these terms as entitling them to examine all the circumstances, including the seniority and previous record of the employees for good conduct, and in coming to a conclusion whether the discharges were for proper cause.

The trial judge was of the opinion that the words "proper" and "just" had different meanings and, according to Mr. Justice Laskin, he failed to show this except by an abstract and selective assertion. Mr. Justice Laskin stated that adjectives such as "proper" or "just" must take their meaning from the context in which they are used and in the circumstances of each case, and that it is unreal to consider them as detached abstractions.

He noted that the Shorter Oxford Dictionary (3rd ed. revised 1959) gives among the meanings of "just" the following: "right," "proper," "correct," "merited"; and "proper" is defined, *inter alia*, as meaning "appropriate to the circumstances." Finally, he held that in common sense, all three members of the arbitration board took a reasonable and workable view of the word "proper," and he stated that he found no error in law in their approach.

Limits on Employer's Rights to Punish

Next Mr. Justice Laskin considered whether the company, having "cause" to punish the three employees for misconduct, had an unreviewable discretion to decide that only discharge would meet the situation. The board of arbitration viewed "cause" as involving a breach of duty to the employer, but felt that it had to decide whether there was a breach of duty for which it was "proper" to discharge the three employees. This issue led to the consideration of the relevance of the common law of master and servant to the principles underlying collective bargaining.

Common Law Principles not Applicable

Mr. Justice Laskin held that, at common law, an employee had no security of employment even in the face of a firm contract for a term; the employer, if he could show no breach of contract or serious breach of the duty of loyalty to justify peremptory discharge, could rid himself of an employee by paying damages for wrongful dismissal. Collective bargaining, as projected in many collective agreements, has changed this situation drastically. Matters familiar in a master and servant context have taken on different dimensions under collective agreements. Collective bargaining and the collective agreement have given the individual worker security of continuing employment, depending on his seniority in relation to the employer's production needs and on his good behaviour which avoids giving just or proper grounds for discharge.

In the opinion of Mr. Justice Laskin, the seniority and discharge clauses in a collective agreement represent the employees' charter of employment; this is reinforced by removing from the employer not his initiative in acting against an employee, but his previously unreviewable right to rid himself of an employee, even if it cost money damages to do so.

In the case at bar, the company and the union, although admitting that there had been a breach of duty or misconduct by employees, agreed that the company's action in treating the misconduct as meriting discharge could be arbitrated by a board that might take a different view of the situation and annul the discharge. The arbitration board, in the case at bar, had held that the cause, as established, did not merit discharge, but a lesser form of discipline. Mr. Justice Laskin could not see in this determination any ground for judicial interference on *certiorari*, and he stated that he would take the same attitude if the arbitration board had sustained the company's action and the union had brought *certiorari*.

Mr. Justice Laskin added further that the collective agreement leaves the extent of disciplinary action at large under the formula of "proper cause." It was for the arbitration board, as the special agency established by the parties to adjudicate on disputes respecting the administration, application, interpretation or alleged violation of the collective agreement, to take into consideration the employee's length of service and any other factors respecting his employment record with the company when deciding whether to sustain or interfere with the company's action. In doing so, the board was carrying out the very function assigned to it by the parties.

Substitution of Suspension for Discharge

The third ground given by Mr. Justice Brooke for quashing the arbitration award was that the board erred in law in subtituting suspension for discharge when it concluded that proper cause for discharge was not established. This apparently meant that the arbitration board should have directed unqualified reinstatement with pay for time lost. An appeal counsel for the company did not argue against an exercise of a remedial power of substitution, but preferred to rest its case on the existence of fatal error in law in respect of the arbitration board construction and application of the standard of "proper cause." In these circumstances, Mr. Justice Laskin did not regard the third ground taken by Mr. Justice Brooke as preventing the setting aside of his order to quash.

Appeal Allowed

The Court of Appeal, by a majority decision (Mr. Justice Schroeder dissenting), allowed the appeal from the decision of Mr. Justice Brooke and upheld the validity of the arbitration award. *Port Arthur Shipbuilding Company v. Arthurs et al*, 67 CLLC, para. 14,024; (1967) 62 D.L.R. (2nd) Part 5, p. 342.

Recent Regulations

Under Provincial Legislation

Minimum wage rates were raised in three provinces. Alberta raised the general minimum to $1.25 an hour by two stages. New Brunswick provided for a general minimum of $1 an hour on January 1, 1968. In Quebec, higher rates were set for employees in forest and sawmill operations and in the shoe industry. In Newfoundland, workmen's compensation benefits extended to offshore fishermen.

Amendments to the general minimum wage order of Alberta, and to the three special orders governing the ambulance, taxicab industries and work camps issued by the Board of Industrial Relations on June 30, increased the minimum wage from $1 to $1.25 an hour by two stages, and also raised the minimum wage of commercial travellers, and female telephone operators in small exchanges. A new order governing call-in pay of part-time employees in municipal recreation and athletic programs was gazetted the same day.

The general minimum wage was raised from $1 to $1.15 an hour, effective August 1, 1967. It is to increase to $1.25 an hour on January 1, 1968. The same rates are set for employees in the ambulance and taxicab industries and in work camps, the only difference being that these employees are again permitted to work longer hours at straight-time rates.

The amendment to the order covering commercial travellers and various kinds of salesmen (Alta. Reg. 221/67) raised the minimum from $40 to $46 a week, effective August 1, 1967, with provision for an increase to $50 a week on January 1, 1968.

Under the amended order for female telephone operators in exchanges serving less than 100 lines (Alta. Reg. 223/67), the minimum was raised by 15 cents to $1.05 an hour on August 1, 1967, with provision for a further increase to $1.15 an hour on January 1, 1968.

The new order governing part-time employees in recreation and athletic programs (Alta. Reg. 225/67) applies to part-time employees employed in a municipally operated recreation or athletic program or by a non-profit community service organization.

The new order exempts these employees from Sec. 4 of the general minimum wage order, which requires the payment of at least four hours' pay at the applicable minimum rate for any period of less than four consecutive hours, or if an employer's establishment is open for business less than four in any day. Instead, it provides that this category of part-time employees must receive at least two hours' pay at the applicable minimum rate for any period of employment of less than two hours.

NEW BRUNSWICK

Minimum Wage Act

In New Brunswick, a new general order providing for a minimum wage of $1 an hour will go into force on January 1, 1968, replacing three orders originally issued in 1965 for the wholesale and retail trades, the manufacturing and food processing industries and the service industries

Amendments to the order for employees in construction, mining and primary transportation, and to the order governing workers in logging, forest and sawmill operations, increased the minimum wage by 20 cents to $1.25 an hour, effective January 1, 1968.

NEWFOUNDLAND

Workmen's Compensation Act

New Workmen's Compensation regulations (Nfld. Reg. 29/67 gazetted June 20, 1967) extended workmen's compensation benefits to offshore fishermen and made some other changes in the classification of industries under Part I of the Act. First-aid requirements were also amended.

QUEBEC

Minimum Wage Act

New minimum wage orders issued by the Quebec Minimum Wage Commission on July 15 increased rates for employees in forest operations, sawmills and related enterprises, and in the shoe industry. A revised vacation order published the same day provided for extended coverage, effective from July 1.

Forest Operations

The new order for forest operations (No. 9, 1967), which went into force on July 1, set the following minimum rates:

(1) piecework wood cutters — an average rate of $14 a working day established for each calendar month;
(2) other employees hired by contract (cooks, kitchen helpers and fire rangers) — $12.50 a day;
(3) camp watchmen, stablemen, dam watchmen and gatekeepers — $11.25 a day;
(4) all other employees — $1.25 an hour.

Sawmills and Related Enterprises

The order for sawmills and related enterprises (No. 10, 1967), which went into force on July 15, again set rates on a zone basis.

In sawmills, the general minimum is $1.25 an hour in Zone I and $1.15 an hour in Zone II. In small sawmills with five employees or less, or in sawmills where 75 per cent of the work done is for farmers, the minimum is $1.15 an hour in Zone I and $1.05 an hour in Zone II. Skilled employees such as sawfilers, stationary enginemen and machinists must be paid at least $1.40 an hour in Zone I and $1.30 in Zone II. The minimum for employees under 19 years is 90 cents an hour in Zone I and 85 cents in Zone II.

The minimum for employees in wrought wood shops are 5 cents more than those for employees in sawmills.

Shoe Industry

In the order for the shoe industry (No. 7, 1967), which went into force on July 15, rates are again set for three zones. Most of these rates are established on a piecework basis.

Vacation Order

The revised vacation order (No. 3, 1967) made no change in benefits, but extended coverage, effective from July 1, 1967.

Newly covered workers include: employees of municipal and school corporations (except teachers and secretaries whose hours cannot be verified); apartment house janitors; caretakers provided with free lodgings; and home workers.

As before, all workers covered by the order must be given a week's vacation with pay after a year's service. A worker who has not completed a year's service on April 30 (the end of the "reference year") is entitled to one half day of vacation for each month of service.

Claimants in May

211,200 Fewer Than in April

Unemployment Insurance
Pensions and Manpower Section
Dominion Bureau of Statistics

Claimants for unemployment insurance benefit on May 31 totalled 281,100, which was 54 per cent fewer than the total of 492,300 on April 28, and 29 per cent more than the total of 217,600 on May 31, 1966.

The number of male claimants increased 32 per cent from May 31, 1966 and the number of female claimants 25 per cent. The seasonal benefit period terminated on May 20.

Initial and Renewal Claims

A total of 116,900 initial and renewal claims were filed during May, which was 21 per cent fewer than the total of 148,200 filed during April, and 28 per cent more than the total of 91,000 filed during May 1966.

The decrease of initial and renewal claims from April can be attributed partly to the termination of seasonal benefit payments on May 20. Although initial claims made up 75 per cent of the total number of claims in both April and May, they accounted for 80 per cent of the month-to-month decrease of the number of claims filed.

Beneficiaries and Benefit Payments

The average weekly number of beneficiaries during May was estimated to be 294,200, compared with 460,500 in April, and 278,200 a year ago. Benefit payments during May totalled $37.2 million, compared with $47.2 million in April, and $30 million in May 1966. The average weekly payment was $25.28 during May, $25.63 during April, and $23.93 during May 1966.

Provincial Data

The total number of regular benefit claimants at the end of May showed an increase in all provinces from the total at the end of May 1966, except in Manitoba, where a slight decrease occurred.

The total number of initial and renewal claims at the end of May showed an increase in all provinces from the total at the end of May 1966, except in Manitoba, where a 2 per cent decrease occurred. The number of initial claims increased in all provinces. In the number of renewal claims, however, a 15 per cent decrease occurred in Manitoba, and a 3 per cent decrease occurred in Nova Scotia.

Seasonal Benefit 1966—1967

Claims considered under the seasonal benefit provisions accounted for more than 35 per cent of initial claims processed during the 1966-67 seasonal benefit period and 40 per cent of the total of one year ago. The heaviest volume of claims considered under these provisions occurred in December. This is associated with the slow-down in employment due to climatic conditions and the opening of the seasonal benefit period on November 27, 1966.

Initial claims established under the seasonal benefit provisions totalled 242,000, which was 3 per cent fewer than the total of 250,000 during the 1965-66 period. In about 10 per cent of the cases, eligibility was achieved from contributions in fishing. For this group, the number was only slightly lower than that of one year ago, and the decrease occurred mainly among persons eligible for non-fishing seasonal benefit.

More than 24 per cent of a total number of 242,400 benefit claims were established in December. The January total was somewhat less, but some of these would have been filed in December. The sharp dip in the May total was due mainly to the termination of the seasonal benefit period on May 20.

The number of claimants reporting to the local offices on the last working day of each month was greatest on March 31 with a total of 136,500. At the end of April, the total number of claimants decreased from the total at the end of March. Although the number of fishermen claiming seasonal benefits decreased, the number of non-fishermen claimants increased. The decrease was due to the exhaustion of benefit, as well as the resumption of fishing.

For the fishing sector, 90 per cent of the claims were recorded during December and January. In the non-fishing sector, only 45 per cent of the claims were recorded during these two months. Of the 25,000 fishermen establishing benefit, approximately 20,000, or 80 per cent, were in the Atlantic provinces. Newfoundland accounted for almost 10,000, Nova Scotia accounted for 5,000, and British Columbia recorded 4,000.

During the 1966-67 period almost $70 million was paid under these provisions, compared with $61 million for the same period last year.

A claimant's unemployment register is placed in the "live file" at the local office as soon as the claim is made. As a result, the count of claimants at any given time inevitably includes some whose claims are in process. "Claimants" should not be interpreted either as "total number of beneficiaries" or "total job applicants."

Wage Schedules Prepared In June

During June, the Department of Labour prepared 342 wage schedules for inclusion in contracts proposed to be undertaken by departments of the federal Government and its Crown corporations in various areas of Canada, for works of construction, remodelling, repair or demolition, and other services.

In the same period, 275 contracts in these categories were awarded. In addition, 321 contracts containing the General Fair Wages Clause were awarded by Central Mortgage and Housing Corporation, Defence Construction (1951) Limited, and the Departments of Defence Production, Post Office, Public Works and Transport.

A copy of the wage schedule issued for each contract is available, on request, to trade unions concerned, or to others who have a bona fide interest in the execution of the contract.

Contracts awarded in June for the manufacture of supplies and equipment were:

Department	*No. of Contracts*	*Aggregate Amount*
Defence Production	141	$823,870.00
Post Office	3	34,330.72
Transport	1	17,492.00

During June, the sum of $15,411.14 was collected from 17 contractors for wage arrears owing their employees as a result of the failure of the contractors, or their subcontractors, to apply the wage rates and other conditions of employment required by the schedule of labour conditions forming part of their contract. This amount is for distribution to the 244 workers concerned.

Cases Nos. 71 to 73

Canadian Railway Office of Arbitration Releases Decisions in Three Disputes

Three separate disputes, which were submitted for arbitration before the Canadian Railway Office of Arbitration, were given a hearing in Montreal on July 17. The arbitrator was J. A. Hanrahan.

The first dispute, case No. 71, dealt with the claim of an unassigned yardmaster for premium pay for work performed in addition to his regular assignment. The second dispute, No. 72, concerned the claims of five trainmen for general holiday pay for Victoria Day. The third dispute, No. 73, concerned a claim for a runaround of 50 miles for a conductor and unassigned freight crew who were not given the opportunity to man a passenger extra that departed from their home terminal.

The arbitrator denied all three cases. Summaries of the arbitrator's awards appear below.

CASE NO. 71

Dispute between Canadian National Railways (Great Lakes Region) and the Brotherhood of Railroad Trainmen concerning the claims of an unassigned yardmaster for time and one half rate of pay for five separate days.

An unassigned yardmaster was called and used to fill a position as yardmaster in accordance with the provision of the yardmasters' collective agreement. The employee submitted a time return claiming eight hours at one and one half times the straight-time rate of pay for the service performed. The company allowed payment at the straight-time rate of pay.

The employee subsequently submitted a claim for four hours at the yardmaster's straight-time rate of pay, which was the difference between the amount originally claimed and the pay allowed. The company denied payment of this claim.

The brotherhood claimed that, in refusing payment, the company violated the provisions of an article in the yardmasters' agreement.

Similar claims were submitted by the unassigned yardmaster for time he worked on four additional occasions. The company suggested that, because these additional claims of the employee were similar to the initial claim, they could be considered on the same basis.

The facts established that, on the day previous to the employee's assignment as yardmaster, he had worked his fifth straight-time shift as a yard foreman under the yardmen's agreement. The brotherhood stated that service under two agreements was not the issue, however; the employee had completed his work week under one agreement and was taking his rest days. Therefore he was not subject to duty, nor was he required in any capacity until the starting time of his next regular assignment, unless he made himself available.

According to the yard collective agreement, such work would not interfere with his regular assignment. The yardmasters' agreement states that service under two agreements will be restricted to five days in a work week when qualified relief men who have not worked five days in a work week are available at pro rata rates. The brotherhood argued that, in a combination of the two agreements, work was restricted to five days in a work week, such combination being used to make up the weekly guarantee.

The overtime provisions in each of the two agreements states that employees working more than five straight-time, eight-hour shifts in yard service shall be paid one and one half times the basic straight-time rate, and that a regular assigned yardmaster, working on his days off, shall be paid one and one half times the basic straight-time rate.

The company explained that an unassigned yardmaster usually performs service under two separate collective agreements. When working as a yardman, the agreement applicable to yardmen governs his service; when working as a yardmaster or assistant yardmaster, the yardmasters' agreement governs his service. In order for the claim to succeed, the company argued, service under two different collective agreements would have to be combined. But this combination was specifically prohibited by an article in the yardmasters' agreement that said: "... nor shall service under two agreements be combined in any manner in the application of the five-day work week ..."

The company suggested that only tours of duty as a yardmaster may be used in the application of the five-day work week. Because the days off for an unassigned yardmaster need not be consecutive, only the day previous to the employee's assignment as yardmaster, which was a Monday, could be counted towards this claimant's work week.

The company further pointed out that the employee had not worked as an unassigned yardmaster for more than five days in a work week and, therefore, was not entitled to one and one half the basic rate of pay for such work. For his day of work as yardmaster, the employee was bound by the provision for rates of pay in accordance with the hours of service and the overtime rules contained in the yardmasters' agreement.

The arbitrator found that the claimant was properly paid for his work as yardmaster on the dates mentioned. The claim was therefore denied.

CASE NO. 72

Dispute between Canadian National Railways (Great Lakes Region) and the Brotherhood of Railroad Trainmen concerning the claims of five trainmen for general holiday pay on Victoria Day, May 23, 1966.

Five trainmen, regularly assigned as brakemen, were each called in turn to work as an assistant conductor on a train scheduled on Victoria Day. The trains to which they were regularly assigned had been cancelled on the holiday. Each of these employees failed to respond to the call for service as conductor and, consequently, was not used in any capacity until the trainman used in his place returned from the tour of duty.

Each of the claimants submitted a time return claiming general holiday pay for the day. The company denied payment of the claims on the ground that the employees failed to qualify in accordance with the collective agreement. The brotherhood argued that the employees did qualify.

Victoria Day is one of the holidays mentioned in the agreement, which was negotiated following the passing of the Canada Labour (Standards) Code (L. G. 1965, p. 697). The Code provides for certain general holidays for employees in

industries under the jurisdiction of federal legislative authority. It was agreed that the claimants qualified for the receiving of the benefits of general holidays. But the parties disagreed as to the justification for this claim.

The brotherhood maintained that the article of the collective agreement referring to duty on holidays had application to the cancellation of the claimant's regular assignments for Victoria Day. The company argued that it referred to the employee, not to his regular assignment, and that the employee had failed to meet the requirement that he be available for work on the holiday as required.

An article of the agreement states:

> Except as otherwise provided . . . trainmen assigned to regular runs will not be considered absent from duty after being relieved on arrival at final terminal at end of day's run until again required for their regular assignment. If their services are required in the interval, they will be notified, and if so notified and not used, will be paid a minimum day, unless cancelled prior to the starting time of their regular assignment if it were being worked on that day, in which event they will be allowed half a day.

The brotherhood submitted that this paragraph essentially relieves regularly assigned trainmen from the need to be available for work other than their assignments. The company, however, suggested that limiting provisions contained in another article required trainmen who are qualified conductors not working as such to hold themselves available between trips on their regular assignments. If they do not remain available, they are considered absent. A qualified conductor not working as such can be required to fill temporary conductor vacancies between runs on his regular assignment, the company argued. In addition, the agreement provides for crews to be worked in service other than their regular assignments, where this arrangement will not interfere with their regular assignments, in order to complete guarantees.

Finally, the company submitted that the general holidays article does not represent an entity that can function independently of the rest of the collective agreement.

In his award, the arbitrator said it is a basic rule of interpretation that a general provision is superseded by a special provision. In this case, the general provision concerning cancellation cannot be considered apart from the two special exceptions concerning the requirements for a trainman to make himself available for duty between trips on his regular assignment.

The arbitrator suggested that the time to reduce the effect of the two special exceptions to the general provision was during negotiation, and not during arbitration.

For these reasons, the claims were denied.

CASE NO. 73

Dispute between Algoma Central Railway and the Brotherhood of Railroad Trainmen concerning the claim of a conductor and crew for a runaround when an assigned passenger crew was used to man a passenger extra.

A passenger train, en route to a terminal, was held at a junction because of a washout of the track that occurred between the junction and the terminal. On the following day, the assigned passenger crew on the train was called, and they handled a passenger extra between the junction and the terminal of origin. A conductor and an unassigned freight crew, one of three crews who handle all trains on the subdivision, claimed a runaround of 50 miles under the trainmen's schedule. The company refused to pay the claim.

The brotherhood argued that the agreement specifically provides that passenger trainmen are not required to perform extra service when unassigned crews are available.

The company based its argument on an article of the collective agreement that reads:

> When through unavoidable cause, such regularly assigned trainmen lose their trip or run, they will be used to run the first unassigned train which will enable them to catch their assigned train or run at the other terminal; this not to constitute a runaround under [another article of the agreement]. Provided, further, that regularly assigned passenger trainmen will be so moved only in passenger service or deadhead.

The company interpreted this provision to mean that crews should get back on their regular assignment as quickly as possible following disruption of assignments due to unavoidable cause — such as, in this instance, impassable track due to washouts. Because the assigned passenger crew was unable to complete its scheduled run, it was used to run the first unassigned passenger train to leave the junction.

The arbitrator decided that the delay of the train was due to an "unavoidable cause" and that the passenger crew was assigned to "the first unassigned train." Consequently he ruled that there had been no violation of the existing provisions of the collective agreement. The claim was therefore denied.

Employment Security

Continued from page 631

worker needs to move to employment, and even more cases when he can get a job locally, but only if he first acquires new skills through training."

The Department's new program of occupational training for adults would enable it to provide suitable training when needed. Although the actual work of training was the business of the provinces and of industry itself, the Department would "buy" the training when there was clear evidence that it would improve the worker's productivity in an occupation that was in demand. Training would include allowances to provide income while people were being trained.

Training was not always the best way to make a man more productive, however. Sometimes he had qualifications that were in demand, but not in his own neighbourhood. In such cases, the Department was ready to give the person financial help in making a move. There were also a number of government programs designed to bring jobs to workers.

Regarding immigration, the speaker said, "We are now in the process of developing new selection criteria and procedures which, we hope, will succeed in relating immigration to our national manpower needs both more efficiently and more humanely than has been achieved before." The country's need was not for numbers of immigrants but for the right type of immigrants. "Today our affluent society offers few opportunities for the unskilled." At the same time, this did not mean that "our immigrants can or should consist only of highly qualified people. Family and humanitarian considerations have to be taken into account, along with the varying needs of our diverse industries."

The task that his department had set for itself required "of our staff great understanding, great devotion, much knowledge, much patience, great skill." To this end, Mr. Kent said, extensive training programs were being provided; and the response had been remarkable.

The correspondence courses that are now offered to members of IAPES in all parts of the world were available last year only within a limited territory. The first four courses now offered are: Introductory Economics, Social Psychology, Labour Economics, and Human Relations.

Anyone working in employment security, regardless of educational attainments, is eligible for the courses; but it was stated that "because the work is at college level, high school graduation or the equivalent is desirable." Each course costs $50. Anyone who fails or drops out may take the course again next year without further charge.

Publications Received in Department of Labour Library

List No. 223

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed by making application to the Librarian, Department of Labour, Ottawa. Students must apply through the library of their institution. Applications for loans should give the number (numeral) of the publication desired and month in which it was listed in the LABOUR GAZETTE.

Accidents

1. U.S. BUREAU OF LABOR STANDARDS. *Report of Work Injuries to Minors under 18 years of Age; A Study of 18 Months' Experience Reported By 28 States, 1964-65.* Washington, GPO, 1966. Pp. 25.

2. U.S. BUREAU OF LABOR STANDARDS. *Safety and Health Regulations for Longshoring.* June 1966. Washington, GPO, 1966. Pp.40.

Arbitration, Industrial

3. McPHERSON, WILLIAM HESTON. *The French Labor Courts: Judgment by Peers* [by] William H. McPherson [and] Frederic Meyers. Urbana, Institute of Labor and Industrial Relations. University of Illinois, 1966. Pp.104.

Contents: Introduction. Historical background. Structure, jurisdiction, and procedure. The Paris Court in operation. Structural and operational problems. Evaluation of achievements. Major conclusions.

4. STONE, MORRIS. *Labor Grievances and Decisions.* Introd. by Joseph S. Murphy. New York, Harper & Row, 1965. Pp.xxvi, 198.

The author is Vice-President and Editorial Director of the American Arbitration Association. There are sixty cases presented in this volume and classified under ten general headings. Each case study gives an account of the case, the arbitrator's award, and questions for discussion. The ten topics are: Seniority: how it is measured and how it terminates; Seniority: how it is used for job security; Job Bidding: seniority vs. ability; Discipline: holidays and holiday pay; overtime; work schedules; work loads and work assignments; Individual Rates: guarantees of work and wages; the union, its officers, and its stewards.

Collective Agreements

5. NOVA SCOTIA. DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH DIVISION. *Collective Agreement Survey in Nova Scotia Hospitals.* Halifax, 1966. Pp.30.

"This survey covers approximately 2,698 unionized employees from 22 hospitals in Nova Scotia." Some topics covered are union security, seniority, grievance procedure, days and hours of work, overtime rates, paid holidays, pay rates for holidays worked, paid vacations, fringe benefits, and salary ranges.

6. U.S. BUREAU OF LABOR STATISTICS. *Major Collective Bargaining Agreements: Arbitration Procedures.* Washington, GPO, 1966. Pp.167.

Analyzes collective agreement provisions establishing three types of voluntary arbitration of labour-management disputes: grievance disputes, disputes over new contract terms, and jurisdictional disputes.

Collective Bargaining

7. AMERICAN ASSEMBLY. *Challenges to Collective Bargaining.* Edited by Lloyd Ulman. Englewood Cliffs, N.J., Prentice-Hall, 1967. Pp.180.

"The papers . . . were prepared . . . for the Thirtieth American Assembly which met in October, 1966."

Contents: Stability and change in the structure of collective bargaining by Arnold R. Weber. Pensions, health and welfare plans, by Robert Tilove. Collective bargaining in the public sector, by Jack Stieber. The employment and training of minorities, by Ray Marshall. Labor relations law, by Benjamin Aaron. Wage-price policy and alternatives, by Melvin Rothbaum. Collective bargaining and the public interest, by A. H. Raskin. The social utility of collective bargaining, by John T. Dunlop.

8. CANADA. DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH BRANCH. *Determination of the Appropriate Bargaining Unit by Labour Relations Boards in Canada* [by] Edward E. Herman. [Ottawa, Queen's Printer, 1966, i.e. 1967] Pp.227.

Based on the author's Ph.D.Thesis, *The Problem of Determination of the Appropriate Bargaining Units by Labor Relations Boards in Canada*, submitted to the Department of Economics and Political Science, McGill University, March 1965.

"The object of this study is to investigate the certification practices of Canadian Labour Relations Boards, and to examine the problems encountered by them in the course of their duties."

9. INDUSTRIAL RELATIONS RESEARCH ASSOCIATION. *Collective Bargaining in the Public Service; Proceedings of the 1966 Annual Spring Meeting, Milwaukee, Wisconsin, May 6-7 1966.* Edited by Gerald G. Somers. Madison, Wisc., 1966. Pp.140.

The conference dealt with collective bargaining by civil servants in Canada and the U.S., and by teachers and municipal employees in the U.S.

Economic Conditions

10. ONTARIO. DEPARTMENT OF ECONOMICS AND DEVELOPMENT. OFFICE OF THE CHIEF ECONOMIST. *Niagara 1966. Presented to the "State of the Region" Meeting of the Niagara Regional Development Council, November 8th, 1966.* [Toronto, 1966] 1 volume (various pagings).

11. ORGANIZATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT. WORKING PARTY NO. 2 ON POLICIES FOR THE PROMOTION OF ECONOMIC GROWTH. *Economic Growth, 1960-1970; a Mid-Decade Review of Prospects.* Paris, OECD [1966] Pp.113.

A report "on the prospects of achieving the target, adopted by the OECD Member countries, of 50 per cent growth in their combined national products between 1960 and 1970."

Education

12. CANADA. DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH BRANCH. *Studies in the Economics of Education*, by Bruce W. Wilkinson. Ottawa, Queen's Printer, 1966. Pp.148.

"This paper is based on work carried out [by Mr. Wilkinson] at the Massachusetts Institute of Technology and is published here with the permission of the Institute's Department of Economics and Social Science."

The author is with the Department of Economics and Political Science at the University of Saskatchewan. This study concerns the relationship of education to economic growth.

13. ONTARIO ECONOMIC COUNCIL. *Assessing Educational Requirements for Skillpower; A Look at How Five Manufacturers and Three Service Businesses in Ontario View the Educational Requirements of the 28,500 Employees Between 1965 and 1970; A Report.* Toronto, 1966. Pp.24.

14. PATON, JAMES MCNIDDAR. *The Role of Teachers' Organizations in Canadian Education.* Toronto, Gage, 1962. Pp.89.

The author, General Secretary of the Provincial Association of Protestant Teachers of Quebec, delivered these two Quance lectures at the University of Saskatchewan in Saskatoon on July 9th and 10th, 1962.

Employment Forecasting

15. MEHMET, OZAY. *Methods of Forecasting Manpower Requirements, With Special Reference to the Province of Ontario.* [Toronto, Centre for Industrial Relations, University of Toronto] 1965 [i.e. 1966] Pp.57, xvi.

This report describes techniques available for estimating manpower requirements. Seven methods are studied: "(1) the econometric method, (2) the productivity method, (3) the trend projection method, (4) the employers' survey method, (5) the method of forecasting specialized manpower requirements, (6) the inter-area comparisons method, and (7) the elasticity of factor substitution method." The author includes a list of studies and statistics available for Canada and Ontario relating to different forecasting techniques.

16. NOVA SCOTIA. DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH DIVISION. *Chart Analysis of Manpower Training Requirements for Nova Scotia 1970 and 1975.* Halifax, 1966. Pp.50.

"These charts are based on the information collected by Dr. Stanislaw Judek for his study, *Manpower Training Requirements for Nova Scotia, 1970 and 1975*, prepared for the Economics and Research Division of the Nova Scotia Department of Labour."

Employment Management

17. CANADA. CIVIL SERVICE COMMISSION. *Job Analysis and Job Description Writing.* Ottawa, 1964. Pp.72.

18. U.S. FEDERAL COUNCIL FOR SCIENCE AND TECHNOLOGY. STANDING COMMITTEE. *Management and the Marginal Employee; An Analysis of Personnel Practices to Prevent and Treat the Problem.* Washington, 1966. Pp.15.

The term "marginal employee" can be applied to persons who lack the competence and ability to do their work properly, the employees lacking interest or motivation in their work, or to employees with physical or mental ailments which affect the amount of work they can do. This paper discusses how to deal with the problem of the marginal employee.

Income

19. INTERNATIONAL ASSOCIATION FOR RESEARCH IN INCOME AND WEALTH. *Income Redistribution and the Statistical Foundations of Economic Policy*, edited by Colin Clark and Geer Stuvel. New Haven Conn., 1964. Pp.xiii, 353.

"Authors' Index to Income and Wealth, Series I-X": p.348-351

20. INTERNATIONAL ASSOCIATION FOR RESEARCH IN INCOME AND WEALTH. *The Measurement of National Wealth.* Papers by T. Barna [and others]. With a statistical introduction by the editors and Th. van Der Weide. Edited by Raymond Goldsmith and Christopher Saunders. Chicago, Quadrangle Books, 1959. Pp.xiv, 389.

21. INTERNATIONAL ASSOCIATION FOR RESEARCH IN INCOME AND WEALTH. *Studies in Social and Financial Accounting.* Papers by R. C. Geary [and others] Edited by Phyllis Deane. Chicago, Quadrangle Books, 1961. Pp.xiv, 254.

Industrial Disputes

22. FRIEDHEIM, ROBERT L. *The Seattle General Strike.* Seattle, University of Washington Press, 1964. Pp.224.

An account of the Seattle General Strike of 1919 and an analysis of the events that led up to the strike.

23. MEHLING, JEAN. *Analyse socio-économique d'une grève.* Montreal, *Presse de l'Ecole des Hautes Études Commerciales, Librairie Beauchemin*, c1963. Pp.218.

The author, a professor at *L'Ecole des Hautes Etudes Commerciales* in Montreal, has made a study of a strike in Noranda, Quebec which lasted six months from 1953 to 1954, involving Noranda Mines, Limited, and the United Steelworkers of America.

Industrial Relations

24. ADAMS, GRAHAM. *Age of Industrial Violence, 1910-15; The Activities and Findings of the United States Commission on Industrial Relations.* New York, Columbia University Press, 1966. Pp.316.

This book examines the origins, operations, and findings of the U.S. Commission on Industrial Relations between 1910 and 1915, describes some of the industrial disputes investigated by the Commission, and analyzes the impact of the Commission's work on American history.

25. JOINT LABOUR-MANAGEMENT STUDY CONFERENCE, DALHOUSIE UNIVERSITY, HALIFAX. 4th, 1965. *The Fourth Nova Scotia Labour-Management Study Conference, Summary of Proceedings and Addresses, November 18 & 19, 1965.* Halifax, Institute of Public Affairs, Dalhousie University, 1966. Pp.78.

The participants at this conference discussed amendments in 1964 and 1965 to the Nova Scotia Trade Union Act, a review of Judge McKinnon's report on labour legislation, the Tripartite Construction Committee, automation and technological change as it affects the worker, etc.

26. RESEARCH CONFERENCE ON LABOR RELATIONS, UNIVERSITY OF CALIFORNIA, LOS ANGELES. 8th, 1965. . . .*Proceedings of the Eighth Annual Research Conference, held at . . . Los Angeles, March 11-12, 1965, presented by Institute of Industrial Relations* [and] *University Extension, University of California, Los Angeles.* Los Angeles, Institute of Industrial Relations, University of California, 1966. Pp.50.

Contents: The impact of the federal civil rights law on labor relations [by] Benjamin Aaron. Problems of unrest in labor unions [by] Paul Sultan. The wage-price guideposts and economic policy [by] Joseph W. Garbarino. Business and government co-operation in the use of manpower [by] John C. Donovan.

27. STAGNER, ROSS. *Psychology of Union-Management Relations* [by] Ross Stagner and Hjalmar Rosen. Belmont, Calif., Wadsworth Pub. Co., 1965. Pp.147.

"An examination of ways in which the psychology of individuals illuminates the field of union-management relations." In particular, the authors study the human factors involved in union-management disputes.

Labour Laws and Legislation

28. BUREAU OF NATIONAL AFFAIRS, WASHINGTON, D.C. *The Fair Labor Standards Act Amendments of 1966; Explanation of Changes; Text of Act as Amended.* [Washington, 1966?] Pp.64.

29. KEYSERLING, LEON HIRSCH. *How Well Is the Employment Act of 1946 Achieving Its Goal?* Washington, Dept. of Labor, Manpower Administration, 1966. Pp.50.

"Condensed transcript of the seminar held in Washington, D.C., November 18, 1965."

30. QUEBEC (CITY). UNIVERSITE LAVAL. DEPARTEMENT DES RELATIONS INDUSTRIELLES. *Le Code du travail du Québec (1965)* [par] Gérard Hébert [et al.] Quebec, *Les Presses de l'Université Laval*, 1965. Pp.271.

Report of the *20th Congrès des relations industrielles de l'Université Laval* held in Quebec City, April 26 and 27, 1965.

Text of the *Code du travail:* p.227-253.

The Papers presented at this Conference dealt with the new Labour Code which was adopted in 1964 by the Quebec Legislature. Such topics were discussed as the right of association, the Quebec Labour Relations Board, the Labour Code and collective agreements, collective bargaining and recourse to strikes and lockouts, the new role of the Minister of Labour under the Code, etc. The text of the Labour Code is included.

Labour Organization

31. COOK, ALICE HANSON. *An Introduction to Japanese Trade Unionism.* Ithaca, New York State School of Industrial and Labor Relations, Cornell University, 1966. Pp.ix, 216.

The author spent the year of 1962-1963 as a Fulbright Visiting Lecturer in labour relations at Keio University in Tokyo, Japan. She writes about the structure and functioning of Japanese trade unions.

32. DAVIES, IOAN. *African Trade Unions.* Harmondsworth, Eng., Penguin, 1966. Pp.256.

This is the only book in English which deals with African trade unions on the whole continent.

33. JENKINS, CLIVE. *British Trade Unions Today*, by Clive Jenkins and J. E. Mortimer. [1st ed.] Oxford, New York, Pergamon Press, 1965. Pp.125.

The authors are both full-time trade union officials. This book covers the origin, growth, development, achievements and aims of British trade unions.

34. PEPIN, MARCEL. *A Society for Man; Moral Report of the National President of the Confederation of National Trade Unions.* Quebec, 1966. Pp.70.

Labour Supply

35. GINZBERG, ELI. *Expanding Employment in a Pluralistic Economy.* Washington, Dept. of Labor, Manpower Administration, 1966. Pp.36.

"Condensed transcript of the seminar held in Washington, D.C., October 7, 1965."

36. INTERNATIONAL LABOUR OFFICE. *Manpower Planning and Employment Policy in Economic Development.* Second item on the agenda. Geneva, 1966. Pp.211.

At head of title: Report 2. Eighth Conference of American States Members of the International Labour Organization. Ottawa, September 1966.

This report tries (1) to identify the main problems that the countries on the American continent face in the field of employment policy and manpower planning, (2) to define measures and policies to solve these problems, and (3) to evaluate I.L.O. operational activities regarding manpower planning.

37. U.S. BUREAU OF LABOR STATISTICS. *Projections 1970; Interindustry Relationships, Potential Demand, Employment.* Washington, GPO., 1966. Pp.155.

"This bulletin provides projections to 1970 of potential demand, interindustry relationships, and employment under alternative assumptions regarding rates and patterns of growth. It represents a report on a major phase of the work of the Inter-agency Growth Study Project."

Labouring Classes

38. BAERWALD, FRIEDRICH. *Economic Progress and Problems of Labor.* Scranton, Penn., International Textbook Company, 1967. Pp.353.

A textbook on labour economics.

39. CONFEDERATION DES SYNDICATS NATIONAUX. *Main-d'oeuvre, 1965, 1966, 1967, 1968, 1969* [et] *1970.* [Quebec?] 1966. Pp.64.

Présenté au 42e Congrès général de la Confédération des syndicats nationaux, Montreal, October 1966.

40. FARMER-LABOUR-TEACHERS' CONFERENCE. 7th, Port Elgin, Ont., 1966. [*The Changing World of Agriculture*]; *Report of the Seventh Conference, UAW Education Centre, Port Elgin, June 18-19, 1966.* Toronto, 1966. Pp.43.

Conference sponsored jointly by Canadian Labour Congress and Ontario Federation of Labour.

41. HABER, WILLIAM, Ed. *Labor in a Changing America.* New York, Basic Books, 1966. Pp.341.

The contributors whose essays appear in this book are students of the American labour scene. They discuss the history, problems and prospects of American labour unions, unemployment, income distribution, industrial unionism, work and leisure, union wage policies, government regulation of union activities, etc.

42. MANGUM, GARTH LEROY. *Wage Incentive Systems.*

Berkeley, Institute of Industrial Relations, University of California, 1964. Pp.83.

Explains existing wage incentive practices and considers the attitudes of employees, unions, and employers toward incentives, the impact of automation on incentives, and the problems in administering an incentive system.

Plumbing

43. CANADA. DEPARTMENT OF LABOUR. *An Analysis of the Plumbing Trade*. Rev. ed. Prepared by a national committee appointed by the Department of Labour. Ottawa, Queen's Printer, 1966. Pp.233.

Statistics

44. CONFERENCE ON STATISTICS. 5th, PRINCE OF WALES COLLEGE, CHARLOTTETOWN, P.E.I., 1964. *Papers on Regional Statistical Studies*, edited by Sylvia Ostry and T. K. Rymes. Toronto, Published for the Canadian Political Science Association by University of Toronto Press, 1966. Pp.ix, 258.

Conference held June 13 and 14, 1964, sponsored by the Canadian Political Science Association.

Partial contents: Regional statistics and their uses: a geographical viewpoint, by R. S. Thoman and G. McGrath. Developing regional statistics for policy purposes: the prediction of trade centre viability in Saskatchewan, by Gerald Hodge. Problems on regional industrial, and occupational mobility in relation to disarmament, by G. Rosenbluth. Interindustry study of the economy of the Atlantic Provinces, by Kari Levitt.

Unemployment

45. CONFERENCE ON UNEMPLOYMENT AND THE AMERICAN ECONOMY. 3rd., NEW YORK, 1965. *Prosperity and Unemployment*, edited by Robert Aaron Gordon and Margaret S. Gordon. New York, Wiley, 1966. Pp.ix, 353.

"One of a series of books from the Research program on unemployment, Institute of Industrial Relations, University of California, Berkeley."

Topics discussed at this conference included current business expansion in the U.S., patterns of employment and unemployment, wages, and economic expansion and persisting unemployment.

46. U.S. BUREAU OF LABOR STATISTICS. *Weathering Layoff in a Small Community; Case Studies of Displaced Pottery and Carpet-Mill Workers*. Washington, GPO, 1966. Pp.83.

Contents: The post-layoff experience of displaced carpet-mill workers, by N. Arnold Tolles. Displaced pottery workers' adjustment to layoff, by David Levinson.

Women

47. MIDDLE ATLANTIC REGIONAL PILOT CONFERENCE, PHILADELPHIA, 1965. *Counselling Girls toward New Perspectives; a Report of the Middle Atlantic Regional Pilot Conference held in Philadelphia, Pa., December 2-4, 1965*. Co-sponsored by Women's Bureau, U.S. Department of Labor [and] Office of Education, U.S. Dept. of Health, Education, and Welfare. Washington, U.S. Dept. of Labor, Women's Bureau, 1966. Pp.88.

48. U.S. WOMEN'S BUREAU. *College Women Seven Years after Graduation; Pre-survey of Women Graduates — Class of 1957*. Washington, GPO, 1966. Pp.54.

The U.S. Women's Bureau sent a questionnaire in 1964 to women college graduates of the Class of 1957 asking them about their employment, recent work history, and future plans. This study is based on replies from almost 5,000 respondents.

Miscellaneous

49. CANADA DEPARTMENT OF NATIONAL REVENUE. TAXATION DIVISION. *Twenty-one Million Dollars A Day; the Average Gross Collections per Working Day*. Ottawa, Queen's Printer, 1966. Pp.63.

50. ECONOMIC COUNCIL OF CANADA. ADVISORY COMMITTEE ON INDUSTRIAL RESEARCH AND TECHNOLOGY. *A General Incentive Programme to Encourage Research and Development in Canadian Industry; Report to the Economic Council of Canada*. Ottawa, Queen's Printer, 1966. Pp.20.

51. INVITATIONAL CONFERENCE ON GOVERNMENT-UNIVERSITY RELATIONS IN THE PROFESSIONAL PREPARATION AND EMPLOYMENT OF COUNSELORS, WASHINGTON, D.C., 1965. *Counselor Development in American Society; Conference Recommendations*. [Edited by John F. McGowan. Washington? Distributed by the U.S. Dept. of Labor] 1965. Pp.306.

Sponsored by the Panel on Counselling and Selection of the National Manpower Advisory Committee.

"Administered by the University of Missouri under contract with the Office of Manpower, Automation and Training (U.S. Department of Labor) and U.S. Office of Education (U.S. Department of Health, Education, and Welfare)."

52. McGILL, RALPH EMERSON. *The South and the Southerner*. Washington, Dept. of Labor, Manpower Administration, 1966. Pp.33.

"Condensed transcript of the seminar held in Washington, D.C., September 16, 1965."

53. MEAD, MARGARET. *The Changing Cultural Patterns of Work and Leisure*. Washington, Dept. of Labor, Manpower Administration, 1966. Pp.38.

"Condensed transcript of the seminar held in Washington, D.C., February 16, 1966."

54. NATIONAL INDUSTRIAL CONFERENCE BOARD. *Organization for New-Product Development: a Symposium*. New York, 1966. Pp.83.

In this report, eleven senior marketing executives discussed various ways companies develop new products using new-product committees, product managers for new products, new-product departments, or project teams or task forces.

55. OKUN, ARTHUR M. *Challenges in Sustaining Prosperity*. Washington, Dept. of Labor, Manpower Administration, 1966. Pp.33.

"Condensed transcript of the seminar held in Washington, D.C., January 27, 1966."

56. ORGANIZATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT. *Work or Support; An Economic and Social Analysis of Substitute Permanent Employment* [by] Bent Andersen. Paris, 1966. Pp.122.

Concerns the employment problems of persons handicapped by health or education or some other reason.

57. PEALE, NORMAN VINCENT. *The Amazing Results of Positive Thinking*. Englewood Cliffs, N.J., Prentice-Hall, 1959. Pp.280.

58. SINGLETON, W. T. *Current Trends Towards Systems Design*. London, Ministry of Technology, 1966. Pp.20.

Ergonomics for industry [series] No. 12.

Diagnosing Industrial Unrest

Continued from page 625

situation, they say, union officials would often like to see management stand firm. Where rank-and-file members defied their leaders, and management capitulated in the face of pressure, the union and its leadership might be so undermined that the labour-management relationship could be completely upset. And management behaviour of that kind clearly invited a repetition of membership defiance in the future.

The authors ask the question: "Why is it that union militancy has not been expressed through lawful processes that are available to employees to redress their grievances and to advance or protect their economic position?"

They quote J. C. McRuer, a distinguished jurist, and formerly Chief Justice of the High Court of Ontario, who had challenged the premise that the ordinary man on the street has less respect for justice today than he had 50 years ago. Mr. McRuer took the view that it was a passion for justice that often led to disrespect for laws.

The new respectability of lawlessness, the authors claim, is premised upon a belief that the legal order is not a just order. "Whether this is a simplistic view of Canadian labour relations law is a matter for debate. But the real facts of the matter are less relevant in terms of explaining labour lawlessness than the widespread conviction of unionists that they have little to gain and much to lose if they comply with the law." The authors contend that genuine grievances must be recognized if labour is to be persuaded to change its view.

To unionists, the statistical fact that the great majority of injunctions sought are actually granted, raises a presumption of unfairness. To other critics of the labour injunction, procedural abuses at least seem to call for substantial reforms. The appearance of fairness is dissipated by the extremely short notice required to be given prior to the hearing, the practical impossibility of making full answer and defence, the peremptory nature of the hearings, the virtual unavailability of appeal, the easy manipulation of jurisprudential concepts, and the disregard of traditional strictures on the use of the court's injunctive power.

Legal doctrines developed and administered by courts are often rigid and unresponsive to the needs and problems of collective bargaining. For example, the ability of an employer, under present Canadian law, to undermine the structure of collective bargaining agreements by the institution of technological change, or by relocation of the plant, has shaken the confidence of the unions in the law's impartiality.

Although the employer was permitted to disregard the collective agreement in these circumstances, the law nonetheless forbade the worker to retaliate during the lifetime of the agreement by disregarding the compulsory no-strike clause. Distinctions between the two situations, however valid on purely legal grounds, seem spurious indeed to the unionist. Similarly, even when the substance of the law clearly favoured the position of the union, as for example in imposing a duty of good-faith bargaining upon the employer, "practical difficulties of enforcement sometimes seem to render the law a hollow mockery."

Crispo and Arthurs also demonstrate that, in the present state of law, it is difficult for an employer to secure monetary compensation through the regular courts for wrongs done by the union; although arbitration boards have, on a number of occasions, awarded employers damages because of union liability for unlawful strikes. The criminal process was slow, proof was difficult, and policy and prosecuting authorities were reluctant to intervene on behalf of either party to a labour dispute. Consequently, since he could neither prosecute nor sue for damages, the employer was driven to use the injunction as the primary technique of protecting his legal position.

Until recently, the authors say, the mere issuance of the injunction was sufficient to secure an end to picketing, presumably because unionists were no more prepared to abandon respect for the law than most citizens. As this respect waned, however, and confidence in the basic fairness of the courts decreased, deliberate disobedience of the injunction became more prevalent. Although those who disobey an injunction are liable to fine and imprisonment for contempt of court, it seemed unlikely that such sanctions could be completely effective.

First, there was the practical problem of enforcement. Large numbers of contemnors had to be identified and brought to court, specific allegations had to be made and proved against each one, and either jails had to be found to accommodate those found guilty, or extended proceedings has to be taken to recover unpaid fines.

The second problem was even greater: for a unionist who deliberately courts martyrdom, fines and jail are not forms of punishment but the very things he seeks. Government is faced with a dilemma from which it can only escape by reform of the law, according to Crispo and Arthurs. Vigorous enforcement of injunctions might produce a backlash at the polls; non-enforcement might undermine the credibility of the whole judicial process. Conclude the two authors: "To escape from this dilemma, the Government of Ontario has appointed a Royal Commission Inquiry into Labour Disputes. Whether its report will ultimately stimulate effective reform of the law remains to be seen."

C—Employment, Hours and Earnings

Tables C-1, C-2 and C-4 are based on reports from employers having 20 or more employees in any month of the year; at April 1967, employers in the principal non-agricultural industries reported a total employment of 3,504,911. Table C-3 gives estimates of total employment, by industry divisions, for the provinces and Canada, derived from the survey of establishments employing 20 or more persons and from a sample survey of establishments employing less than 20 persons. Tables C-5 to C-7 are based on reports from a somewhat smaller number of firms than Tables C-1, C-2 and C-4. They relate only to wage-earners for whom statistics of hours of work are also available, whereas Tables C-1, C-2 and C-4 relate to salaried employees as well as to all wage-earners in the reporting firms.

D—Manpower Division

The reorganization of manpower activities under the Department of Manpower and Immigration has led to a number of administrative changes which have, in turn, altered the significance of D Table statistics about employment placements and unfilled job vacancies.

The result is that valid comparisons with previous periods are not possible on the basis of these statistics. Accordingly, their publication is being suspended.

New statistical series are being developed to give more significant information about persons using the services of Canada Manpower Centres. The results will be published as they become available.

E—Unemployment Insurance

Unemployment insurance statistics emanate from the operations of the Unemployment Insurance Act, and relate to persons in contact with the Unemployment Insurance Commission, either as contributors or claimants. The data are compiled in the Unemployment Insurance, Pensions and Manpower Section, DBS, from information supplied by the UIC. The source for Tables E-1 to E-4 is *The Statistical Report on the Operation of the Unemployment Insurance Act*. For further information regarding the nature of the data see Technical Note, page 675.

TABLE E-1—Estimates of the Insured Population under the Unemployment Insurance Act

End of	*Total**	*Employed*	*Claimants*
1967—April	4,694,000	4,201,700	492,300
March	4,750,000	4,206,200	543,800
February	4,681,000	4,129,200	551,800
January	4,684,000	4,152,100	531,900
1966—December	4,633,000	4,209,600	423,400
November	4,591,000	4,324,700	266,300
October	4,521,000	4,336,700	184,300
September	4,528,000	4,363,100	164,900
August	4,577,000	4,389,800	187,200
July	4,512,000	4,316,000	196,000
June	4,500,000	4,318,700	181,300
May	4,404,000	4,186,400	217,600
April	4,465,000	4,051,100	413,900

*Commencing March 31, 1967, agricultural workers are included, as coverage was extended to certain workers in this industry April 1, 1967.

TABLE E-4—Benefit Payments, by Province, May 1967

Province	*Weeks Paid**	*Amount of Benefit Paid*
Newfoundland	94,513	2,543,776
Prince Edward Island	17,712	426,204

*St. John's index on the base June 1951=100.

NOTE: Indexes above measure percentage changes in prices over time in each city and should not be used to compare actual levels of prices as between cities.

Statistical information on work stoppages in Canada is compiled by the Economics and Research Branch of the Canada Department of Labour on the basis of reports from the Manpower Division, Department of Manpower and Immigration. The first three tables in this section cover strikes and lockouts that amount to ten or more man-days. The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the union directly involved in the disputes leading to the work stoppages. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included. For further notes on the series, see page 676.

TABLE G-1—Strikes and Lockouts, 1962-67

Month or Year	Strikes and Lockouts Beginning During Month or Year	Strikes and Lockouts in Existence During Months or Year			
		Strikes and Lockouts	Workers Involved	Duration in Man-Days	
				Man-Days	Per cent of Estimated Working Time

Technical Note to "E" Tables

Under the Unemployment Insurance Act, contact between the claimant and the Unemployment Insurance Commission is achieved by means of a network of local offices. Tables E-2 to E-4 relate to local office operations, though Table E-3 includes data on regional office processing.

Upon separation from employment, a person wishing to file a claim for benefit applies either in person or by mail to the nearest local office of the Commission. The claim will be either an "initial" or a "renewal" depending upon whether or not it is necessary to compute benefit rights. On an initial claim, the claimant's benefit entitlement is calculated, and this will be available for compensation of spells of proved unemployment during a period of one year,* unless used up prior to that time. When a claimant misses two successive scheduled reporting dates and subsequently files a claim, a renewal claim will serve to re-activate the claim, provided that there is still benefit available.

The total of initial and renewal claims (Table E-3) thus approximates the number of recorded separations from employment during a month. However, to the extent that an initial claim is taken from a person who has just exhausted benefit and seeks re-establishment of credits, the total would constitute an overstatement of the new cases of recorded unemployment. Claims in the category "entitled to benefit" include initial claims on which the contribution requirements were fulfilled and no disqualification was imposed, and renewal claims allowed, with no disqualification. Claims "not entitled to benefit" consist of failures on initial claims due to insufficient contributions, and in addition, disqualifications imposed on either initial or renewal claims. Claims not completely processed at the end of the month are shown as "pending."

Claimants are required to report every two weeks by mail to the local office. Information on the number of claimants currently reporting to local offices is obtained by a count of individual unemployment registers in the currently active file at the month-end (Table E-2). Once a claim is taken, the document on which the record of activity is maintained (the unemployment register) is placed in the active file, and it becomes dormant only after the scheduled reporting pattern has been broken twice in succession or the claimant finds work. The count of weeks on claim represents the number of weeks of proved unemployment since the most recent separation from employment. When a new unemployment register is prepared, because the previous claim has terminated and a new entitlement has been computed, the number of weeks is calculated from the date of actual separation from employment. Information on the number of weeks on claim is based on examination of a 20-per-cent sample of unemployment registers.

Payment data are provided by Treasury Offices of the Unemployment Insurance Commission and relate to transactions during a month. In some cases, the compensated unemployment would have occurred in a prior month. Data cover partial as well as complete weeks.

Estimates of the insured population (Table E-1) are based on an estimate of persons either working in insured employment or on claim at June 1 each year. Monthly estimates of insured employment are projected from the June 1 figure, using employment indexes, for individual industry divisions as published in "Employment and Average Weekly Wages and Salaries" (Employment Section, Labour Division, DBS). The number of claimants recorded at the month-end, as described above, is added to provide the total estimate.

Technical Note to "G" Tables

Statistical information on work stoppages in Canada is compiled by the Economics and Research Branch of the Canada Department of Labour on the basis of reports from the Manpower Division, Department of Manpower and Immigration. The first three tables in the section cover strikes and lockouts which amount to ten or more man-days.

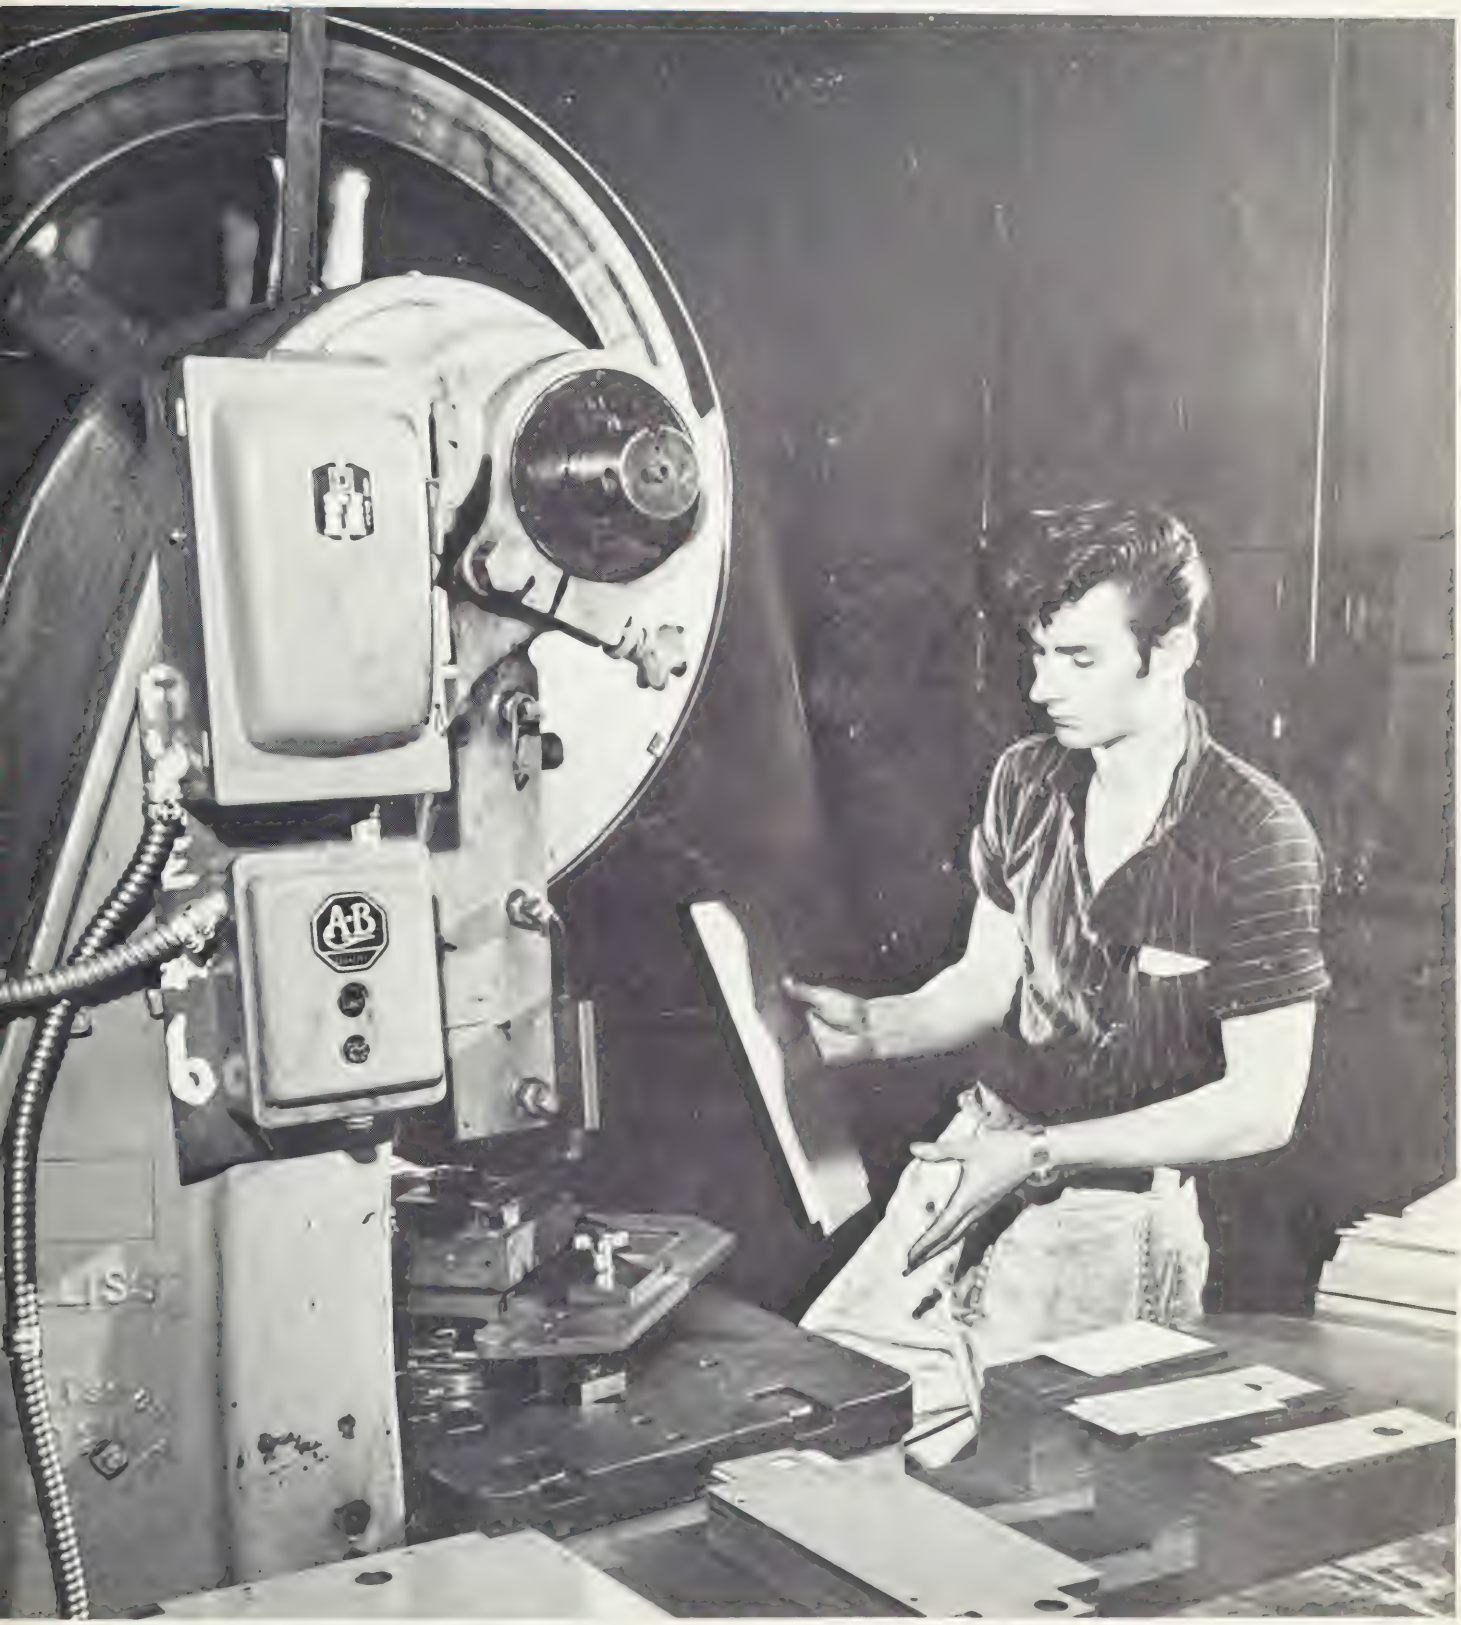
The developments leading to work stoppages are often too complex to make it practicable to distinguish statistically between strikes on the one hand and lockouts on the other. However, a work stoppage that is clearly a lockout is not often encountered.

The data on workers involved include all workers reported on strike or locked out, whether or not they all belonged to the unions directly involved in the disputes leading to work stoppages. Where the number of workers involved varied in the course of the stoppage, the maximum number is used for monthly totals, but adjustments are made for changes reported in the number of workers involved in work stoppages extending over two or more months. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included in the data on workers involved. Their number, however, if any, is shown in parentheses for the major work stoppages listed in Table G-4. The data in parentheses are those reported at an early stage of the work stoppage, and they refer only to the plant or premises at which the stoppage occurred.

Duration of strikes and lockouts in man-days is calculated by multiplying the number of workers involved in each work stoppage by the number of working days the work stoppage was in progress. Where the number of workers involved varied significantly in the course of the stoppage, an appropriate adjustment is made in the calculation as far as this is practicable. The duration in man-days of all stoppages in a month or year is also shown as a percentage of estimated working time, based on the corresponding monthly figure or annual average figure for non-agricultural paid workers in Canada. The data on duration of work stoppages in man-days are provided to facilitate comparison of work stoppages in terms of a common denominator; they are not intended as a measure of the loss of productive time to the economy. For convenience of expression, however, duration in man-days is on occasion referred to as "time loss" in reviews based on this series.

The data on the distribution of work stoppages by industry in Table G-2 follow the Standard Industrial Classification, DBS (1960).

In Table G-3 work stoppages are classified according to jurisdiction, whether federal or provincial. This is done on the basis of the government agency that intervened in the dispute. Where there was no such intervention the classification is, wherever possible, on the basis of the agency that previously dealt with labour matters in the establishment involved.



Work stoppages involving 100 or more workers are listed in Table G-4, which shows in each instance the employer(s) and the location of the premises at which the work stoppage occurred, the union(s) directly involved or concerned in the dispute, number of workers involved, duration in man-days, starting date (the first day on which normal operations were affected) and termination date. For work stoppages that are terminated by mutual agreement, the termination date is usually the day on which work was resumed. Work stoppages that have not been resolved in this way are as a rule considered terminated, for statistical purposes, at the date by which it was established that two-thirds or more of the workers involved had either returned to work, or had found work with other employers, or had been replaced by new employees; or the date by which it was reported that the operations affected by the work stoppage would not be resumed. Also shown in Table G-4 are the major issues, as far as known, that led to work stoppage, and the result, i.e., the terms of settlement of major issues where a settlement was reached when the work stoppage terminated, or the circumstances in which the work stoppage came to an end.

While the methods used to obtain data on work stoppages preclude the likelihood of major omissions, it is not always possible, particularly on a preliminary basis, to obtain precise information in detail. Consequently the information in this section may not be accurate in all respects.

Publications

labour gazette

Canada Department of Labour/November 1967

Canada Department of Labour Publications

Annual Report of the Department of Labour (Covers fiscal year ending March 31). (English or French). Cat. No. L1-1966.

Report of the Industrial Inquiry Commission on Canadian National Railways "Run-Throughs." Report of Hon. Mr. Justice Samuel Freedman, Commissioner. (English or French). Price $1.50, Cat. No. L35-965/1.

Supplements to Labour Gazette

Collective Bargaining Review. Prepared by the Collective Bargaining Section, Economics and Research Branch, Canada Department of Labour. Free to LABOUR GAZETTE subscribers but must be requested from Publications Division, Canada Department of Labour.

Reports of Boards of Conciliation established under the Industrial Relations and Disputes Investigation Act together with reasons for judgment of the Canada Labour Relations Board. Free to LABOUR GAZETTE subscribers but must be requested from Publications Division, Canada Department of Labour.

Economics and Research Branch

Labour Organizations in Canada (annual). Contains a brief commentary, the latest statistical data on union membership, and a directory of labour organizations with names of their principal officers, publications, and the geographic distribution of their local branches in Canada. (English or French). Price 50 cents, Cat. No. L2-2/1966.

Industrial and Geographical Distribution of Union Membership in Canada, 1966. (English or French). Price 15 cents, Cat. No. L31-766.

Strikes and Lockouts in Canada (annual). Furnishes a record of strikes and lockouts occurring in Canada during a year. Tables and related texts showing strikes and lockouts by years, by areas, by industries, including time lost, number of workers involved, duration, etc. Price 35 cents, Cat. No. L2-1/1965.

Wage Rates, Salaries and Hours of Labour, 1965. An annual report published in loose-leaf form and followed later by a paper-bound volume. Contains the results of an annual survey at October 1 of occupational wage rates and standard hours of work in most industries. Averages and predominant ranges of wage rates for selected occupations are tabulated separately on a regional basis for some 90 industries including logging, mining, manufacturing, construction, transportation, trade and service groups. Weekly salaries for office occupations and hourly wage rates for maintenance of service occupations and for labourer for several broad industry groups are shown, on a community basis, in 52 communities. Trends in wage rates are included in tables of index numbers by industry. First year service including attractive binder with index tabs and paper-bound volume, $9.50; service without indexed binder, $7.00; individual tables, 15 cents. Paper-bound volume, $2.50. (Bilingual). Cat. No. L2-548.

Working Conditions in Canadian Industry, 1966. (Bilingual). Price $1.00, Cat. No. L2-15/1966.

Répertoire de termes et expressions utilisés en relations industrielles et dans des domaines connexes. A catalogue, in French, of terms currently in use in the labour relations field. Prepared by the Economics and Research Branch. Price $4.50, Cat. No. L31-967F.

Labour-Management Research Series

Shiftwork and Shift Differentials in Canadian Manufacturing Industries. Price 35 cents, Cat. No. L2-22/2.

CORRESPONDENCE—Address letters dealing with editorial matters to the Editor, those dealing with subscriptions to the Circulation Manager. SUBSCRIPTIONS—Canada: $3 per year, single copies 50 cents each; all other countries: $5 per year, single copies 50 cents each. Send remittance by cheque or post office money order, payable to the Receiver General of Canada, to The Queen's Printer, c/o Superintendent of Government Publications, Ottawa. All subscriptions payable in advance. SPECIAL GROUP SUBSCRIPTION OFFER—Five or more annual subscriptions, $1.50 per subscription (Canada only). Send remittance, payable to the Receiver General of Canada, to the Circulation Manager. BOUND VOLUMES—$5 per copy delivered in Canada, $7 per copy to other countries. CHANGE OF ADDRESS—Attach previous address label.

50 Years Ago

From the Labour Gazette, November 1917

Prices of staple foods, fuel, lighting and rent in October 1917 were compared with prices of similar items in 1900 and 1914

The weekly cost of a family budget for staple foods, fuel and lighting, and rent at the average prices prevailing in 60 cities in Canada in 1900 was $9.38. In 1914 it had risen to $14.31, and by October 1917 it had reached $18.82. The figures given are those published in this journal in November 1917.

An examination of the individual components of this family budget shows that two pounds of beef sirloin steak, which cost 27.2 cents in 1900, cost 48.8 cents in 1914. By October 1917 the cost was 62.8 cents.

A pound of fresh pork, which could be bought for 12.2 cents in 1900, cost 20.2 cents in 1914. In October 1917 the price was 32.7 cents. Prices of breakfast bacon were: 1900-15.4 cents; 1914-25.9 cents; and October 1917-43.2 cents.

Fresh eggs were 25.7 cents a dozen in 1900, 34.4 cents in 1914 and 54.7 cents in October 1917. Six quarts of milk could be bought for 36.6 cents in 1900, 52.8 cents in 1914, and 64.8 cents in October 1917.

The price of a pound of creamery butter was 25.5 cents in 1900, 33.7 cents in 1914, and 50.6 cents in October 1917. Fifteen pounds of white bread cost 55.5 cents in 1900, 64.5 cents in 1914, and 109.5 cents in October 1917.

The price of coffee remained comparatively constant. A quarter of a pound cost 8.6 cents in 1900, 10.8 cents in 1914, and 10.1 cents in October 1917. During the 17-year period, the price of a quarter of a pound of black tea was 8.2 cents at the beginning and 12.4 cents at the end.

Potatoes ranged from 24.1 cents for two pecks in 1900, to 41 cents in 1914, and 56.7 cents in October 1917. A half pound of laundry starch cost 2.9 cents in 1900 and 4.4 cents in October 1917.

Anthracite coal cost 39.5 cents for 1/16 of a ton in 1900 ($6.32 a ton). In 1914 it had risen to 54 cents ($8.64 a ton), and in October 1917 to 69.4 cents ($11.10 a ton). A 1/16 of a cord of hardwood could be bought for 32.5 cents in 1900 ($4.20 a cord), for 42.5 cents in 1914 ($6.80 a cord), and for 57.3 cents ($9.16 a cord) in October 1917.

Coal oil changed very little in price, varying from 24 cents a gallon in 1900 to 25.8 cents in October 1917, though it had dropped to 21 cents in 1912.

Rent for the family was estimated at $2.37 a week in 1900, $4.65 in 1914 and $4.47 in October 1917.

The average cost of food staples in the family budget in 1900 varied from $4.81 in Prince Edward Island to $6.90 in British Columbia. The second-best province in which to buy inexpensive food was Ontario, where the food budget was $5.01 a week.

By 1914, the cost of this package of food was $6.69 in Prince Edward Island, $7.16 in Quebec and $7.48 in Ontario. British Columbia, where the cost was $9.12, was still the most expensive. In October 1917, the cost of the food staples was $10.31 in Prince Edward Island and $11.13 in Manitoba, the next inexpensive province for these articles. In British Columbia it was $12.42, and in Nova Scotia—the second most expensive province—it was $11.92.

In October 1917, leaving out Prince Edward Island, Manitoba and British Columbia, the variation from province to province was slight, ranging from $11.57 in Quebec to $11.92 in Nova Scotia.

For many individual items of food, the variation in price from province to province was not large. Prime rib roast of beef, for example, varied in price from 24.5 cents in Quebec to 26.9 cents in Nova Scotia and 27 cents in Saskatchewan.

For bacon, the variations were somewhat larger, prices ranging from 38 cents in Nova Scotia, 40.5 cents in Quebec, 43.3 cents in New Brunswick, and 42.3 cents in British Columbia, to 46.3 cents in Saskatchewan and 46.5 cents in Manitoba. New-laid eggs varied quite widely in price, ranging from 45 cents a dozen in Manitoba, and 51.3 cents in Saskatchewan, to 55.6 cents in Quebec and 71.7 cents in British Columbia.

Potatoes ranged from $1.43 for a 90-lb bag in Manitoba and $1.48 in Saskatchewan, to $1.78 in British Columbia and $2.50 in Quebec.

Coal also varied widely in price from province to province, and there were large differences between the prices of domestic bituminous coal and anthracite coal. In Sydney, N.S., bituminous coal was $4.80 a ton and anthracite was $16.80. In Alberta, bituminous coal averaged $5.75 a ton and anthracite $6.63. In Ontario, the average price of bituminous coal was $9.52 and that of anthracite $9.60. In Saskatchewan, bituminous averaged $8.75 and anthracite $14.63.

Except in Saskatchewan and Alberta, house rents did not vary greatly across the country. The rent of a six-room house, without "sanitary conveniences," was $15.19 a month in Quebec and $15.50 in New Brunswick. This compared with the highest rents of $17.60 in Nova Scotia, $17.08 in British Columbia and $18.27 in Ontario. In Saskatchewan and Alberta, however, the rent of this type of house averaged $22.50 and $22.25 respectively.

For a six-room house without sanitary conveniences, the average rent varied from $10.57 in Quebec and $11.10 in Nova Scotia, to $13.63 in Alberta and $14.30 in British Columbia.

Women Railway Employees

In some places, the shortage of men led the railway companies to employ women. In Toronto, the Canadian Pacific Railway engaged a number of women as oilers, and in Stratford, a number of women and girls were employed in the Grand Trunk car shops.

Women were also working in some other establishments that usually employed men. This journal reported that in Vancouver, "owing to the completion of contracts, the number of women employed in one machine shop was greatly reduced." In Ontario, "a piano company, owing to the scarcity of skilled mechanics, engaged some women who were being trained in work formerly performed by men."

26th Annual CAALL Conference

More than 100 senior labour officials of the federal, provincial and territorial Governments met in Ottawa September 11 to 13 for the 26th Annual Conference of the Canadian Association of Administrators of Labour Legislation.

George V. Haythorne, Association President and Deputy Minister of the Department, acted as conference chairman.

Labour Minister Nicholson welcomed delegates to the CAALL meeting, and praised the Association for its importance and value. He said it is "the only organization in the country in which senior labour officials can freely and frankly discuss matters of common concern."

Mr. Nicholson said that the Department was fully cognizant of the fact that methods of dealing with industrial relations problems should be reappraised in the light of change. He believes that free collective bargaining is the most democratic and effective method of settling differences, and that the Government's role is to assist and give leadership in developing ways to make collective bargaining more effective.

He urged better communication between all the parties involved in industrial relations, and he said that, as more white-collar workers turn to collective bargaining, the climate of industrial relations was bound to change.

The Government, he said, was having more discussions with management and unions, and these were proving valuable and productive. As an example, he cited the many discussions concerning the new Labour Standards Code, particularly with respect to the hours-of-work provisions. "Slowly but surely, practical ways of meeting the requirements of the Code are being worked out by an increasing number of industries."

He told delegates that another new piece of legislation, the Canada Labour (Safety) Code, is relying heavily on consultation for its implementation and success. There would be considerable informal consultations with labour and management to develop a model safety code, he concluded, as well as extensive consultation with safety authorities in all the provinces.

HON. IVAN C. RAND

"Picket lines may spring up against almost any view on a controversial public question," Hon. Ivan C. Rand, Ontario Royal Commission on Labour Disputes, told the delegates. "Apart from such demonstrations by the immature or the mildly lunatic fringe, they are largely a protest against what is felt to be unfairness in the sharing of material values." Through the absence of specific criteria for judgment, he said, that question involves the greatest difficulties of determination. And with equality of distribution, and arbitral or administrative decree being rejected, the result is a coerced acceptance through economic conflict.

"Suggestions are made . . . that wage increases must go on without end, unrelated to production, to the general economy, to guidelines, to inflation, almost in fact to everything except the arbitrary demand for more. We have too much intelligence in labour leadership to have such assertions treated as final and definitive." But, he added, the question of criteria for determining distribution persists.

"It is not difficult to detect the main source of intimidating attitudes between employers and employees: it is the pressures upon property." Universal education has dissipated many ideas which previous generations had accepted, he said, and this liberation of thinking has raised questions concerning the present disparity of possessions.

Judge Rand believes that competitive profit-making can be incompatible with integrity and social responsibility, and that it threatens the maintenance of ethical standards generally. "Since 'business' has become the chief 'business' of the state, the example it sets tends to permeate the whole community. Its merit is the scope and stimulation it gives to individual action and resourcefulness . . . but its inseparable accompaniment is a generalized resentment against restriction or imposition, which in turn generates a hardness and hostility of attitude presently saturating western society."

The one misfortune that would reduce this country to social degradation, he said, is the destruction of moral values, honesty, integrity, and loyalty to the intuitions of justice and good will. He quoted Dr. Glenn I. Seaborg, chairman of the Atomic Energy Commission, whose words appeared in the July 15 issue of *Saturday Review* magazine: "When we are less likely to be in competition with one another, much of the hypocrisy of society will vanish and more honest relations will be formed. And, finally, when we can walk down the street—anywhere in the world—in a community free from want, where every human being has a sense of dignity not gained at the expense of others, we might not only walk free from fear but with a great feeling of exaltation."

Judge Rand reflected that apart from racial conflicts, the issues of labour and management have, in many respects, become the dominant problems of democratic government, and that the solution of the one ensures substantially the solution of the other.

"What we see formed and forming before us is a democratic society fashioned and supported by social functions, tending to monopoly, performed by huge collectivities of capital and labour. The convenience, health and security, and at times the necessities of communities, are seen to be put in fee to these groups; our modes and standards of living . . . have been brought under subjection to their policies and action." And since labour and capital, in the broad view, have been entrusted with the task of maintaining the economic life of the country, the interest of the public becomes increasingly obvious."

In this assumption of social trusteeship,

Ministers and Deputy Ministers Attending

Provincial ministers attending the conference were: Hon. Obie Baizley, Minister of Labour, Manitoba; Hon. Dalton Bales, Minister of Labour, Ontario; and Hon. J. Elmer Blanchard, Minister of Labour and Manpower Resources, Prince Edward Island.

Provincial deputy ministers attending the conference were: K. A. Pugh, LL.D., Deputy Minister of Labour, Alberta; W. H. Sands, Deputy Minister of Labour, British Columbia; R. P. Campbell, Deputy Minister of Labour, New Brunswick; G. T. Dyer, Deputy Minister of Labour, Newfoundland; R. E. Anderson, Deputy Minister of Labour, Nova Scotia; Donat Quimper, Q.C., Deputy Minister of Labour, Quebec; and J. R. L. Parrott, Deputy Minister of Labour, Saskatchewan.

said Judge Rand, lies the justification for legislative action.

"The preservation of our values of freedom and good citizenship, and the attainment of acceptable standards of strength and vigor, demand the intelligent and responsible discharge of the duty," he concluded. "This country, with its colossal material resources, can be denied greatness only by the failure of its people."

PROF. H. D. WOODS

"The ink is hardly dry on the signature to a collective agreement before the agreement is already out of date for any number of the multitude of factors that bring about change," Prof. H. D. Woods, Dean of Arts and Sciences, McGill University, told the CAALL convention.

"In industrial relations terms, this means that the conflict of interests is continuously renewing itself, and bargaining about the impact [of change] has to go on."

Change leading to unemployment is frequently a personal disaster for the redundant worker, he said. "Yet it happens frequently, and society has been slow or niggardly in transferring the social costs . . . from the affected individual, either to the industry . . . or to society as a whole."

He thinks that we may be asking collective bargaining to solve problems beyond its capacity to do so. "Collective bargaining has been remarkably successful in bringing about agreements and accommodations throughout the year, but it has limits."

To carry out the function of bargaining, a union needs not merely recognition by the employer or consent to negotiate, but power to back up demands for rule changes. Historically this has been supplied by the strike.

"We need to remind ourselves of this whenever we begin to contemplate changes in public policy regarding labour relations and labour relations law. The history of industrial relations reveals over and over again that without the strike as a weapon . . . [unions] would never have been able to carry out the role that society has assigned to them."

It is the interplay of power that has led to a gradual spreading of a complex structure of interrelated private constitutional industrial governments that leaves to management the authority for organizational efficiency, and to worker representatives an instrument to reshape personnel policies. "If employers in the aggregate find themselves with surplus labour either in employment or in the local labour market, power will shift toward employers and away from labour."

And conversely, when employers confront a local labour shortage, power will flow from employers to employees. "It is this power relation that lies behind the wages, working conditions, and authority in industry," said Dean Woods. "Management's capacity to command, order and direct a work force is variable as its power in the labour market changes. A tight labour market favours employees and a loose labour market favour employers."

Despite limitations, he believes that collective bargaining "is the most successful device for achieving labour and management co-operation that has yet been developed in the western world." But there was no guarantee that it would not develop weaknesses to the point where it would become a liability in the future. "It is conceivable that the social problems of industrialism in 1967 cannot be solved at all satisfactorily by a power confrontation of the interested parties."

Dean Woods said that legislative action in labour relations in the past had made it possible for collective bargaining to develop, but that labour had lost many of its rights to strike. "Indeed, generally in Canada a strike is legal only in negotiations for a new agreement or the renewal of an expiring one, and in most jurisdictions, only after compulsory conciliation."

At this point in his address, Dean Woods mentioned in an aside to the audience that, when management decides it would be preferable to "take" a strike than to give in to union demands, then the strike is as much a management weapon as a labour weapon. "In other words, the strike almost inevitably requires a decision of both management and labour, not just labour alone."

Task Force Invites Briefs

Interested organizations and members of the public are invited to submit briefs to the Task Force on Labour Relations set up by the Prime Minister "to examine industrial relations in Canada and to make recommendations to the Government with respect to public policy and labour legislation and on such other matters as it considers relevant to the public interest in industrial relations in Canada." Information on the submission of briefs can be obtained by writing to: Research Director, Task Force on Labour Relations, Room 700, 150 Kent Street, Ottawa 4, Canada.

Until recently, he said, the use of the strike had been declining, but the last two or three years have been marked by a sharp rise in strikes, and economic losses through strikes.

"Through it all, the public seems to be displaying a greater impatience with the behaviour of the parties, and to be more inclined to use the power of the state to cut the power of the parties by imposing compulsory settlements. Many years ago the founder of the Canadian Department of Labour referred to circumstances in which 'private rights may become public wrongs,' and he used this to justify the first major important compulsion in Canadian labour relations policy—compulsory investigation under the I.D.I. Act of 1907" (L. G. 1907, p. 1147, 1108).

Dean Woods emphasized, in his concluding remarks, that public authorities must recognize that industrial conflict is an inevitable consequence of employment. "This is self-evident; and since the employment contract is gradually becoming almost universal in our society, it is necessary to determine what principles should be governing or determining public policy. With this settled, the question of means to the end of the policy goals comes up."

The Task Force (L. G., Nov. 1966, p. 631) is now studying the facts about the industrial relations system in Canada, he said, seeking the principles inherent in "a relatively free society upon which the industrial relations system should be built." It is studying the behaviour of management and workers, examining the actual union and business structure relating to industrial relations, the power relations in the system, the consequences of the process of accommodations, the record of the agencies and comparing the whole with experience elsewhere.

"If we do our task well, we may be able to make some sensible suggestions to the Government and to the Canadian people."

Left to right: T. H. Robinson, employer deputy member on the ILO Governing Body; Joseph Morris, worker member; George V. Haythorne, Deputy Minister, Canada Department of Labour, and Kalmen Kaplansky, Director, Canada Branch Office.

ILO Week at EXPO 67

ILO Week was observed at the United Nations Pavilion at EXPO 67 from September 1 to 8. It was heralded by a luncheon attended by 35 senior representatives of government, and labour and management organizations.

Among them were: Dr. George V. Haythorne, Deputy Minister of Labour; J. P. Després, Assistant Deputy Minister of Labour; Bryce Mackasey, Parliamentary Secretary to the Minister of Labour; Kalmen Kaplansky, Director of the Canada Branch of the International Labour Office; Joseph Morris, Executive Vice-President of the Canadian Labour Congress; Marcel Pépin, President of the Confederation of National Trade Unions; Gérard Rancourt, General-Secretary of the Quebec Federation of Labour; C. B. C. Scott, Assistant General Manager (Personnel), Ontario Hydro; T. H. Robinson, Manager, Industrial Relations, Canadian International Paper Co.; W. L. Jacobsen, Manager, Labour Relations, Canadian Pacific Railways; and Peter Casson, Commissioner-General of the UN Pavilion.

The luncheon was preceded by the viewing of a new ILO film, "A Day Like Any Other," and an informal meeting with the press.

Speaking to delegates on behalf of the Government of Canada, Dr. Haythorne said: "For Canada, membership in the International Labour Organization has many advantages. In a fast-moving world of change, we need to be in tune with new ideas and ways of dealing with problems in all fields of human activity. The ILO is Canada's readiest means of access to the ideas and experience of other countries in such matters as full employment, labour relations, human rights, productivity, social security and labour standards.

"When war broke out in Europe in 1939, the ILO accepted the Canadian Government invitation to move its headquarters from Geneva to Montreal so that it could carry on its work in freedom, and the ILO was housed at McGill University until 1948.

"With its nearly half-century of experience and its unique tripartite approach to world labour and social problems, the ILO has a truly vital contribution to make in the struggle to improve the working and living conditions of people everywhere."

On behalf of labour, Mr. Morris said: "The International Labour Organization has been actively working toward the goal of a peaceful world since it came into being in 1919, and it has been a beacon of hope since that time. It is a unique tripartite organization concerning itself, within the family of the United Nations, with the economic and social problems without whose solution peace in anybody's time is impossible.

"The ILO provides an opportunity for three major elements in society—government, employers and employees—to come together for the discussion of current issues and for the making of decisions that will be in the best interests of society as a whole. The Canadian Labour Congress is for 'the dialogue'. We believe there is nothing to be lost and potentially much to be gained by people talking to people. This is why the tripartite structure of the ILO is so important. This is why it should be nurtured and developed to new degrees of perfection."

Speaking as employer deputy member,

Mr. Robinson said: "Until the postwar period, the ILO program was devoted primarily to the promotion of social justice through the establishment of international standards of human welfare and working conditions. Recently, however, the needs of the many developing nations, old and new, for technical assistance in economic and social matters, absorb an increasing proportion of the ILO's resources. Moreover, the ILO is the executing agency for many UN programs of technical assistance.

"Canadian employers are strong supporters of the ILO. They have participated in its activities since its inception through the Canadian Manufacturers' Association in co-operation with the Canadian Chamber of Commerce, the Canadian Construction Association, and the Railway Association of Canada. Canadian employers participate in the annual conferences and the inter-American regional conferences, the most recent of which was held in Ottawa last September. They are represented on the Governing Body of the ILO; and they serve on many ILO industrial and technical committees. Canadian employers welcome these opportunities to contribute to the goals of the ILO."

Mr. Kaplansky told the guests: "Throughout the summer, EXPO 67 has given people from many countries a graphic description of the conditions and the accomplishments of man in all parts of the world.

"The ILO, which has worked for social progress and for economic development for nearly 50 years now, is indeed very pleased to be associated with the messages of EXPO 67, in this observance of ILO Week at the United Nations Pavilion.

"EXPO outlines to us in many forms and in many languages the results that endeavour and work can achieve, and the variety of our achievements. I should add that we are especially pleased to be here at the time of Labour Day, and to mark the contributions that people who work have made to progress."

In an address to a mass meeting at the Place des Nations on "Workers Day," Mr. Kaplansky pointed out that the EXPO theme of "Man and His World" was a concept that is central to the constitution, international arrangements and treaties that inspire and guide the activities of the ILO.

"Our aim has been social justice. Our motto—'poverty anywhere is a threat to prosperity everywhere'. Our purpose—the full and productive utilization of human resources everywhere. Our means toward the achievement of this goal—the improvement of the conditions of life and work, and perfection of the institutions through which free men can solve their inevitable difficulties."

EXPO Commissioner-General Pierre Dupuy told the Labour Day gathering: "The complexity of the modern world forces workers to become organized and united to defend their professional interests. Unions are an aspect of the interdependence of men, one of the forces that must contribute to the equilibrium on our small planet. My thoughts extend beyond Canada. They reach all those working to improve their fate and that of mankind.

"I greet them on your behalf, and send them our wishes for prosperity in peace and liberty.

"The future of the world is in suspense as never before. To face the problems of our time and solve them, we will need to pool our good will, our know-how, our effort, our maturity. We will need good leaders, and it is up to us to choose them well. This is not only a national affair. Interests are getting more and more interwoven between countries. This is why I am happy to salute here the presence of the ILO representative, since Geneva remains the centre of labour activities and studies."

Mr. Dupuy said he would ask the representative to be Canada's intermediary in telling the workers of the world that EXPO has set a high example of human solidarity.

Job opportunity in ILO

The International Labour Office has announced that it is seeking applicants to fill a job position in its International Labour Standards Department, Application of Standards Branch.

The duty station is Geneva, Switzerland for an unlimited time period.

The salary range is U.S. $7,287 to $11,913, tax-free. Increases are granted annually. In addition, there is a post adjustment that varies with changes in the cost of living, basic salary and dependency status. At present it ranges from U.S. $216 to U.S. $528.

The duties and responsibilities of the post include the examination of reports by Governments on ratified and unratified Conventions and on Recommendations. The incumbent will prepare comparative analyses of the legislation of the different states and the terms of Conventions. He will prepare notes, reports, and opinions of a legal character concerning the application of Conventions for consideration by Governments, the Governing Body, and the International Labour Conference.

The incumbent will prepare meetings of various committees dealing with the application of Conventions and Recommendations, and participate in the secretariat of these committees to prepare documents, records of meetings and draft reports. He will, in addition, correspond with governments and with employers' and workers' organizations on questions relating to International Labour Conventions and Recommendations.

The requirements for the position include Canadian, British, or Australian citizenship, age 23 to 35 years, a good honours degree in law, and a knowledge of English and French. The person appointed will be required to learn Spanish.

The closing date for applications is November 15, 1967. Requests for additional information or ILO application forms for employment should be made to the Director, Canada Branch, International Labour Office, 178 Queen Street, Ottawa 4, Ont.

ILA Branch material restored

Several paragraphs dealing with the Department of Labour's International Labour Affairs Branch were forced out of our July Centennial issue by space restrictions. They read as follows:

The ILO was headquartered in Montreal during World War II. Its aims and purposes were restated and broadened in 1944 at Philadelphia, Pa., by a Declaration known as the Philadelphia Charter (L. G. 1944, p. 714).

The conference in Montreal in 1946, presided over by the Minister of Labour, was the beginning of a new era. After moving back to its Geneva headquarters, the ILO began developing its technical assistance programs and modernizing the Code to meet the challenges and stresses of the postwar years, which included the problems of the developing nations of Asia, Africa and Latin America.

In 1946, the Government designated the Department of Labour as the liaison between the ILO and Canada, and the Department established an ILO Branch to handle international labour affairs.

The ILA Branch deals with all of the Department's international responsibilities, which include the ILO's standard-setting and operational activities, labour aspects of the work of the Organization for Economic Co-operation and Development, Canadian Labour Counsellors in various countries, the flow of international labour information to and from Canada, analysis of Canadian conformity with international labour standards at federal and provincial levels, training programs for labour officials visiting Canada from developing countries, and co-operation with the External Aid Office and ILO in recruiting Canadian experts for assignments in such countries.

Within Canada, the Branch maintains relations with the provincial governments and with employer and trade union organizations and the general public on all international labour affairs.

Strike by postal workers averted in August

A strike proposed by the 12,000-member Canadian Union of Postal Workers was averted late in August because of lack of support from many of the locals of the union.

Members of the CUPW threatened to call a one-day strike sometime during August. The union demands asked for extra pay for 2,500 postal workers who said that they missed out on the July 3 holiday because it was their regular day off.

In view of the threatened strike, Hon. E. J. Benson, President of the Treasury Board, released a statement on July 28 in which he explained the Government's position as employer of the postal workers. He stated that the Government had turned down requests for an additional holiday associated with the Dominion Day July 1 weekend, a statutory holiday, because "in the view of the Cabinet, the existing arrangements would enable most public servants to participate fully in the Centennial celebrations scheduled for the weekend."

Existing regulations entitle public servants to leave with pay on the first working day after a holiday, when the holiday falls on a normal day of rest. To those postal employees who were required to work on Monday, July 3 in order to maintain essential services, wages of at least time and a half in addition to their normal rates were paid.

The 12,000-member CUPW, meanwhile, had conducted a nation-wide vote on the proposed one-day strike. The union's 300 locals held meetings, which were sparsely attended, to vote on the question of a walkout and on a future policy of refusing to co-operate on holiday decisions of the Government. Union officials claimed that 72 per cent of the members who voted were in favour of taking strike action.

Mr. Benson warned that such strike action would be clearly illegal. The Public Service Staff Relations Act (L. G., May, p. 291) provides for fines for unions and their members for an illegal strike. The law can bring upon a union a fine of $150 a day, $300 a day for officers who lead the walkout, and $100 a day for each member participating.

William Kay, President of the CUPW, announced on August 1 that the union planned to carry out the strike in spite of Mr. Benson's statement. He indicated, however, that "other avenues are being explored to solve our grievance." Harry Arthurs, a Toronto lawyer and labour mediator, was employed as a special adjudicator with the Public Service Staff Relations Board, it was announced on August 8.

In late August, the planned strike action was declared illegal by the Board. The decision was made on August 22.

The 10,000-member Letter Carriers Union of Canada was not involved in the strike threat. It was understood, however, that the letter carriers would honour picket lines set up by the CUPW. In addition, the letter carriers would be unable to perform their duties if the mail were unsorted because of the strike.

The two organizations, which have functioned independently for 40 years, formed a council of postal unions earlier this year as a transitional step toward amalgamation.

Mr. Kay, meanwhile, persisted in his plans for strike action. He announced that the walkout would begin at 12:01 EDT on August 25. He applied pressure on British Columbia locals, which were opposed to the strike, to heed the national executive's strike call. Members of locals in Vancouver, Calgary, Edmonton, Winnipeg, North Bay, and Niagara Falls voted against the strike. Members in Toronto, Montreal, Ottawa, and Sault Ste. Marie voted in favour.

But growing opposition among locals across the country, together with an unyielding Government, forced the cancellation of the strike. Mr. Kay conceded that he had been telephoning union leaders across the country. Members of the Toronto local signified that they were more interested in obtaining certification by the Public Service and a collective agreement than in participating in the planned walkout. At the same time, the Montreal local backed off when the Toronto local requested a postponement, Mr. Kay said, because it did not want to be left holding the bag.

The union's decision to cancel the walkout came 24 hours after the Public Service Staff Relations Board decided that a strike would be unlawful.

Donald MacDonald

Donald MacDonald named CLC acting President

Donald MacDonald, Secretary-Treasurer of the Canadian Labour Congress since it was founded in 1956, has been formally named as its acting President.

Mr. MacDonald had been designated as the senior officer of the labour body since early this year because of the illness of President Claude Jodoin. The decision to make him acting President was taken by the CLC executive council in September.

Mr. MacDonald has resigned as chairman of a special commission investigating the structure and operations of the CLC and has been replaced in this post by Executive Vice-President Joseph Morris.

Union signs agreement with Sunnybrook Hospital

A first collective agreement between Sunnybrook Hospital in Toronto and the Building Service Employee International Union has been signed on behalf of 1,000 employees and has established a minimum wage of $2 an hour for male employees at the hospital.

A. G. Hearn, the union's Canadian Vice-President, said that wage increases ranged from $35 to $60 a month. The agreement calls for a monthly starting rate of $247 for female workers ,$258 for those with one year's service and $269 for two year's service. It provides also for nine paid statutory holidays for all employees, and a variety of other benefits including payment by the hospital of two thirds of the cost of the health and welfare plans.

The 25,000-member union, representing 22,000 hospital employees in Canada, has also been certified for 275 office employees in the hospital, the first such certification it has achieved.

CNR agreement faces up to technological change

The principle of negotiation concerning the adverse effects of technological change on employees has been accepted in an agreement between the Canadian National Railways and the Brotherhood of Locomotive Engineers that was signed at the end of August.

It seems, therefore, that in this case at least, a way has been found of dealing with the kind of disputes that led to the appointment of the Freedman Commission, and this has been done through agreement between the parties without resort to legislation. It was a dispute about run-throughs that brought about the appointment of that Commission (L. G., Jan.-Feb. 1966, p. 4).

The article, "Adverse Effects of Changes in Working Conditions," makes it clear, however, that "material changes in working conditions . . . are to be initiated solely by the company." It is "measures to minimize any significantly adverse effects of the proposed change on locomotive engineers" that are to be subject to negotiation.

The Company undertakes to give the Brotherhood at least six months notice of any such proposed change, with full details of the change and of its expected effects on working conditions. Run-throughs and changes in home stations are particularly mentioned as subjects to which the article is intended to apply. A list of other matters considered negotiable is given in the article.

The agreement stipulates that negotiations are to begin within 20 days of the date of the giving of notice of any change by the Company. If agreement on the issues in dispute is not reached within 60 calendar days of the beginning of negotiations, the issues are to be referred within 20 days of the cessation of negotiations to a board of review, which is to be composed of two senior officers from each party. Within 30 days, this board is to publish its findings and recommendations.

If the board is unable to reach a decision, or if its recommendations are not satisfactory to either party, the issue or issues remaining in dispute may be referred by either party to a single arbitrator whose decision shall be final and binding on both parties. The request for abitration is to be made in writing by either party to the other within seven days after the board's finding have been made known. If the parties cannot agree on the choice of an arbitrator within seven days of the request for abitration, the Minister of Labour is to be asked by either one or both of the parties to appoint one.

The parties are to prepare a joint statement of the issues to be submitted to the arbitrator, and the arbitrator is to hear the dispute within 30 days from the date of his appointment, and to render his decision within 30 days of the completion of the hearing. If the parties cannot agree on a joint statement, either may submit a separate statement, informing the other party that it has done so.

"The decision of the arbitrator shall be confined to the issue or issues placed before him, and shall also be limited to measures for minimizing the significantly adverse effects of the proposed change upon employees who are affected thereby," the agreement stipulates. The changes, the effects of which are subject to negotiation, are not to be made until the procedures for negotiation and arbitration, if necessary, have been completed.

Jolly Green Giants replace farm workers

Thirty men and 14 machines have replaced an estimated 1,000 farm labourers during the bean- and pea-picking harvest on Westham Island near Ladner, B.C.

The mammoth automated green pea combines—referred to as Jolly Green Giants—are manufactured by a food machinery company in Columbus, Ohio, and cost between $20,000 and $25,000 each. The bean combines cost $8,000 a unit.

The Canadian company using the combines says that it has about $500,000 invested in automated harvesting and that production costs have been cut by about 60 per cent.

The combines travel at half a mile an hour, picking 12 to 15 acres of beans a day, averaging from three to five tons an acre. Thirty acres of peas are picked daily, yielding two tons an acre.

Alteration in minimum standards article

"Minimum Standards Legislation and Economic Policy," an article dealing with a paper prepared by Phillip Cohen, Chief of the Department's Federal Industries Division in the Economics and Research Branch, was published on page 567 in the September issue of this journal. The final sentence in the first paragraph appearing under the subhead "Help or Hinder?" in column two should have read:

"He stated that the universal minimum standards imposed by the Code had had the useful result of causing various unions to re-examine the working conditions of all their members to see whether they were in accord with the standards established."

Union-Management Council established in Ontario

A Union-Management Council has been established to advise the Ontario provincial Government on labour relations. Under the chairmanship of John Crispo, Director of the University of Toronto's School for Industrial Relations, the Council will have the task of reconciling the diverse views of labour and management with respect to the Ontario Labour Relations Act.

Union representatives on the Council are D. F. Hamilton, Secretary-Treasurer of the Ontario Federation of Labour; Larry Sefton, Director of District 6, United Steelworkers of America; Harry Simon, Regional Director of the Canadian Labour Congress; Stanley Little, National President of the Canadian Union of Public Employees; and William Ladyman, Vice-President of the International Brotherhood of Electrical Workers.

Management representatives are: R. E. Alden, Director of Industrial Relations, Steel Co. of Canada Ltd.; E. J. Gaunt, Manager for Employee Relations, British-American Oil Co. Ltd.; R. P. Riggin, Vice-President for Corporate Relations, Noranda Mines Ltd.; D. Kenneth Frid, President, Frid Construction Co. Ltd.; and G. S. P. Ferguson of Montgomery, Cassels and Mitchell.

New labour course offered at Ottawa U

A new course on the "why" and "how" of negotiating and administering collective agreements, was introduced in September by the University of Ottawa. Officially called Labour Relations and Personnel Management, the evening program concentrates on problems and methods in drafting and maintaining such agreements.

Developed by an advisory committee representing industry, labour, government and the university, the course is open to high school graduates with several years' experience in labour relations and personnel management. Felix Quinet, Chief of the Department of Labour's Collective Bargaining Division, is program co-ordinator.

Members of the Faculty of Social Sciences will lecture on collective bargaining, principles of economics, money and banking, labour economics, Canadian economic problems, and personnel administration in the Public Service. Students may choose any four among the six subjects, leading to a certificate on successful completion.

ILO article deals with the non-manual worker

A look at the non-manual worker and a reappraisal of non-manual employment shows that the dividing line between what is commonly considered to be "manual" or "non-manual" is much more blurred than it appears to be at first glance. The *ILO Panorama*, in an article in its July-August issue—"Non-Manual Employment and Social and Economic Progress"—discussed the changes in non-manual employment, and changes in popular thinking.

In the past, the distinction between manual and non-manual work has been more or less arbitrary, the article said. Automation and cybernetics is changing work assignments by carrying out a wide range of administrative tasks, data processing for scientific research, market forecasting and planning, medical diagnosis, the placing of air and rail reservations, and even the deciphering of ancient texts in unknown languages.

This means that many non-manual workers are now becoming machine controllers and are less and less required to apply intellectual skills in job duties that formerly required human contact, as in retail enterprises.

The article describes the role of the non-manual workers as twofold. First, they are able to contribute to the production of wealth by increasing productivity as a result of improved health conditions, expanding markets, and the provision of adequate educational and vocational training facilities. Second, they contribute to social and economic progress through acquiring the increased skills and knowledge demanded by rising standards in job performance.

It is difficult at this stage, the article admits, to forecast the knowledge and qualifications required for future careers. Nor has academic or vocational guidance reached the stage where it can provide information to assess and process future needs.

The ILO conducted an examination of the problems of non-manual employment in 1959 and, since then, has continued to review the employment and working conditions of the various non-manual occupational groups, such as nurses, performers, office workers, civil aviation personnel, urban transport employees, civil servants, hotel and restaurant staff, and teachers. In addition, the ILO has extended its research activities and technical co-operation programs related to the development of managerial and intermediate personnel.

These surveys formed the basis of the ILO Director-General's report delivered to the 51st International Labour Conference (L. G., Aug., p. 472), as part of the continuing program of study of non-manual workers.

Public Service opportunities for university women

Married women who have university degrees and who want part-time work will now have opportunities in the Public Service of Canada. The Public Service Commission has started a new recruitment program that should be of particular benefit to married women who have family responsibilities, but who are able to work outside their homes for a few hours a day.

At first the openings will be for those who are qualified as economists, statisticians and librarians. Thirty positions are now available for successful candidates in competitions that have already been organized. Further expansion of the program will depend on the results obtained within the next year.

Successful candidates may arrange to work between four and six hours a day, with working periods adjusted to suit school hours. The working year will be arranged to fit within school terms, from September to June, with time off during the Christmas and Easter holidays.

Salary ranges for the positions open are those established for the economist, statistician and librarian classifications, in keeping with the qualifications of each candidate for the position being filled, and on a pro rata basis according to the hours worked. Persons interested may obtain more information by calling the socio-economic staffing program at the Public Service Commission of Canada.

More married women in the labour force

Married women over 35 are returning to work in larger numbers than ever, according to a report, *Women Who Work* (Cat. No. 71,509), by John D. Allingham, University of Western Ontario.

The report is part of a series, *Special Labour Force Studies*, released by the Dominion Bureau of Statistics.

The survey, which covers the 10-year period 1951-61, shows that 31 per cent of married women in the 40-44 age group with high school diplomas are working. Only 21 per cent of those with elementary education are working.

Desire for fulfilment, coupled with financial need, is providing the impetus. Mr. Allingham's report concludes: "With their new willingness to work, women in their mid-30s and older, make up Canada's greatest reservoir of untapped labour, apart from the school-age population."

Britain publishes booklet on industrial training

A new booklet, *Industrial Training in Britain*, seeks to explain the distribution of responsibility for training in Britain.

It discusses the provisions of the Industrial Training Act 1964 and, in general terms, the forms of training that are usual for different types and levels of work in a broad range of civilian employment. The booklet is concerned with all grades, from operatives to managers, and with office work and distribution as well as with manufacturing processes, construction and transport, including a number of activities outside the statutory scope of the Industrial Training Act.

In its introduction, the booklet outlines the reasons for the growing interest in the quality and quantity of industrial training in Britain:

- modern technological development is rendering many old tasks and occupations obsolete, and requires new skills to be applied to new processes;
- the nation's economic situation calls for greater productivity, to which better training can contribute;
- the interests of the workers themselves demand that they should be enabled to realize their full potential—both for the sake of earning capacity and for satisfaction in their work—and should be equipped to transfer to other work if their old jobs are lost through technological change or other factors;
- by the late 1960s and early 1970s, there will be fewer workers available, especially skilled workers, than the projected number needed to man the industries and services then likely to be in operation;
- the pace of change makes it advisable that training policies be addressed to producing people with the capacity to adapt to future demands and needs yet unforeseen.

The booklet is prepared by the Reference Division, Central Office of Information for British Information Services in Canada, dated April 1967. Copies are available from British Information Services across Canada or from 80 Elgin Street, Ottawa 4.

New course for women at Manitoba University

A novel type of course that is designed to study problems facing married women undergraduates was initiated by the recently appointed Dean of Women at the University of Manitoba, Mrs. Shirley Smith. Dealing with one of the problems, a report to be published soon will examine the fact that few scholarships are available to students over 35 years of age.

Working Conditions In Canadian Industry, 1966

A private pension plan was modified to adapt it to the Canada or Quebec Pension Plans in establishments that included the majority of the employees covered by the May 1966 survey of working conditions conducted by the Economics and Research Branch of the Department of Labour. Modified plans of this kind applied to 59 per cent of the non-office and 80 per cent of the office employees.

Overtime provisions of some kind are now almost universal for non-office employees. For office employees, there are still some establishments that do not provide for overtime. Provision for overtime was found in establishments employing 96 per cent of the non-office workers and 85 per cent of the office workers covered by the survey.

In the following analysis, the percentages given refer to the number of persons employed by establishments that report having a certain provision, as a percentage of the total number of employees covered by the survey. This is not necessarily the same as the number of employees to which the provision actually applies, because in some establishments the provision may not apply to all those employed.

The report on the survey of working conditions, which is conducted each year, in 1966 was based on information obtained from questionnaires sent to nearly 35,000 reporting units. Those that replied had a total of 2,970,303 employees at May 1, 1966.

This total was made up of 1,989,593 non-office and 980,710 office employees. Comparable figures for the 1965 report were: total number of employees, 2,928,985, of which 1,976,551 were non-office and 952,434 were office employees.

Forestry, construction and education were the main non-agricultural industries that were not included in the survey.

Non-Office Employees

A private pension plan had been in existence at some time between January 1, 1965 and April 30, 1966 in establishments employing 75 per cent of the total of 1,989,593 non-office employees covered by the survey. Besides the establishments in which such a plan had been modified to fit in with the Canada or Quebec plans, the private plan continued without modification after April 30, 1966 in establishments covering 14 per cent of the employees, while a private plan was discontinued in establishments employing 2 per cent of the workers.

A money payment as the only kind of compensation for overtime applied in cases covering 85 per cent of the employees, 2 per cent were covered by a provision for time off only, and 9 per cent by a provision for a combination of money and time off.

Overtime on a daily basis was paid after 8 hours in plants employing 56 per cent of the workers; and on a weekly basis after 40 hours in plants employing 43 per cent. Various other daily and weekly periods were mentioned in cases, each of which covered a comparatively small percentage of the employees.

By Industry

The distribution of overtime provisions by province is considered to be of little significance; but by industry, there were some instances in which the coverage was complete; in other cases it was well below average. These differences appear to be connected at least partly with the kind of operation carried on.

For example, all establishments provided for overtime in most kinds of mining, in rubber products manufacturing, and in cotton yarn and cloth and synthetic and silk textile, and other manufacturing. In air transport and railway transport, on the other hand, among operating and running trades employees, coverage ranged from 73 to 79 per cent; but for other employees in these industries it was complete or almost so.

The existence of private pension plans of some kind, which occurred in establishments employing 75 per cent of all non-office employees in the survey, was found in all establishments reporting in only a few industries. These were: rubber and tire manufacturing, petroleum refining, railway transport (for all but a very small number in the running trades), and in telephone communications. Industries in which the percentage of employees covered was below average included, for example: gold and uranium mining, 37 and 25 per cent; boot and shoe manufacturing, 36 per cent; hosiery and knitted goods, 32 per cent; sash and door and planing mills, 22 per cent; restaurants, 25 per cent; and laundries and dry cleaning, 21 per cent.

Office Employees

Of the total of 980,710 office employees in the survey, 91 per cent were in establishments that had a private pension at some time between January 1, 1965 and April 30, 1966. Establishments in which a private plan had been modified to adjust to the Canada or Quebec Pension Plans, as already noted, covered 80 per cent of the employees in the survey. A private plan was continued after April 30, 1966 in establishments employing 10 per cent of the employees, and such a plan was discontinued in a few establishments employing 1 per cent of the workers.

A money payment was the only kind of compensation for overtime in establishments employing 54 per cent of the office employees. Time off only applied in cases covering 6 per cent, and a combination of money and time off in cases covering 25 per cent of the employees.

Provision for payment of a money premium after 7½ hours a day covered 12 per cent of the employees, and, after 8 hours a day, covered 11 per cent. A premium was paid after 40 hours a week in establishments employing 15 per cent of the office workers. Other periods after which overtime was paid varied from 7 to more than 8 hours a day and from 35 to as high as 44 hours a week. Comparatively small percentages of employees were affected by each of these provisions.

By Industry

Overtime provisions were less commonly found in all establishments in an industry for office than for non-office employees. Coverage was complete in only rubber footwear and tires and tubes manufacturing, in telephone communications and in banks and government; but it was almost complete in some other industries.

Industries in which coverage of office employees was unusually low included: woollen yarn and cloth, 39 per cent; hosiery and knitted goods, 23 per cent; water transport, 38 per cent; and restaurants, 41 per cent.

Industries in which all office employees were in establishments that had some kind of pension plan for such employees were: tires and tubes manufacturing, railway rolling stock, petroleum refining, railway transport, telephone communications, banks and government; but coverage was high or nearly complete in a number of other industries.

The bilingual report, *Working Conditions in Canadian Industry, 1966,* may be obtained from the Queen's Printer, price $1.00 (Catalogue No. L2-15/1966).

Technological Change Provisions In Collective Agreements

In "Response to Technological Change", a recent survey of 471 collective agreements, each of which affected 500 or more employees, 133 agreements covering 255,373 workers contained clauses dealing explicitly with technological change. These 133 agreements* constituted 28 per cent of the total number surveyed, and they affected 32 per cent of the employees covered by the survey. Included in the report of the survey are two charts and seven tables.

The various kinds of provisions concerning technological change may be grouped into five main classes: advance notice, maintenance of income, adaptation of workers, sharing of employment, and joint union-management procedures. The following notes contain a brief outline of the main types of provisions.

Advance Notice

Advance notice provisions, which are usually accompanied by a severance pay clause, are designed for two purposes: to allow the worker time to look for other employment, and to provide time for adjustment measures to be worked out.

Such provisions were contained in 51, or 11 per cent of the 471 agreements mentioned above as having clauses dealing with technological change. The length of notice to be given ranged from one month or less to as long as 12 months. In the great majority of these agreements it did not exceed three months.

Income Maintenance

The most complete form of income maintenance is full maintenance for an unspecified period, but more often full maintenance is for a limited period only. Sometimes maintenance of income at a lower rate is provided for after the specified period for full maintenance comes to an end. Most maintenance of income provisions, however, allow for only partial income. A very common provision of this type is what is called severance pay, which is commonly based on length of service up to a certain maximum.

Another provision for maintenance of income is that which guarantees to maintain income but not at a previously established level. Most of such provisions are fundamentally guarantees of employment, and in many cases it may probably be assumed that full income is guaranteed also.

Full maintenance was provided for in 46 agreements, or 10 per cent of the total number examined, for periods ranging from three months to 24 months. Three months was the period mentioned in 25 of these agreements. In 16 agreements, no period was mentioned.

Severance pay was provided for in 49, or 11 per cent of the agreements. In 44 of these agreements, the amount of pay varied according to length of service and income.

Worker Adaptation

Probably the two main types of provisions designed for the adaptation of the workers are those relating to retraining and relocation. The most important question regarding retraining is probably that of financing the training, either in full or in part. Retraining may be on-the-job, general upgrading, technical, etc.

In relocation provisions, financing is again probably the most important matter. The criteria that may be used in selecting workers who are to be helped to move and obtain new employment may be put second. As an example of the scale of financial help in relocation, one agreement provides for allowances ranging from $55 for a single employee who moves a distance of from 50 to 99 miles, up to $580 for a married employee whose move is 1,000 miles or more.

Retraining was provided for in 41 agreements (9 per cent) and relocation assistance in 12 agreements.

Employment Sharing

Arrangements for sharing the work among as many workers as possible, such as a reduction in hours of work or early retirement, are employed for reasons other than adaptation to technological change, and usually any connection with such change is only incidental. Only five such provisions were found in the survey. Four of these were for a reduced workweek, and there was one provision regarding early retirement.

Union-Management Procedures

The problem of adjustment to technological change is sometimes considered to be too important and complicated to be dealt with adequately in periodic negotiations for a collective agreement. The joint committee provides a more thorough and carefully planned way of dealing with the question.

In concerns where the problem is coming up for the first time, the committee may very likely be established to lay down a general and comprehensive set of adjustment provisions applicable to all future technological changes. On the other hand, the committee may in other cases be a standing one that deals with each technological change problem on its own merits. In such cases, displacements may be dealt with in much the same way as grievances.

"It would appear, however, that the most significant difference among the various union-management procedures is whether the decision-making process is through consultation or negotiation," the report comments. Provisions that treat the matter as one for negotiation are comparatively rare. Out of the 56 provisions containing provisions for union-management procedures, 51 were of the consultation type. Only five were of the negotiation type, and in four of these, there was a provision for the final settlement of differences through resort to the grievance procedure, with arbitration as the final step.

Of the total of 133 contracts containing provisions regarding technological change, 36 were in the wood products industries —including pulp and paper—and 16 were in machinery and transportation equipment manufacturing.

A study of the same subject, under the title *Technological Change Provisions in Ontario Collective Agreements—Ten Manufacturing Industries,* was recently published by the Research Branch of the Ontario Department of Labour. The data used were taken from 1,078 collective agreements covering a total of 218,000 production and allied workers.

The agreement provisions relating to technological change in this study were grouped under five main headings: Advance Notice and Consultation; Changes in Job Content and Rates of Pay; Job Security; Cushioning the Impact of Job Change and Job Loss; and Sharing in the Gains of Productivity.

*The agreements were negotiated at various dates up to 1966; most were still in force early in 1967. Agreements signed in the construction trades and the railway industry were not included. The survey was conducted in the Collective Bargaining Division of the Economics and Research Branch of the Department of Labour by David Ross under the supervision of Felix Quinet, Chief of the Division.

Employment Fatalities in Canada

Second Quarter, 1967

The employment fatalities covered in this review involved persons gainfully employed, and occurred during the course of, or arose out of their employment, and included deaths resulting from industrial diseases.

Statistics on employment fatalities are compiled by the Economics and Research Branch from reports received from the provincial Workmen's Compensation Boards and certain other official sources. Newspaper reports are used to supplement these. For industries not covered by workmen's compensation legislation, newspaper reports are the Department's only source of information. It is possible, therefore, that coverage in such industries as agriculture, fishing and trapping, and certain of the service groups, is not as complete as it is in industries covered by workmen's compensation legislation. Similarly, a small number of traffic accidents, that are in fact industrial, may be omitted from the Department's records because of lack of information in press reports.

The number of fatalities that occurred during the period under review is usually greater than indicated in the article and tables. Fatalities that were not reported in time for inclusion, however, are recorded in supplementary lists, and statistics are revised accordingly in the next annual review.

The Department has received reports on 204 employment fatalities that occurred in Canada during the second quarter of 1967. During the previous quarter, 231 fatalities were recorded. This is 20 more than the previously published total of 211 (L. G., Sept., p. 572). In the second quarter of last year, 279 fatalities were recorded—51 more than the preliminary figure of 228 (L. G., Oct. 1966, p. 574).

During the quarter, one multi-fatality accident killed 15 workmen in a mine explosion at the Balmer North Coal Mine in British Columbia.

Three industry divisions accounted for 60.2 per cent of the total number of fatalities.* Of the total, 45 fatalities occurred in transportation, 42 in mining and 36 in manufacturing. The remaining 39.8 per cent were distributed in other industry divisions as follows: construction, 13.7 per cent; forestry and trade, 7.4 per cent each; service, 4.9 per cent; public administration, 2.9 per cent; agriculture, 2.5 per cent; and fishing, 1.0 per cent. No fatalities were recorded in the finance industry.

The 25-44 age group accounted for 45.6 per cent of the total number of fatalities. Workers in the 45-64 age group accounted for 34.8 per cent, and the remaining 19.6 per cent were distributed in the other age groups: 65 and over, 9.3 per cent; 20-24 age group, 6.9 per cent; and 14-19 age group, 3.4 per cent.

Two occupational divisions accounted for 50.0 per cent of the total number of fatalities: craftsmen, production process and related workers, 28.9 per cent; and transport and communication workers, 21.1 per cent. The remaining 50.0 per cent were distributed in the other occupational divisions: miners, quarrymen and related workers, 15.7 per cent; labourers and unskilled workers (not agricultural, logging, fishing or mining), 12.7 per cent; loggers and related workers, 6.9 per cent; service and recreation workers, 4.9 per cent; farmers and farm workers, 2.9 per cent; professional and technical occupations workers, 2.5 per cent; managerial and sales workers, 1.5 per cent each; fishermen, trappers and hunters, 0.9 per cent; and clerical workers, 0.5 per cent.

Three accident-type categories accounted for 58.3 per cent of the total number of fatalities. These were: collisions and derailments, 24.5 per cent; struck by different objects, 19.1 per cent; and falls and slips, 14.7 per cent. The remaining 41.7 per cent were distributed in other accident-type categories: conflagrations, temperature extremes and explosions, 11.8 per cent; caught in, on or between different objects, 10.8 per cent; over-exertion, 7.8 per cent; inhalations, absorptions and industrial diseases, 6.4 per cent; miscellaneous accidents, 2.5 per cent; contact with electric current, 1.9 per cent; and striking against or stepping on objects, 0.5 per cent.

A cross-section analysis of the greatest concentration of fatalities by age reveals that the 25-44 age group accounted for 71.4 per cent of the total number of fatalities that occurred in construction, 47.5 per cent in mining, and 46.7 per cent in transportation. A similar cross-section examination of these industries to pinpoint the main concentration of fatalities by occupation shows that craftsmen, production process and related workers accounted for 66.7 per cent of the total number of fatalities that occurred in trade, and 52.8 per cent in manufacturing. Labourers and unskilled workers accounted for 57.1 per cent of the total number of fatalities that occurred in the construction industry.

An analysis of cross-classifications of industry divisions by main accident-type categories reveals that 57.8 per cent of the fatalities in the transportation industry were the result of collisions, derailments and wrecks; and 35.7 per cent of the fatalities in the mining industry were the result of conflagrations, temperature extremes and explosions.

During the quarter, there were 86 fatalities in April, 63 in May and 55 in June. By province, the largest number of fatalities, 74, occurred in Ontario. In British Columbia there were 45, in Alberta 27, and in Quebec 21.

*See Table H, p. 728.

Price Indexes

Consumer, August 1967

The consumer price index (1949=100) increased 0.5 per cent to 150.9 at the beginning of August from 150.2 in July. It was 4.1 per cent higher than the August 1966 level of 144.9.

The advance between July and August was due mainly to higher food prices; all main component indexes, except clothing and transportation, increased.

The food index increased 1.8 per cent to 151.2 from 148.5. Egg prices increased substantially over the preceding month, accounting for about one third of the rise in the total food index. Other dairy products registered minor increases, but the price of milk remained unchanged. The price of bread rose by over 3 per cent. Higher prices were reported also for most fresh fruits, coffee, tea, soft drinks, potatoes, carrots and onions. Decreases were recorded for sugar, pork, lettuce, tomatoes and cabbage.

The housing index rose 0.2 per cent to 152.2 from 151.9 as a result of general increases in rent and the cost of insurance adjustments on dwellings and household contents.

The clothing index declined 0.2 per cent to 132.3 from 132.5. Minor increases for men's wear and footwear were offset by lower prices for women's and children's wear.

The transportation index decreased 0.2 per cent to 158.0 from 158.3; lower prices were recorded in various cities for new cars and for gasoline.

The health and personal care index rose 0.2 percent to 191.9 from 191.5 as a result of higher prices for a range of personal care supplies. The recreation and reading index advanced 0.1 per cent to 167.9 from 167.8. The tobacco and alcohol index increased 0.4 per cent to 128.6 from 128.1 due to scattered price increases for cigarettes, tobacco and beer.

Group indexes a year ago in August were: food 148.1, housing (shelter and household operation) 145.0, clothing 124.8, transportation 150.6, health and personal care 181.3, recreation and reading 159.6, and tobacco and alcohol, 125.1.

City Consumer, August 1967

The consumer price indexes (1949=100) advanced in all 10 regional cities between July and August. The increases ranged from 1.2 per cent in both St. John's and Halifax to 0.3 per cent in Toronto.

Food indexes rose in all cities, with the increases ranging from 3.9 per cent in Halifax to 0.7 per cent in Toronto. Housing indexes increased slightly in all cities except St. John's, which remained unchanged. Clothing indexes were higher in three cities, and lower in three. Transportation indexes declined marginally in eight cities, remained unchanged in one and increased in one. Health and personal care index movements were higher in six cities, lower in one, and unchanged in three. Recreation and reading indexes rose slightly in six cities and were unchanged in four. Tobacco and alcohol indexes advanced in Halifax, Vancouver and three other cities, were unchanged in four, and lower in one.

Regional consumer price index point changes between July and August were: Halifax +1.7 to 143.1; St. John's +1.5 to 130.9*; Saint John +1.3 to 145.9; Montreal +0.7 to 149.7; Ottawa +0.7 to 148.6; Winnipeg +0.7 to 146.5; Saskatoon-Regina +0.7 to 140.9; Edmonton-Calgary +0.6 to 141.3; Vancouver +0.6 to 144.7; Toronto +0.4 to 152.1.

Wholesale, July 1967

The general wholesale index (1935-39=100) moved up slightly in July to 263.7 from the June index of 263.6, and was 1.5 per cent higher than the July 1966 index of 259.8. Four major group indexes increased, while four declined.

The animal products group index declined 0.8 per cent to 292.7 from 295.1 on lower prices for livestock, fresh and cured meats, eggs, animal oils and fats, and hides and skins. The vegetable products group index declined 0.7 per cent to 230.8 from 232.4 on lower prices for sugar and its products, grains, livestock, and poultry feeds.

The iron products group index rose 1.0 per cent to 275.2 from 272.5 on higher prices for castings and forgings. The wood products group index rose 0.9 per cent to 346.9 from 343.9. In response to price increases for soaps and detergents, the chemical products group index moved 0.5 per cent higher to 211.8 from 210.8. The non-metallic minerals products group index rose 0.4 per cent to 199.3 from 198.6.

Minor decreases occurred in the following two major groups: textile products, 252.8 from 253.1, and non-ferrous metals, 253.7 from 236.0.

*On base June 1951=100.

Farm Products Prices

The index of Canadian farm products at terminal markets (1935-39=100) increased 3.5 per cent to 259.7 from 251.0 in the four-week period July 28 to August 25. The field products index moved up 7.1 per cent to 189.2 from 176.6 and the animal products index increased 1.5 per cent to 330.2 from 325.4.

Residential Building

The price index of residential building materials (1935-39=100) increased fractionally in July to 365.1 from 363.3 in June, and to 160.1 from 159.3 on the base 1949=100. The price index of non-residential building materials (1949=100) advanced to 154.1 from 154.0.

U.S. Consumer, July 1967

The U.S. consumer price index (1957-59 =100) rose by 0.4 per cent between June and July. The index was 116.5 in July and 116.0 in June.

Food prices, at 116.0, accounted for half of the July increase, rising 0.8 per cent. The over-all consumer prices were 2.8 per cent above those of a year ago.

British Retail, July 1967

The British index of retail prices (Jan. 16, 1962=100) was 119.2 at July 18, 1967, compared with 119.9 at June 20 and 116.6 at July 19, 1966.

Reductions in the prices of potatoes, most other fresh vegetables, meat and eggs, accounted for the decrease. The index for the food group as a whole fell by less than 3 per cent to 118.4 compared with 121.8 in June.

As a result of an increase in the average level of rents of unfurnished dwellings, the index for the housing group rose by nearly one half of 1 per cent to 134.6, compared with 134.1 in June.

In the transport and vehicles group, the index rose by more than 1 per cent to 112.7, compared with 111.4 in June.

In the remaining seven groups, there was little change in the general level of prices.

Sheltered Workshops in Canada

Vocational Rehabilitation Branch
Department of Manpower
and Immigration

A recent survey by the Vocational Rehabilitation Branch of the Department of Manpower and Immigration shows that there are approximately 193 sheltered workshops in Canada providing work training, assessment and continuing employment for nearly 6,900 persons who, because of physical, mental, social or emotional handicaps, have been unable to get, or hold, jobs in the normal competitive labour market.

This figure of 193 represents an increase of more than 50 per cent in the number of sheltered workshops established since an earlier survey was made in 1964. The increase reflects a growing recognition of the unique service provided by such a program in preparing handicapped persons for entry or re-entry into the labour market or, in cases of severe handicap, providing them with the opportunity to work to the level of their capacity in a less demanding situation than is possible in regular employment.

Development of Sheltered Workshops

The value of some form of sheltered employment was first recognized in Canada about 200 years ago. Religious organizations first provided employment for disabled persons as a form of charity. Mental hospitals also became involved in shelters connected with hospitals where work was provided as a therapeutic device. These proved to be of such value to mental hospitals and sanatoriums that they continued to develop to the point where some hospitals now have sheltered workshops as part of their rehabilitation program.

Serving the Disabled

The development of most of the sheltered workshops in operation in Canada today was fostered by various agencies with a view to fulfilling the needs of their particular disability groups. These groups embrace such disabilities as blindness, deafness, mental retardation, poliomyelitis, paraplegia, cerebral palsy and epilepsy. Included in this type of facility in Canada are 90 workshops serving the mentally retarded, 22 serving the blind, 11 for physically handicapped individuals, 10 for the mentally ill, and three for the cerebral palsied. One workshop has been established to give employment to persons suffering from epilepsy.

In addition to these, there are 48 community and general workshops. These are designed to serve all types of handicapped persons in the community. The newest of these facilities has just been opened in St. Johns, Newfoundland, and will be providing assessment and training opportunities for all types of disabled persons in the province. The only other workshop in Newfoundland provides employment opportunities for ten blind persons.

Sheltered workshop operations can be divided into three main groups.

- the "good will" type of shop collects, sorts, repairs and resells donated household articles, clothing and furniture;
- the "subcontract" type undertakes small assembly and manufacturing, sorting, packaging, collating, stuffing envelopes, mailing, and similar tasks. These subcontracts are obtained from industry, business, governments and community organizations.
- the "manufacturing" type works at the manufacture and sale of new articles, such as wood products, ceramics and handicrafts.

In addition, there are other types of operation which do not fall into the category of "sheltered workshop." These are industrial concerns developed to give employment to disabled persons. They are strictly business operations, and are in competition with any shop offering a similar service. Their shops and equipment compare favourably with their competitors. They hire only the handicapped, pay the going wage, and those hired must be able to maintain a level of production comparable to that of a non-handicapped worker engaged in similar work elsewhere. There are eight such business enterprises in Canada, and they employ 462 disabled persons.

Types of Service

The simulated industrial conditions found in the workshops provide the opportunity to assess the individual's capabilities for various kinds of employment, and to bring the individual up to a standard of performance demanded by industry. As a result of the experience in the sheltered workshop, some will be able to move into competitive employment, some will go into vocational training, and others may remain in the remunerative sheltered employment part of the workshop program. This is designed for those persons who are unable at the moment to meet the demands of employment in industry, but who are able to perform useful and productive work in a more sheltered environment.

As we in Canada aim for total manpower development, we must recognize that the handicapped represent a resource that is tangible and vital to the economy. The broad social and economic value of rehabilitation is evidenced by the fact that it prevents dependency and restores or converts tax-dollar consumers into tax-dollar producers. Sheltered workshops are making their contribution to bring this about. Equally important, however, they are instrumental in restoring human beings to places of dignity as wage earners, and they provide an interest and feeling of accomplishment to some individuals who have almost forgotten the feeling of usefulness.

Spain's Working Women

Women's Bureau

Industrialization in Spain has gained impetus in recent years, and consequently the working population is undergoing a fundamental change. Although women, both mothers and daughters, are traditionally closely tied to the work of the home, new ideas are leading them to collaborate on equal terms with men in industry, the office and professional fields.

Spanish women now comprise about 25 per cent of the total labour force of Spain, and 17.7 per cent of the total female population are working women. The majority of women who seek employment outside the home are single. In urban areas, the largest numbers are employed in the manufacturing industries; but as educational opportunities increase, more women are entering office work and the professions.

The growing participation of women in the economic sector of Spain has brought about many legislative and social changes.

Labour and Social Legislation

The typical workweek in industry, the distributive trades and services is 48 hours over a period of six days. Civil Service and office employees generally work a shorter week of 5½ days and 39 hours. The 48-hour workweek may appear long by our standards, but Spaniards are entitled to a two-hour midday break and a month's vacation every year.

In 1961, labour laws were extended to recognition of the principle of equal remuneration for men and women for work of equal value. The new legislation* also proclaimed that women be entitled to enter into any type of employment contract, with no distinction of any kind to be made in employment regulations or collective agreements on grounds of sex or marital status. Although we find few Spanish women in the professions or high executive posts, no field of activity is barred to them in principle. The first woman Supreme Court judge was appointed this year, and at approximately the same time, the first woman building contractor, a girl of 22, received her papers.

Spanish women were first granted the right to vote in 1931. They may vote in all elections and are eligible for election on an equal basis with men (there are now three women representatives in the National Assembly but none of Cabinet rank). Every year a growing number of women enter the professions as doctors, lawyers, teachers and social workers—but whatever her degree of culture or intellectual ability, the Spanish woman is not attracted to politics as a career.

Spain has 14 universities, from which women have never been barred. But traditional home ties and social organization have not, until recently, encouraged the participation of women in higher education. In 1925, women comprised barely 5 per cent of the university population; but in 1966, the enrolment of women had risen to 26 per cent.

Married women are traditionally attached to the home, and it is not common practice, with exceptions in industrialized urban areas, for women with home responsibilities to go out to work.

As early as 1929, however, maternity insurance became obligatory in order to guarantee medical and financial assistance for working women. Maternity benefits now cover all medical expenses connected with childbirth, and a benefit is payable from the eighth month of pregnancy as well as during the nursing period. The woman is also permitted six weeks leave of absence from work before and after confinement.

Factory Nurseries

All factories employing women with young children must provide nurseries on the factory premises. These are staffed by trained public nurses and expenses are shared by employers and the State. Holiday colonies or vacation residences are becoming a common feature of Spain's socio-economic organization. These are maintained and staffed by industrial enterprises, or by the Social Insurance Federation, and are for the recreational use of working women and their families.

By a decree of 1959, social security benefits were extended to include domestic servants. The women's section, *Sección de mujeres*, of the national movement was instrumental in bringing about these improvements.

A system of unions has been organized throughout Spain to facilitate the hiring and firing of servants—but with advantages for both employer and employee. A girl who has been dismissed from her job may go to one of many residences established by the *Sección de mujeres*, where she may live free of charge until other employment is found. The unions function as well in the role of employment agencies to whom people may apply for domestic help.

Further stipulations under the Labour Code affecting domestic workers are the granting of:

- one half day off a week, with one full day every two weeks, and a month's vacation every year;
- retirement at the age of 60 with a pension; and
- a minimum monthly wage of approximately $50 a month.

The Women's Section

A feminist movement was initiated in the early 1930s, but failed to gain force until the Civil War in 1936, in which 580,000 Spanish women participated. After the war, the feminist movement grew, and in the 1950s changed both its name and form. It is now known as the *Sección de mujeres* (Women's Section), with headquarters in Madrid and regional branches throughout Spain. Its operations are varied and highly esteemed:

- it encourages and instructs in the learning of skills that may be used in home industries, and the produce of these handicrafts are collected and sold co-operatively and the profits returned to the workers;
- it promotes legislative reform in all areas affecting working women; and
- it encourages the continuance and revival of folk-lore, folk-songs and traditional dances in all regions of Spain.

These are simply a few of the facts. They are not intended to be comparisons. In any assessment of Spain, one must beware of using the Western concept of emancipation. The Spanish woman is deeply religious, and her home is her fulfillment; but within the family, the woman's authority has been continuous and decisive. She is an individual with opinions, and is one of Spain's "thirty million dictators."

*No detailed information is currently available as to categories of work or minimum wage legislation, although the latter is applicable throughout Spain.

Communications As a Problem-Solver

Labour-Management Consultation Branch

Canadian Pacific Merchandise Services, Winnipeg, is using a massive program of labour-management communication to reduce claims filed by customers whose goods are handled at the warehouse interchange for rail and truck transport. According to Frank Titterton, Terminal Manager, the problem of claims lay in "carelessness," and the solution in "communication."

Mr. Titterton has used personal management-employee contact to cut claims to a minimum to the satisfaction of company, employees and customers. The 24-hour warehousing operation employs 210 warehousemen and drivers, represented by Local 2307, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (AFL-CIO/CLC).

The current system of communications, started at the beginning of the year, calls for each of the 11 supervisors to meet with the employees under him every two weeks. Meetings, on company time, last approximately half an hour.

Mr. Titterton is enthused with development of the system, which he began strictly as a method to reduce claims. Meetings have evolved into "more of a general discussion" from which worthwhile suggestions are processed by management. "Our entire operation has improved due to the interest we've developed among the employees, and the co-operation they're giving management," he says.

Sessions which formerly dealt exclusively with claims, with the supervisor doing most of the talking, have expanded to round-table discussions, with employees initiating useful suggestions.

A survey made of a five-week period January 19 to February 23, turned up 15 meetings involving a total of 110 employees—over 50 per cent. Attendance averaged 10 persons a meeting.

Harvey Patterson, Chairman of Local 2307, says joint consultation has put employees "in a better frame of mind, which is reflected in a 50-per-cent reduction in grievances. "It's been proved to me that the work force is in a better frame of mind when it knows it's being listened to by management," he says. The employees are careful in their work when they feel they belong. They develop the attitude of "I'm part of this business and I want it to be successful so I can get my share of it."

* * *

1967 marks a quarter century of highly organized joint consultation at the E. B. Eddy Company, whose three paper-making plants straddle the Ottawa river at Hull, Que., and Ottawa. President W. C. R. Jones sees a reflection of the company's two-tiered labour-management system in product quality. "We have good quality products, so we know these meetings pay off," he says.

Eddy's 19 departmental committees and one senior committee (called the Plant Committee) are geared to fit the structure of the organization, which employs 2,400 persons, including 1,800 union members.

The Plant Committee, comprising 25 union representatives and six from management, tackles issues of overall interest that affect more than one department.

Frank Cashman, superintendent of employee relations, who is permanent committee chairman, outlines the company's business picture at these meetings. "I try to keep the committee informed as to our production outlook by projecting four or five months ahead," he says. Other regular topics include safety, working conditions, apprenticeship, housekeeping and recreation.

The 19 departmental committees meet separately bi-monthly. Departmental superintendents usually chair the meetings, and foremen round out the management side. In most cases, union members are elected to the committees by the rank and file; occasionally they are appointed by local union officers. Main topics of discussion are safety, costs, customer complaints, quality, operating efficiency and working conditions—all related to the particular department.

Says Mr. Cashman: "As a result of encouraging our people to stand up and be heard, a lot of individual problems come up. When the company is able to overcome some of these problems, it improves morale, which in turn improves productivity."

Eddy's employees come under three unions, each with Quebec and Ontario locals: Local 50 and 73, International Brotherhood of Pulp, Sulphite and Paper Mill Workers (AFL-CIO/CLC); Locals 33, 34 and 243 United Papermakers and Paperworkers (AFL-CIO/CLC); and Local 412, International Association of Machinists and Aerospace Workers (AFL-CIO/CLC).

According to Jules Caron, President of Local 50, joint consultation has brought improved working conditions. "A man is happier on the job when he is satisfied with his working conditions," he says. In 25 years, Eddy's has had only one grievance go to arbitration.

The labour-management committee at the Winnipeg plant of the Continental Can Company of Canada Ltd. uses self-evaluation to keep itself working at peak productivity. The committee's ability to look inward resulted in a new agenda formula that has stiffened the procedural backbone of meetings.

Joint consultation has been practised since 1959 at the paper products plant, organized by the International Printing Pressmen and Assistants' Union of America (AFL-CIO/CLC), and its subordinate, Local 537 of the Winnipeg Printing Specialties.

Plant Manager Bernard Jorgenson explains that productivity of meetings was increased by a simple change in procedure. "We allotted the first half hour to discussion of a particular topic to put more direction into our meetings," he says. "The second half was left open to general items."

David Turner, local union leader and Committee Co-chairman, supports the policy. "We've learned to stress an individual topic each month, and to tie up any loose ends on it before the next meeting," he says.

Occupational Training and Job Redesign

Older Workers' Section
Department of Manpower
and Immigration

"In a changing world, where economic expansion and development for the better satisfaction of the needs of mankind are one of the commandments of our industrial society, the fact that the population of our countries includes a high proportion of people over 45—and they are then called 'older persons'—is of very great importance.

"This fact appears all the more pregnant with consequences of all kinds—economic, social and human—because the development of techniques and means of production points to a vital conclusion: from now on the pace of technical change is going to be faster; the concept of a single and almost uniform career is outdated, and generations to come must be prepared to follow two or even three careers.

"In the face of this fundamental upheaval, and the need for individuals to move with the times if they are not to find themselves defenceless before the difficulties of life, it is quite certain that age plays an important part."

Bernard Vrillon, Deputy General Secretary of the Social Commission of the French Employers' Association, made this statement in a presentation to the International Management Seminar of the Organization for Economic Co-operation and Development (OECD) held in London, Eng., in October 1964. In his paper, Mr. Vrillon discussed the attitude and role of employers and their organizations toward the use of job redesign and occupational training for older workers. Although the quoted statement was made three years ago, it is as relevant today as it was then.

Optimum Use

Mr. Vrillon went on to stress the importance of firms' making the "optimum use of manpower resources." He contended that this objective meant that industry would have to make the necessary effort to maintain older workers in the best conditions of productive work, and so enable them to contribute to the common good by making the most of their possibilities—thus serving at the same time both economic and human needs. "That is why an essential aim of the firm must be to keep such workers in employment, with the necessary adaptation and after suitable re-training," he said.

The speaker pointed out that everyone's physical and intellectual abilities develop to a maximum and then start to fall off, but that this point of change does not occur at the same age or to the same extent in everyone. Even if capacities decline, practice, study, initiative, experience and sense of responsibility largely offset the decline. He emphasized the importance of distinguishing between "physical" age and "official" or "chronological" age.

Discussing the employment difficulties of older workers, Mr. Vrillon stated that the prime consideration is satisfactory fitting of the job to the worker; the worker must also adapt to the job, however, even if persistent effort is needed. He pointed out the need to provide training that would help both employers and workers to adapt to the technical change made necessary by an evolving world.

Output and Age

The paper suggests that it is the duty of top management to think mainly in economic terms, and consequently to seek the best conditions of production. Output and productivity are among the chief pre-occupations of management. If the equipment of two competing firms is standard, then the quality of labour becomes extremely important. Where the aging of workers has an adverse effect on production, a remedy must be found. At this point, Mr. Vrillon questions whether the problem could be solved by adapting the job to the man, and whether ergonomics (L. G. 1964, p. 778) could be of assistance.

Since ergonomics is still a relatively new science, Mr. Vrillon emphasized that the first task of employers' organizations is the dissemination of information. They must be prepared to publicize and demonstrate the advantages, and the economic and human contributions of methods designed to utilize older manpower effectively. Furthermore, employees themselves must do their utmost to apply these methods. Workers must always be placed in jobs that make the best use of their capabilities. In the long run, Mr. Vrillon suggested, it is more beneficial to modify working conditions so that a worker can do his job without excessive fatigue, than it is to transfer an older worker to another job. But it is important to demonstrate that redesigning jobs to match worker capabilities makes a firm more efficient, and in no way diminishes its competitive position.

Mr. Vrillon's paper pointed out also that solutions adopted in relation to job redesign would make it possible to improve a company's economic returns and ensure the optimum utilization of manpower resources.

Mr. Vrillon concluded his paper with the statement that the myths and prejudices concerning age, which lead to the inefficient use of older workers and a waste of manpower resources, must be eliminated. Maximum efficiency and utilization require the co-operation of employers, employer organizations, workers, and the various levels of government.

Readers interested in job redesign (ergonomics) and occupational training techniques for older workers may obtain material on these subjects, free of charge, by writing to: Section on Older Workers, Vocational Rehabilitation Branch, Department of Manpower and Immigration, Ottawa, Canada.

Employment and Unemployment In August

Employment increased by 13,000 to 7,854,000 between July and August. The labour force, at 8,101,000, was 296,000, or 3.8 per cent higher than a year earlier. Employment was 277,000 or 3.7 per cent higher than in August 1966.

Unemployment decreased by 37,000 during the month from 284,000 to 247,000, but was 19,000 higher than a year earlier.

Total unemployment in August represented 3.0 per cent of the labour force compared with 2.9 per cent in August 1966, and 2.8 per cent in August 1965.

Employment

Employment, at 7,854,000, increased by 13,000 from July to August. It was higher than a year ago in all regions, the largest relative gains being in Quebec and British Columbia.

At 7,854,000, employment in August showed an increase of 277,000 over August 1966.

Farm employment increased by 23,000 to 705,000 between July and August; minor increases in manufacturing, construction and trade were offset by decreases in the service industries.

There were increases in community business and personal service (122,000), trade (78,000), agriculture (56,000) and transportation, communication and other utilities (42,000). Construction employment was 37,000 lower than a year earlier.

Unemployment

Unemployment, at 247,000, was 37,000 lower than a month ago, and 19,000 higher than in August 1966. Of the total unemployed, 193,000 or 78 per cent had been unemployed for less than four months, 25,000 had been unemployed for four to six months, and 29,000 for seven months or more.

NOTE: The classification of labour market areas, and the summary table titled "Labour Market Conditions," are not included in this issue because the statistical basis for these tables is not comparable with a year ago. Beginning September 1, 1966, all registered applicants were asked to contact Canada Manpower Centres every 30 days—instead of the previously requested period of 14 days—to keep their registrations active. Another factor influencing the comparability of registered applicants is the extension of provisions, such as temporary layoffs, for exempting certain classes of unemployment insurance beneficiaries from registration.

Insurance Registrations And Other UIC Statistics

On June 30, insurance books or contribution cards had been issued to 4,485,356 employees who had made contributions to the Unemployment Insurance Fund since April 1, 1967.

On the same date, registered employers numbered 394,823 an increase of 2,480 since May 31, 1967.

During June, 12,022 investigations were conducted by enforcement officers across Canada. Of these, 9,578 were spot checks of claims to verify the fulfilment of statutory conditions, and 731 were miscellaneous investigations. The remaining 1,713 were investigations in connection with claimants suspected of making false statements to obtain benefits.

Prosecutions were begun in 323 cases, 97 against employers and 226 against claimants.*

Punitive disqualifications as a result of false statements or misrepresentations by claimants numbered 683.*

Revenue received by the Unemployment Insurance Fund in June totalled $36,315,879.86 compared with $33,979,-902.35 in May and $33,224,965.79 in June 1966.

Benefits paid in June totalled $17,837,-292.04 compared with $37,192,065.10 in May and $14,674,856.77 in June 1966.

The balance in the Fund on June 30 was $258,201,591.00. On May 31, it was $239,723,003.18 and on June 30, 1966 it was $155,118,709.49.

*These do not necessarily relate to the investigation conducted during this period.

U.S. employment tests discriminate inadvertently

A company may inadvertently discriminate against ethnic minorities while appearing to comply with fair employment laws, a recent U.S. research study reveals.

The two-year study on employment testing, conducted under a Ford Foundation grant, compared test scores of 1,208 persons in six job situations with their on-the-job performance. About one third of the group were Negroes and persons of Spanish origin. Scores from 26 different tests were analyzed along with biographical data.

The four New York University psychologists working on the study found that one test for all applicants—particularly a highly verbal test loaded with historical and cultural items—operated unfairly against members of certain ethnic groups coming from culturally disadvantaged backgrounds. Minority groups, they said, "tend to score lower on the average on this kind of test, and the test will therefore effectively screen out minority applicants."

The researchers recommended changing equal employment laws that prohibit employers from identifying job applicants by their ethnic origin, and suggested that the "fairest and most valid approach" is to use separate selection standards and procedures for separate ethnic groups. Ironically, the tests showed that they did not accurately predict job performance, the reason for their existence in the first place.

Wage Schedules Prepared in July

During July, the Department of Labour prepared 354 wage schedules for inclusion in contracts proposed to be undertaken by departments of the federal Government and its Crown corporations in various areas of Canada, for works of construction, remodelling, repair or demolition, and certain services.

In the same period, 196 contracts in these categories were awarded. In addition, 179 contracts containing the General Fair Wages Clause were awarded by Central Mortgage and Housing Corporation and the Departments of Defence Production, Post Office, Public Works and Transport.

A copy of the wage schedule issued for each contract is available on request to trade unions concerned or to others who have a bona fide interest in the execution of the contract.

Contracts awarded in July for the manufacture of supplies and equipment were:

Department	*No. of Contracts*	*Aggregate Amount*
Defence Production	96	$707,145.00
Post Office	5	129,781.95
Royal Canadian Mounted Police	1	2,085.00
Transport	4	7,360.95

During July, the sum of $11,916.47 was collected from 11 contractors for wage arrears owing their employees as a result of the failure of the contractors, or their subcontractors, to apply the wage rates and other conditions of employment required by the schedule of labour conditions forming part of their contract. This amount is for distribution to the 191 workers concerned.

Certification and Other Proceedings

Before the Canada Labour Relations Board

Employee Representation Branch

The Canada Labour Relations Board met for six days during August. The Board granted 23 applications for certification, rejected 9, and ordered 12 representation votes. It granted one application for revocation of certification; and, in a second application for revocation of certification, the parties were notified that, on the basis of the information before it, the Board was of the opinion that, in present circumstances, the certification order is of no force and effect. During the month, the Board gave consideration to a request for review of an earlier decision and issued Reasons for Judgment. It also received seven applications for certification and allowed the withdrawal of one such application.

Applications for Certification Granted

1. National Association of Broadcast Employees and Technicians on behalf of a unit of employees of Bushnell TV Co. Limited, Ottawa, Ont., employed at station CJOH-TV, Ottawa, and CJSS-TV, Cornwall (L. G., Oct., p. 642). Two employees, James Wright and Paul W. Kudla, had intervened, each as representative of a group of employees.

2. *Syndicat des employés du Transport d'Anjou, Inc.*, on behalf of a unit of employees of Transport d'Anjou Inc, Rivière-du-Loup, Que. (L. G., July, p. 417).

3. International Union of District 50, United Mine Workers of America on behalf of a unit of drivers employed by Tank Truck Transport Limited, Maple, Ont. (L. G., Aug., p. 497).

4. Bricklayers, Masons, Cement Block Layers, Marble Masons and Vitrolite Tile Setters, Terrazzo Workers, International Union, Local 1, Manitoba, on behalf of a unit of bricklayers employed by the Hudson Bay Mining and Smelting Co. Limited, Flin Flon, Man. (L.G., Aug., p. 497).

5. Canadian Marine Officers' Union on behalf of a unit of marine engineers employed aboard vessels owned and/or operated by McAllister Towing Ltd., Montreal, Que. (L. G., Aug., p. 497). The Board found that captains and apprentice captains should be excluded for the reason that they are not employees within the meaning of the Act.

6. Canadian Brotherhood of Railway, Transport and General Workers on behalf of a unit of employees of Cement Cartage Company Limited, Havelock, N.B. (L. G., Sept., p. 580).

7. *Syndicat national des employés de S.C.H.L. (CSN)* on behalf of a unit of maintenance men and janitors employed by Central Mortgage and Housing Corporation at Domaine Estria and Pavillon Mercier, Montreal, Que. (L. G., Sept., p. 580).

8. *Syndicat national des employés de S.C.H.L. (CSN)* on behalf of a unit of maintenance men and janitors employed by Central Mortgage and Housing Corporation at Cloverdale Park Apartments, Pierrefonds, Que. (L. G., Sept., p. 580). The International Union of District 50, United Mine Workers of America, Local 13946, had intervened. (See also Item No. 4, Representation Votes Ordered, below.)

9. *Syndicat national des employés de S.C.H.L. (CSN)* on behalf of a unit of maintenance men and janitors employed by Central Mortgage and Housing Corporation at St-Michel Terrace, Montreal, Que. (L. G., Sept., p. 580). The International Union of District 50, United Mine Workers of America, Local 13946, had intervened. (See also Item No. 5, Representation Votes Ordered, below.)

10. *Syndicat national des employés de S.C.H.L.(CSN)* on behalf of a unit of maintenance men and janitors employed by Central Mortgage and Housing Corporation at St-Georges Gardens, Pte-aux-Trembles, Que. (L. G., Sept., p. 580). The International Union of District 50, United Mine Workers of America, Local 13946, had intervened. (See also Item No. 6, Representation Votes Ordered, below.)

11. Teamsters, Chauffeurs, Warehousemen and Helpers, Local 91, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America on behalf of a unit of office employees employed by Hurley Transport Company Limited, Brockville, Ont. (L. G., Sept., p. 580).

12. Teamsters, Chauffeurs, Warehousemen and Helpers, Local 91, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America on behalf of a unit of office employees employed by McNeil Transport Limited, Brockville, Ont. (L. G., Sept., p. 580).

13. Canadian Brotherhood of Railway, Transport and General Workers on behalf of a composite unit of air crew and ground crew employees of Nanaimo Airlines Ltd., Nanaimo, B.C. (L. G., Sept., p. 580.)

14. Cartage and Miscellaneous Employees' Union, Local 931, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America on behalf of a unit of employees of H. G. Snyder Trucking Inc., Ville St-Laurent, Que. (L. G., Sept., p. 580).

15. *Syndicat national des employés de S.C.H.L. (CSN)* on behalf of a unit of maintenance men and janitors employed by Central Mortgage and Housing Corporation at Park Royal Apartments, Ville St-Laurent, Que. (L. G., Sept., p. 581). The International Union of District 50, United Mine Workers of America, Local 13946, had intervened. (See also Item No. 7, Representation Votes Ordered, below.)

16. *Syndicat national des employés de S.C.H.L. (CSN)* on behalf of a unit of employees of Central Mortgage and Housing Corporation employed at Pie IX Apartments, Montreal, Que. (L. G., Sept., p. 581). The International Union of District 50, United Mine Workers of America, Local 13946, had intervened.

This section covers proceedings under the Industrial Relations and Disputes Investigation Act involving the functions of the Canada Labour Relations Board, for which the Employee Representation Branch of the Department is the administrative agency.

(See also Item No. 9, Representation Votes Ordered, below).

17. Canadian Brotherhood of Railway, Transport and General Workers on behalf of a unit of drivers, warehouse employees and checkers employed by Regina Cartage & Storage Co. Ltd., Regina, Sask. (L. G., Sept., p. 581).

18. Professional Transport Workers' Union of Canada on behalf of a unit of drivers, warehouse and dock employees employed by Grimshaw Trucking & Distributing Ltd., Edmonton, Alta. (L. G., Sept., p. 581).

19. Transport Drivers, Warehousemen and Helpers Union, Local 106, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America on behalf of a unit of employees of Boyd's Express Ltd., Lachute, Que. (L. G., Sept., p. 581).

20. International Association of Machinists and Aerospace Workers on behalf of a unit of service and maintenance employees of Nordair Ltd., Dorval, Que. (L. G., Sept., p. 581). The Nordair Employees' Union (CNTU), previously certified as bargaining agent, did not contest the application.

21. *Syndicat national des employés de S.C.H.L. (CSN)* on behalf of a unit of maintenance men and janitors employed by Central Mortgage and Housing Corporation at Terrasse Belleville, St-Vincent-de-Paul, Que. (L. G., Sept., p. 581). The International Union of District 50, United Mine Workers of America, Local 13946, had intervened. (See also Item No. 11, Representation Votes Ordered, below.)

22. Seafarers' International Union of Canada on behalf of a unit of deckhands and cooks employed aboard the M.V. *Canadian Tide* and M.V. *Min Tide* by Pacific Tidewater Marine Ltd., Port Alberni, B.C. (L. G., Oct., p. 642).

23. Canadian Merchant Service Guild, Inc. on behalf of a unit of mates and engineers employed aboard the M.V. *Canadian Tide* and M.V. *Min Tide* by Pacific Tide Water Marine Ltd., Port Alberni, B.C. (L. G., Nov., p. 696). The Board found that captains should be excluded from the unit for the reason that they are not employees within the meaning of the Act. (See also Item No. 2, Applications for Certification received, below.)

Applications for Certification Rejected

1. Chauffeurs, Teamsters and Helpers, Local 395, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, applicant, and Deruth Transport Ltd., Regina, Sask., respondent (L. G., July, p. 416). The application was rejected because it was not supported by a majority of the employees affected in the representation vote conducted by the Board. (See also Item No. 1, Representation Votes Ordered, below.)

2. Chauffeurs, Teamsters and Helpers, Local 395, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, applicant, and J. Kearns Transport Ltd., Regina, Sask., respondent (L. G., July, p. 416). The application was rejected because it was not supported by a majority of the employees affected in the representation vote conducted by the Board. (See also Item No. 2, Representation Votes Ordered, below.)

3. Chauffeurs, Teamsters and Helpers, Local 395, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, applicant, and Walco Trucking Ltd., Regina, Sask., respondent (L. G., July, p. 416). The application was rejected because it was not supported by a majority of the employees affected in the representation vote conducted by the Board. (See also Item No. 3, Representation Votes Ordered, below.)

4. D. K. W. Employees' Association, applicant, Deruth Transport Ltd., Regina, Sask., respondent, and Chauffeurs, Teamsters and Helpers, Local 395, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, intervener (L. G., Aug., p. 497). The application was rejected because the Board was not satisfied that the D. K. W. Employees' Association has members in good standing within the meaning of Rule 15 of the Board's Rules of Procedure.

5. D. K. W. Employees' Association, applicant, J. Kearns Transport Ltd.,

---

Scope and Administration of Industrial Relations and Disputes Investigation Act

Conciliation services under the Industrial Relations and Disputes Investigation Act are provided by the Minister of Labour through the Conciliation and Arbitration Branch. The Employee Representation Branch acts as the administrative arm of the Canada Labour Relations Board in matters under the Act involving the Board.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until superseded by the Wartime Regulations in 1944. Decisions, orders and certificates given under the Wartime Regulations by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the Act.

The Act applies to industries within federal jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the federal Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of conciliation officers, conciliation boards, and Industrial Inquiry Commissions concerning complaints that the Act has been violated, or that a party has failed to bargain collectively, and for controlling applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents; the writing of provisions—for incorporation into collective agreements—that fix a procedure for the final settlement of disputes concerning the meaning or violation of such agreements; and the investigation of complaints referred to it by the Minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act, the Regulations made under the Act, and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported here under two headings: (1) Certification and Other Proceedings Before the Canada Labour Relations Board and (2) Conciliation and Other Proceedings Before the Minister of Labour.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, Halifax and St. John's, Newfoundland. The territory of the officers resident in Vancouver comprises British Columbia, Alberta and the Yukon and Northwest Territories; officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; officers resident in Toronto confine their activities to Ontario; officers in Montreal are assigned to the province of Quebec; and officers resident in Fredericton, Halifax and St. John's represent the Department in the Atlantic Provinces. The headquarters of the Conciliation and Arbitration Branch and the Employee Representation Branch are in Ottawa.

Regina, Sask., respondent, and Chauffeurs, Teamsters and Helpers, Local 395, International Brotherhood of Teamsters, Chauffeurs, Warehousement and Helpers of America, intervener (L. G., Aug., p. 497). The application was rejected because the Board was not satisfied that the D. K. W. Employees' Association has members in good standing within the meaning of Rule 15 of the Board's Rules of Procedure.

6. D. K. W. Employees' Association, applicant, Walco Trucking Ltd., Regina, Sask., respondent, and Chauffeurs, Teamsters and Helpers, Local 395, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, intervener (L. G., Aug., p. 497). The application was rejected because the Board was not satisfied that the D. K. W. Employees' Association has members in good standing within the meaning of Rule 15 of the Board's Rules of Procedure.

7. Canadian Brotherhood of Railway, Transport and General Workers, applicant, AirWest Airlines Ltd., Vancouver, B.C., respondent, and Ronald McKim, *et al.*, interveners (L. G., Sept., p. 580). The application was rejected because it was not supported by a majority of the employees in the proposed bargaining unit.

8. *Syndicat national des employés de S.C.H.L.* (*CSN*), applicant, and Central Mortgage and Housing Corporation, respondent (Place Benoit, Ville St-Laurent), and the International Union of District 50, United Mine Workers of America, Local 13946, intervener (L. G., Sept., p. 581). The application was rejected for the reason that it was not supported by a majority of employees affected in the representation vote conducted by the Board. (See also Item No. 8, Representation Votes Ordered, below.)

9. *Syndicat national des employés de S.C.H.L.* (*CSN*), applicant, and Central Mortgage and Housing Corporation, respondent (Terrasse Villeray, Montreal), and the International Union of District 50, United Mine Workers of America, Local 13946, intervener (L. G., Sept., p. 581). The application was rejected for the reason that it was not supported by a majority of employees affected in the representation vote conducted by the Board. (See also Item No. 10, Representation Votes Ordered, below.)

Representation Votes Ordered

1. Chauffeurs, Teamsters and Helpers, Local Union 395, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, applicant, and Deruth Transport Ltd., Regina, Sask., respondent (L. G., July, p. 416) (Returning officer: A. E. Koppel). (See also Item No. 1, Applications for Certification Rejected, above.)

2. Chauffeurs, Teamsters and Helpers, Local 395, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, applicant, and J. Kearns Transport Ltd., Regina, Sask., respondent (L. G., July, p. 416) (Returning officer: A. E. Koppel). (See also Item No. 2, Applications for Certification Rejected, above.)

3. Chauffeurs, Teamsters and Helpers, Local 395, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, applicant, and Walco Trucking Ltd., Regina, Sask., respondent (L. G., July, p. 416) (Returning officer: A. E. Koppel). (See also Item No. 3, Applications for Certification Rejected, above.)

4. *Syndicat national des employés de S.C.H.L.* (*CSN*), applicant, Central Mortgage and Housing Corporation, respondent (Cloverdale Park, Pierrefonds, Que.), and the International Union of District 50, United Mine Workers of America, Local 13946, intervener. The Board directed that the names of the *Syndicat national des employés de S.C.H.L.* (*CSN*) and of the International Union of District 50, United Mine Workers of America, Local 13946, appear on the ballot (L. G., Sept., p. 580) (Returning officer: G. R. Doucet). (See also Item No. 8, Applications for Certification Granted, above.)

5. *Syndicat national des employés de S.C.H.L.*(*CSN*), applicant, Central Mortgage and Housing Corporation, respondent (St-Michel Terrace, Montreal, Que.), and the International Union of District 50, United Mine Workers of America, Local 13946, intervener. The Board directed that the names of the *Syndicat national des employés de S.C.H.L.* (*CSN*) and of the International Union of District 50, United Mine Workers of America, Local 13946, appear on the ballot (L. G., Sept., p. 580) (Returning officer: G. R. Doucet). (See also Item No. 9, Applications for Certification Granted, above.)

6. *Syndicat national des employés de S.C.H.L.* (*CSN*), applicant, Central Mortgage and Housing Corporation, respondent (St-Georges Gardens, Pte-aux-Trembles, Que.), and the International Union of District 50, United Mine Workers of America, Local 13946, intervener. The Board directed that the names of the *Syndicat national des employés de S.C.H.L.* (*CSN*) and of the International Union of District 50, United Mine Workers of America, Local 13946, appear on the ballot (L. G., Sept., p. 580) (Returning officer: G. R. Doucet). (See also Item No. 10, Applications for Certification Granted, above.)

7. *Syndicat national des employés de S.C.H.L.* (*CSN*), applicant, Central Mortgage and Housing Corporation, respondent (Park Royal, Ville St-Laurent), and the International Union of District 50, United Mine Workers of America, Local 13946, intervener. The Board directed that the names of the *Syndicat national des employés de S.C.H.L.* (*CSN*) and of the International Union of District 50, United Mine Workers of America, Local 13946, appear on the ballot (L. G., Sept., p. 581) (Returning officer: G. R. Doucet). (See also Item No. 15, Applications for Certification Granted, above.)

8. *Syndicat national des employés de S.C.H.L.* (*CSN*), applicant, Central Mortgage and Housing Corporation, respondent (Place Benoit, Ville St-Laurent) and the International Union of District 50, United Mine Workers of America, Local 13946, intervener. The Board directed that the names of the *Syndicat national des employés de S.C.H.L.* (*CSN*) and of the International Union of District 50, United Mine Workers of America, Local 13946, appear on the ballot (L. G., Sept., p. 581) (Returning officer: G. R. Doucet). (See also Item No. 8, Applications for Certification Rejected, above.)

9. *Syndicat national des employés de S.C.H.L.* (*CSN*), applicant, Central Mortgage and Housing Corporation, respondent (Pie IX Apartments, Montreal), and the International Union of District 50, United Mine Workers of America, Local 13946, intervener. The Board directed that the names of the *Syndicat national des employés de S.C.H.L.*(*CSN*) and of the International Union of District 50, United Mine Workers of America, Local 13946, appear on the ballot) (L. G., Sept., p. 581) (Returning officer: G. R. Doucet). (See also Item No. 16, Applications for Certification Granted, above.)

10. *Syndicat national des employés de S.C.H.L.* (*CSN*), applicant, Central Mortgage and Housing Corporation, respondent (Terrasse Villeray, Montreal), and the International Union of District 50, United Mine Workers of America, Local 13946, intervener. The Board directed that the names of the *Syndicat national des employés de S.C.H.L.* (*CSN*) and of the International Union of District 50, United Mine Workers of America, Local 13946, appear on the ballot (L. G., Sept., p. 581) (Returning officer: G. R. Doucet). (See also Item No. 9, Applications for Certification Rejected, above.)

11. *Syndicat national des employés de S.C.H.L.* (*CSN*), applicant, Central Mortgage and Housing Corporation, respondent (Terrasse Belleville, St-Vincent-de-Paul, Que.), and the International Union of District 50, United Mine Workers of America, Local 13946, intervener. The Board directed that the names of the *Syndicat national des employés de S.C.H.L.* (*CSN*) and of the International Union of District 50, United Mine Workers of America, Local 13946, appear on the

ballot (L. G., Sept., p. 581) (Returning officer: G. R. Doucet). (See also Item No. 20, Applications for Certification Granted, above.)

12. International Association of Machinist and Aerospace Workers, the petitioner in a request for review, Canadian Pacific Air Lines, Limited, Vancouver Airport, B.C., respondent, and D. A. Robinson, *et al.*, interveners (L. G., Aug., p. 496). The Board directed that a representation vote be conducted among certain clerical employees in the respondent's Maintenance and Engineering Department to determine whether or not they desire the said union to act as their bargaining agent within the bargaining unit for which the petitioner was certified as bargaining agent on August 27, 1948.

Applications for Revocation Granted

1. Piette Transport Inc., Joliette, Que., applicant, and Transport Drivers, Warehousemen and Helpers' Union, Local 106, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, respondent. The application was for the revocation of the Board's order of April 12, 1962, certifying the respondent union as the bargaining agent for a unit of truck drivers and labourers employed by the company (L. G., July, p. 416.)

2. *Martel Express Ltée.*, Farnham, Que., applicant, and Transport Drivers, Warehousemen and Helpers' Union, Local 106, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, respondent. The Board notified the parties that, on the evidence before it, the Board was of the opinion that the Order of Certification issued to the respondent's union on July 4, 1966, is, in the present circumstances, of no force and effect. The application was not opposed by the respondent union, and upon the information before it, the Board concluded that the business or undertaking of the company, as presently carried on, is conducted solely within the Province of Quebec, and is not subject to the legislative authority of the Parliament of Canada.

Request for Review under Sec. 61 (2)

The Board issued Reasons for Judgment in a request for review made by the General Drivers, Warehousemen and Helpers, Local 979, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America for review of the Certification issued by the Board on June 6, 1966, which certified the union as the bargaining agent for a unit of driver-helpers employed on leased tractors by Arrow Transit Lines Ltd., Winnipeg, Man. (L. G., March, p. 191). Named as respondents in the review proceedings were: Arrow Transit Lines Ltd., Winnipeg, Man.; Kingsway Freightlines Limited, Calgary, Alta.; John Kron & Son Limited, Winnipeg, Man.; and Kingsway Transports Limited, Agincourt, Ont.

Applications for Certification Received

1. Shaft & Development Workers, Local 1037, International Union of Mine, Mill and Smelter Workers (Canada) on behalf of a unit of employees of Mount Nansen Mines Limited, Vancouver, B.C., employed at Carmacks, Y. T. (Investigating officer: D. H. Cameron).

2. Canadian Merchant Service Guild, Inc., on behalf of a unit of masters, mates and engineers employed aboard the M.V. *Canadian Tide* and the M.V. *Min Tide* by Pacific Tidewater Marine Ltd., Port Alberni, B.C. (Investigating officer: C. M. Gilmour). (See also Item No. 22, Applications for Certification granted, above.)

3. International Union of Operating Engineers, Local 115 on behalf of a unit of employees employed in the Yukon Territory by Poole Engineering Company Limited, Edmonton, Alta., (Investigating officer: C. M. Gilmour).

4. Asbestos Workers' Union, Local 1612 on behalf of a unit of employees of Outfitters Incorporated Ltd., Corner Brook, Nfld., engaged in the loading and unloading of ships (Investigating officer: W. J. Gillies).

5. General Truck Drivers' Union, Local 938, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America on behalf of a unit of employees of Kraus Transport Limited, Toronto, Ont. (Investigating officer: H. A. Fisher).

6. Transport Drivers, Warehousemen and Helpers' Union, Local 106, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America on behalf of a unit of mail truck drivers employed by Federal Delivery Inc., Ste-Foy, Que. (Investigating officer: R. L. Fournier).

7. Transport Drivers, Warehousemen and Helpers Union, Local 106, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America on behalf of a unit of mail truck drivers employed by H. O. Grenier, St-Pascal, Que. (Investigating officer: G. R. Doucet).

Application for Certification Withdrawn

International Union of Operating Engineers, Local 115, applicant, and Poole Engineering Company Limited, Edmonton, Alta., respondent (employees in Yukon Territory) (L. G., Feb., p. 128).

Conciliation and Other Proceedings Before the Minister of Labour

Conciliation and Arbitration Branch

During August, the Minister of Labour appointed Conciliation Officers to deal with the following disputes:

1. Tiger Transfer Ltd., Calgary, Alta., and Local 362, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Conciliation Officer: D. H. Cameron).

2. Continental Explosives Ltd., Vancouver, B.C., and Canadian Merchant Service Guild (Conciliation Officer: D. S. Tysoe).

3. Canadian Pacific Air Lines Limited, Vancouver International Airport, and Canadian Air Line Flight Attendants' Association (Conciliation Officer: D. S. Tysoe).

4. National Harbours Board, Port of Montreal, and National Harbours Board Police Brotherhood (Conciliation Officer: C. E. Poirier).

5. Canadian Lake Carriers' Association, Montreal, and Canadian Marine Officers' Union (Conciliation Officer: C. E. Poirier).

This section covers proceedings under the Industrial Relations and Disputes Investigation Act involving the administrative services of the Minister of Labour and the Conciliation and Arbitration Branch of the Department.

Settlements by Conciliation Officers

1. Porter Shipping Limited, Toronto, Ont., and Canadian Marine Officers' Union (Conciliation Officer: T. B. McRae) (L.G., Oct., p. 644).

2. Canadian National Railways (Canadian National Newfoundland Steamship Service) and Canadian Merchant Service Guild (Conciliation Officer: H. R. Pettigrove) (L. G., Sept., p. 581).

3. B. C. Towboat Owners' Association (certain member companies) and Seafarers' International Union of Canada (Conciliation Officer: D. S. Tysoe) (L. G., Aug., p. 498).

4. B. C. Towboat Owners' Association (certain member companies) and Local 400, Canadian Brotherhood of Railway, Transport and General Workers (unlicensed personnel) (Conciliation Officer: D. S. Tysoe) (L. G., Aug., p. 498).

Conciliation Boards Appointed

1. Eastern Provincial Airways (1963) Ltd., Gander, Nfld., and Lodge 1763, International Association of Machinists and Aerospace Workers (L. G., Sept., p. 581).

2. Canadian National Hotels Limited (Fort Garry Hotel, Winnipeg) and Canadian Brotherhood of Railway, Transport and General Workers (L. G., Oct., p. 644).

3. Canadian National Hotels Limited (Bessborough Hotel, Saskatoon, Sask.) and Canadian Brotherhood of Railway, Transport and General Workers (L. G., Oct., p. 644).

Conciliation Boards Fully Constituted

1. The Board of Conciliation and Investigation established in July to deal with a dispute between Hudson Bay Mining and Smelting Co. Limited, Flin Flon, Man., and United Steelworkers of America (L. G., Oct., p. 644) was fully constituted in August with the appointment of Roy A. Gallagher, Q. C., Winnipeg, as Chairman. Mr. Gallagher was appointed by the Minister in the absence of a joint recommendation from the other two members of the Board, company nominee H. B. Monk, Q. C., and union nominee S. M. Cherniack, both of Winnipeg.

2. The Board of Conciliation and Investigation established in July to deal with a dispute between Consolidated Aviation Fueling of Toronto Limited, Toronto International Airport, and Lodge 717, International Association of Machinists and Aerospace Workers (L. G., Oct., p. 644) was fully constituted in August with the appointment of Dr. Louis Fine, Toronto, as Chairman. Dr. Fine was appointed by the Minister on the joint recommendation of the other two members of the Board, company nominee B. M. W. Paulin, Toronto, and union nominee W. G. Carson, Dundas, Ont.

3. The Board of Conciliation and Investigation established in July to deal with a dispute between E.M.I.-Cossor Electronics Ltd., St. John's, Nfld., and National Association of Broadcast Employees and Technicians (L. G., Oct., p. 644) was fully constituted in August with the appointment of R. Hattenhauer, St. John's, as Chairman. Mr. Hattenhauer was appointed by the Minister in the absence of a joint recommendation from the other two members of the Board, company nominee P. J. Lewis, Q. C., and union nominee E. Thoms, both of St. John's.

4. The Board of Conciliation and Investigation established in June to deal with a dispute between Bristol Aviation Services, Montreal International Airport, and Lodge 869, International Association of Machinists and Aerospace Workers (L. G., Sept., p. 589) was fully constituted in August with the appointment of Marc Brière of Montreal, as Chairman. Mr. Brière was appointed by the Minister in the absence of a joint recommendation from the other two members of the Board, company nominee M. G. Bergeron and union nominee L. Gagnon, both of Montreal.

Board Reports Received

1. McCabe Grain Company, Edmonton, Alta., and Local 987, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (L. G., June, p. 365).

2. Canadian National Railways (Canadian National Newfoundland Steamship Service and Yarmouth-Bar Harbour Ferry Service) and Canadian Brotherhood of Railway, Transport and General Workers (L. G., Sept., p. 589).

Settlements after Board Procedure

1. Canadian Pacific Air Lines, Limited, Vancouver, and Lodge 764, International Association of Machinists and Aerospace Workers (L. G., Oct., p. 644).

2. Canadian National Railways (Canadian National Newfoundland Steamship Service and Yarmouth-Bar Harbour Ferry Service) and Canadian Brotherhood of Railway, Transport and General Workers (see above). Mr. H. R. Pettigrove was appointed mediator, and he brought the parties to a settlement.

3. Canadian National Railways (Borden-Cape Tormentine Ferry Service) and Canadian Merchant Service Guild (L. G., Oct., p. 644).

4. National Harbours Board and National Syndicate of Employees of the Port of Montreal (CNTU) (L. G., Oct., p. 644).

Settlement during Board Procedure

Canada Coach Lines Ltd., Hamilton, Ont., and Amalgamated Transit Union, Division 107 (L. G. Oct., p. 644).

Dispute Lapsed

Transcanada Communications Limited (Station CKCK-TV) Regina, Sask., and National Association of Broadcast Employees and Technicians (L. G., Feb., p. 138).

Strike Action

Canadian Lake Carriers' Negotiating Committee (26 companies) and Seafarers' International Union of Canada (L. G., Oct., p. 644).

Britain pays employers to hire workers

In what has been described as a "brave and original" attempt to correct the regional imbalance in Britain's economy, the Government decided in July to pay manufacturing firms a cash premium for every worker they employ. Payment, which began in September, amounts to 30 shillings ($4.50) a week for the hiring of a male employee and 15 shillings for a female worker.

The Confederation of British Industry, the principal organization of employers, was not enthusiastic about the scheme, but the 9,500,000-member Trades Union Congress greeted it warmly. The TUC regards it as a good way of utilizing human resources that "are now lying wastefully idle in the development areas." It believes also that the premium could provide a new stimulus to regional "reflation" without creating new worries for the Government concerning the balance of payments.

The Ministry of Labour gives grants and practical help for the training and retraining of labour for firms moving into development areas or expanding there. Most of the Ministry's own training centres are in these areas, and workers receive allowances while learning new skills.

The scheme is costly—$300,000,000 a year—but it will not be a permanent subsidy. It is intended to run for seven years and then taper off. It is assistance on a scale that has not been seen since the development areas were recognized as being in need of special aid.

Director appointed to U.S. Employment Service

Charles E. Odell, former director of the United Auto Workers' Older and Retired Workers Department, has been appointed Director of the United States Employment Service by U.S. Secretary of Labor W. Willard Wirtz.

He succeeds Frank H. Cassell, who is returning to private industry. As special assistant to Mr. Cassell since April 1966, Mr. Odell was a key figure in developing and implementing the Government's Human Resources Development program.

Legal Decision Affecting Labour

The Ontario High Court has ruled that the decision of an arbitration board on a referred question of law is not subject to judicial review

Legislation Branch

On January 25, 1967 Mr. Justice Jessup of the Ontario High Court dismissed an application to quash an award of an arbitration tribunal under a collective agreement, and held that, where a specific question of law is submitted to arbitrators, their decision is not reviewable simply because questions of fact might be involved in the submission.

The Court held further that, in Ontario, the rights and benefits provided for individuals by a collective agreement are enforceable by individual employees either in the Courts or under Sec. 34 (9) of the Labour Relations Act, provided, however, that when these rights or benefits depend on the interpretation of a collective agreement, such interpretation is within the exclusive jursidiction of a board of arbitration and a condition precedent to a court action.

Circumstances of Dispute

On January 31, 1966 the award of an arbitration board dismissed two grievances submitted by Local 5, International Mailers' Union, Toronto, under three collective agreements between the Mailers' Union and the Globe and Mail Ltd., The Telegram Publishing Co. Ltd. and the Toronto Star Ltd.

The grievances submitted to arbitration concerned members of the Mailers' Union who were employees of one or other of the employers mentioned above.

All three collective agreements contained the following clause:

> (101) The Employer agrees to employ only members of Toronto Mailers' Union No. 5 to perform all work within the jurisdiction of the Union. The Union shall furnish as many competent journeymen as are called for by the Employer to meet his requirements, and to thereby make it unnecessary for regular members to work in excess of five days or nights in any one regularly scheduled workweek. If the Union fails to do this, the Employer may secure the help needed from any source, provided that such help are members of the International Typographical Union.
>
> (703A) No employee covered by this agreement shall be required to cross a picket line established because of a legal strike or any lockout of Toronto Typographical Union No. 91.

The collective agreements provided for certain hospitalization and other like benefits by the employers. (Para. 1001 (1) and (2)). Para. 1101 provided for a grievance and arbitration procedure. The term of the agreements were from January 1, 1963 to December 31, 1964.

All the employers concerned also had collective agreements with Toronto Typographical Union No. 91, and that union and the Mailers' Union were both locals of the International Typographical Union. On July 9, 1964, Toronto Typographical Union 91 started a lawful strike against the employers, and set up picket lines at their premises. At that time, about 40 mailers were employed by the Globe and Mail Ltd., 125 by the Toronto Star Ltd., and 50 by the Telegram Publishing Co. Ltd. Following the establishment of the picket line, only two—and later some six or eight—of the mailers returned to work.

The arbitration board found that the remainder of the mailers not only abstained from work, but participated in picketing and other strike activities with the assistance of the Union itself. Such conduct continued up to the hearing before the arbitration board on September 30, 1965.

After several months, the employers discontinued their payments for the hospitalization and other like benefits provided for in the collective agreements

with the Mailers' Union. In the first week of April 1965, the president of the Mailers' Union informed each of the employers that the majority of the mailers wished to return to work. During this time, negotiations were in progress for new collective agreements between the Mailers' Union and the employers, and the latter refused to have the employees concerned return to work except under the terms of the proposed new agreements. But such agreements were never concluded, and, following conciliation procedures, the Ontario Minister of Labour released the report of a conciliation board on September 29, 1965.

Meanwhile, the Union brought a representative action in the Supreme Court against the Globe and Mail to restrain the newspaper from employing in its mailing room persons other than members of the Mailers' Union. The application for interim injunction was dismissed by Mr. Justice Lieff on January 18, 1965. One of the reasons for dismissal of the application reads, as follows:

> I find further that the Collective Agreement in force between the parties, and which does not expire for some considerable time to come, has been frustrated by the applicant, and that the applicant did not first invoke the arbitration procedure provided by the Collective Agreement whereby its terms would have been interpreted.

Following the refusal by the employers of an immediate return to work of the employees concerned, the Mailers' Union, by letters to each of the employers, dated April 20, 1965, initiated grievances. The letters read in part:

> The overwheming majority of our members who work in the [paper concerned] had signified individually to me that they wish to return to work, and whatever process is necessary [sic] to accomplish their aim, which in our mind is legally sound under the present agreement, should be carried out.
>
> On behalf of these members, please accept this letter as notification that we invoke Clause 1101 of the agreement [joint standing] and the clause we wish to process through the grievance procedure is Clause 703A [picket line].

Following the discontinuance by the employers of the hospitalization and other like benefits, the union had earlier initiated grievances with respect to that issue by letters to each of the employers dated October 31, 1964, which read in part:

> . . . I now wish to inform you that Toronto Mailers' Union No. 5 hereby invokes Clause 1101 of our agreement, including the final paragraph which states in part: "The conditions existing prior to the cause of the disputes shall be maintained until the dispute shall have been settled."
>
> We are invoking this clause on our claim that the [company] is not living up to the agreement specifically as referred to in Clause 1002, paragraph 2, also Clause 1101, Hospital 1 and Hospital 2.

Arbitration Award

The issue before arbitration board was the interpretation of para. 703A of the collective agreement (quoted above), and the fact of picketing and strike activities of the employees and of the Mailers' Union. The board by majority decision held:

> The action of the Mailers went far beyond the individual rights given to employees under Sec. 703 (A) of the collective agreements, and their actions were quite inconsistent with the right given to the employees under Sec. 703A of the collective agreements and were quite inconsistent with normal employee-employer relationships.

The decision of the majority of the board was based on the following principles of law:

> It has been held that it is an implied term of all contracts of employment that an employee shall serve his employer with good faith and fidelity, and shall not deliberately set out to do something which may harm his employer's business, even on what is called his own time. (See *Hivac Ltd. vs. Park Royal Limited*, 1946, 1 All E. R. p. 350.)
>
> If the breach of such contract is of an obligation which is essential to the contract, then the innocent party is free to refuse further performance of his own obligations. (See *Hayman vs. Darwin Ltd.*, 1942, 1 All E.R. p. 336.)
>
> In this case it is pointed out by Lord Wright, at page 355, that this is really an application of the maxim that a party cannot take the benefits of a contract without conforming to obligations imposed upon him by the contract. (See also *Cheshire and Fifoot*, Law of Contracts, 6th Edition, p. 504.)

In applying such principles, the majority award held that the duty to serve with good faith and fidelity was an implied term of the collective agreements, and that the actions of the employees, members of the Mailers' Union, in breach of such essential duty, relieved the employers from any obligation to them.

Issue of Fact and Law

The Union applied to the Court to quash the arbitration award on the ground that the findings of the board constituted an error on the face of the record in a matter of law material to the issues before the Board, but not specifically referred to it. This distinction was dealt with by Chief Justice Kerwin, delivering the judgment of the Supreme Court of Canada, in *Faubert and Watts v. Temagami Mining Co. Ltd.* [1960] S.C.R. 235 at p. 241, 22 D.L.R. (2d) 20 at p. 225:

> The authorities are all mentioned in the 16 ed. of Russell on Arbitration, but reference might be made particularly to the judgment of the House of Lords in *Absalom Ltd. v. Great Western (London) Garden Village Society Ltd.* [1933] A.C. 592. Lord Russell, with the concurrence of Lord Buckmaster and Lord Tomlin, at p. 607, points out that the authorities make a clear distinction between a case where disputes are referred to an arbitrator in the decision of which a question of law becomes material, from the case in which a specific question of law has been referred to him for decision. In the first, the Court can interfere if and when any error of law appears in the face of the award; but in the latter case, no such interference is possible upon the ground that it so appears that the decision upon the question of law is an erroneous one. Lord Warrington and Clyffe and Lord Wright came to a like conclusion for similar reasons.

The applicant submitted that, even if the question of law was specifically submitted to the board, the decision is reviewable because the submission to the board involved disputed matters of fact as well as of law. This submission was based on passages in the judgment of Lord Wright in the *Absalom* case.

In his reasons for judgment in the case at bar, however, Mr. Justice Jessup noted that such distinction is not found in the judgment of Lord Russell, which was adopted by Chief Justice Kerwin in the *Flaubert* case. Moreover, Lord Wright's judgment approved of *Re King and Duveen* [1913] 2 K. B. 32, where questions of fact were referred to the arbitrators. Consequently, Mr. Justice Jessup concluded that, if it can be found that a specific question of law is referred to arbitrators, their decision does not become reviewable simply because questions of fact are involved in the submission to them.

Jurisdiction to Review

Mr. Justice Jessup next considered whether, in the case at bar, the disputed decision of law was specifically referred to the board. In his view, in order to find what the issues of an arbitration were, it is proper to look not only at the grievance and any reply to it, but also at the award. In his opinion, it can be found in most labour matters that what has been referred is the construction of the entire collective

agreement, together with the material facts.

He noted that, in the case at bar, para. 703A of the collective agreements and para. 1001 (providing for hospital and other benefits) were specifically referred to the board. The contested matter of law arose only collaterally in the general issue as to whether, on the facts, the employees affected were entitled to the rights and benefits claimed. Accordingly, Mr. Justice Jessup held that the arbitration award under consideration was reviewable.

Collective Agreements and Contracts

It was argued that the arbitration board had held, as a matter of law, that, by reason of the actions of the employees and of the Mailers' Union, and in breach of an essential term of the collective agreements, the employers were relieved from all obligations under the collective agreements either to the employees or to the Union. Thus the agreements were, in effect, terminated. In the opinion of Mr. Justice Jessup, if the board so held, then it erred in law. In support of his view, he quoted from the judgment of Chief Justice McRuer in *Re Polymer Corp. and Oil, Chemical and Atomic Workers' Union, Local 16-14* (L. G. 1961, p. 379)*, the following:

> . . . a collective agreement is different in some aspects from an ordinary commercial contract . . . it is not that sort of contract that can be terminated by repudiation by one party merely because the other party has broken one of its terms.

Mr. Justice Jessup stated that it is questionable if many of the principles of contract law have any application to a collective agreement as such. He added that a collective agreement has the features of a treaty rather than a commercial contract, although Prof. A.W.R. Carrothers observed in *Labour Arbitration in Canada* (1961), p. 68:

> If the agreement looks like a duck, swims like a duck and quacks like a duck, the courts may reasonably be expected to treat it as a duck.

Counsel for the respondent companies referred to the principle of *Hayman v. Darwin Ltd.* as "discharge by acceptance of repudiation." Mr. Justice Jessup held that this principle, which would result in the cessation of operation of an agreement, has no application to a collective agreement as such. He noted that Sec. 39 (3) of the Ontario Labour Relations Act provides that:

> A collective agreement shall not be terminated by the parties before it ceases to operate in accordance with its provisions or this Act without the consent of the Board on the joint application of the parties.

It was Mr. Justice Jessup's view that the word "terminate" includes not only consensual rescission, but any ending of the operation of a collective agreement. He also thought the principle of the *Hayman* case, as applied to a collective agreement as such, was repugnant to the entire scheme and purpose of the Labour Relations Act. But he did not find, anywhere in the majority award, a finding that the collective agreements as such ceased to operate. When disposing of the grievance regarding hospitalization and other benefits, the board held:

> In the opinion of the Board, the actions of the Mailers, as above set out, continuing as it did for months, constituted a breach of the obligations of the employees, which obligations were essential to the contract and relieved the employers, at their option, of any obligation to share the costs of hospitalization and other benefits for employees not at work.

In the view of Mr. Justice Jessup, the arbitration board dealt only with the rights of those who had not returned to work and had participated in the picketing and other strike activities. Those employees were the only ones concerned with the right to return to work, and the grievance in that respect was decided by the board as follows:

> In addition in the opinion of the Board, the actions of the Mailers during the period in excess of nine months prior to April 20th, 1965 were such as to relieve the employers, in the circumstances here, of any obligation to permit the employees to return to work.

Mr. Justice Jessup concluded that the majority of the board was dealing with the individual rights of employees as a group on whose behalf the grievances were initiated. Consequently the award had a limited effect.

No Error in Law

In view of the limited effect of the award, Mr. Justice Jessup considered whether there was error in law in the decision of the arbitration board that the employees in question had become disentitled to benefits.

He held that, under the principle established by the Supreme Court of Canada in *Hamilton Street R. Co. v. Northcott* (L. G., Apr., p. 249), any rights or benefits provided for employees in a collective agreement in Ontario are enforceable by individual employees alternatively in the Courts or under Sec. 34 (9)† of the Ontario Labour Relations Act, subject only to the proviso in the case of a court action that, if the rights or benefits depend on the interpretation of the collective agreement, such interpretation is within the exclusive jurisdiction of a board or arbitration whose interpretation is a condition precedent to action.

If rights and benefits provided in a collective agreement are enforceable in a court action by an individual, it must be because they arise from his contract of employment. This follows, according to Mr. Justice Jessup, from the judgment of Mr. Justice Judson of the Supreme Court of Canada who said in *Syndicat Catholique des Employés de Magasins de Québec Inc. v. Compagnie Paquet Ltée* (L. G. 1959, p. 286):

> The collective agreement tells the employer on what terms he must in the future conduct his master and servant relations.

Accordingly, Mr. Justice Jessup held that in the hiring of an individual, the provisions of a collective agreement become terms and conditions of his contract of employment, and a matter of contractual right and obligation as between him as an individual and his employer. It follows that, if an individual employee breaches an obligation that is essential to his contract of employment, his employer is relieved from his obligations under that contract. He added further that, in a case where the obligation of the employee is a term of the collective agreement, a board of arbitration has jurisdiction to declare his disentitlement. As this was essentially the basis on which the majority award proceeded, he did not find that the board erred in law in doing so.

Mr. Justice Jessup held that it is equally open to the employee, in the event of a failure by his employer in an essential obligation, to decline further performance by quitting. And if, for such reason, a group of employees quit in concert, they would not be striking within the meaning of the Labour Relations Act. It would be otherwise if they were insisting on the continuance of the employee relationship by picketing, for instance.

The application to quash the arbitration award was dismissed. *Regina v. Fuller et al., Ex parte Earles and McKee*, (1967) 62 D.L.R. (2d) Part 3, p. 156; 67 CLLC, para. 14,004.

*The judgment was upheld by the Ontario Court of Appeal (L.G. 1961, p. 1276) and by the Supreme Court of Canada (L.G. 1962, p. 1184).

†Sec. 34 (9) Where a party, employer, trade union or employee has failed to comply with any of the terms of the decision of an arbitrator or arbitration board, any party, employer, trade union or employee affected by the decision may, after the expiration of fourteen days from the date of the release of the decision or the date provided in the decision for compliance, whichever is later, file in the office of the Registrar of the Supreme Court a copy of the decision, exclusive of the reasons therefor, in the prescribed form, whereupon the decision shall be entered in the same way as a judgment or order of that court and is enforceable as such.

June Claimants 40,000 Fewer Than Total in May

Claimants for unemployment insurance benefit on June 30 totalled 243,000, which was 14 per cent fewer than the total of 281,000 on May 31, and 34 per cent more than the total of 181,000 on June 30, 1966.

The number of male claimants on June 30 totalled 148,000, which was an increase of 39 per cent from that of a year ago. The number of female claimants increased 27 per cent during the past year. A 20-per-cent decrease in the number of male claimants accounted almost entirely for the decrease from May to June.

Male claimants accounted for 60 per cent of the total on June 30, and 75 per cent or more during the winter months. This is associated with the seasonal upswing of job opportunities for male workers.

Initial and Renewal Claims

A total of 89,000 initial and renewal claims were filed during June, which was 24 per cent fewer than the total of 117,000 filed during May, and 30 per cent more than the total of 68,000 filed during June 1966. Initial claims increased 28 per cent, and renewal claims increased 37 per cent during the year. Workers separated from their employment during the month accounted for 90 per cent of the June claims. The comparable figure for May was 75 per cent.

Unemployment Insurance
Pensions and Manpower Section
Dominion Bureau of Statistics

Beneficiaries and Benefit Payments

The average weekly number of beneficiaries during June was estimated to be 181,600, compared with 294,200 in May, and 137,500 in June 1966. Benefit payments during June totalled $17.8 million, compared with $37.2 million in May and $14.7 million a year ago.

A claimant's unemployment register is placed in the "live file" at the local office as soon as the claim is made. As a result, the count of claimants at any given time inevitably includes some whose claims are in process. "Claimants" should not be interpreted either as "total number of beneficiaries" or "total job applicants."

The decrease in beneficiaries and benefit payments from May to June can be attributed to the termination of benefits to claimants under the seasonal benefit provisions. The average weekly payment was $24.56 during June, compared with $25.28 during March and $23.78 during June 1966.

Provincial Data

The total of claimants since May 31 showed a decrease in every province with the exception of Ontario. The small increase of 3 per cent in the number of claimants in Ontario was the indirect result of labour disputes in the construction and manufacturing industries in that province.

The number of claimants since June 30, 1966, was higher in every province. Over 75 per cent of the increases occurred in Quebec and Ontario.

The number of claims filed since May 31 was lower in every province except Ontario. In that province, the number increased by 4 per cent as a result of a 20-per-cent increase in the number of renewal claims.

Summary Table

Activity	June 1967	May 1967	June 1966	Cumulative Data 1967: Jan. to June	Cumulative Data 1967: 12 months ending June
	(in thousands)				
Insured population as at month-end	—	4,670	4,500	—	—
Initial and renewal claims filed					
Total	89	117	68	961	1,695†
Initial	63	86	49	724	1,265
Renewal	26	31	19	237	429
Claimants currently reporting to local offices	243	281	181	441*	339*
Beneficiaries (weekly average)	182	294	138	361*	251*
Weeks compensated	726	1,471	619	9,374	12,977
Benefit paid	$17,837	$37,192	$14,712	$240,321	$327,119

Employment picture changes in New Zealand

The number of unemployed in New Zealand is now about 2,300, the highest total since World War II, and the New Zealand Federation of Labour was predicting a total of 20,000 by October.

In the last 25 years, New Zealand has always had more jobs than applicants, with a high rate of staff turnover in most industries, particularly among seasonal workers. Now the ratio has been drastically reversed, with as many as 40 applicants for a single advertised job.

Hardest hit are the unskilled workers; but carpenters, architects and nurses are also being laid off for lack of work.

Although the situation reminds older people of the depression, some industrialists are happy because they say that it tends to stabilize their staff. And for the first time in 20 years, they can employ selectively, hiring the most qualified applicants.

Decision of the Umpire Under the Unemployment Insurance Act

CUB-2703

The claimant filed a renewal claim for benefit on November 18, 1966 and registered for employment as a welder. He had been working for 2½ years in this capacity at a salary of $2.10 an hour at the time of his dismissal.

He subsequently stated that he was dismissed because he absented himself without permission to take a high-pressure welding test, and two other employees were released for the same reason. The employer reported to the local office that the claimant had been dismissed because of his "absences without notification."

The insurance officer notified the claimant that he was disqualified from the effective date of his claim, because he had lost his employment "for cause"—that is, by reason of his own misconduct within the meaning of the Act. But, considering the reason for which the claimant absented himself, and his long period of employment with this employer, the officer reduced the disqualification period to two weeks.

In reply to a letter received from the local office, the employer wrote that the claimant had absented himself from work for one day during the week of November 5, explaining that he had presented himself at the Immigration Office. When the superintendent inquired, no one was able to confirm that the claimant had been there; his fellow-workers reported however, that he was looking for other employment. The same thing occurred again on November 10 and the company dismissed him.

The claimant then appealed to the Board of Referees. He repeated his statement that he had gone to take a welding test on November 10, and was dismissed the following day. "We could not give the true reason for our absence as that would have meant our immediate dismissal."

On December 20, the apprenticeship centre to which the claimant said he had gone for the test confirmed his statement that he had been there on the two days mentioned, and said that he had passed the test.

The Board of Referees heard the case, and the majority decided to uphold the insurance officer's decision and dismiss the appeal.

A dissident member of the Board said that the claimant appeared to have had a perfect record with his employer, and that if his absence without permission was an infraction of the company's rules, the employer could have punished him by suspending him for a certain time. For this reason, he considered that "the claimant has not been dismissed for cause, within the general meaning of our legislation." He should therefore be reinstated in his entitlement to benefits.

The claimant appealed to the Umpire, stating in part: "On the advice of my fellow workers, I gave other reasons for my absence on those two days, as this type of thing is frowned upon and could have brought about my immediate dismissal . . . Some tattletale workers had told the foreman that I was looking for other employment and had not been absent for this reason . . ."

Considerations and Conclusions

The Umpire said that it had been proved satisfactorily that if the claimant had asked for leave of absence and given the true reason, this permission would have been refused. Without proof to the contrary, however, it could not be presumed that the employer had not had a valid reason for refusing the permission that day. Even though the claimant was worthy of praise in certain respects, the Umpire thought that his failure to ask his employer for permission to absent himself on the day in question constituted an act of misconduct within the meaning of the Act, and that the majority decision of the Board of Referees, who took into account the attenuating circumstances for the purpose of reducing the duration of the disqualification period, was well-founded in fact and in law. He therefore dismissed the appeal.

Indian women organize province-wide group

Ten delegates, representing Saskatchewan's 67 Indian reserves, met in Regina in August to set up an organization whose aims are to encourage the development of women's clubs on reserves, with a view to promoting discussion of living conditions, old age, child neglect, recreation, alcoholism and community leadership. These are the reserves' biggest headaches, according to Mrs. Gladys Johnston, Regina, chairman of the group.

The organization is the first of its kind in the province, and Mrs. Johnston is hopeful that it may reach a national level, although other provinces have not as yet responded to Saskatchewan's invitation to form similar groups. Several government agencies were represented at the two-day meeting, however, and a conference planned for late fall is receiving financial assistance from Ottawa, and planning assistance from the University of Saskatchewan.

When asked if band councils might think these women were moving into strictly council government areas, Mrs. Johnston said it was becoming increasingly obvious that women were better educated than their reserve peers, and had better leadership abilities. At least 10 women are already sitting on councils, and from now on, women will be seeking representation at council meetings.

ICFTU salutes Canadian unions

In a special Labour Day message to Canada and the United States, the International Confederation of Free Trade Unions (ICFTU) praised Canadian trade unions for their efforts in the fields of human rights legislation, the protection of minority groups, and unemployment insurance benefits.

The ICFTU said, "We warmly congratulate the Canadian trade unions on this Centenary celebration year in which they are acting as hosts to the ICFTU-sponsored First World Conference on Education in the Labour Movement, and the 5th International Labour Film Festival. We salute them especially for their sustained struggle to ensure the effective implementation of human rights legislation for all Canadians, particularly the disadvantaged minorities and their efforts to improve unemployment benefits."

Publications Received in the Department of Labour Library

List No. 224

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed by making application to the Librarian, Department of Labour, Ottawa. Students must apply through the library of their institution. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the LABOUR GAZETTE.

Automation—Labour Aspects

1. ECONOMIC COUNCIL OF CANADA. *A Declaration on Manpower Adjustments to Technological and Other Change.* November 1966. Ottawa, Queen's Printer, 1967. Pp. 14.

English and French, the latter inverted and with special title page. Title in French: Une déclaration au sujet de l'adaptation de la main-d'œuvre aux changements technologiques et autres.

2. INTERNATIONAL LABOUR OFFICE. *Technological Change and Manpower in a Centrally Planned Economy; a Study based on Soviet Literature dealing with the Metalworking Industry in the U.S.S.R.* Geneva, 1966. Pp. 92.

An analysis of 163 Soviet publications relating to the effects of automation in the metalworking industry.

BUREAU INTERNATIONAL DU TRAVAIL. *Progrès technique et main-d'œuvre dans une économie planifiée; l'évolution dans les industries mécaniques en U.R.S.S. d'après les publications soviétiques.* Genève, 1966. Pp. 102.

Travail et automation, Cahier no. 3.

Collective Bargaining

3. CANADA. DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH BRANCH. *Twenty-Five Provisions in Major Collective Agreements covering Employees in Canadian Industries (1966).* Ottawa, 1966. Pp. 24.

Contains tables of 25 main types of provisions in 188 collective agreements, covering 1,000 or more workers in Canadian industries. The collective agreements examined covered 505,400 workers.

4. MABRY, BEVARS DUPRE. *Labor Relations and Collective Bargaining.* New York, Ronald Press Co., 1966. Pp. 475.

Discusses the nature of labour relations and the role of the participants, the theory and techniques of collective bargaining, including the content and administration of labour agreements, and the special problems of industrial disputes.

Conferences

5. CONFERENCE ON STATISTICS. 3d, McMASTER UNIVERSITY, HAMILTON, 1962. *Papers,* edited by J. Henripin and A. Asimakopulos. Toronto, Published for the Canadian Political Science Association by the University of Toronto Press, 1964. Pp.vii, 260.

At head of title: Canadian Political Science Association, Conferences on Statistics 1962 & 1963, McMaster University, Hamilton & Laval University, Quebec.

Conferences held June 10-11, 1962 and June 8-9, 1963.

Contents: *Third Conference.* Some quantitative analyses of Canadian election results [by] John Meisel and Gilles Paquet. A Level-of-Living Scale for the Prairies, by Donald E. Willmott. Estimates of Canadian manufacturing output by markets, 1870-1915, by J. H. Dales. Historical statistics on growth and structure in manufacturing in Canada, 1870-1957, by Gordon W. Bertram. Price indexes in a social accounting framework, by B. J. Emery and T. K. Rymes. *Fourth Conference.* An econometric study of the reliability of Canadian preliminary annual national accounts estimates, by Frank T. Denton and John Kuiper. Short-term forecasting of non-residential construction, by S. J. May. Ratio estimates and sample surveys: a theoretical and empirical study, by R. A. Holmes.

6. CONFERENCE ON THE WEST INDIES AND THE ATLANTIC PROVINCES OF CANADA, DALHOUSIE UNIVERSITY, HALIFAX, 1966. *The West Indies and the Atlantic Provinces of Canada; Papers from a Conference organized by Canadian National Commission for UNESCO and Institute of Public Affairs, Dalhousie University, in Association with Atlantic Provinces Economic Council and Department of Trade and Industry, Province of Nova Scotia, May 18-20, 1966.* Halifax, Institute of Public Affairs, Dalhousie University, 1966. Pp. 70.

This conference was intended to promote a general knowledge of the West Indies and to show the relationship between the Atlantic Provinces and the West Indies. The conference adopted a resolution during its concluding session requesting the Association of Atlantic Universities "to study the possibility of establishing a Canada-West Indies Institute in cooperation with other interested parties . . ."

7. GOVERNOR'S CONFERENCE ON MANPOWER TRAINING, BUFFALO, N.Y., 1966. *Proceedings of the Governor's Conference on Manpower Training, June 2-3, 1966,*

Buffalo, N.Y. [Albany? New York State Manpower Advisory Council? 1966] Pp. 188.

Sponsored by New York State Manpower Advisory Council.

The participants at this Conference discussed problems in effective manpower utilization and training. The topics discussed included the Public Employment Service; training the disadvantaged; future manpower needs; occupational training for production and service workers; and, meeting technical and professional manpower demands.

8. MEETING OF EXPERTS ON SOCIAL AND CULTURAL FACTORS IN MANAGEMENT DEVELOPMENT, GENEVA, 1965. *Social and Cultural Factors in Management Development; [Conclusions, Preliminary Report, and Papers]* Geneva, Management Development Branch, Human Resources Department, International Labour Office, 1966. Pp. 178.

Employment Management

9. SLAVICK, FRED. *Compulsory and Flexible Retirement in the American Economy.* Ithaca, New York State School of Industrial and Labor Relations, Cornell University [1966] Pp.vii, 172.

"This report contains an analysis of the plant and establishment characteristics which are associated with the use of compulsory and flexible retirement policies, and includes rough estimates of the prevalence of the various types of policies in the United States in 1962."

10. STRAUSS, GEORGE. *Personnel: the Human Problems of Management* [by] George Strauss [and] Leonard R. Sayles. Englewood Cliffs, N.J., Prentice-Hall, 1960. Pp. 750.

Partial contents: Technology and job satisfaction. Work groups and informal organization. General supervision. The supervisor's use of authority. Communications. Interviewing: the fine art of listening. Conference leadership. Introducing change. Discipline. Minimizing the human problems of large organizations. Personnel as a staff function. Recruitment and selection policies. Promotion, transfer, seniority policy for non-managerial employees. Management development. Performance evaluation. Management training. Wage and salary administration. Work measurement techniques. Service and benefit programs. Management's responsibilities in dealing with people.

Industrial Relations

11. BAKKE, EDWARD WIGHT. *Mutual Survival; the Goal of Unions and Management.* 2d ed. Hamden, Conn., Archon Books, 1966. Pp.ix, 116.

This book contains two assessments of union-management relations in the United States, one made in 1946 and the second made in 1966. The author says, "Both management and unions have survived that 20 years of trial and error by building a system of collective bargaining which, while recognizing the existence of conflicts of interest between them, provides a problem solving mechanism which enables the parties to live together tolerably well." The author calls this relationship, "antagonistic co-operation."

12. DALHOUSIE UNIVERSITY, HALIFAX. INSTITUTE OF PUBLIC AFFAIRS. BUREAU OF INDUSTRIAL RELATIONS. *Labour-Management Relations; a Summary of Proceedings of a Fourth One-Day Conference of Owners and Managers of Manufacturing and Processing Plants, held at Dalhousie University on November 27, 1958, in Co-operation with the Nova Scotia Department of Trade and Industry, Atlantic Division [of the] Canadian Manufacturers' Association, Maritime Provinces Board of Trade, Halifax Board of Trade, and the Atlantic Provinces Economic Council.* Halifax, 1959. Pp.iv, 40.

Contents: Labour-management relations: review and prospects. Four statements of experience and policy [regarding industrial relations]. So they're going to organize your plant. Negotiating the agreement. Current trends and problems.

13. DeSCHWEINITZ, DOROTHEA. *Labor-Management Consultation in the Factory; the Experience of Sweden, England, and the Federal Republic of Germany.* Honolulu, University of Hawaii, Industrial Relations Center, 1966. Pp. 128.

Describes joint committees and works councils, what they do and how they do it.

14. McCARTHY, WILLIAM EDWARD JOHN. *The Role of Shop Stewards in British Industrial Relations; a Survey of Existing Information and Research.* London, HMSO, 1966. Pp. 81. Research paper prepared for Great Britain Royal Commission on Trade Unions and Employer's Associations.

Provides information about shop stewards, with special reference to the problems before the Commission. Contents: Constitutional and procedural provisions. Shop steward functions in the workplace. Methods and effects of shop steward bargaining. Shop stewards and their unions. Factors affecting the behavior and influence of shop stewards. Practical applications.

15. NATIONAL ASSOCIATION OF MANUFACTURERS OF THE UNITED STATES OF AMERICA. INDUSTRIAL RELATIONS DIVISION. *Compulsory Arbitration of Industrial Disputes in Foreign Countries.* New York [n.d., 1966?] Pp. 14.

Labour Laws And Legislation

16. GRUNFELD, CYRIL. *Modern Trade Union Law.* London, Sweet & Maxwell, 1966. Pp. 517.

An examination of British trade union law as it was at the end of February 1966. Discusses the law as it applies to the legal structure of a trade union, trade union government and administration, inter-union disputes, agreements, and union mergers, industrial disputes, and trade union political activities.

17. U.S. BUREAU OF LABOR STANDARDS. *State Workmen's Compensation Laws: a Comparison of Major Provisions with Recommended Standards.* Rev. ed. Washington, GPO, 1966. Pp. 37.

18. U.S. BUREAU OF LABOR STATISTICS. *Labor Law and Practice in Lebanon.* Washington, GPO, 1966. Pp. 98.

Labour Organization

19. INTERNATIONAL CONFEDERATION OF FREE TRADE UNIONS. *Free Trade Unions for Economic and Social Progress; the Economic and Social Policies of the ICFTU.* Brussels, 1966. Pp. 78.

"Certain chapters of this booklet have been wholly or partly taken from [the ICFTU] pamphlet, 'The Fight for Economic and Social Progress', published in 1963."

The subjects considered are: "prices, wages and productivity; full employment; world economic problems; trade and development; the international monetary system; and housing."

20. NOVA SCOTIA. DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH DIVISION. *Handbook on Labour Unions in Nova Scotia, 1965-1966.* Halifax, 1966. Pp. 45.

"This report is prepared from the Canada Department of Labour's 1965 survey of *Labour Organizations in Canada* and from the 1965-1966 *Financial Statements* filed with the Nova Scotia Department of Labour."

Labour Supply

21. GORDON, ROBERT AARON, ed. *Long-term Man-*

power Projections; Proceedings of a Conference conducted by the Research Program on Unemployment and the American Economy, University of California, Berkeley [held at] Washington, D.C., June 25-26, 1964. R. A. Gordon, editor. Berkeley, Institute of Industrial Relations, University of California, 1965. Pp. 64.

"This conference was financed by a grant of funds from the Office of Manpower, Automation, and Training, U.S. Department of Labour."

The conference was held to inform participants what methods were being used by governmental and non-governmental groups to make manpower projections, and to get suggestions for improving the methods being used.

22. GREAT BRITAIN. COMMITTEE ON MANPOWER RESOURCES FOR SCIENCE AND TECHNOLOGY. *Report on the 1965 Triennial Manpower Survey of Engineers, Technologists, Scientists and Technical supporting Staff.* London, HMSO, 1966. Pp. 64.

23. HUTTON, MARY. *Gross Movements of the Labour Force*, by Mary Hutton and A. N. Polianski. Ottawa, Dept. of Manpower and Immigration, Research Branch, 1966. Pp. 33.

24. KUHN, JAMES WESLEY. *Scientific and Managerial Manpower in Nuclear Industry.* Foreword by Eli Ginzberg. New York, Columbia University Press, 1966. Pp. 209.

"The research reported herein was financed through the programs of the Office of Manpower Policy, Evaluation, and Research, United States Department of Labor."

A study of manpower policies in the nuclear power industry, including manpower policies of the U.S. Atomic Energy Commission.

25. SCHAFFER, WILLIAM ARTHUR. *Structural Changes and Plant Employment Proportions, 1954-57.* Ann Arbor, Mich., University Microfilms, 1966. Pp. 129.

Thesis (Ph.D.)—Duke University, 1966.

"This 'O-P Book' is an authorized reprint of the original edition, produced by microfilm-xerography . . . "

26. U.S. CONGRESS. SENATE. COMMITTEE ON LABOR AND PUBLIC WELFARE. SUBCOMMITTEE ON EMPLOYMENT AND MANPOWER. *The Manpower Revolution; its Policy Consequences; Excerpts from Senate Hearings before the Clark Subcommittee.* Edited by Garth L. Mangum. With a foreword by Senator Joseph S. Clark. [Anchor Books ed.] Garden City, N.Y., Doubleday, 1966. Pp. 580.

Paperback book.

Consists of excerpts from *Nation's Manpower Revolution*, Hearings of the U.S. Senate Committee on Labor and Public Welfare held during 1963 and 1964.

27. U.S. DEPARTMENT OF LABOR. OFFICE OF MANPOWER POLICY, EVALUATION AND RESEARCH. *Technology and Manpower in Design and Drafting, 1965-75.* Washington, GPO, 1966. Pp. 39.

28. U.S. DEPARTMENT OF LABOR. OFFICE OF MANPOWER POLICY, EVALUATION AND RESEARCH. *Technology and Manpower in the Telephone Industry, 1965-75.* Washington, GPO, 1966. Pp. 53.

29. U.S. OFFICE OF MANPOWER, AUTOMATION AND TRAINING. *Unused Manpower: the Nation's Loss.* Washington, GPO, 1966. Pp. 25.

Labouring Classes

30. AYUSAWA, IWAO FREDERICK. *A History of Labor in Modern Japan.* Honolulu, East-West Center Press, 1966. Pp. 406.

The author, Professor of Labor Problems and International Relations at the International Christian University in Tokyo, describes the history of labour in Japan up to 1962.

31. DEITER, JOHN CHARLES. *Multi-jobholding and the Short Workweek Issue.* Ann Arbor, Mich., University Microfilms, c1966. Pp. 253.

Thesis (Ph.D.)—Western Reserve University, 1965.

"This 'O-P Book' is an authorized reprint of the original edition, produced by microfilm-xerography . . . "

This dissertation is concerned with the relationships between multi-jobholding and the length of the primary job work week, and nine other factors. The investigation was restricted to the Akron, Ohio rubber and machinery industries, and the rubber industry located outside Akron.

32. INSTITUTE OF LABOR AND INDUSTRIAL RELATIONS (UNIVERSITY OF MICHIGAN-WAYNE STATE UNIVERSITY) *A Study of Patterns of Discrimination in Employment for the Equal Employment Opportunity Commission.* Detroit, 1966. Pp. 300.

This study, conducted with the co-operation of eleven state and municipal civil rights agencies, was made possible by a grant from the Equal Employment Opportunity Commission. "The major objectives of the study . . . were (a) the development and refinement of a method of approach for identifying patterns of discrimination in employment; and (b) the development of techniques for utilizing the information obtained in the expansion and improvement of employment opportunities for all minority group individuals, particularly Negroes and other non-whites."

33. INTERNATIONAL INSTITUTE FOR LABOR STUDIES. *Bulletin No. 1, October 1966.* Geneva, 1966. Pp. 93.

Partial contents: The Institute, its position and purpose [by] David A. Morse. Four keys to the purpose of Institute educational action [by] Robert W. Cox. Sweden, a trade union approach to an active labour market [by] Bertil Bolin. France, the role of employees and their organisations in solving manpower and employment problems. Recent institutional changes in planning and management in the socialist countries [by] R. M. Stamenkovic. Case study—Mackenzie in metamorphosis: the emerging need for institutions of social authority in Guyana's second community.

34. INTERNATIONAL LABOUR OFFICE. *Plantation Workers; Conditions of Work* and Standards of Living. Geneva, 1966. Pp. [284]

BUREAU INTERNATIONAL DU TRAVAIL. *Les travailleurs des plantations, leurs conditions d'emploi et leurs niveaux de vie.* Genève, 1966. Pp. [320]

35. PREUSS, WALTER. *The Labour Movement in Israel, Past and Present.* [3d ed.] Jerusalem, R. Mass. [1965] Pp. 239.

36. SMITH, A. D. *Redundancy Practices in Four Industries; a Comparison of Structural Redundancy Practices in the Railway, Steel, Cotton Textiles and Telecommunications Industries of the United States and the United Kingdom.* Paris, OECD, 1966. Pp. 129.

"The redundancy practices considered in this report are those associated with natural attrition, internal transfers to new jobs, retraining, and aids, including financial assistance, to dismissed workers." Each of the countries studied is dealt with separately and "each of the four industries is considered in its specific national, institutional and collective bargaining setting."

Management

37. FLOYD, ELIZABETH RICHARDSON. *Preparing the Annual Report.* New York, American Management Association, c1960. Pp. 112.

Contents: Part 1. Steps in producing the annual report.

Overall responsibility. Authorization of expenditure. The planning process. Working up the manuscript. Distribution of the annual report. The respondents' annual reports. Part 2. Content of annual reports. Organization of information. The sections. Part 3. Exhibits.

38. U.S. SMALL BUSINESS ADMINISTRATION. *Management Aids for Small Manufacturers. Annual no. 12.* Edited by Jean B. McArthur. Washington, 1966. Pp. 85.

"The articles [in this booklet] first appeared as individual issues in the series, *Management Aids for Small Manufacturers* during the year ended June 30, 1964."

Partial contents: Bank loan limitations: living within them. Effective communication in small plants. Getting facts for better sales decisions. Keeping machines and operators productive. Financial facts that lenders require. Will profit sharing help your firm? Publicize your company by sharing information.

39. U.S. SMALL BUSINESS ADMINISTRATION. *Small Marketers Aids. Annual No. 8.* Edited by Jean B. MacArthur. Washington, GPO, 1966. Pp. 87.

This booklet contains 12 aids originally published during the year ended June 30, 1963.

Partial contents: Offsetting the higher cost of doing business. Color can stimulate sales. Customers: a neglected sales force. Pricing your services for profit. Electronic recordkeeping for small marketers. Are you selling enough service?

Occupations

40. CANADA. DEPARTMENT OF LABOUR. *An Analysis of the Industrial Instrumentation Trade.* Prepared by a National Committee appointed by the Department of Labour. Ottawa, Queen's Printer, 1965. Pp. 544.

Productivity Of Labour

41. GELLERMAN, SAUL WILLIAM. *Motivation and Productivity.* New York, American Management Association, 1963. Pp. 304.

"The first part of the book deals with motivation in terms of the work environment: how various types of supervision, management philosophies, and organization structures affect individual productivity. The second part considers motivation from the standpoint of the individual, what his needs and purposes are and how he acquires and expresses them. In the third part, the author shows how the lessons learned from studies of both the individual and his work environment can help managers solve problems of leadership, recruitment, morale, organization change, and labor relations."

42. U.S. BUREAU OF LABOR STATISTICS. *Labor Productivity of the Steel Industry in the United States, July 1966.* [Washington, 1966?] Pp. 36.

"Prepared for the Economic Commission for Europe in connection with a decision made in 1965 by the 33rd session of the Commission's Steel Committee."

Social Conditions

43. INTERNATIONAL LABOUR OFFICE. *The Role of Social Security and Improved Living and Working Standards in Social and Economic Development.* Third item on the agenda. Geneva, 1966. 2 vols.

At head of title: Report 3. Part 1-2. Eighth Conference of American States Members of the International Labour Organization, Ottawa, September 1966.

Contents: Pt. 1. Social security. Pt. 2. Remuneration and conditions of work.

44. MAMORIA, C. B. *Labour Problems Welfare in India* [by] C. B. Mamoria & S. L. Doshi. [2d rev. and enl. ed.] Allahabad, Kitab Mahal, 1966. Pp. 492.

Unemployment

45. ALBRECHT, WILLIAM PRICE. *The Relationship between Wage Changes and Unemployment in Metropolitan and Industrial Labor Markets.* Ann Arbor, Mich., University Microfilms, c1966. Pp. 122.

Thesis (Ph.D.)—Yale University, 1965.

"This 'O-P Book' is an authorized reprint of the original edition, produced by microfilm-xerography. . . ."

"In this dissertation the relation between the rate of change of average hourly earnings and unemployment in a number of different labor markets in the United States is examined."

46. GONICK, CYRIL WOLFE. *Aspects of Unemployment in Canada.* Ann Arbor, Mich., University Microfilms, 1966. Pp. 218.

Thesis (Ph.D.)—University of California, Berkeley, 1965.

"This 'O-P Book' is an authorized reprint of the original edition, produced by microfilm-xerography . . . ."

This dissertation examines the causes and character of Canada's depressed areas, with particular attention to Windsor, Ontario. In conclusion, the author proposes a policy for Canada's depressed areas.

Wages and Hours

47. JOINT WORKING GROUP ON UNITED STATES-JAPAN WAGE STUDY. *Wages in Japan and the United States; Report on the Joint United States-Japan Wage Study.* Washington, GPO, 1966. Pp. 155.

Prepared jointly by the Ministry of Labor and the Ministry of International Trade and Industry of Japan, and by the U.S. Department of Labor with staff assistance from the U.S. Department of Commerce.

48. NOVA SCOTIA. DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH DIVISION. *Wage Rates and Hours of Labour in Nova Scotia.* Halifax, 1966. Pp. 226.

Contains statistics for industry, county, urban area, and urban and surrounding area as of October 1965.

49. U.S. BUREAU OF LABOR STATISTICS. *National Survey of Professional, Administrative, Technical, and Clerical Pay, February-March 1966; Accountants and Auditors, Attorneys, Personnel Management, Buyers, Engineers and Chemists, Engineering Technicians, Draftsmen, Office Clerical.* Washington, GPO, 1966. Pp. 75.

Women—Education

50. U.S. WOMEN'S BUREAU. *Continuing Education Programs for Women.* Washington, GPO, 1967. Pp. 31.

"Schools with special programs or services for adult women, by State": p. 12-28.

Concerns continuing education programs for women over 30 who wish to resume their formal education.

Miscellaneous

51. INTERNATIONAL LABOR OFFICE. *Statistics of Labour Cost. Report prepared for the Eleventh International Conference of Labour Statisticians (Geneva, October 1966).* Second item on the agenda. Geneva, 1966. Pp. 53.

At head of title: Report 2. International Labour Organization. 11th International Conference of Labour Statisticians.

52. ORCUTT, GUY HENDERSON. *Microanalysis of Socioeconomic Systems; a Simulation Study* [by] Guy H. Orcutt [and others] New York, Harper & Row, 1961. Pp.xviii, 425.

"First of a series relating to the work of the Social Systems Research Institute at the University of Wisconsin."

53. ORGANIZATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT. *L'évolution démographique*

de 1965 à 1980 en Europe occidentale et en Amérique du Nord. Demographic trends, 1965-1980, in Western Europe and North America. Paris, 1966. Pp. 115.

English and French text in parallel columns.

This is the third study of its kind; the first two studies covered the periods 1951-1971 and 1956-1976.

54. SMITH, DAVID CHADWICK. *Incomes Policies; Some Foreign Experiences and Their Relevance for Canada.* Ottawa, Queen's Printer, 1966. Pp. 207.

An examination of incomes policies in United States, Great Britain, Netherlands, Sweden and France in order to determine whether or not one would be useful for Canada.

55. UNITED NATIONS. DEPARTMENT OF ECONOMIC AND SOCIAL AFFAIRS. *A Manual for Programme and Performance Budgeting.* New York, 1965 [i.e. 1966] Pp. 103.

56. U.S. CONGRESS. JOINT ECONOMIC COMMITTEE. SUBCOMMITTEE ON FEDERAL PROCUREMENT AND REGULATION. *Background Material on Economic Impact of Federal Procurement, 1966.* Washington, GPO, 1966. Washington, GPO, 1966. Pp. 134.

At head of title: 89th Congress, 2nd session. Joint committee print.

"Materials prepared for the Subcommittee . . . ." by Ray Ward.

This pamphlet provides background information to assist the subcommittee which looks into the procurement, transportation, warehousing and disposal of Federal property.

57. VOICE OF AMERICA (RADIO PROGRAM) *Modernization: the Dynamics of Growth.* Edited by Myron Weiner. Washington, 1966. Pp. 373.

"This series of lectures was broadcast originally by the Voice of America."

"These essays represent the efforts of twenty-five American scholars to present their reflections in the most challenging problem of the twentieth century—how modernization occurs and how it can be accelerated." The essays are grouped under these headings: Perspectives and conditions, the modernization of society and culture, the modernization of politics and government, and, the modernization of the economy.

Statistics Section

Current Labour Statistics

Principal Items	Date	Amount	Percentage Change From Previous Month	Percentage Change From Previous Year
		(in thousands)		
TOTAL CIVILIAN LABOUR FORCE*	August 17	8,101	− 0.3	+ 3.8
Employed	August 17	7,854	+ 0.2	+ 3.7

*Revised. †Preliminary.

‡Includes post office wages and salaries. **Figures in this column are for total labour income, Canada, but are not totals of the figures in the remaining columns of this table, which do not show labour income in Agriculture, Fishing and Trapping.

NOTE: Monthly figures may not add to annual totals because of rounding.

SOURCE: *Estimates of Labour Income*, DBS (Cat. No. 72-005).

Tables C-1, C-2, and C-4 are based on reports from employers having 20 or more employees in any month of the year; at May 1967, employers in the principal non-agricultural industries reported a total employment of 3,588,240. Table C-3 gives estimates of total employment, by industry divisions, for the provinces and Canada, derived from the survey of establishments employing 20 or more persons, and forms a sample survey of establishments employing less than 20 persons. Tables C-5 to C-7 are based on reports from a somewhat smaller number of firms than Tables C-1, C-2 and C-4. They relate only to wage earners for whom statistics of hours of work are also available, whereas Tables C-1, C-2 and C-4 relate to salaried employees as well as to all wage earners in the reporting firms.

*Includes shift differential, premium pay for overtime, pay for paid holidays, pay for paid sick leave if paid through payroll but not if paid under insurance plan, incentive bonus but not annual bonus.

NOTE: Information on hours and earnings by cities obtainable from *Man-Hours and Hourly Earnings*, DBS.

Latest figures subject to revision.

SOURCE: *Man-Hours and Hourly Earnings*, DBS (Cat. No. 72-003).

D—Manpower Division

The reorganization of manpower activities under the Department of Manpower and Immigration has led to a number of administrative changes which have, in turn, altered the significance of D Table statistics about employment placements and unfilled job vacancies.

The result is that valid comparisons with previous periods are not possible on the basis of these statistics. Accordingly, their publication is being suspended.

New statistical series are being developed to give more significant information about persons using the services of Canada Manpower Centres. The results will be published as they become available.

E—Unemployment Insurance

Unemployment insurance statistics emanate from the operations of the Unemployment Insurance Act, and relate to persons in contact with the Unemployment Insurance Commission, either as contributors or claimants. The data are compiled in the Unemployment Insurance, Pensions and Manpower Section, DBS, from information supplied by the UIC. The source for Tables E-1 to E-4 is *The Statistical Report on the Operation of the Unemployment Insurance Act* (Cat. No. 73-001). For further information regarding the nature of the data see Technical Note, page 675, October issue.

TABLE E-1—Estimates of the Insured Population under the Unemployment Insurance Act

End of	*Total**	*Employed*	*Claimants*
1967—May	4,670,000	4,388,900	281,100
April	4,746,000	4,253,700	492,300
March	4,750,000	4,206,200	543,800
February	4,681,000	4,129,200	551,800
January	4,684,000	4,152,100	531,900
1966—December	4,633,000	4,209,600	423,400
November	4,591,000	4,324,700	266,300
October	4,521,000	4,336,700	184,300
September	4,528,000	4,363,100	164,900
August	4,577,000	4,389,800	187,200
July	4,512,000	4,316,000	196,000
June	4,500,000	4,318,700	181,300
May	4,404,000	4,186,400	217,600

*Commencing March 31, 1967, agricultural workers are included, as coverage was extended to certain workers in this industry on April 1, 1967.

TABLE E-4—Benefit Payments, by Province, June 1967

Province	*Weeks Paid**	*Amount of Benefit Paid*
Newfoundland	29,043	761,231
Prince Edward Island	3,117	68,405
Nova Scotia	29,014	667,945

*St. John's index on the base June 1951 = 100.

NOTE: Indexes above measure percentage changes in prices over time in each city and should not be used to compare actual levels of prices as between cities.

G—Strikes and Lockouts

Statistical information on work stoppages in Canada is compiled by the Economics and Research Branch of the Canada Department of Labour on the basis of reports from the Manpower Division, Department of Manpower and Immigration. The first three tables in this section cover strikes and lockouts that amount to ten or more man-days. The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the union directly involved in the disputes leading to the work stoppages. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included. For further notes on the series, see page 676, October issue.

TABLE G-1—Strikes and Lockouts, 1962-67

Month or Year	Strikes and Lockouts Beginning During Month or Year	Strikes and Lockouts in Existence During Month or Year			
		Strikes and Lockouts	Workers Involved	Duration in Man-Days	
				Man-Days	Per Cent of Estimated Working Time
1962	290	311	74,332	1,417,900	0.11
1963	318	332	83,428	917,410	0.07

Canada Department of Labour/December 1967

Canada Department of Labour Publications

Annual Report of the Department of Labour (Covers fiscal year ending March 31). (English or French). Cat. No. L1-1966.

Report of the Industrial Inquiry Commission on Canadian National Railways "Run-Throughs." Report of Hon. Mr. Justice Samuel Freedman, Commissioner. (English or French). Price $1.50, Cat. No. L35-965/1.

Supplements to Labour Gazette

Collective Bargaining Review. Prepared by the Collective Bargaining Section, Economics and Research Branch, Canada Department of Labour. Free to LABOUR GAZETTE subscribers but must be requested from Publications Division, Canada Department of Labour.

Reports of Boards of Conciliation established under the Industrial Relations and Disputes Investigation Act together with reasons for judgment of the Canada Labour Relations Board. Free to LABOUR GAZETTE subscribers but must be requested from Publications Division, Canada Department of Labour.

Economics and Research Branch

Labour Organizations in Canada (annual). Contains a brief commentary, the latest statistical data on union membership, and a directory of labour organizations with names of their principal officers, publications, and the geographic distribution of their local branches in Canada. (English or French). Price 50 cents, Cat. No. L2-2/1966.

Industrial and Geographical Distribution of Union Membership in Canada, 1966. (English or French). Price 15 cents, Cat. No. L31-766.

Strikes and Lockouts in Canada (annual). Furnishes a record of strikes and lockouts occurring in Canada during a year. Tables and related texts showing strikes and lockouts by years, by areas, by industries, including time lost, number of workers involved, duration, etc. Price 35 cents, Cat. No. L2-1/1965.

Wage Rates, Salaries and Hours of Labour, 1965. An annual report published in loose-leaf form and followed later by a paper-bound volume. Contains the results of an annual survey at October 1 of occupational wage rates and standard hours of work in most industries. Averages and predominant ranges of wage rates for selected occupations are tabulated separately on a regional basis for some 90 industries including logging, mining, manufacturing, construction, transportation, trade and service groups. Weekly salaries for office occupations and hourly wage rates for maintenance of service occupations and for labourer for several broad industry groups are shown, on a community basis, in 52 communities. Trends in wage rates are included in tables of index numbers by industry. First year service including attractive binder with index tabs and paper-bound volume, $9.50; service without indexed binder, $7.00; individual tables, 15 cents. Paper-bound volume, $2.50. (Bilingual). Cat. No. L2-548.

Working Conditions in Canadian Industry, 1966. (Bilingual). Price $1.00, Cat. No. L2-15/1966.

Répertoire de termes et expressions utilisés en relations industrielles et dans des domaines connexes. A catalogue, in French, of terms currently in use in the labour relations field. Prepared by the Economics and Research Branch. Price $4.50, Cat. No. L31-967F.

Labour-Management Research Series

Shiftwork and Shift Differentials in Canadian Manufacturing Industries. Price 35 cents, Cat. No. L2-22/2.

Vacations with Pay, 1951-61: An Examination of Vacation Practices in Canadian Industries. (English or French). Price 35 cents, Cat. No. L2-22/4.

Collective Agreement Provisions in Major Manufacturing Establishments, 1964. Price 35 cents, Cat. No. L2-22/5.

50 Years Ago

From the Labour Gazette, December 1917

Great activity in Canadian shipbuilding and repairing yards. Measures taken in three countries to control prices and supply of food. First Industrial Safety Congress of New York State held in Syracuse.

"Shipbuilding and repairing was active at all points where the work is carried on," the LABOUR GAZETTE for December 1917 reported in reviewing the conditions of industries and trades during the previous month.

"Halifax reported much overtime in boat- and shipbuilding plants, and Saint John reported shipbuilding yards active. At Quebec, shipbuilding yards and repairing trades were very busy. At Three Rivers, shipyards were in need of carpenters, and the Canadian Steamship Company was erecting two large shops. Sorel reported shipyards very busy during the first three weeks of the month, but the transfer of two large companies to Three Rivers left a number of men out of work, and some men also were laid off in Government yards.

"At Toronto, shipbuilding yards were employing an increased number of men. Kingston reported shipbuilding yards active on repairs, and plants at Port Arthur were working overtime. Vancouver reported steel and wooden shipbuilding very active. Shipyards at New Westminster were very busy, and one company absorbed 150 men during the month; most of the smaller yards were engaged on repairs. Victoria also reported work at the iron and wooden shipbuilding yards brisk.

"Victoria reported the lumbering industry stimulated by the demand from wooden shipbuilding yards."

In September and October, food controllers in the United Kingdom and in Canada began the publication of fortnightly bulletins giving information about the measures taken by their administrations, conditions of supply, and other matters connected with their work. In the United States, similar information was supplied in a daily official bulletin.

"In the United Kingdom, the food controller stated it was his policy to set prices for those articles of prime necessity over which effective control could be obtained at all stages from producer to the retail dealer, determining profits, for each middleman and for the producer on the basis of reasonable pre-war profits, prices being changed from time to time according to cost of production, except in the case of bread and flour, which were set below cost, the Government bearing the loss.

"As a large part of the food in the British Isles is imported, and the Government controls the shipping, the commodities now sold only under control and at fixed prices include the most important foods as well as many of secondary importance . . . ."

"In the United States, the food administrator announced his policy to be the elimination of waste in the trade in food and the stabilizing of prices, to save food by every possible means so that the Allies might be supplied, especially with the concentrated foods: wheat, grain, beef, pork, dairy products and sugar; while other foods were used as much as possible at home, and to see that the surplus of foods should be exported to the Allies without inflation of prices. The control of fuel was placed under the food administration by Congress, and a fuel administrator was appointed. Prices were set for coal and coke, and distribution in the United States and export to Canada and other countries have been regulated . . . .

"The distillation of foodstuffs into spirits was prohibited after September 8, and regulations were adopted which, through a system of license, aim to prevent dealers from speculating in foods or asking excessive prices.

"In Canada, the food controller secured the enactment of regulations restricting the use of beef and bacon, including all cured pork, prohibiting the sales of cereals in small packages except under license, and permitting the manufacture, importation and sale of oleomargarine. Arrangements were made, in co-operation with the Board of Grain Supervisors and the millers, setting the price of flour at 20 cents per bbl. above the cost of the wheat required in milling it, the price of wheat having been fixed by the Board at $2.21 for No. 1 Manitoba Northern at Winnipeg, and $2.22 for No. 2 Ontario Winter at Toronto.

"Various committees were appointed to increase the supply and facilitate the transportation of fish, to supervise the trade in vegetables and fruit, to investigate the supply and prices of milk and its products, and to develop the food resources. Arrangements have been made to control packinghouses and cold storage plants in Canada . . . ."

This journal gave a brief report of the proceedings of the first Industrial Safety Congress of New York State, held in Syracuse December 11 to 14, 1916. At the first session, the president of the National Association of Manufacturers "read a paper on the duty of employers in the matter of the prevention of accidents and the conservation of health of employees. He held that the duty of employers to exercise supreme care to prevent occupational diseases was no longer a debatable question. The employer was responsible for his own particular plant, and it was also his duty to co-operate with local, state and national organizations interested in the safety movement."

The president of the Associated Manufacturers and Merchants of New York State "spoke on the attitude of New York organized industry toward the safety movement. He said that nearly all present-day managers had 'done their bit' in the works, and had not left behind all feeling for their fellows. Employers recognized that a feeling of safety and security on the part of employees brought economic returns which amply repaid them for expenditure on improvement of working conditions."

The president of the New York State Federation of Labor "discussed the attitude of New York organized labour toward the safety movement. He said that the interest of organized labour in employers' liability for negligence and in workmen's compensation legislation was rooted, not in the benefits they provided for the injured, but in the conviction that they would impel effort to prevent industrial accidents. He urged that employees should be consulted in the preparation of shop rules to prevent hazards, and that these rules should be vigorously enforced."

At one of the sessions, a talk on the subject of women in industry was given by a female official of the Westinghouse Lamp Company, who emphasized the importance of instructing and developing new untrained women workers. She also said that "women should receive equal pay for the same work as that done by men."

Canada's war on poverty is subject of report

"Fighting Poverty in 1966" is the subject of the first annual report compiled by the Special Planning Secretariat, a committee that began its operations in late April 1965 (L. G. 1965, p. 794; 1965, p. 897), shortly after it was announced in the Speech from the Throne.

The Secretariat's initial efforts were concentrated on working with Government departments to plan new programs for area development, labour mobility and manpower training. It brought together those federal agencies that are interested in community development, the objective being to meet more effectively the growing needs and demands for this type of service.

The report states that Canada's war on poverty does not follow the American pattern, and cites three main differences:

- a large proportion of anti-poverty programs in Canada is not administered by the federal Government;
- the Canadian "war" does not have a central organization, but works through various organizations and individuals across the country;
- as part of the public administration, it does not operate at the political level, but works with existing structures, government or private.

The report outlines the work of the Secretariat and gives an abbreviated account of anti-poverty programs being administered by other agencies such as the Department of Agriculture, ARDA, Atlantic Development Board, Area Development Agency, Central Mortgage and Housing Corporation, Company of Young Canadians, Department of Finance, Department of Fisheries, Department of Indian Affairs and Northern Development, Department of Manpower and Immigration, and the Department of National Health and Welfare.

The report cites that, under the Manpower Mobility program, nearly 2,000 people were given financial assistance to move to new jobs. "A wide variety of vocational training programs was offered to train the disabled and unemployed, to upgrade skills, to provide vocational teachers, and to train secondary school and post-secondary school students. Three of these programs alone provided training or retraining for nearly 110,000 Canadians at a cost of nearly $40,000,000."

It stated also that new and substantially higher training allowances were introduced, permitting payment of up to $90 a week. And vocational rehabilitation programs provided new opportunities for 2,451 physically and mentally handicapped. "At a cost to the public of $1.6 million for training and support, these people now have earnings of $5.6 million."

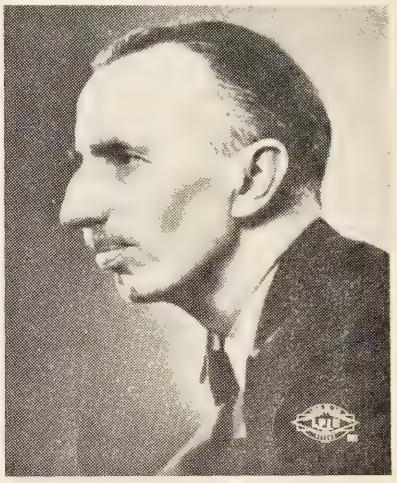
Summing up the Secretariat's philosophy and strategy, the report states: "The role of the Special Planning Secretariat is constantly to help the improvement and extension of programs by existing agencies, rather than to fight any of its own wars. Its success is measured not in its own programs, for in the administrative sense it has none, but in the increasing effectiveness of anti-poverty programs in every part of the country."

New industrial relations approach announced

A new program of "positive industrial relations," is being initiated by the Canada Department of Labour. Hon. John R. Nicholson, Minister of Labour, announced on September 26 plans for a series of meetings with leaders of management and unions in the industries under federal jurisdiction, to discuss "informally and in confidence those particularly difficult aspects of their industrial relations, and matters of mutual interest."

Mr. Nicholson said that the traditional "referee's" role of the Department was no longer adequate to deal responsibly with the new industrial relations complexities of today. The meetings would be held "not in times of crisis, but in periods of calm," the Minister said.

"Simply stated, the Department . . . is today setting in motion what is needed—a program of positive industrial relations. In this rapidly changing industrial world, we can no longer afford simply to respond after the fact."



Name omitted

An article on page 483 of this journal's August issue, dealing with the Canadian Industrial Relations and Research Institute's annual meeting, failed to list the name of John L. Fryer as being elected to the executive committee of CIRRI for the coming year. Mr. Fryer is Director of Research for the Canadian Labour Congress.

Former director-general of the ILO dies

Edward J. Phelan, a former director-general of the International Labour Office, died in Switzerland on September 15. Mr. Phelan was one of the original senior officers of the ILO.

From the time the United Nations was established in 1946, Mr. Phelan worked to ensure that the ILO would find a place within its framework. He obtained the consent of the Governing Body and

Edward J. Phelan

member States for changes in the Constitution necessitated by the creation of the United Nations and the demise of the League of Nations, thus predetermining the continued independence of the ILO. He negotiated with the UN a basic agreement that ensured the organization its place in the postwar world.

As a tribute to his outstanding work, the 99th Session of the Governing Body, which met in Montreal in 1946, conferred on Mr. Phelan the title, Director-General of the ILO, retroactive to February 15, 1941. He retired in 1948.

One of his books, "Yes and Albert Thomas," an account of the origins of the ILO and the League of Nations in Geneva, was published in 1936 and has since become a classic work on international organizations.

George V. Haythorne, Deputy Minister of Labour, called Mr. Phelan an "inspiring and far-seeing planner." His contribution toward strengthening the movement for world co-operation, Mr. Haythorne said, was immeasurable.

Law professor appointed to adjudicate labour disputes

A professor of law at Laval University, Fernand Morin, has been appointed by the federal Cabinet to adjudicate labour disputes in the government service.

Prof. Morin has written articles on labour relations and acted as a legal adviser in the labour field. As adjudicator, he will hear grievances arising from the grievance procedure set up under the Public Service Staff Relations Act, the legislation that provides public servants with collective bargaining rights. His appointment, on a part-time basis, is for two years.

Book deals with liability of strikers

The Canadian tort law of strikes and picketing should be codified, suggests Prof. I. M. Christie in his recent book, *The Liability of Strikers in the Law of Tort.*

The author deals with various aspects of illegal actions of trade unionists in Britain and in Canada during industrial conflicts, and examines the grounds upon which trade unionists in the two countries may be sued in connection with such illegal actions.

In this book, the author explores the statutory restrictions on picketing, the development of the law of "watching and besetting," civil liability for conspiracy, and breach of contract in trade disputes.

The author observes that the Canadian law of industrial relations, in contrast to that of Britain, is committed to a policy of regulatory control and intervention. The grounds upon which strikers are held liable in the law of tort, however, are not in harmony with the statutory framework of industrial relations in Canada. The author doubts whether this imbalance could be remedied by judicial creativity.

In his conclusion, the author suggests that the codification of tort law for regulatory control and intervention should not be administered in the ordinary courts. Picketing should be made unlawful only when it is in support of an unlawful strike. All picketing or other economic pressure in support of lawful strikes should be allowed by the law, except where it is contrary to the general criminal law, constitutes a trespass, involves assault or battery, or, in some cases, where it is secondary in its incidence. Activity, such as massed pickets, which interferes with an employer's property rights should be enjoined when it exceeds limits set by legislation. The jurisdiction to determine when these limits have been exceeded should be taken from the courts and given to the provincial and federal labour relations boards.

The author is a graduate of the University of Alberta and did his postgraduate work at Oxford University. He is now a member of the Faculty of Law at Queen's University where he specializes in labour law.

The book is published by the Industrial Relations Centre, Queen's University, Kingston. The price is $8.00 for hard-cover editions and $6.00 for soft-cover editions.

McGill conference now in book form

The problem of the aged and disadvantaged, and how government subsidies could organize the labour market to give these people meaningful work, was one of the important items discussed at the 17th Annual Conference of the Industrial Relations Centre at McGill University, in Montreal last May (L.G., Aug., p. 479).

The speakers brought out the fact that there is an untapped pool of youthful idealism and good will that could be used for public benefit. They urged that programs be created and missions adopted, not only for the young, but for the aged and for women seeking meaningful work.

Lectures, discussions and symposiums of the McGill meetings have now been compiled in a book, *Human Values and Technological Change*, published by Eagle Publishing Co., Montreal. Copies of the book may be obtained by writing to the Industrial Relations Centre, McGill University. The price is $3.00.

PARLIAMENT

A motion to introduce a measure to provide for the establishment of a Canada Manpower and Immigration Council, advisory boards, and regional and local manpower committees was proposed by the Minister of Manpower and Immigration on September 25 (*Hansard* p. 2458). The measure, known as Bill C-150, which was given first reading on the same day, provided for the appointment of members of these bodies, their remuneration, allowances and other expenses. The bill passed second reading on September 26 (p. 2507).

The introduction of a measure to establish a department of corporate and consumer affairs was moved by the Registrar General on October 13 (p. 3108) and the bill, No. C-161, was given first reading. It provided for the appointment of a minister and a deputy minister and defined their duties and powers. It also provided for the establishment of a consumer advisory council and other bodies to assist the minister.

Establishment of a maximum rate of interest of 8¼ per cent on home-ownership and rental loans under the National Housing Act, with effect October 1, was announced by the Minister of Labour on September 27 (p. 2577). The Minister explained that the adjustment was made in accordance with the formula introduced in November 1966 (L.G., Jan., p. 6).

The *Fourth Annual Review* of the Economic Council of Canada was tabled by the Minister of National Health and Welfare on September 26 (p. 2507).

First world congress on man and change

The purpose of the first world congress of the International Industrial Relations Association, held in September, in Geneva, was to set in motion an intensified scientific inquiry and sharing of knowledge on the impact of the increasingly rapid technological, economic and social changes as they affect man in his occupational environment. The four main congress themes were: bargaining and conflict, resistance and response to change, incomes policy, and teaching and research.

"It is our function to discover and analyze the facts, to clarify thought and promote theoretical understanding of industrial relations systems and the emergent trends, and create the intellectual climate within which adjustment to change can take place with the minimum of destructive conflict," Prof. B. C. Roberts, of the London School of Economics, and chairman of the British Universities Industrial Relations Association, told the IIRA congress in his presidential address. The congress was attended by 200 scholars and practitioners in the industrial relations field from many countries.

The congress tested the proposition that the problems of individual adjustment to technological and economic change cut across ideological boundaries, or differences between industrialized and developing countries, and that there is emerging a shared interest in evolving a scientific basis for solutions through teaching and research in the industrial relations field.

The International Institute for Labour Studies in Geneva acts as the world secretariat for the IIRA, which was established in 1966. The aims of the IIRA are of a purely scientific character, and its general purpose is to promote the study of industrial relations throughout the world.

ILO discusses change in maritime industry

The 20th session of the Joint Maritime Commission, International Labour Organization, discussed the substantial changes that have taken place in recent years in maritime transport. The commission met in September for two weeks in Geneva.

On the basis of a detailed study by the ILO, the commission considered the social implications of this transformation, with special reference to the effects of technological development on job opportunity and upon working and living conditions on board ship. The discussion showed that these developments could improve the efficiency and safety of the shipping industry, and benefit all interests associated with it.

The Commission also adopted resolutions on several subjects:

- a preparatory technical maritime conference to be followed by a maritime session of the International Labour Conference to discuss crew accommodation, wages, hours of work on board ship, manning, problems arising from technical developments, modernization on board ship, accident prevention, vocational training of seafarers, and seafarers welfare;
- vocational training for seafarers in the use of the prescribed equipment designed to ensure the safety of ships and life at sea;
- seafarers welfare and noise aboard ship;
- responsibility of the ILO in the maritime field for dealing with social and industrial problems arising directly or indirectly from employment;
- refugee seafarers; and
- co-operation of the shipping industry in the celebration of the 50th anniversary of the ILO.

The Joint Maritime Commission was meeting for the first time since 1961, and was composed of 15 representatives of shipowners and 15 seafarers. *Ex officio* chairman of the Commission was Prof. Roberto Ago, chairman of the Governing Body of the ILO. He was assisted by two vice-chairmen: Sir Richard Snedden, shipowners member, Britain and D. S. Tennant, seafarers member, Britain.

Kalmen Kaplansky

Kaplansky to co-ordinate ILO 50th anniversary

Kalmen Kaplansky, Director of the International Labour Organization (Canada Branch) and Special Adviser to the Director-General, has been appointed co-ordinator for the celebration of the 50th anniversary of the ILO (L.G., Sept., p. 562). The announcement was made by the ILO Director-General, David A. Morse.

Mr. Kaplansky will co-ordinate the various international and national activities that will mark the half century of the ILO's existence. The appointment will continue until the conclusion of the 50th anniversary year in 1969.

Seminar deals with trade union documentation

An international seminar on trade union documentation and research services met in October in Geneva. Organized by the International Labour Office, it brought together 24 officials who are in charge of the research services of trade union organizations around the world.

The seminar sought to establish and expand research services for trade union organizations in both developing and industrialized countries. The absence or inadequacy of such services has made it difficult for these organizations either to fulfil their roles in the defense of workers or to participate fully in the economic and social development of their respective countries.

The purpose of the seminar was to enable full analysis to be made of the role assigned to the trade union research bureau, the nature of its work and methods, its organization, the patterns of collaboration it has to develop, and educational requirements for the trade union organization.

Academic switch

The academic locations of two university professors were inadvertently reversed in our October issue. The italicized preface appearing on page 626 should have read as follows:

The two following articles are summaries of papers presented at a symposium in Ottawa earlier this year by Prof. W. B. Cunningham, Head of the Department of Economics and Political Science, Mount Allison University, New Brunswick, and Prof. Stuart Jamieson, Department of Economics, University of British Columbia. The symposium was sponsored jointly by the Canada Department of Labour and the Ottawa Branch of the Canadian Political Science Association. Both papers were based on research carried out by the two senior scholars during their stay at the International Institute for Labour Studies, Geneva, in 1965-66. The research was financed by the Canada International Labour Fellowship Program.

Dock workers in Britain no longer casual labour

Britain no longer has casual dock labour. Britain's 60,000 dockers (in Canadian parlance, "stevedores"), who had to assemble at dawn each morning to be allocated work or be left jobless, have now achieved the dignity of full-time employment.

Today the docker has a permanent job, a regular employer, and a guaranteed wage of £15 a week ($42). Most of the dockers are expected to earn at least £25 a week. In addition, each one will be paid £2 extra a week for giving up restrictive practices — a long-time stumbling block to the efficiency of the ports.

The "decasualization" has brought dissenting voices from the militant elements in the London and Liverpool docks who are out to get more money. They want a minimum wage of £17 a week.

Under the new plan, which took two years to devise, some of the higher-paid dockers could receive less pay. Not a few of the men may have to travel greater distances to their new permanent jobs and regular employers, and despite assurance from the Minister of Labour, Ray Gunter, many fear loss of jobs.

After the decasualization plan was announced in mid-September, half of London's 23,000 dock force and most of Liverpool's 12,000 went on a wildcat strike. The unions, who fully support the plan, are urging the dockers to give decasualization a fair trial.

The Canadian Economy

From the 1960s to the 1970s

In its Fourth Annual Review, the Economic Council of Canada recommends that policies be formulated and implemented with careful regard to longer-term possibilities, problems, and objectives, rather than predominantly in relation to current and short-term considerations.

THE growth potential of the Canadian economy in the next few years will depend almost entirely upon the future growth in the supplies of productive resources and on productivity growth, the Economic Council of Canada says in its *Fourth Annual Review: The Canadian Economy from the 1960's to the 1970's*, which was released in September.

There is no longer a substantial backlog of idle resources, the report states. The closing of the gap between actual output and potential output has removed one of the significant elements that could be drawn into use to boost total production. A very high rate of growth in total output, however, will be necessary to maintain an adequate rate of expansion of the labour force toward potential output in 1970.

The Canadian economy in 1963 was operating well below its existing potential, with excessive unemployment and underutilized productive capacity. At that time, the Council, in its *First Annual Review* (L.G. 1965, p. 217), estimated that the economy would have a potential annual rate of growth in the volume of output of some 5½ per cent to 1970. This estimate for an exceptionally high growth potential was based upon the unprecedented rate of prospective expansion in the labour force contributing to increased employment, and the temporary and unsustainable boost to growth arising from the closing of the gap between actual output and potential output.

The dominating factors for increasing the potential output for 1965-70 and 1970-75 are the nation's productive resources, improvements in the quality of these resources, and advances in the efficiency with which they are combined in production processes, the Review says.

These productive resource factors include the "factor productivity" of the potential output in terms of labour and capital inputs. Compared with previous reports (L.G. 1965, p. 217; March 1966, p. 84; Feb., p. 90), the Council makes a more detailed study in this analysis of some of the factors influencing growth, and of the role of improved manpower education and skills.

Manpower, the nation's main resource, will increase rapidly until the mid-1970s, the Council predicts. But the slower growth of the labour force in the late 1970s, increasing international competition, and the general world scarcity of capital, all emphasize the immediate importance of efforts to improve productivity.

Actual physical output of the Canadian economy should grow by an average annual rate of 5 per cent a year during 1965-70. For 1970-75, the target growth rate is an average of

4¾ per cent a year. These targets are above those of most other industrial countries. The potential output target to 1970 implies an average rate of growth in real GNP per capita of 3.2 per cent a year between 1966 and 1970. On the basis of reasonable price stability, total GNP could be expected to rise by an average of $4.5 billion a year to 1970.

The 5-per-cent target for 1965-70 is not a downward revision of the original 5½ per cent goal for 1963-70, the report explains. There has been a 6½-per-cent average rate of growth in 1963-65 through the reduction of the gap between actual and potential output levels. Any measurement of the potential growth rate for the balance of the period would, therefore, be less than 5½ per cent.

The growth targets may be viewed as being composed of both growth of employment and growth of productivity. For 1965-70, the 5-per-cent growth target comprises an average annual rate of growth of over 3¼ per cent in total employment and 1¾ per cent for productivity. Similarly, the 1970-75 target comprises employment growth averaging 2¾ per cent annually, and productivity growth averaging about 2 per cent a year, according to the Council's projected statistics.

Another newer way of examining potential growth is to consider the growth in labour inputs, capital inputs, and a "residual," which includes a host of other factors.

In this analysis, both the quantity and quality of labour is considered. Growth in total employment, the quantity of labour, is estimated to account for half the growth in potential output in both 1965-70 and 1970-75. Rising average educational attainments in the labour force are expected to account for about one tenth of the increase in potential output in the early 1970s. But two other factors will have a mild restraining effect on potential growth: changes in the age and sex composition of the labour force, and an anticipated reduction of average hours of work.

Business capital stock, such as business structures, equipment and inventories, is assumed to roughly parallel total output, but the volume of such capital stock for each worker is not expected to rise as fast in the medium-term future as in the past.

The "residual" covers advancing technology, increased scale and specialization in production, attitudes and enterprise of both management and labour, and environmental and institutional situations. The contribution of this residual to growth in Canada in the postwar years has averaged around 1 per cent a year, and there is no firm basis for estimating an increase. Further research is under way in this field, but it is unlikely that any very rapid growth in the residual factor is feasible without major changes in economic policies, conditions and attitudes.

The fact that there is little unused capacity in the economy relative to that of the period of expansion during 1961-67 will make the task of economic policy-making difficult, the Review says. The Council emphasizes the need to steer the economy along on the basis of medium-term policies. The demands on Canadian resources for meeting the basic economic and social goals leave very little margin for waste and inefficiency. The basic strategy of demand policies should be designed to maintain smooth and sustained growth of final demand over the medium-term future in line with rising output, rather than to react to short-term developments.

There should be strong and continuing concern with measures for strengthening the supply and production capabilities of the economy. This involves measures for promoting greater efficiency, competition, manpower mobility, training and education, and more ready adjustments to technological and other change; intensified efforts to develop and apply new technology; and effective means and incentives to stimulate industrial research and development. These measures require a larger place in economic policy than they have yet been given, the Council notes.

The Council calls for:

- improved and expanded adult education and training programs;
- further efforts to deal with large regional disparities in levels of income and unemployment, particularly in eastern Quebec and the Atlantic area, where they are acute;
- better information to help to anticipate and identify bottlenecks and pressure points, which may lead to spreading price and cost instability;
- increased specialization in business firms to adjust to the changes in international trade relations associated with the Kennedy Round of tariff reductions; and
- increased inflow of capital from abroad as the economy moves toward potential output in 1970 in order to maintain adequate supplies of capital.

Purchases of goods and services in 1966 by all levels of government in Canada rose by $1.6 billion or 16 per cent, the largest percentage increase since the Korean defence buildup. Increases in both 1965 and 1966 came atop a strong expansion of demand in other sectors of the economy. This added significantly to excess demand pressures, and contributed to the accentuation of price and cost increases.

The accelerated increase in government spending in 1966 and 1967 is outpacing the growth of government revenues at existing tax levels. This raises the possibility of higher taxes, and of sharper conflicts in competing claims for the use of resources. The Review contains warnings that such conflicts could lead to sharp rises in prices and costs.

The combined position of all three levels of government moved rapidly from a large deficit in 1963 to a moderate surplus in 1965, involving a swing of close to $1 billion on a national accounts basis. But in 1966, this newly emerged surplus showed little change, despite large revenues of $700 million arising from levies imposed to finance the Canada and Quebec Pension Plans. Without this major new source of revenue, the government sector in 1966 would have been in deficit once again.

The average annual increase in GNP as the economy moves to potential output in 1970 could be expected to generate an average rise of about $1.7 billion a year in government revenues. Such an increase would finance substantial increases in government expenditures above 1966 levels, or alternatively leave room for tax cuts, provided that increases in spending were held down. But Council estimates of government expenditure to 1970 hold little prospect that this "fiscal margin" might be used for significant tax reduction. Spending programs appear likely to take up virtually all of the increase in revenues to 1970.

All-government expenditures on goods and services rose at an average rate of 6.4 per cent a year in the 1963-66 period, or at the same rate as real GNP. It is estimated that these expenditures will rise by an average of 6.2 per cent a year to 1970, considerably above the 5-per-cent-growth rate postulated for real GNP. The rise is expected to be faster at the provincial-municipal level than at the federal level.

Despite large increases in U.S. defence expenditures due to increasing involvement in Vietnam, government spending in 1965 and 1966 in Canada rose faster than in the United States. In 1963-66, total government spending at all levels in Canada rose about 35 per cent, compared with 25 per cent in the United States. Total non-defence expenditures in Canada now take up about 30 per cent of GNP, compared with only about 20 per cent in the United States. The difference reflects, among other things, relatively higher spending in Canada for social welfare, transportation, debt charges and subsidies.

The Council recommends a policy designed to achieve a smoother growth path for government expenditures, which

would contribute materially to the promotion of smoother growth in total activity.

The growing uneasiness over government spending increases is too often merely translated into a suspicion of waste, excessive bureaucracy, and lax administration. Constant vigilance is required to eliminate all such waste. Many government treasuries recognize this and are attempting to develop machinery to review and audit more carefully the minutiae of government expenditures.

But these steps have not been matched by comparable advances in efforts to deal with much larger questions: consistent and comprehensive determination of objectives and priorities; continuing evaluation of the impact and effectiveness of programs in relation to their cost; and increased co-ordination between governments in relation to these matters.

The Council recognizes that the overall volume of government spending will and should grow in the future, along with the economy. But it emphasizes that, in future, attention should be focused more intently on such issues as the relationship between the use of resources and the purposes to be achieved, and on possible conflicts with other requirements of the economy. Careful attention should be given also to the possible ways in which rising government spending could impinge on needed growth in housing, exports, and business investment.

The Council emphasizes the need for:

- better and longer-range planning of government expenditures;
- improved planning, programming, and budgeting techniques;
- more cost-benefit analysis of government activities;
- more testing of the possible impact of alternative tax and expenditure patterns on the economic system;
- regular review of existing spending from the standpoint of priorities;
- the abandonment of obsolete programs and activities;
- more effective co-operation and co-ordination among the three levels of government in regard to the pace of overall expansion of government spending;
- the appraisal of purposes, costs versus benefits, and consistency of objectives and results; and
- the setting and reviewing of priorities.

Of all the major sectors of the economy, none will have to grow more rapidly than housing, the Council warns. The volume of new housing in Canada in the 1961-66 period was inadequate for Canada's needs. By 1966, a housing shortage was developing in many parts of the country. This led to low vacancy rates, rising rents, and even faster increases in house prices, with adverse social consequences and inhibiting effects on labour mobility.

A major element in this situation was a shortage of mortgage funds at a time of high and rising family formation. Interest rates for home builders in 1966 reached the highest levels in 40 years.

Monetary policy aimed at moderating the excessive growth of total demand in the economy has weighed heavily on housing, and indirectly has affected the position of income groups whose accommodation costs already are a disproportionate share of their income. The Review advises the Government to discontinue the use of housing as an economic regulator. When severe monetary restraint may be necessary, special measures may be required to shield the housing sector from the full effects of such a policy.

Looking to 1970, the Council expects the availability of financial resources for housing to ease in the light of less rapidly advancing demand for capital from the business sector for plant and equipment outlays. Recent financial and institutional changes may also help to assure the large and sustained growth of new residential mortgage financing that will be needed over the years ahead. But further institutional changes may be required.

The Council estimates that about one million Canadians now live in substandard housing, and that one quarter of these are in the big cities.

Of 200,000 housing starts required annually by 1970, the increase in new households would account for 140,000 units, replacement demand for 50,000, and a stock of vacant dwellings for roughly 10,000.

To meet the housing demand implied by projections of new family and household formation, an average of some 190,000 new housing units a year are required between 1966 and 1970. This will require a four-year total of over 750,000 new units, with a heavy volume of completions concentrated in the latter part of the period.

To achieve this growth, the volume of expenditures on new housing would need to rise by an average of 8.4 per cent a year in the period 1966-70—over twice the 1963-66 average annual increase of 3.2 per cent. The proportion of GNP going into housing would have to rise from 3.8 per cent in 1966 to 4.5 per cent in 1970. The Council therefore questions the appropriateness of maintaining a heavy sales tax on building materials in the circumstances of these rapidly expanding requirements for new housing.

Greatly increased resources will be needed in housing, including a substantially enlarged work force with appropriate skills, considerably enlarged capital and residential construction capacity, and an adequate expansion of serviced land for new housing. Close attention will have to be paid to more productive methods of building new housing, more efficient use of existing housing, and planning the great accompanying expansion in government, community and private services.

Steeply rising land values have been the dominating factor contributing to rising housing costs over the past decade, the Council points out. Various means exist for public authorities to acquire and prepare land for residential use in ways that would reduce upward pressure on land values. It recommends that these means be used more effectively than in the past, and strengthened if necessary.

The Council has laid considerable stress on the problems associated with Canada's predicted population growth. With the total population increasing at a rate of 1¾ per cent a year by 1980, about 81 per cent of the people will be living in cities. Urbanization will continue to increase in Canada at a rate that is greater than that in the other major industrial countries.

Between 1966 and 1980, Canada's urban population is projected to rise by almost 5.8 million people to over 20 million. Some 60 per cent of the population will be concentrated in some 29 large city complexes of 100,000 and over. By 1980, one out of every three Canadians will live in Montreal Toronto, or Vancouver. The estimated approximate regional levels of urbanization by 1980 are: Ontario, 86 per cent; Quebec, 86 per cent; British Columbia, 81 per cent; Prairies, 73 per cent; Atlantic Provinces, 57 per cent.

This increasing urbanization has important implications for housing, social capital, municipal expenditures, fiscal capacity, and the many problems associated with big-city life, including such diverse matters as traffic congestion, air and water pollution, protection from crime, requirements for education and recreational services, health, community welfare and other problems. The challenge calls for new and imaginative policies involving all three levels of government, and new priorities in the allocation of resources.

The investment in urban expressways, arterial thoroughfares, collectors, and rapid transit between now and 1980 could well exceed $4 billion for centres of 100,000 and over. The Council

Labour Relations Legislation in 1967

Parliament extended collective bargaining rights to 200,000 public service employees, and Nova Scotia established a civil service joint council. Legislation ended strikes of Quebec teachers and transport workers, and Newfoundland outlawed strikes by hospital employees.

Part I - Labour Relations

This is the first of a three-part article on labour legislation in 1967. Part II, dealing with labour standards, human rights and anti-discrimination legislation, will be published in the January 1968 issue. Part III deals with legislation on industrial safety and workmen's compensation, and industrial training, and will be published in the February issue.

THE main enactments in the labour relations field during 1967 were concerned with various classes of public service employees—civil servants, teachers, hospital workers, policemen and firemen.

Parliament passed the Public Service Staff Relations Act, which extended collective bargaining rights to about 200,000 federal public servants, including professional and administrative personnel. In Nova Scotia a new Act titled, "An Act Respecting the Civil Service Joint Council," provided for a negotiating system for provincial civil servants similar to that in effect in Ontario.

In Quebec, a statute titled, "An Act to Ensure for Children the Right to Education and to Institute a New Schooling Agreement Plan," was passed to bring to an end a strike of teachers and to prepare the way for province-wide negotiations.

After some hospital workers had gone on strike in defiance of an order proclaiming a state of emergency, the Newfoundland Legislature passed the Hospital Employees (Employment) Act, 1966-67, which bans strikes by hospital workers. It revoked the section of the Labour Relations Act dealing with emergency disputes in hospitals, including the procedures for the settlement of the issues in dispute in emergency situations.

Some changes were made in the collective bargaining provisions of the police legislation of Alberta and Ontario. Ontario also amended its special legislation for firemen.

The general labour relations laws of Prince Edward Island and Nova Scotia were amended, and several labour relations boards have revised their rules.

Federal Public Employees

The federal Public Service Staff Relations Act went into force on March 13, extending bargaining rights to about 200,000 employees of the public service, including professional and administrative personnel.

Two complementary pieces of legislation went into force the same day—the Public Service Employment Act, and an amendment to the Financial Administration Act. The Public Service Employment Act, which replaced the Civil Service Act, provided for the continuation and extension of the merit principle of appointment and promotion. In line with this change, the Civil Service Commission was renamed the Public Service Commission, and staffing was made its major responsibility.

The amendments to the Financial Administration Act established the Treasury Board as the central management agency in the federal public service. Except in the case of agencies such as the Defence Research Board and the National Research Council, which are designated separate employers, Treasury Board will act as the principal agent of the Government in the collective bargaining process.

The Public Service Staff Relations Act incorporates mainly the same principles as the general labour relations laws governing employer-employee relationships in the private sector, except for some modifications deemed necessary to make the new law conform to the special needs and responsibilities of the federal public service.

One of the special features of the new law is that a union that is certified under the Act may choose between two dispute settlement procedures. One provides for recourse to binding arbitration; the other requires a reference to a conciliation board, and permits strike action—except in the case of employees whose services are considered essential to the safety or security of the public. The choice between the two procedures must be made before notice to bargain is given.

A bargaining agent will not be permitted to change its option during negotiations, but it may do so before the next round of negotiations begins, by applying in the prescribed manner to the Public Service Staff Relations Board, the regulatory board responsible for the administration of the Act.

The second option—the right to strike—is more complicated, in that a conciliation board may not be appointed until agreement has been reached on the question of "designated employees," that is, employees whose duties are considered essential to the safety or security of the public. The responsibility for the selection rests with the government agency concerned, which is required to furnish the PSSR Board with a list of such employees within 20 days after notice to bargain is given. If the employee organization makes no objection to the list, these employees become "designated employees." If there is any objection, the matter will be referred to the Board for settlement. Designated employees are prohibited from striking.

Initially, bargaining units are to be defined in such a way as to correspond with the occupational categories in the new classification structure now being developed and implemented. The Public Service Commission is authorized to specify and define the occupational groups within the occupational categories established. Five occupational categories have been established: operational; scientific and professional; technical; administrative and foreign service; and administrative support.

In March, the Public Service Commission published a list containing definitions of 72 groups within these five categories.

By the end of July, the Board had made determinations on five applications covering employees in the operational category. In three cases, Treasury Board was the employer. The separate employers were the National Research Council and the Defence Research Board. In each case, the Board made a distinction between supervisory and non-supervisory personnel and issued separate certificates for each group. The Public Service Alliance, the organization formed as a result of a merger between the Civil Service Association of Canada and the Civil Service Federation of Canada (L.G., Feb., p. 88), was the bargaining agent certified, except in the case of the employees of the National Research Council, who are to be represented by the Research Council Employees' Association.

Another feature of the Public Service Staff Relations Act is the jurisdiction of the PSSR Board or its chairman. The Board has the usual certification function. In addition, the chairman has duties in relation to conciliation.

Upon request, he may make the services of a conciliator available to the parties. Except in those cases where the bargaining agent has chosen arbitration as the final step, the chairman may, if the conciliator was not able to effect a settlement, establish a conciliation board. He may, however, refuse a request to appoint a board, if, after consultation with the parties, he thinks it will serve no useful purpose.

The chairman is authorized to appoint the members of a board, if the parties fail to do so within the required time. The chairman also has the duty of setting out the terms of reference of a conciliation board.

The Board has duties also in relation to the Public Service Arbitration Tribunal, the body established to decide disputes referred to arbitration and headed by Mr. Justice Montpetit of the Quebec Superior Court. The representative members on this Tribunal are to be drawn from panels named by the PSSR Board. The chairman and alternate chairman of the Tribunal are appointed by the Governor in Council on the recommendation of the Board.

The PSSR Board has also a considerable number of functions in relation to the grievance process. The Act provides for the establishment of grievance processes throughout the public service, and for third-party adjudication of grievances relating to the interpretation or application of a collective agreement, or an arbitral award, or a disciplinary action resulting in discharge, suspension or financial penalty. The Board was authorized to make regulations governing grievance procedures and issued its first regulations in April. These regulations require every department to establish a grievance process, which may not consist of more than four levels.

Adjudicators, including the chief adjudicator, are to be appointed by the Governor in Council on the recommendation of the PSSR Board.

In addition to its other powers, the PSSR Board is also authorized to determine any question of law or jurisdiction that may arise in connection with any matter before the Arbitration Tribunal or an adjudicator. The referral may be made by the Tribunal, the adjudicator or either of the parties.

Nova Scotia Civil Servants

A new statute titled, "An Act Respecting the Civil Service Joint Council," introduced a system of collective bargaining for Nova Scotia's departmental civil servants, which replaces the system of consultation adopted in 1963. Employees of provincial boards and commissions, such as the Nova Scotia Power Commission and the Nova Scotia Liquor Commission, except those appointed by the Civil Service Commission or the Governor in Council, were brought under the Trade Union Act in 1965. The result is that they are subject to the same bargaining procedures as are employees in industry—the only difference being that they may not resort to strike action until 30 days after the time limit prescribed for employees in the private sector.

The new negotiation system for departmental civil servants is similar to that in effect in Ontario. Negotiations are to be conducted by the Joint Council, and mediation will be available to help the parties reach an agreement. In the event of a stalemate, a dispute will be referred to a civil service arbitration board for settlement. Unlike the Ontario Act, which is silent on the question of strikes, the Nova Scotia legislation bans strike action by the Nova Scotia Civil Service Association.

The Civil Service Joint Council is to be composed of seven members: three public servants appointed by the Governor in Council, who will represent the official side; three nominees of the Nova Scotia Civil Service Association, who will represent the staff side; and a chairman, chosen by the Government, who must not be a member of the legislature, a public servant or a civil servant.

The Joint Council is empowered to establish its own procedures, but it must meet at least four times each fiscal year. Civil servants representing the staff side are to be granted leave with pay to attend meetings.

Any matter concerning the terms of employment of civil servants, defined as "persons appointed by the Civil Service Commission," may be put on the agenda, including remuneration, working conditions, leave and hours of work. The chairman has, however, certain discretionary powers. He must not put any matter on the agenda until satisfied that all review procedures provided for in the Civil Service Act and regulations have been complied with.

As in Ontario, there is provision for third-party mediation in the event of a stalemate. If the Joint Council is unable to reach an agreement, the chairman must refer the matter to the Minister of Labour, who has discretionary power to appoint a mediator within 15 days. No time limit is set for the mediator's report.

Like the Ontario legislation, the Nova Scotia Act does not expressly provide for collective agreements. Instead, it states that every decision of the Joint Council, whether reached with or without the services of a mediator, must be signed by the chairman and the vice-chairman. The chairman must transmit it to the appropriate authority to be implemented, and it is binding on the Association as well as on the Government.

If the Minister of Labour does not appoint a mediator within the prescribed time, or if the mediator is unable to effect a settlement, the chairman of the Joint Council must, at the request of either the Minister of Labour or the Association, refer the matter to a civil service arbitration board for settlement.

A civil service arbitration board is to be composed of a chairman nominated by the Minister of Labour and the Association. He will hold office for a renewable period of two years. Two other persons must be appointed on an *ad hoc* basis, and one of them must be nominated by the Association.

With one exception, the Government and the Civil Service Commission are obliged to implement a decision of the Joint Council, or an arbitration award, in the same manner as a provision of the Civil Service Act or regulations. The exception is that they are not bound to implement immediately a decision that would cause a government department to exceed its budget. The Minister of Finance and Economics must, however, provide for such an excess in his estimates for the next fiscal year, and it must be retroactive to the date on which the decision was to be effective.

The Association is forbidden to sanction, encourage or support, financially or otherwise, a strike by its members or any of them. The Act is silent on the consequences to an employee of going on strike.

Quebec Civil Servants

In Quebec, effective from March 23, new regulations under the Quebec Civil Service Act established a two-stage grievance procedure to hear complaints regarding classification.

The provisions apply to employees covered by collective agreements entered into by the Quebec Government and the *Syndicat des Fonctionnaires provinciaux du Québec* and the *Syndicat des agents de la paix*, as well as persons who would normally be part of these units if not excluded by the Labour Code.

The first stage in the appeal procedure is an *ad hoc* fact-finding committee composed of a government representative and a representative of the employee's union. If the employee is in an exempted category, he may name his own representative. This committee must submit a report to the Civil Service Commission.

The second stage in the procedure concerns the Commission. If the committee's report is unanimous, the Commission will render a decision based on this report. If the committee's decision is not unanimous, a member of the Commission, or another authorized person, will make a further inquiry into the complaint before a final decision is made by the Commission.

Quebec Teachers

School teachers in Quebec were brought under the Labour Code in 1965 subject only to the restrictions imposed on public service employees by Section 99. These restrictions apply in the case of teachers, in situations where a threatened or actual strike interferes with the education of a group of students.

On February 17, the Quebec Legislature passed Bill 25, "An Act to Ensure for Children the Right to Education and to Institute a New Schooling Collective Agreement Plan." The purpose of the legislation was twofold: to end a teachers' strike that began in the Yamaska region on November 24 and spread to other parts of the province, including Montreal; and to take steps toward developing province-wide collective bargaining for teachers.

In these strikes, the major issue was wages. In the fall of 1966, the Quebec Government had placed a ceiling on provincial support of salaries, which meant that amounts negotiated over that level had to be paid by local taxes.

The Act required all striking teachers in Quebec to return to work within 48 hours of Royal Assent. It also extended certain agreements until June 30, 1968, which in effect meant that, until after that date, teachers covered by such agreements are forbidden to strike, and would be liable to the fines provided in the Labour Code for engaging in illegal strikes.

The new Act also required every school board affected by a strike to arrange for the resumption of classes and to take back, without reprisals, all teachers employed before the strike began.

It extended to June 30, 1968 all collective agreements between a school board and a teachers' association that had expired prior to February 11, 1967, and also any agreements that would normally have expired in the period February 11 to September 30, 1967 inclusive.

On the original expiry date of each such agreement referred to above, the salary scale set out in the agreement was required to be replaced by a salary scale contained in the schedule to the Act.

The salary scale in the Act is a province-wide scale. It applies to both men and women and fixes salaries according to education and experience. Under this scale, salaries range from $3,450 a year for a teacher with no experience and 11 years of formal schooling, to $12,775 for teachers with 15 years' experience and 20 years of formal education, including a doctorate. A teacher with 15 years of schooling and 15 years' experience is now entitled to a salary of $8,520.

The Act limited the increases teachers were to receive under the new salary schedule and, at the same time, provided for minimum increases effective from April 1, 1967.

The maximum increase a teacher could receive on being brought under the new provincial salary schedule was $1,000, based on his salary for the year ending June 1966, under a collective agreement extended by this Act. He may, however, be paid any annual increase that he has earned because of additional experience.

Also, supplementary payments may be made to department heads and principals and for additional schooling. The maximum annual supplementary payment to department heads and school principals is $500.

The minimum wage increases provided for in the Act took into account any wage increase a teacher had received under the new provincial salary scale, and any statutory increase to which he was entitled under that scale.

Subject to the conditions described below, teachers covered by contracts that expired prior to February 11 were to receive a lump sum payment of $400, effective April 1, 1967. This amount was to be reduced by a sum equal to the difference between the salary to which he would be entitled for the school year ending June 30, 1968, under the new salary scale, and that which he received for the school year ending June 1966 under the previous agreement.

For example, a teacher whose salary would not be increased under the new statutory schedule, and who would not be entitled to any annual increase, would receive a lump sum payment of $400. A teacher who, as a result of the application of the provincial schedule and his statutory annual increase, received an increase of only $300, would receive a lump sum payment of $100. A teacher whose salary was increased by $400 or more under the new salary schedule would not be entitled to any lump sum payment.

Teachers under contracts that normally would have expired between February 11, 1967 and September 30, 1967 would receive a lump sum payment of $200, subject to conditions similar to those imposed on the group referred to above.

A further adjustment could be made to take account of offers already made by school boards. Where the salaries offered by school boards were higher than those in the provincial scale, teachers were to be paid additional amounts to bring their salaries up to the levels agreed upon in the final offer. Since disputes may arise as to the details and applications of the "final offer," provision was made for settlement of such questions by arbitration.

The parties whose agreements were extended by the Act were required to make the necessary amendments to give effect to clauses agreed upon prior to February 11 that are not inconsistent with the Act or the new salary schedule, and to send the text of the agreement to the Minister of Education.

Any disagreement concerning the application of the above section was to be deemed a grievance within the meaning of the Labour Code, and to be referred to an arbitration officer whose decision would be binding on the parties.

To assist in setting up a system of bargaining on some issues at the provincial level, the Act provided for a joint committee to advise the Government on matters that should be dealt with on a provincial basis. It was to be composed of representatives of the Quebec Federation of Catholic School Commissions, the Quebec Association of Protestant School Boards, and three provincial teachers' associations: la Corporation des instituteurs et institutrices catholiques du Québec, the Provincial Association of Catholic Teachers, and the Provincial Association of Protestant Teachers of Quebec. This committee was also to include two members appointed by the Minister of Education after consultation with the most representative parents organizations.

Negotiations on clauses to be dealt with on a provincia

basis were to begin on or before July 17, 1967. If an agreement is not reached before April 1, 1968, the Government must appoint a commission to inquire into the dispute. The commission will have the same powers as a council of arbitration. In its report, which must be submitted by June 1, 1968, the commission must report only the facts, and may not make recommendations. The Government is obliged to publish the commission's report.

There may be no changes in representation until after July 1, 1970. Negotiations at the provincial level are to be carried on between the Quebec Federation of Catholic School Boards, and the Quebec Association of Protestant School Boards, and the three provincial teachers associations mentioned above.

Negotiations on local clauses not affected by the new law could be resumed immediately. A notice of a desire to negotiate amendments to the local clauses in agreements that had expired prior to February 11, 1967 could be filed eight days after the date of Royal Assent. Negotiations were required to begin within eight days after notice and to be carried on diligently and in good faith. If an agreement on these local clauses was not reached within 40 days of the coming into force of the Act, the matter was to be referred by the Minister of Labour, acting *ex officio* or on the application of either party, to an arbitration officer.

Negotiations respecting revisions to the local clauses in agreements that normally would have expired between February 11 and September 30 were permitted to begin in July, after publication of the first order in council specifying the matters to be negotiated on a provincial basis. Fifteen days after the publication of this order, a party could give the other party at least eight days notice of a desire to negotiate those terms that may be dealt with at a local level.

If an agreement on local issues was not reached before August 15, 1967, the dispute was to be referred to an arbitration officer for settlement. The arbitration award would have the effect of a signed collective agreement.

The advisory committee appointed under the Act held fourteen plenary sessions in March, April and May, and made its report setting out the matters that the members unanimously agreed should be negotiated at the provincial level, and those on which there was disagreement. An order (O.C. 1556) was issued on June 30, naming salary scales as a matter for negotiation at the provincial level, and a further order issued July 22 (O.C. 1885) named the following other matters:

- interpretative provisions relating to matters to be negotiated at the provincial level;
- grievance procedures;
- rules and criteria respecting the workload of teachers;
- additional payments, or fringe benefits such as insurance, sick leave and social holidays;
- rules regarding leave including maternity leave, educational leave and leave to perform public duties or assume civil responsibilities;
- union prerogatives;
- rules regarding upgrading courses for teachers recognized by the Department of Education; and
- consultation of teachers.

Newfoundland Hospital Employees

Newfoundland enacted the Hospital Employees (Employment) Act, 1966-67, which bans strikes by hospital workers.

This legislation was enacted after 125 non-professional hospital workers at Central Newfoundland Hospital in Grand Falls went on strike in violation of a government order proclaiming a state of emergency under Section 39A of the Labour Relations Act.

The major issue in dispute was wages. A conciliation board had recommended a wage increase. The Central Newfoundland Hospital Corporation, which administers the Grand Falls Hospital and other hospitals in Newfoundland, agreed with the conciliation board report, but maintained that it could not grant the recommended increases on its own. The Corporation manages hospitals with funds from a budget approved by the provincial Department of Health, with minor income from other sources. Hospital executives said that there was no money available for the increases, except from the Government.

The order declaring a state of emergency was issued on January 23, and on January 24 the Grand Falls hospital employees walked off their jobs. On January 25, the Government introduced two bills—an amendment to the Labour Relations Act repealing Section 39A, and the Hospital Employees (Employment) Act, 1966-67. The new legislation received Royal Assent on January 27. The amendment to the Labour Relations Act provided that the repeal of Section 39A would not affect offences committed under the repealed section.

The new Act, which also went into force on January 27, applies to all hospital workers and their employers in Newfoundland, including Her Majesty in right of the province. It forbids hospital employers to declare or authorize a lockout and forbids trade unions to call, cause or authorize a strike or the continuation of a strike of any hospital employee. No person may aid, abet, counsel or procure a lockout or strike of hospital employees. Hospital employees may not strike.

Picketing of hospitals is expressly forbidden. The Act provides that no person may attend at or near the premises of a hospital employer or any other place where hospital services are provided for the purpose of advertising a strike; nor may a trade union or other person persuade or try to persuade anyone not to enter a hospital employer's premises or deal or do business with him or continue in or seek employment in a hospital.

Employees on strike when the Act went into force were protected against reprisals if they returned to work within 72 hours. On the coming into force of the Act, every trade union whose members were on strike was required to notify them that the strike authorization had been revoked and that, if they did not return to work within 72 hours, their employer could dismiss them by reason only of their having gone on strike.

This obligation to notify members of the revocation of the strike call rests on every person authorized to call a strike of hospital employees, or who has called such a strike, or any officer of the trade union or any employee of the union except a person employed to perform duties of a clerical, accounting or stenographic nature only. The burden of proving that the notice was given, or that an employee of the union is an exempted category, was placed on the person charged.

A trade union that had been certified as the bargaining agent of hospital employees will be decertified by the Labour Relations Board if:

- the union or an agent, officer or employee of the union or of a provincial, regional, national or international trade union, body, organization or association acting for, or on behalf of or in concert with the union, is convicted of an offence under the Act; or
- less than 70 per cent of the striking hospital employees employed in each classification or occupation return to work within 72 hours; or
- any hospital employees who are members of the union go on strike after the coming into force of the Act.

For a period of one year from the date of decertification, a union so decertified will not be eligible to represent any hospital employees who are or were at any time included in the bargaining unit represented by the trade union that has been decertified. Also, no other local or emanation of the trade union, associa-

Today's Priorities For Tomorrow's Prosperity

Productivity, government spending, collective bargaining, labour-management relations, strikes and the Carter Report on Taxation were among the subjects examined by the principal speakers at the 1967 annual meeting of the Canadian Chamber of Commerce.

TODAY'S Priorities for Tomorrow's Prosperity," was the theme of the 38th annual meeting of the Canadian Chamber of Commerce, held in Montreal, September 17 to 21.

The more than 900 delegates who attended authorized the executive to send to the Minister of Finance a brief on the report of the Carter Royal Commission on Taxation. The brief was prepared by a committee that studied it in detail with the help of a number of specialists. Although it neither accepted nor rejected the Carter report in full, the committee submitted it to a critical examination.

The keynote address was given by Roger DeSerres, President of the Chamber. Other speakers included: Hon. Robert H. Winters, federal Minister of Trade and Commerce; Ronald Robertson, McCarthy & McCarthy, Toronto; C. B. Neapole, President of the Montreal Stock Exchange; W H. Flynn, Ontario General Manager, Canadian Industries Ltd.; H. J. Clawson, Vice-President, Steel Company of Canada, Hamilton; and V. O. Marquez, President, Northern Electric Company, Montreal.

W. M. Anderson, a partner in the firm of Winspear, Higgins, Stevenson & Doane, Vancouver, was elected president in succession to Roger DeSerres.

HON. ROBERT H. WINTERS

"What is needed is restraint in the demands made on their governments by Canadians, and resolution by the governments when considering these demands," Hon. Robert H. Winters, Minister of Trade and Commerce, told the delegates.

The Minister said he realized that, as a member of the federal Government, he was to some extent preaching to himself. But he said he was addressing himself to all concerned. It was "idle to exhort the private sector and private citizens, without at the same time accepting the responsibilities of governments stemming from their very heavy impact on the country's economic well-being."

Large discrepancies had been appearing between demands on income and trends in productivity. Was it possible, Mr. Winters asked, "to adapt the collective bargaining process to produce results more closely attuned to the economic realities of the day?" He said that "not only within the ranks of labour, but in some other groups of the Canadian community, there seems to be a growing trend toward the use of economic bargaining power to exact deals which are beyond the ability of the company or the country to afford, within the context of present levels of productivity."

Unless ways could be found "to keep income trends more closely in line with basic productive inputs, some of the key catalysts within our economic system will be undermined." Problems of this kind could be solved in part by aggressive and enlightened management, combined with productive labour. But some of the factors in the cost of production and levels of profit were outside the realm of management, and were "tied up with the demands made by the public on their governments at all levels. The result is that all governments are spending too much money—not in relation to our social needs . . . but in relation to the revenues available to the governments. This means both high taxes and large borrowings."

The federal Government was in the midst of a "rigorous exercise to keep our expenditures and revenues within a manageable relationship for next year. . . . Top priority must be given to those functions of government which sustain and improve the effective functioning of the nation and the economy. On this basis, slower rates of growth in government outlays would have particular impact on consumption-oriented expenditures."

This would not interfere with the "real and long-term benefits of welfare programs," however, because, by adhering to the fundamental rules of good management, we should best be able to fight poverty and improve the well-being of all Canadians.

H. J. CLAWSON

Canada faces some exceedingly serious and fundamental labour-management problems, which, if not solved or ameliorated will have profound effects on the future welfare of the nation as well as upon the institution of free collective bargaining.

In an address on "Labour-Management Relations in the Next Decade," H. J. Clawson, Vice-President of the Steel Company of Canada, took this disquieting view of the present labour situation. He examined three aspects of what he called "the breakdown in collective bargaining in our time."

First, he said that there was clear evidence, not only that the strike weapon was being abused by too frequent use, but that the "very nature of the strike is changing." There had probably never been a time in Canadian history when so high a proportion of labour-management negotiations ended in strikes, or strikes had been averted only by last-minute government intervention. He instanced trucking strikes, construction strikes, postal strikes, railway strikes, longshoremen's strikes, and seaway strikes.

"Another aspect of the present-day strike is that it is often not directed at the employer at all. It is directed at third parties, often the public at large—or at least it is the public that suffers primarily."

An instance of this was the recent strike of operating engineers against British Columbia hospitals. One problem in this connection was the union's insistence on picketing not merely the operations in the bargaining unit but the whole organization. Another problem was that "picketing is now designed not merely to notify the public that there is a strike, but effectively to shut down all operations for as long as the union decides."

A new hazard that had crept into the collective bargaining process during the past few years was the chance that a settlement agreed to by union negotiators might be rejected when it was submitted to the membership for ratification.

The third factor, Mr. Clawson said, involved the actions and attitudes of government, or sometimes the lack of action. The trend in Canada since the war had been to control or limit rather than to prohibit strikes. For example, strikes were made unlawful during the term of a collective agreement and during negotiation after an agreement had expired, pending conciliation procedures. In the public sector, strikes had sometimes been expressly prohibited; and in most other cases it had been assumed "that, even under the general law, a civil servant did not have the right to strike."

But now a new trend had appeared that would have the effect of extending the area of permissible strike activity. Some governments in Canada had in recent years repealed legislation prohibiting strikes by employees in the public service. The speaker said that he did not quarrel with the principle of collective bargaining for federal civil servants. But the Government had gone further than this. It had expressly recognized the right to strike by all civil servants, except those whose duties were "necessary in the interest of the safety or security of the public," and it had done this although most of the public service unions had not asked for the right to strike. Canada was now one of the few countries in the Western World that had expressly recognized the right of employees to strike against the Government.

As if the waste and inconvenience of strikes in the private sector were not enough, this meant that Canadians were now faced with the possibility of periodic strikes by government employees. A compelling practical reason why strikes should not be allowed in the public service was that "it is impossible to have true collective bargaining . . . in respect of public service employees, for the simple reason that any so-called voluntary settlement will almost invariably involve political criteria." The injection of political considerations into industrial disputes was not "free collective bargaining in the ordinary sense," Mr. Clawson contended.

He also referred to talk, arising from the Freedman Report (L.G., Jan.-Feb. 1966, p. 4), of giving unions the right to strike on certain issues, especially technological change, even during the term of an agreement. This, he said, had been described as "tantamount to putting technological change on the auction block of collective bargaining."

What could be done about the serious situation that existed in the Canadian collective bargaining scene, Mr. Clawson asked? "Unfortunately we shall have to look to governments to provide most of the solutions, partly because many of the problems have been created by government action over the years, but mainly because the kind of solutions required can only be provided by legislation." He doubted the effectiveness of appeals for restraint and moderation in formulating collective bargaining demands.

The speaker suggested several things that he thought should be done:

- Management must continue to strive for the highest degree of constructive and co-operative relationships with unions, consistent with sound business economics.
- Government should be called upon to refrain from implementing the Freedman Report or any other suggestions for enlarging the right to strike. Civil servants should not be allowed to strike under any circumstances. Limitations on the right to strike in private non-profit organizations such as hospitals, universities, and certain crown corporations, will probably come.
- The penalties for unlawful strikes must be made more severe and enforcement of such penalties must be made more certain. The individual employer has a responsibility

to negotiate protective provisions in the collective agreement "with teeth in them," and governments must be prepared to strengthen legislation on unlawful strikes. In particular, the legal immunities of unions must be withdrawn so that the appropriate financial penalties can be imposed where there has been a violation of the law or a contract.

- The Government must continue to ensure that qualified arbitrators are available to adjudicate disputes arising during the term of an agreement. It has taken steps that practically prevent judges from acting in this role, and there are very few qualified and mutually acceptable other labour arbitrators.
- A search must be made for a solution to the problem of the repudiation by union members of settlements duly consummated with the union negotiating committee.

Answering questions at the conclusion of his address, Mr. Clawson said that he did not at present favour compulsory arbitration of labour disputes. He thought that governments should intervene as little as possible in such matters. But, if the present trend continued, he said, compulsory arbitration might come.

Neither did he advocate the adoption of a system of labour courts on the Australian model (L.G. 1956, p. 957; 1957, p. 336). He thought that it was not usually advisable for one country to borrow ready-made solutions from another country. Each developed its own methods of dealing with various questions in accordance with conditions in that country, and these conditions might not be the same in another country. Moreover, the Australian plan had not been an unqualified success. Strikes occurred in Australia, although there had not been the long-drawn-out strikes that had sometimes been experienced in Canada.

Legislation making a secret strike vote compulsory among the union members did not appear to have reduced the incidence of strikes, Mr. Clawson said. In British Columbia particularly, experience did not suggest that such a law had any value in preventing strikes. There was no evidence that strikes were frequently brought on by a belligerent minority against the wishes of the majority of the members. He said he thought present indications were that wildcat strikes would become more common, and he was concerned about the prospect.

V. O. MARQUEZ

The difficulties of measuring productivity in any particular business were discussed by V. O. Marquez, President of the Northern Electric Company, Montreal. In his address, "Productivity—The Key to Progress," he ventured the opinion that not many of those present would be able to tell, with any degree of accuracy, whether or not their particular business had shown improvement or deterioration in productivity during the past five years. To measure productivity in a particular business was considerably more difficult than measuring national productivity.

"Gains in productivity usually come from a combination of four activities or processes. First, by improving the quality of the factors of production—people and machines; second, by improving the manner in which these productive factors are combined; third, by utilizing the productive factors as nearly as possible to maximum capacity; and, fourth, by eliminating non-essential activities from the productive system," Mr. Marquez said.

"If 10 men produced 10 units of product per hour in 1960, and 10 men are now able to produce 20 units per hour in 1967, it would seem reasonably clear that the productivity of the manpower resource has doubled. On the other hand, since for an individual corporation, manpower is not the only resource used, it would be necessary to determine whether the gain in manpower productivity has been offset, in whole or in part, by losses in the productivity with which other resources were employed.

"If manpower productivity improvement had been achieved by the expenditure of capital dollars for better machinery, it is conceivable that the improvement in manpower productivity might have been partly, or even completely, offset by a loss in productivity of the capital dollars employed in the business . . . industry productivity measurement is not as simple as might appear at first glance."

Again, the speaker said, "When we buy a faster and more costly machine to save labour hours, we have usually made a sacrifice in capital dollar productivity to achieve a gain in productivity per person and per payroll dollar. How accurately do we balance this exchange? When we raise salaries or wages, we automatically reduce the productivity of the payroll dollar, and we must then find ways of obtaining more output per person, or per unit of time, or per capital dollar, to compensate.

"Taxes represent an important element of the cost dollar, and when taxes are raised, business has to find ways to improve output per person, or per capital dollar, or per other cost dollars, or per day, to compensate. There is no other way to maintain or improve productivity."

Reductions in the tariff, particularly in reference to the Kennedy Round, meant that productivity must improve, at least sufficiently to counterbalance the reduction in protection, Mr. Marquez said. The rate at which we improved productivity in Canada in comparison with the United States had now become "a matter of sheer survival. Pressures for immediate wage parity with the United States add fuel to this particular fire."

BRIEF ON CARTER REPORT

The extensive, 56-page brief prepared by the Chamber of Commerce for presentation to the Minister of Finance in response to his invitation to interested parties to express their views on the Report of the Royal Commission on Taxation was circulated during the conference. The following are excerpts from the introduction:

"We note with approval and satisfaction the Commission's efforts to devise a tax structure that would remove as far as possible from the free working of a market economy the distorting effects of tax laws. As a result of the shortage of time, however, Chamber members have not, at least as yet, been able to satisfy themselves that the recommendations advance this objective. Nor have they been able to satisfy themselves that the Commission's assumptions and conclusions about the over-all use of fiscal policy are fully consistent with the principles and objectives that Chamber members endorse, and which we are satisfied reflect the viewpoint of a great majority of Canadians.

"This being the case, the Chamber believes that it is incumbent upon the Government to include, as a major part of its proposed White Paper on taxation, its own detailed assessments of the economic effects of any major changes in the tax structure that it proposes, and the extent to which these confirm, or differ from, those of the Commission. . . .

"While the Chamber has long supported the use of appropriate fiscal policy to stabilize the Canadian economy, the distinct impression has been gained by many who have considered the report that the Commission is advocating much greater use of federal Government tax and expenditure policies for controlling the Canadian economy . . . .

"The Royal Commission is to be commended for attempting precise estimates of the revenue consequences of its recommendations. Since it is not possible for those without complete access to the resources and information available to the Commission to test these computations, we feel it necessary that the Government should do so, and present its own independent conclusions in the White Paper. . . ."

ICFTU Conference

Education in the Labour Movement

Sponsored by the ICFTU, the first world conference on education in the labour movement focussed attention on union action at national and international levels.

The first world conference on education in the labour movement drew 200 participants from more than 50 countries to Montreal to examine labour education and vocational training. Sponsored by the International Confederation of Free Trade Unions, the conference ran from August 15 to 25.

The meeting provided an opportunity for the ICFTU to focus attention on an increasingly important sphere of trade union action at national and international levels. As it was 15 years since the last international meeting on trade union education, the conference also provided a timely opportunity to question and study the validity of past policies, and to examine their efficiency as an instrument for promoting the well-being of trade union members and other workers.

The five working groups set up for the conference dealt with:

- the demands made upon trade unions, and their proposals for programs concerning general education and vocational training;
- forms of trade union training at various levels, from grass roots to international curricula;
- the role of residential colleges, and the functions, status, and preparation of the teachers;
- trade unions and the educational activities of the United Nations specialized agencies and of intergovernmental organizations; and social and economic demands of trade unions related to education, with a focus on manpower planning, educational leave, and social and economic stimuli to promote permanent education.

Vast Changes

In his address to the first plenary session, Herbert A. Tulatz, ICFTU Assistant General Secretary, discussed the role of the free trade union movement in education. He described some of the vast changes that education has brought to trade unionists during the past decade. "Never have the workers of the industrialized world enjoyed a higher standard of life than today," he said.

There remain, however, the problems that confront labour education in developing countries. Mr. Tulatz described the hurdles that developing nations face in their striving for increased productivity. Illiteracy, population increase, scarcity of revenues devoted to education, and the limited size of the "working class" in newly independent nations provide some of the chief barriers to worker education, which until now has been sporadic in these countries. "The school system in colonial days tended to neglect this aspect almost completely," and now these countries have a large gap in vocational training, he said.

Mr. Tulatz paid tribute to the ILO and OECD for their assistance to vocational training centres in Africa, Asia, and Latin America. He called for greater co-operation between the United Nations Educational, Social, and Cultural Organization and non-governmental organizations, including ICFTU affiliates, in order to obviate the UNESCO activities to channel solely through government agencies.

Mutual Self-help

Bernard Tacke, Vice-President of the West German Trade Union Federation, spoke about the place of labour education in the modern concept of education.

"The principle of mutual self-help was and is still today the major principle of the trade union movement and its educational work," he said. The "teaching authority" may hinder the progress of workers' education by preventing solidarity and community spirit among adults. Mutual self-help can foster co-operative learning within workers' education as an effective pedagogic technique. "Economic and social aspects are necessarily brought into vocational training and are closely bound up with working life."

Mr. Tacke summarized workers' education as:

- adult education that caters to the special situation of workers, both inside and outside their work;

Manpower Centres

Quebec province will establish a total of 25 manpower centres, one for each of the economic subregions. This announcement was made during the world conference on labour education by the Minister of Labour for Quebec, Maurice Bellemare.

The purpose of the centres is to keep a check on changes in the labour market in each region. They will attempt to ensure a supply of skilled workers for each area and to carry out training and reclassification of workers.

- trade union training, vocational training, and political training; and
- a reflection of trade union tasks and policies.

"It must be made clear that there is a large identity between trade union political strivings and the general interest." Political education should be an essential task for labour educationists," he said.

Social Upgrading

Pierre Galoni, Confederal Secretary, *Confédération Général du Travail—Force Ouvrière*, of France, described the content and methods of modern permanent education as a social upgrading action. "The term 'social upgrading' covers everything pertaining to education and further training of persons . . .; it thus refurnishes the idea of adult education," he said.

Its objectives are:

- to enlarge the pool of skilled workers from which the economy can draw;
- to enhance the adaptability and mobility of labour, and to increase its capacity for betterment; and
- to improve the efficiency of educational institutions.

He called for further efforts by labour groups to improve the level of scientific and general knowledge; to re-establish the scope and means for freeing workers from the confinements of overspecialization; and to construct a personal cultural balance for workers.

A prerequisite for an efficient trade union movement was outlined before the delegates by Walter G. Davis, Director, AFL-CIO Department of Education. The aim of trade union training is to make unionists aware of the economic, social, and political problems involved in the running of public affairs. Trade union training will make leaders determined to defend the interests of the workers, he said.

Promote and Strengthen

The second area of union training that Mr. Davis described is one to promote and strengthen the union movement. "American unions are now issue-minded in the sense that where there are defeats of labour candidates in local or national elections, it is directly felt by the workers," he said.

That is why, he went on, full-time union representatives are now expected to advise rank-and-file members on political issues in order to explain and promote the objectives of the national trade union movement in the community.

Manual Peñalver, Press Officer of the Venezuelan Confederation of Workers, told the conference that the trade union movement must train leaders to participate in the social and economic life of the nation and to make this participation significant for the workers.

Mr. Peñalver asked the delegates to consider the creation of a co-ordinating commission for labour education throughout the world. He said that unions must maintain their organic independence and teaching autonomy when receiving economic assistance toward labour education from governments, universities, and international bodies.

New Role

Peter Rosenfeld, a representative of the British Union of Shop, Distributive, and Allied Workers, told the conference that unions are ill-prepared for the new responsibilities that they face in economic and social planning in both developing and industrialized countries. He called on the delegates to improve their education programs in ways that would enable union to play a new role.

Governments "faced with growing responsibilities for planning industrial, economic and social developments" are calling on unions to participate in consultative decision-making councils at regional, national, and industry levels, he said.

This is happening in Britain, France, India, South America and Africa, he said, but "we are a long way from the point at which we can claim to be adequately prepared and fitted in terms of skills, knowledge, and attitudes for this exciting role."

Labour Film Festival

About 60 films were entered in the fifth international labour film festival, which was held from August 11 to 15 in Montreal. The festival was held in conjunction with the ICFTU conference on education.

The film entries competed for a best labour film award as well as for prizes in six special subject categories: labour, social and economic, safety and accident prevention, welfare, social studies, and education.

The first place award went to a Canadian film titled "Do Not Fold, Staple, Spindle, or Mutilate," which also won the grand prize of the festival.

The festival was under the auspices of the International Labour Film Institutes, an organization of the ICFTU, with the co-operation of the Canadian Labour Congress and the National Film Board of Canada.

Jobs for professionals decrease during 1967

Jobs for Canadian engineers, scientists and executives decreased by 6 per cent during the first eight months of 1967, compared with the same period in 1966, according to a report issued by the Technical Service Council, a non-profit placement service sponsored by industry.

The survey reports that architects, civil engineers and draftsmen have been laid off by engineering consultants and other firms, and that smaller numbers of professionals have been laid off in the food, appliance, automotive and electronics industries. The report attributes staff reductions to reduced capital expenditures on factories, the high cost of money, uncertainty about business prospects, and increasing professional salaries.

Partly because of layoffs, the number of professional job-hunters increased by 42 per cent. Although most are not out of work, the increase in the manpower pool gives employers a greater choice of candidates, and they are becoming increasingly selective.

Professional job openings tripled between 1961 and 1965, the report stated; and most 1968 university graduates should have little trouble securing positions.

Brain drain from Canada to U.S. is heavy

Canada is losing about $25,000,000 worth of manpower a year to the United States, a recent report indicates. The report, prepared for a U.S. congressional subcommittee on research and technical programs indicated that the brain drain from Canada brought about $17,180,000 worth of engineers and $7,860,000 in medical doctors to the U.S.

Canada leads in supplying technical talent, exceeded in some categories only by Britain. Not all of the migrants, however, are Canadian-born—only 1,844 out of 3,460 in the 1962-64 period.

Canada Pension Plan reviewed in Argentine

Highlights of the Canada Pension Plan are listed in the January issue of *Boletin del Instituto Nacional de Prevision Social*, official publication of the Ministry of Social Welfare and Security, Republic of Argentina.

Specifically, the article deals with the aspects of retirement pensions and those affecting the disabled, widows and children. Financing and administration of the plan are also dealt with.

Much To Criticize

Growing unemployment and rising prices were among the chief targets of criticism levelled at the British Government by delegates to the 99th annual conference of the Trades Union Congress.

The British Government's entire economic policy was brought under fire at the 99th annual conference of the British Trades Union Congress, held at Brighton in September.

The 1,059 delegates, representing a total membership of 8.7 million workers in 169 unions, considered several proposals and recommendations to be presented to the Government.

According to most labour observers and commentators the criticisms raised during the conference will carry great weight in the decision-making process within Britain's Labour Party because the trade unionists provide the Labour Party not only with votes, but also with a great deal of financing for election campaigns.

This year, the TUC found much to criticize in the Government's policies. Growing unemployment, which has risen to 500,000 jobless workers, and rising prices were the chief targets of the attack. Productivity rates would not be maintained if attempts were made to discipline workers by putting large numbers of them out of work, Sir Harry Douglass, President of the TUC, said in his opening address. The trade union movement was not prepared to accept the discipline of unemployment.

Trade liberalization, Sir Harry said, was eroding tariffs slowly but surely. The elimination of tariffs in the European Free Trade Association and the European Economic Community countries accentuated this erosion. Britain's economy rested on achieving an efficiency at least equal to that of overseas competitors, as competition gradually replaced the financial and physical prohibition of imports.

An assessment of total productive capacity in Britain compared with actual output, he said, would reveal the waste of low-capacity production, and accentuate the need for more effective planning, not only for nationalized production but for marketing.

"Our balance of payments problems," Sir Harry continued, "will not be solved in the long term by defensive barriers, but by the acceptance of hard facts and a joint efficiency effort by Government, employers, and trade unionists." The unionists would not accept unemployment, and resentment toward it was shown by the unionists when unemployment remained at a national average of 2 per cent during the incomes freeze (L. G., Dec. 1966, p. 715).

John Boyd, Chairman of the Labour Party, added to Sir Harry's comments by calling for Government regulations to slash exorbitant shop prices. He criticized non-union economic theories that believed in planning that created unemployment, and he blamed them for the failure to bring about economic prosperity and freedom from unemployment. Mr. Boyd urged a return to wartime legislation to stop prices from soaring at a time when wages are being held down.

In addition, the labour unions took the opportunity to criticize the United States war policy in Viet Nam. The TUC approved a resolution that demanded a break with President Johnson's policy there. The motion recommended that the British Government dissociate itself from American policy, and that the Government make every effort, based on the 1954 Geneva agreement, to bring about an end to the present war with a view to implementing withdrawal of foreign troops and introduction of nation-wide elections.

The delegates remitted to the general council a motion calling for an investigation into the operation of the Redundancy Payments Act, 1965. The unionists, in passing the motion, sought to remove clauses in the Act that "can place workers in nationalized industries at a disadvantage compared with other workers." Delegates pointed out that, in private enterprises of single commercial units, no alternative work would be offered to workers who had been laid off. In the nationalized coal mining industry, however, alternative employment in several nearby pits may be available to such workers—and they would be required to make a claim for redundancy lump sum payments if they refused the employment.

The delegates approved also a motion objecting to selectivity as a basis for the payment of social security benefits.

A resolution deploring the Government's policy concerning the redeployment of labour was approved unanimously. It suggested that the Government first ensure that jobs are available in the areas of redeployment, and that subsidized local authorities provide necessary accommodations in those areas. The resolution called on the general council to insist upon a planned industrial policy from the Government to phase the transfer of labour so that the full economic capacity of workers could be realized.

Another motion declared that a voluntary incomes policy should operate against a background of price control. It demanded that the Government operate this aspect of their policy rigorously. In the long run, a successful incomes policy must be operated on a voluntary basis, the motion added. At the same time, it recognized that an elected Government should have some say over wages, salaries, prices, dividends, and profits.

The motion called for:

- recognition of the cost-of-living factors that lead to wage and salary increases;
- maintenance of proper differentials for skill and responsibility in wage scales;
- and a national minimum wage of £15 ($45) a week to be extended to the scale applicable in most salary sectors.

The motion added that the income policy must aim at:

- the achievement and maintenance of a decent standard of living for all working people, their dependants, and pensioners;
- provision of more comprehensive social benefits; and
- redistribution of income.

Despite pleas by George Woodcock, General Secretary of the TUC, the delegates approved a motion deploring the Government's deflationary measures, rejecting Government intervention in collective bargaining, and proposing lines of action.

Opening the debate on the economic situation, Mr. Woodcock said that it was not the job of the TUC to allocate praise or blame to the Government. It was not long ago, he said, that governments accepted practically no responsibility for economic affairs in the country; now, everything wrong in the economy is blamed on the Government. "We are all involved in this business—

Consumer, September 1967

The consumer price index (1949-100) decreased by 0.1 per cent to 150.7 at the beginning of September, from 150.9 in August. It was 3.9 per cent higher than the September 1966 level of 145.1.

The food index decreased 1.8 per cent to 148.5 from 151.2. Lower prices were reported for some fresh vegetables and fresh fruits. Smaller decreases were recorded for poultry, weiners and lamb. Fresh milk and butter prices remained unchanged, and cheese prices increased slightly. There were slight increases in the price of fruit juices, instant coffee and soft drinks. Sugar and infants' food prices declined marginally.

The housing index rose 0.3 per cent to 152.6 from 152.2 as a result of general increases in rents and home-ownership costs, and home furnishings.

The clothing index advanced 1.8 per cent to 134.7 in September, from 132.3. Women's wear items increased, on the average, by nearly 5 per cent; increases in men's wear, children's wear and footwear prices were much less marked.

The transportation index moved up 0.3 per cent to 158.4 from 158.0, reflecting higher prices for automobile repairs and replacements parts, as well as increased bus fares in several major cities.

At 191.4, the health and personal care index declined by 0.3 per cent from 191.9 as the result of a 3.4 per cent reduction in the price of pharmaceuticals. Personal care supplies registered price increases. The recreation and reading index advanced 0.5 per cent to 168.7 from 167.9, as a result of price increases in magazine subscriptions and television repairs. The tobacco and alcohol component was unchanged at 128.6.

Group indexes a year ago in September were: food 147.1, housing (shelter and household operation) 145.4, clothing 127.0, transportation 151.2, health and personal care 181.3, recreation and reading 158.8, and tobacco and alcohol 126.4.

City Consumer, September

Between August and September, consumer price indexes showed mixed movements in nine of the 10 regional cities, ranging from a decrease of 0.5 per cent in Halifax to an increase of 0.5 per cent in Edmonton-Calgary. The index for Saskatoon-Regina remained unchanged.

Food indexes registered declines of from 2.4 per cent to 0.1 per cent in all cities except Winnipeg and Edmonton-Calgary, where increases of 0.3 per cent were recorded. Housing indexes rose in all cities except Halifax where it remained unchanged. There were increases in the clothing indexes, ranging from 2.1 per cent in Toronto and Winnipeg, to 0.8 per cent in Saint John.

The transportation index moved up fractionally in most cities, the exceptions being Saint John and Saskatoon-Regina, where increases of 1.6 per cent and 1.1 per cent were recorded, and St. John's, Newfoundland, where there was a slight decline. Removal of the federal sales tax on pharmaceuticals resulted in lower health and personal care indexes. The recreation and reading indexes advanced slightly in all cities, while those for tobacco and alcohol remained unchanged.

Regional consumer price index point changes between August and September were: Halifax −0.7 to 142.4; Montreal −0.6 to 149.1; Ottawa −0.3 to 148.3; Saint John −0.2 to 145.7; St. John's −0.1 to 130.8;* Saskatoon-Regina unchanged at 140.9; Toronto +0.1 to 152.2; Vancouver +0.4 to 145.1; Winnipeg +0.6 to 147.1; Edmonton-Calgary +0.7 to 142.0.

Wholesale, August 1967

The general wholesale index (1935-39=100) moved up 0.3 per cent in August to 264.6 from the July index of 263.7 and was 1.6 per cent higher than the August 1966 index of 260.4. Seven major group indexes were higher, and one declined.

The animal products group index rose 0.5 per cent to 294.1 from 292.7 on higher prices for eggs, livestock, and fresh meats. In response to price increases for silver, the non-ferrous metals products group index rose 1.8 per cent to 240.0 from 235.7. The non-metallic minerals products group index moved up 0.4 per cent to 200.1 from 199.3, and the wood products group index advanced 0.3 per cent to 348.0 from 346.9. Increases of 0.2 per cent or less occurred in the following major group indexes: vegetable products to 231.2 from 230.8; chemical products to 212.3 from 211.8; and textile products to 252.9 from 252.8. The iron products group index moved down 0.5 per cent in August to 273.9 from 275.2.

*On base June 1951=100.

Farm Products Prices

The index of Canadian farm products at terminal markets (1935-39=100) decreased 0.4 per cent to 258.0 from 259.1 in the three-week period September 1 to September 22. The field products index moved down 1.3 per cent to 185.8 from 188.2, and the animal products index advanced 0.1 per cent to 330.3 from 330.1.

U.S. Consumer, August 1967

The United States consumer price index (1957-59=100) rose by 0.3 per cent between July and August. The index in August was 116.9 and for July it was 116.6.

Higher prices for food, services and tobacco accounted for the August increase. The overall consumer prices were 2.7 per cent above those of a year ago.

British Retail, August 1967

The British index of retail prices (Jan. 16, 1962-100) was 118.9 at August 22, compared with 119.2 at July 18 and 117.3 at August 16, 1966.

The decrease was due to seasonal reductions in the prices of most fresh vegetables, partly offset by increases, also seasonal, in the prices of eggs.

The index for the food group as a whole dropped by less than 3 per cent to 116.6, compared with 118.4 in July.

In the transport and vehicles group as a whole, the index fell slightly to 112.6, compared with 112.7 in July.

As a result of increases in admission charges to football games and theatres, and for services such as hairdressing, shoe repairing and watch repairing, the index for the services group as a whole rose by nearly one half of one per cent to 126.8, compared with 126.3 in July.

In the remaining seven groups, there was little change in the general level of prices.

Job Opportunities And Employment Practices

Women's Bureau

Progress is opening up new job opportunities for women and removing discriminatory employment practices based on sex, according to the third annual report of the United States Interdepartmental Committee and Citizens' Advisory Council on the Status of Women. Included in the report is a summary of the most recent developments in federal and state education and legislative measures affecting women.

Many of the changes in employment practices date from the passage of the Civil Rights Act of 1964, which prohibits discrimination in employment based on sex, as well as on race, colour, religion and national origin. The Act became effective in July 1965, at which time the President appointed a five-member Equal Employment Opportunity Commission to administer the Act.

All private employers, public and private employment agencies, labour organizations, and joint labour-management apprenticeship programs, involving 50 or more persons are covered by the Act. By July 1968, the requirement for persons will be reduced to 25. They will have to have been on the payroll of an employer for 20 weeks or more during the calendar year, a provision that allows for coverage of many part-time as well as full-time employees.

Employers Comply

A private survey of employers*, conducted a year after introduction of the Act, revealed that three out of 10 companies surveyed had made personnel policy changes that complied with the intent of the legislation. These changes were ranked by the survey, in order of frequency, as follows:

- maternity leave instituted for pregnant employees (one half of the offices and one third of the plants surveyed made this change;
- women allowed to include husbands as dependents under group life or health insurance plans;
- segregated male-female seniority lists unified;
- reference to sex omitted in job postings;
- retirement age of men and women equalized;
- increase in amount of group life insurance for women employees;
- "equal pay" changes.

As elsewhere in the West, the female labour force in the U.S. is showing rapid growth. It increased 5.2 per cent in 1966 to 28.7 million compared with a 0.6 per cent increase for men. The Act is assisting this trend by opening up new job opportunities in work previously classified as "male only."

First Annual Report

During its first year of operation, the Commission was virtually swamped by 8,854 allegations of employment discrimination—four times the number anticipated by the previous experience of state Fair Employment Practice Commissions. The first annual report of the federal Commission, issued in June 1966, gives an analysis of the complaints received, by subject matter and broad category.

Racial discrimination was the basis for 59 per cent of the complaints, but 37 per cent concerned alleged discrimination based on sex. The remainder were based on discrimination concerning national origin or religion. Where states have laws and procedures for dealing with such complaints, they must be dealt with first at the state level—or the federal EEOC may defer to the state for a maximum of 120 days to handle the problem.

Of the complaints the EEOC received based on sex discrimination, over half, 726, concerned a difference in benefits received by male and female employees; and 588 were based on layoff, recall and seniority issues. Only a small percentage concerned wage differentials, because equal-pay complaints may also be made under the federal Fair Labor Standards Act, or through similar legislation in 29 states.

The effect of EEOC rulings spreads beyond individual cases, because the Commission actively pursues a policy "firstly, to obtain prompt and appropriate relief for the charging party; and secondly, to seek a remedy for the underlying problem of discrimination. A charge of job discrimination is frequently a symptom of widespread disease." In one instance, when the EEOC persuaded a New Orleans restaurant to comply with the Act, it sought also to secure compliance from all other restaurants in the city to avoid jeopardizing the one operator's competitive position.

Far-reaching Effects

Among opinions of the EEOC that have broken new ground and may be expected eventually to have far-reaching effects are the following:

Age—An employer may not refuse to hire a woman because of age unless a similar policy is applied to men.

Insurance—If a company or negotiated health insurance plan provides maternity benefits to wives of male employees, but not to female employees, it contravenes the Act. So does payment of smaller sick benefits or life insurance benefits to female employees than to male employees. To prevent duplication, however, participation in an insurance plan may be confined to the principal breadwinner in the family.

Pregnancy—Refusal to recall a female worker after pregnancy violates the Act, because it denies a woman the same recall rights that a male would have after a prolonged illness. The Commission has ruled that the employer may determine (subject to any collective agreement provision to the contrary) when a pregnant

The National Training Course for Sheltered Workshop Personnel

Vocational Rehabilitation Branch
Department of Manpower
and Immigration

The first national training course of sheltered workshop personnel was held from August 14 to 31 at York University, Toronto. The participants were from all parts of Canada, represented a variety of interests, and included instructors and directors of programs in both government institutions, and voluntary agencies. The course was sponsored by the Canadian Association for Retarded Children, in co-operation with the Vocational Rehabilitation Branch of the Department of Manpower and Immigration.

J. M. Larkin, Chief of the Vocational Rehabilitation Services, Ontario Region, Department of Manpower and Immigration, stressed the need for an organized approach to the many areas of rehabilitation. Close co-operation between government and private agencies serving the handicapped was imperative, he said—and he cited the National Training Course as a prime example of a way in which the government and a private agency could co-operate.

The primary objective of the training course was to contribute to the personal and professional growth of people already engaged in providing rehabilitation services for the handicapped, and to increase the number of qualified and competent workshop supervisors, managers and directors. It is common knowledge that the shortage of trained personnel to work with the disabled is one of the most serious problems confronting rehabilitation programs.

Course Director William C. Berendsen, National Consultant in Sheltered Workshop Services for the Canadian Association for Retarded Children, pointed out that "since medical and psychological rehabilitation have advanced more rapidly than vocational rehabilitation, a serious situation has been created. It is an imperative need to bridge the gap between these services and ultimate job objective—a need with which workshops are especially concerned. This demands increased knowledge about the world of work, fitting the handicapped to specific jobs, fitting specific jobs to certain handicapped individuals, the physical demands of various types of work, the emotional demands of various types of work, the organization and relationships of labour and management."

Walter N. Boyd, Provincial Co-ordinator of Rehabilitation Services for Manitoba, stated: "Our function in rehabilitation is to assist the individual to determine his remaining abilities or capabilities, to evolve a vocational rehabilitation objective that is related to these abilities, and to assist the individual to use his resources and those in the community to make the maximum use of these abilities both economically and socially."

Mr. Boyd went on to note that, from the standpoint of the employer, in order for a person to function effectively in an employment situation, whether this be in competitive employment or in sheltered employment, four basic assets must be present:

- the individual must be able to work with other people;
- he must be able to produce something of dollar value;
- he must be able to comply with the industrial requirements of the employment situation; and
- he must be able to accept supervision.

Without these four prerequisites, said Mr. Boyd, a person will be unable to keep a job.

The neurological, medical and physical aspects of the various areas of disability were described by Dr. S. J. Keogler, Superintendent of the Mental Retardation Centre, Toronto, and Dr. M. C. P. Cameron, Professor of Physical Medicine and Rehabilitation, University of Western Ontario.

Work assessment and work adjustment, subjects of great importance to many workshops, were discussed and illustrated with case histories by J. L. Campbell, Assistant Director, Vocational Guidance and Rehabilitation Services, Cleveland, Ohio. Of special interest was his explanation of his "Phase-Task" approach—which he defined as the breaking down of a process of change into manageable units. Work adjustment was discussed in a four-phase framework: settling in; learning, growth; and job readiness.

In his lectures on "Work Study," A. D. McCoshen, consultant with Woods, Gordon & Company, said that "the value of work study lies in the fact that, by carrying out its systematic procedures, quite ordinary men can achieve results as good as, or better than the less systematic genius was able to achieve in the past. It is the most penetrating tool of investigation available to management, because, in investigating one set of problems, the weaknesses of all the other functions affecting the efficiency of the operation will be laid bare, so that the development of the solution to the problems have far-reaching effects."

Employment opportunities of the handicapped were highlighted by R. McCormack, consultant, Vocational Rehabilitation, Prairie Region, Department of Manpower and Immigration. A number of actual placement cases were discussed and illustrated with slides.

It was thought by the participants that, as a pilot project, the course was an unqualified success. The three weeks, however, did not afford sufficient time to go deeper into certain areas of study; and those expressed interest in follow-up specialist courses in such areas as work assessment and adjustment and methods study.

The unanimous hope of the participants was that the course would mark the inception of continuing training for sheltered workshop personnel, so that Canada would have a sufficient number of qualified persons to meet the needs of an expanding rehabilitation program.

Knowing Employees By Name

Labour-Management Consultation Branch

No one expects the manager of a large plant or service industry operation to know all his employees by name. But he should make an effort to periodically make himself available to the employees. One method is for him to take part in the activities of a labour-management committee.

This is the gist of an argument put forward by William Cranston, Chairman of the Economic Council of Ontario. Mr. Cranston, who firmly believes that labour-management consultation "is necessary if we are to enjoy economic growth," bases the following remarks on his experience in industry, newspapers and Government:

"A member of management is inevitably strictly handicapped in terms of his ability to get to know his staff, their problems and their potentials. But he should be involved periodically, rather than leave it to his middle-level staff. In saying this, I in no way suggest that the role of the intermediary communicators—the plant superintendent or personnel manager or union representative—should be downgraded. On the contrary, the basic inability of senior management ever to get to know enough of the employees in a large bargaining unit makes the function of these communicators not only highly essential but of growing importance.

"The man from senior management can only sweeten relations in the plant by periodically making himself available as a person around the plant. One method is for senior management to participate in labour-management committees. It should pay dividends in an understanding employee-managerial atmosphere, and will assist the union to know "the weight of the man" during contract negotiations.

"Unfortunately, the opportunities for senior management to mix with the employees diminishes as the size of the company increases. The manager should have little difficulty, however, ensuring a measure of personal contact in a unit of up to 200 employees.

"Turning to another area, the responsibility and right of management is to do its best to protect the security of employees, shareholders and itself by making the most effective adjustments to the market in terms of price, production and investment policy. Their collective job security, indeed, often hinges on the ability to make every possible investment in machinery and methods which will increase productivity and thus permit lower selling prices and wider product or service acceptance by the consumer public.

"Management should make a sincere attempt to tell the union of its problems. In particular, management hasn't worked hard enough to educate their employees as to the role of government. I believe this can be done at committee meetings and by occasional articles in the company newspaper."

Domtar Packaging

The labour-management committee at Domtar Packaging Ltd., Corrugated Products Division, Montreal, never forgets. Organized on a formal basis early this year, the committee has set itself guidelines to ensure that no item is fumbled off the agenda, or put on ice.

This is done by a numbering system; each item is given a number when it appears on the agenda. By early fall, the highest number was 61, meaning that 60 items had preceded it onto the agenda since meetings began. It doesn't mean, though, that all 60 had been settled. A few are carried from meeting to meeting, often because a quick answer is physically impossible. But not one has been neglected, since topics at each meeting are discussed in chronological order, with "old" business superseding "new."

Roger Turgeon, Production Manager, explains: "It's to make sure we answer every problem. We know we can't forget something." Before a number, and the question it represents, can be taken off the agenda, he said, it must either be settled to the satisfaction of the committee, or withdrawn by the person who put it there.

Hourly-rated workers are represented by Local 314, International Chemical Workers' Union (AFL-CIO/CLC). Some 280 persons are employed at the plant, which produces corrugated cardboard containers.

The current committee, which features hard-and-fast rules and effective problem-solving discussions, was an improvement on an informal arrangement for meetings used prior to a two-month strike last year. According to Mr. Turgeon, the atmosphere after the strike was conducive to the development of a rationalizing approach to mutual problem areas.

Bernard Boulanger, union representative who supports the committee, says it grew from a "mutual desire to re-establish good co-operation."

Five unionists are on the committee, one elected by fellow workers in four of the five departments. The President of the Local is a permanent member of the committee. Other permanent members are: Mrs. R. F. Petch, personnel officer; Gaston Beauchemin, Production Superintendent, and Mr. Turgeon. Foremen are invited to meetings when discussion centres on their departments. On the average, two foremen attend each meeting.

Both union and management committee members prepare for meetings. Besides looking after old business, they exchange a list of topics one week prior to each meeting, and the two groups do preliminary work on the new items, in order to accomplish as much as possible at the meeting.

Referring to the constructive tone of the meetings, Mr. Turgeon says, "When we are both giving at the same time, it is easier for each party to understand the other's problems." Monthly meetings last about four hours, on company time. They start at 10 a.m. and continue after lunch. Topics handled at a recent session included overtime, installation of new machinery and group insurance.

Roger Robillard, chief union steward, finds that the exchange of ideas at meetings avoids grievances. Léonide Dionne, President of the local, says that the meetings help define management and union responsibilities. A management and a union secretary attend the meetings, and afterwards they compare their minutes, and combine them in a summary that is sent to all employees.

According to Mr. Boulanger, one value of the committee is that it "helps us see what's ahead . . . takes away insecurity." For example, by informing the committee in advance of plans to install new machinery, the company was able to give the union advance information on the possible effects of the new installation on the employees. "The committee," he concludes, "is a buffer that will avoid a lot of grievances."

Job Redesign for Older Workers in the United States

Older Workers' Section
Department of Manpower
and Immigration

"With 40 per cent of the labour force made up of workers 45 years of age and over, redesigning jobs to accommodate the actual capabilities of older workers is attracting increasing interest. It is coming to be recognized both as a practical need under current conditions of shortages of experienced workers, and as an opportunity for translating enlightened social policy into action."

This quotation is from the preface to the report on a study, *Job Redesign for Older Workers—Ten Case Studies*,* which was prepared by the U.S. Bureau of Labor Statistics. It was undertaken as part of the U.S. Department of Labor's program to promote the full use of human resources.

As the physical capabilities of workers decline with age, there are three general ways of approaching the problem. The first is to reassign the worker to a position which makes fewer demands on him, at the same or a lower rate of pay. Reassignment often involves retraining in the new position. The second is to retire the older worker at a full or reduced pension. Early retirement rarely begins before age 55, however, and then usually at a reduced rate. The third is to eliminate those physical or perceptual demands of the job that create stress for the older workers. By modifying equipment or rearranging work flow, older workers can be helped to perform their remaining tasks more easily, and to continue working for the same employer.

The report contains additional information about the experiences of companies that have been successful in redesigning jobs for older workers.

Out of 500 large corporations surveyed in connection with this particular older worker problem, 284 replied. Only a small number indicated that they had redesigned jobs specifically for older workers. Many indicated that they had reassigned older workers to easier jobs, or had set aside specific jobs for older workers. A few organizations retired early those aging workers with declining capacities.

Studies made at plants where job redesign had been introduced led to the following observations:

- jobs are constantly being redesigned to improve efficiency, but only occasionally to adapt the job to the limitations of older workers;
- job redesign for older workers has been incorporated in the operations of both large and small establishments, and in a variety of manufacturing industries producing goods ranging from carpets to aircraft engines;
- job redesign has been applied in a variety of jobs being performed by both unskilled workers and highly skilled craftsmen;
- informal action by foremen or plant managers to modify jobs to suit the capabilities of older workers was more typical; formal programs were not so common;
- job redesign necessitates a change in job content, together with equipment improvement, or a reallocation of duties among workers according to job capacity;
- job redesign for older workers usually entails very little expenditure for new equipment, and scarcely any loss of output due to work interruption;
- job redesign for older workers generally results in improved productivity;
- when job redesign involves mechanization, some older workers are displaced; others are reassigned or retired;
- job redesign, as opposed to reassignment, has some advantages for both the older worker and management;
- wider dissemination of information about job redesign is needed.

Summaries of two of the 10 case studies provided in the report of job redesign projects are as follows:

In the first case study, a man of 54 had operated an electric locomotive crane at a slag plant for most of his 25 years with the company. The crane was old, and to operate it required experience, together with strength and dexterity while standing. The operator developed a painful skin condition, lost strength, and began having trouble standing throughout a full working day. As a result, his work output declined.

Returning to work after almost two years of disablement, the employee applied for his old job. Persons hired to replace him during his absence had not been entirely satisfactory, so the company rehired him and installed pneumatic controls at a cost of about $500. The man was able to remain seated at his job, and he operated the crane at his previous rate of pay.

In the second case study, the output of a group of 20 "top stitch" women workers at a shoe factory, most of whom were over 50 years of age, was declining, and absenteeism and complaints were increasing.

The job required the women to stitch the shoe's lining to the upper leather, and it included selecting the materials from a supply rack, sewing, trimming, and carrying the completed pieces to the next operation. This physical movement demanded a lot of squatting, stooping and bending. The job was eventually reorganized so that two "service workers" were chosen from the group. They did all the moving of materials, leaving the other 18 women to work without interruption. After two months, productivity increased 16 per cent, absenteeism declined, and employee complaints became rare.

Certification and Other Proceedings

Before the Canada Labour Relations Board

Employee Representation Branch

The Canada Labour Relations Board met for four days during September. It granted three applications for certification, rejected one, ordered four representation votes in certification proceedings, and one vote in revocation proceedings initiated by the Board. It also granted one request for the review of an earlier decision, and allowed the withdrawal of one application for revocation of certification. The Board received 11 applications for certification and one application for revocation of certification.

Applications for Certification Granted

1. National Association of Broadcast Employees and Technicians on behalf of a unit of certain employees in the Programming and Operations Departments of the CTV Television Network Limited, Toronto, Ont. (L. G., June, p. 364).

2. *Syndicat des employés de la Banque d'Epargne de la Cité et du District de Montréal* on behalf of a unit of certain employees of the Montreal City and District Savings Bank, Montreal, Que. (L. G., July, p. 416).

3. International Union of Operating Engineers, Local 115, on behalf of a unit of operators and maintenance employees employed on a project at Carmacks, Yukon Territory, by Poole Engineering Company Limited, Edmonton, Alta. (L.G., Nov., p. 698).

Application for Certification Rejected

International Brotherhood of Electrical Workers, applicant, the Bell Telephone Company of Canada, respondent (plant department), and Canadian Telephone Employees' Association, intervener (L. G., Feb., p. 129). (Reasons for Judgment published in L. G. Supplement No. 7, 1967).

Representation Votes (Certification)

1. International Longshoremen's Association, applicant, Clarke Steamship Co. Ltd., Montreal, Que., respondent (L. G., Aug., p. 496), and Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, intervener. The Board directed that the names of the applicant and of the intervener appear on the ballot (Returning Officer: R. L. Fournier).

2. International Union of Operating Engineers, Local 115, applicant, and Western-Freeway Venture, Edmonton, Alta., respondent (project in Y.T.) (L. G., Sept., p. 581) (Returning Officer: D. H. Cameron).

3. Beverage Dispensers, Hotel Service, Culinary and Restaurant Employees' Union, Local 579, applicant, and Pine Point Hotel, Pine Point, N.W.T., respondent (L. G., Sept., p. 581) (Returning Officer: D. H. Cameron).

4. Cartage and Miscellaneous Employees' Union, Local 931, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, applicant, and J. E. Fortin Transport, Inc., Blackpool, Que., respondent (L. G., Oct., p. 643) (Returning Officer: G. R. Doucet).

Representation Vote (Revocation)

International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada, applicant, and the Canadian Broadcasting Corporation, respondent (L. G., Oct., p. 643) (Returning Officer: A. F. Tulloch).

Request for Review Granted

International Association of Machinists and Aerospace Workers (formerly International Association of Machinists), applicant, Canadian Pacific Air Lines, Limited, Vancouver Airport, B.C., respondent, and D. A. Robinson, *et al.*, interveners (L. G., Nov., p. 698). The Board granted the request for review by

This section covers proceedings under the Industrial Relations and Disputes Investigation Act involving the functions of the Canada Labour Relations Board, for which the Employee Representation Branch of the Department is the administrative agency.

amending a certificate issued to the applicant on August 27, 1948, so as to include in the existing bargaining unit certain technicians and certain clerical employees employed at Vancouver Airport, and lead steward and stewards employed at Montreal Airport. The inclusion of the clerical employees followed a representation vote of these employees to determine their wishes concerning inclusion.

Application for Revocation Withdrawn

Marie Close, *et al.*, applicants, Canadian Pacific Air Lines, Limited, Vancouver Airport, B.C., respondent, and Local 28, Hotel and Restaurant Employees' and Bartenders' International Union, respondent.

Applications for Certification Received

1. Teamsters, Chauffeurs, Warehousemen and Helpers, Local 141, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of drivers and mechanics employed by A. & H. Express Lines Ltd., London, Ont. (Investigating Officer: H. A. Fisher).

2. General Truck Drivers' Union, Local 938, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of checkers, dock workers and mechanics employed by Midland Superior Express Limited, Rexdale, Ont. (Investigating Officer: H. A. Fisher).

3. International Brotherhood of Boilermakers, Iron Ship Builders, Blacksmiths, Forgers and Helpers, Local 359, on behalf of a unit of certain employees of Yukon Welding, Whitehorse, Y. T. (Investigating Officer: C. M. Gilmour).

4. United Brotherhood of Carpenters and Joiners of America, Lumber and Sawmill Workers, Local 3012, on behalf of a unit of employees of the Restigouche Log Driving and Boom Company, Campbellton, N.B. (Investigating Officer: D. T. Cochrane).

5. Transport Drivers, Warehousemen and Helpers' Union, Local 106, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of drivers and other employees of Sicotte Transport Ltd., Montreal, Que. (Investigating Officer: R. L. Fournier).

6. AM/TV Employees' Association on behalf of a unit of employees of A. A. Murphy & Sons Limited, Saskatoon, Sask., employed at Radio station CFQC and TV station CFQC-TV (Investigating Officer: A. E. Koppel).

7. General Truck Drivers' and Helpers' Union, Local 31, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of drivers and other employees of Security Storage Division of Motorways Van Lines Ltd., North Vancouver, B.C. (Investigating Officer: C. M. Gilmour).

8. United Steel Workers of America, Local 6536, on behalf of a unit of certain employees of Arctic Mining and Exploration Limited (N.P.L.), Carcross, Y.T. (Investigating Officer: C. M. Gilmour).

9. Canadian Brotherhood of Railway, Transport and General Workers on behalf of a unit of pilots employed by West Coast Air Services Limited, Vancouver Airport, B.C. (Investigating Officer: D. H. Cameron).

10. Beverage Dispensers & Culinary Workers' Union, Local 835, on behalf of a unit of cookhouse employees employed at Clinton Creek, Y.T., by Cordner, Hubert & Bond, Montreal, Que. (Investigating Officer: D. H. Cameron).

11. Transport Drivers, Warehousemen and Helpers' Union, Local 106, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of truck drivers employed by *J. M. Ferland Transport Ltée*, Valcourt, Que. (Investigating Officer: R. L. Fournier).

Application for Revocation Received

Kenneth Eiswerth, *et al.*, applicants, Chauffeurs, Teamsters and Helpers, Local 395, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, respondent, and Continental Trucking Ltd., Saskatoon, Sask., respondent. The application is for the revocation of the Board's order of July 26, 1966, certifying the respondent union as bargaining agent for a unit of employees of Continental Trucking Ltd. (L. G., Oct. 1966, p. 589).

Scope and Administration of Industrial Relations and Disputes Investigation Act

Conciliation services under the Industrial Relations and Disputes Investigation Act are provided by the Minister of Labour through the Conciliation and Arbitration Branch. The Employee Representation Branch acts as the administrative arm of the Canada Labour Relations Board in matters under the Act involving the board.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944 and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until superseded by the Wartime Regulations in 1944. Decisions, orders and certificates given under the Wartime Regulations by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the Act.

The Act applies to industries within federal jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the federal Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of conciliation officers, conciliation boards, and Industrial Inquiry Commissions concerning complaints that the Act has been violated or that a party has failed to bargain collectively, and for controlling applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents; the writing of provisions—for incorporation into collective agreements—that fix a procedure for the final settlement of disputes concerning the meaning or violation of such agreements; and the investigation of complaints referred to it by the Minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act, the Regulations made under the Act, and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported here under two headings: 1. Certification and Other Proceedings Before the Canada Labour Relations Board; and 2. Conciliation and Other Proceedings Before the Minister of Labour.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, Halifax and St. John's, Newfoundland. The territory of the officers resident in Vancouver comprises British Columbia, Alberta and the Yukon and Northwest Territories; officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; officers resident in Toronto confine their activities to Ontario; officers in Montreal are assigned to the province of Quebec; and officers resident in Fredericton, Halifax and St. John's represent the Department in the Atlantic Provinces. The headquarters of the Conciliation and Arbitration Branch and the Employee Representation Branch are in Ottawa.

Conciliation and Other Proceedings

Before the Minister of Labour

Conciliation and Arbitration Branch

During September, the Minister of Labour appointed Conciliation Officers to deal with the following disputes:

1. *Aeronaves de Mexico, S.A.* (Toronto and Montreal Offices) and International Association of Machinists and Aerospace Workers (Conciliation Officer: T. B. McRae).

2. Canadian Arsenals Limited, Toronto, Ont., and Canadian Union of Operating Engineers (Conciliation Officer: T. B. McRae).

3. Midland Superior Express Limited, North Burnaby, B.C., and Local 31, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Conciliation Officer: D. S. Tysoe).

4. Robin Hood Flour Mills, Ltd., Port Colborne, Ont., and United Packinghouse, Food and Allied Workers, Local 416 (plant employees) (Conciliation Officer: T. B. McRae).

5. British Yukon Navigation Company Limited, Vancouver, B.C., and Canadian Brotherhood of Railway, Transport and General Workers (Conciliation Officer: D. H. Cameron).

6. National Harbours Board, Churchill, Man., and Public Service Alliance of Canada (Conciliation Officer: A. E. Koppel).

Settlements by Conciliation Officers

1. Continental Explosives Ltd., Vancouver, B.C., and Canadian Merchant Service Guild (Conciliation Officer: D. S. Tysoe) (L.G., Nov., p. 698).

2. Canadian Pacific Railway Company (Atlantic, Eastern, Prairie and Pacific Regions) and Brotherhood of Locomotive Engineers (Conciliation Officer: C. E. Poirier) (L.G., Sept., p. 581).

3. National Harbours Board, Port of Montreal, and Seafarers' International Union of Canada (Conciliation Officer: C. E. Poirier) (L.G., Aug., p. 498).

Conciliation Board Appointed

Blue Peter Steamships Limited, St. John's, Nfld., and Canadian Merchant Service Guild (L.G., Oct., p. 644).

Conciliation Boards Fully Constituted

1. The Board of Conciliation and Investigation established in August to deal with a dispute between Eastern Provincial Airways (1963) Ltd., Gander, Nfld., and Local 1763, International Association of Machinists and Aerospace Workers (L.G., Nov., p. 699) was fully constituted in September with the appointment of James W. Conway, St. John's, as Chairman. Mr. Conway was appointed by the Minister on the joint recommendation of company nominee Alec Henley and union nominee Boyd A. Rowe, both of St. John's.

2. The Board of Conciliation and Investigation established in August to deal with a dispute between Canadian National Hotels Limited (Fort Garry Hotel, Winnipeg) and Canadian Brotherhood of Railway, Transport and General Workers (L.G., Nov., p. 699) was fully constituted in September with the appointment of Roy A. Gallagher, Q.C., Winnipeg, as Chairman. Mr. Gallagher was appointed by the Minister in the absence of a joint recommendation from company nominee K. G. Houston and union nominee Art Coulter, both of Winnipeg.

Board Reports Received*

1. Hudson Bay Mining and Smelting Co., Limited, Flin Flon, Man., and United Steelworkers of America (L.G., Nov., p. 699).

2. Consolidated Aviation Fueling of Toronto Limited, Toronto International Airport, and Local 717, International Association of Machinists and Aerospace Workers (L.G., Nov., p. 699).

Disputes Lapsed

1. Grenier Express Inc., Shawinigan, Que., and Local 106, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (L.G., June, p. 364).

2. Continental Trucking Ltd., Saskatoon, Sask., and Local 395, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (L.G., Apr., p. 248).

Strike Action

1. Consolidated Aviation Fueling of Toronto Limited, Toronto International Airport, and Local 717, International Association of Machinists and Aerospace Workers (see above).

2. Cargill Grain Company Limited, Baie Comeau, Que., and National Syndicate of Employees of Cargill Grain Company Limited (CNTU) (L.G., Oct., p. 644).

This section covers proceeding under the Industrial Relations and Disputes Investigation Act involving the administrative services of the Minister of Labour and the Conciliation and Arbitration Branch of the Department.

*Full texts published in L.G. Supplement No. 7, 1967.

Legal Decision Affecting Labour

Ontario High Court has ruled that the operation of a limousine service at a federally owned airport is not within federal jurisdiction in relation to the field of aeronautics.

Legislation Branch

On February 27, 1967, Mr. Justice Donohue of the Ontario High Court held that a limousine service to and from a federally owned airport makes operation of the airport somewhat more orderly, but the airport could function without it. Consequently such a transportation service, not being necessarily incidental to the exercise of federal legislative authority over the field of aeronautics, is not within federal jurisdiction. On the other hand, where part of the operation of a limousine company is interprovincial, its operation would come under federal jurisdiction; but the federal Motor Vehicles Transport Act delegated to the provincial motor vehicle licensing bodies the authority to license buses and trucks carrying on interprovincial business. Consequently the Ontario Transport Board had jurisdiction to issue provincial as well as extraprovincial operating licenses, and the hearing of an application for an extension of such licenses could not be prohibited by an order of prohibition.

Circumstances of Dispute

An application was made for an order of prohibition directed to the Ontario Highway Transport Board to prohibit the Board from proceeding with hearings and from granting an extension of an operating license issued pursuant to the Ontario Public Vehicles Act, and of an extraprovincial operating license issued under the federal Motor Vehicle Transport Act, both held by Air Terminal Transport Limited. The circumstances that led to this application were outlined by Mr. Justice Donohue in his reasons for judgment.

In May 1964, the Air Terminal Transport was granted, by the Ontario Registrar of Motor Vehicles, a public vehicle operating license 1519 to conduct the business of carriage of passengers, their baggage and express freight between: "A. Metropolitan Toronto and Toronto International Airport (Malton); and B. The City of Hamilton and the Toronto International Airport (Malton) including intermediate points."

The same license enables the company, in case of emergency, to carry air passengers and air crew to and from Toronto Airport and to other airports and places in Ontario.

In April 1965, the same company received from the Ontario Registrar of Motor Vehicles an extraprovincial operating license X155 to carry passengers on chartered trips from Toronto Airport to the International Boundary at the Niagara River for additional transport to authorized points in the U.S.A., to carry airline crews to and from the U.S.A.; and, under conditions of emergency, to carry airline passengers and crew from Toronto Airport to the Ontario-Quebec border for further transport to points in Quebec.

The Ontario Transport Board derives its jurisdiction, and powers with respect to the operation of motor vehicles on Ontario highways, under the statutes enacted by the Ontario Legislature—in particular the Public Vehicles Act, the Ontario Highway Transport Board Act, and the Regulations issued under these statutes.

With respect to licensing of vehicles for the transport of passengers on undertakings connecting Ontario with any other province, or extending beyond the limit of Ontario, the Board derives its jurisdiction and functions under the federal Motor Vehicle Transport Act.

Under the Public Vehicles Act, the Ontario Transport Board issues certificates of public necessity and convenience. Regarding the operation of public vehicles on property owned by Her Majesty the Queen in right of Canada, the board does not issue certificates of public necessity or convenience, nor does the Ontario Minister of Transport issue vehicle licenses for such purpose. Consequently the licenses issued to Air Terminal Transport permitted operation of public vehicles on Ontario Highways only up to and from the boundary of the large area occupied by Toronto Airport.

It was noted that Air Terminal Transport holds a lease from the federal Government for the exclusive right and privilege to maintain and operate a limousine and taxi service at the Airport.

In May 1966, Air Terminal Transport gave notice in the Ontario Gazette that it

would apply to the Ontario Transport Board for extension of its said extra-provincial operating license X155 for the following purposes:

to carry charter passengers from Toronto Airport to the U.S.A. border at all border points, and to carry passengers to the U.S.A., entering at any border point to the said Airport and to Metropolitan Toronto;

to carry charter passengers from the said Airport and Metropolitan Toronto to the Ontario-Manitoba border for furtherance to points in Western Canada as authorized, and to carry charter passengers from points in Western Canada as authorized from the Ontario-Manitoba border to the said Airport and Metropolitan Toronto;

to carry passengers to and from points in Quebec to the said Airport and Metropolitan Toronto.

Apparently, the purpose of these extensions was to allow the company greater scope in points of entry and exit to and from the U.S.A., and to allow runs through Ontario to Western Canada and Quebec, and to permit the local departure point and terminus to be Metropolitan Toronto as well as Malton Airport.

In the same item in the Ontario Gazette, Air Terminal Transport gave notice also that it would apply to the Ontario Transport Board for an extension of its license 1519 by deleting the restriction that charter trips be limited to airline passengers from Toronto Airport to points in Ontario, and substituting a provision that charter trips from Toronto Airport and Metropolitan Toronto be restricted.

It appeared to Mr. Justice Donohue that this substitution meant that charter trips would not be permitted from Toronto Airport or Metropolitan Toronto. It could mean also that charter trips might commence at either Toronto Airport or Metropolitan Toronto.

According to the rules and practices established by the Ontario Transport Board, objections to the extension of licenses in the case at bar were filed by four applicants who claimed that they already supplied adequate service, and that public necessity and convenience did not call for extension of the company's licenses.

In June 1966 a hearing began before the Ontario Transport Board with all parties represented by counsel on the question of public necessity or convenience, as it applied to the requested extension of the existing operating licenses of Air Terminal Transport. After hearing 23 witnesses, the Board adjourned the matter to September 12, 1966, and later to October 17, 1966.

On the resumption of hearings on October 17, counsel for Colonial Coach Lines requested that the Board state a case to the Court of Appeal under the provisions of Sec. 19 of the Ontario Highway Transport Board Act on the following questions:

1. Is the jurisdiction to grant authority to carry passengers to and from federal airports within the exclusive jurisdiction of the Government of Canada?

2. Has the Minister of Transport authority to license an undertaking to carry air passengers to and from a federal airport?

3. Had the Minister of Transport authority to issue the existing license of Air Terminal Transport Limited?

4. Is there authority in the Public Vehicles Act, and the regulations pursuant thereto, to grant charter privileges to Air Terminal Transport Limited having regard to the terms of its existing license?

An application was made also for dismissal of the applications of Air Terminal Transport for want of jurisdiction. The Board reserved its decision on both applications, and proceeded to hear the evidence of three more witnesses. Whereupon Colonial Coach Lines Limited, acting on behalf of all the applicants, served the Board with the notice of motion in these proceedings for prohibition. The Board then adjourned the hearing indefinitely.

Question of Jurisdiction

At the hearing before Mr. Justice Donohue, counsel for the applicants argued that, because Air Terminal Transport's business was that of carrying airline passengers and air crew by motor vehicle transport to and from Toronto Airport, which is under the ownership and control of the Government of Canada, such business was included in the field of aeronautics, which comes within federal jurisdiction. Therefore the business of Air Terminal Transport was exclusively within federal jurisdiction and should never have come before Ontario Transport Board.

In support of this argument, counsel relied on the decision of the Supreme Court of Canada in *Reference re Eastern Canada Stevedoring Co. Ltd.* (L. G. 1955, p. 952), in which the court held that the loading and unloading of ships' cargos constituted shipping and that, therefore, the employees of Eastern Stevedoring were subject to the federal Industrial Relations and Disputes Investigation Act. Counsel argued that this operation was analogous to the operation of Air Terminal Transport—namely, the carrying of airline passengers and crew to and from Toronto Airport.

Counsel for the applicants referred to the following statement made by Mr. Justice Rand with regard to the tests of the scope of federal powers as they touch incidentally upon civil rights, when, according to Privy Council decisions, a certain civil right was "truly ancillary" or "necessarily incidental" to federal legislation:

> These phrases assume that legislation on a principal subject matter within an exclusive jurisdiction may include as incidents subordinate matters or elements in other aspects outside that jurisdiction. The instances in which this power has been upheld seem to lead to the conclusion that if the subordinate matter is reasonably required for the purposes of the principal or to prevent embarrassment to the legislation, its inclusion to that extent is legitimate. This may be no more than saying that the incidental has a special aspect related to the principal. Actual necessity need not appear as the contracting-out case shows; it is the appropriateness, on a balance of interests and convenience, to the main subject matter or the legislation.

Using the words of Mr. Justice Rand, counsel for the applicants argued that the transport of airline passengers and crew to and from Toronto Airport is a requirement for its operation.

Mr. Justice Donohue, however, queried whether the operation carried on by Air Terminal Transport was a reasonable requirement for the operation of Toronto Airport. In his view, the transport of airline passengers and crew to and from Toronto Airport by the company in question was not reasonably required by Toronto Airport. He added further that the service rendered by Air Terminal Transport is no doubt a convenience to the public in going to and from the airport, but that the airport could continue to function without this service.

Mr. Justice Donohue noted that Toronto Airport does not operate aircraft, but provides a harbour for aircraft, and facilities for the traveling public. In his view, if there is any duty upon anyone other than the travelers themselves to get to and from the airport, such duty would surely fall upon the airlines who provide the aircraft for the passengers. He noted that the Government of Canada had entered into a lease with Air Terminal Transport to provide service to and from and in the airport, but this was for the convenience of the airlines and their passengers. In his view, such service is not reasonably required by the airport, but it may be reasonably required by the airlines and their passengers.

Mr. Justice Donohue described the services rendered by Air Terminal Transport as of primary benefit to the passengers, secondary benefit to the airlines and tertiary benefit to the airport, in the sense that these services make the operation somewhat more orderly than would be

the case if the airport were jammed with private motor vehicles and taxis.

The conclusion reached by Mr. Justice Donohue was that the operation carried on by Air Terminal Transport was not reasonably required by the federal authority. He stated that, in the Eastern Stevedoring case the connection of the stevedores with the ships was different and closer than the connection that exists between Air Terminal Transport and the operation of Toronto Airport. The stevedores were dockside crew, in port on the ships or the dock for loading and unloading, whereas Air Terminal Transport's employees had no actual connection with the aircraft at Toronto Airport. They simply transported airline passengers and crew, and other persons such as restaurant personnel, to and from Toronto Airport.

In Mr. Justice Donohue's opinion, these services did not make the operation of Air Terminal Transport a part of aeronautics. In the Eastern Stevedoring case, the loading, stowing and unloading of cargo was, in a very real sense, a critical part of the marine trade and practice, whereas the mere transportation of passengers and crew to and from Toronto Airport was neither ancillary nor incidental to aeronautics.

In Mr. Justice Donohue's opinion, the fact that Air Terminal Transport holds a lease from the Government of Canada to operate at Toronto Airport does not enlarge Air Terminal Transport's real function. This lease gives the lessor a measure of control over Air Terminal Transport's operations, but it does not make the company an integral part of the operation of Toronto Airport.

Applying the last sentence of Mr. Justice Rand's decision in the Eastern Stevedoring case quoted earlier, Mr. Justice Donohue concluded that, on a balance of interest and convenience to the main subject-matter or the legislation, the balance of interests and convenience in Air Terminal Transport's operation was heavily in favour of provincial control.

The Winner Case

In the case at bar, a reference was made to the decision of the Judicial Committee of the Privy Council in *A.-G. Ont. et al. v. Winner* (L. G. 1954, p. 559). Counsel for the Ontario Transport Board stated that this case was the starting point for control by the federal authority of bus lines that cross provincial boundaries.

Mr. Justice Donohue noted that, in the Winner case, the ruling of the Judicial Committee of the Privy Council was that, although the provinces had control of the highways within their boundaries, and had authority over them to that extent, nevertheless, in the case of interprovincial undertakings that connect one province with another and extend beyond the limits of a province, the jurisdiction of the federal Government under Sec. 92 (10) (a) of the B.N.A. Act could not be impaired by the general control exerted by the provinces over their own roads.

This decision, which placed interprovincial truck and bus transportation under federal jurisdiction, was followed by the enactment of a federal Motor Vehicle Transport Act, which delegated to provincial motor vehicle licensing bodies the authority to license buses and trucks that carried on interprovincial business. Since then, the courts have held that the employees of interprovincial truck lines are subject to the provisions of the federal law with respect to labour disputes (*Re Tank Truck Transport Limited*—L.G. 1961, p. 159).

Mr. Justice Donohue noted also that the Winner case made it clear that, if part of Winner's operation consisted of interprovincial business, the fact that the company also operated on intraprovincial business did not deprive the undertaking of its interprovincial character.

It was clear in the case at bar that part of the operation of Air Terminal Transport was interprovincial. By applying the principle established in the Winner case, Mr. Justice Donohue was of the opinion that the operation of Air Terminal Transport was within federal authority.

The Murray Hill Case

The applicants in the case at bar referred to the dissenting judgment of Mr. Justice Rinfret in *Murray Hill Limousine Service Limited v. Batson et al.* (L.G. 1965, p. 641). The issue in this case was whether the porters who carried baggage to and from the limousines provided for airline passengers at Dorval Airport were under the jurisdiction of the Quebec Minimum Wage Act.

Mr. Justice Rinfret held that the porters were so closely connected with air travel that they came under federal rather than provincial jurisdiction. With reference to the Eastern Stevedoring case, he found the operation of the porters similar to that of stevedores. But, to reach this conclusion, Mr. Justice Donohue pointed out, Mr. Justice Rinfret had had to divorce the porters from their employer, the limousine company. In other words, in order to consider that the porters were serving the airlines or the aircraft, and thereby bring them within federal jurisdiction, Mr. Justice Rinfret, thought it necessary to separate them from the common carrier.

In the opinion of Mr. Justice Donohue, this dissenting judgment could not be of help to the applicants at bar, because the Murray Hill Limousine Company certainly resembled Air Terminal Transport in their operation. On the other hand, Mr. Justice Donohue noted that, in the same case, Mr. Justice Taschereau held "that the work of the defendant's employees [the porters], as useful as it may be to the airlines and to their passengers, does not form an integral part of aerial transport—no more than do the restaurants, newsstands, beauty salons and bars established in all large airports for the comfort and benefit of travellers."

Mr. Justice Montgomery indicated that he considered the limousine operators and the porters to be outside federal jurisdiction.

Quebec Railway Light Case

In the case at bar, a reference was made to the judgment of the Supreme Court of Canada in *Quebec Railway Light & Power Co. v. Town of Beauport*, (1945) S.C.R. 16, (1945) 1 D.R.L. 145, where the question was whether the tolls to be charged for transportation on buses were controlled by federal or provincial authority. The buses were operated by the company as an extension of its railway services.

The railway company in question had been declared by a federal statute to be a work and undertaking for the general advantage of Canada—and as such, it came under federal jurisdiction. The Court held that, because the buses were part of that work, federal regulations would apply to toll charges on such buses.

Mr. Justice Donohue noted that three judges in this case pointed out that, where an amending federal Act gave the railway power to operate buses subject to all provincial and municipal enactments, this subjective provision would give the province the right to license and regulate traffic.

Mr. Justice Donohue noted that, in the case at bar, the lease between the Government of Canada and Air Terminal Transport made the latter subject to all lawful rules, regulations and bylaws of municipalities and other governing bodies.

Application Dismissed

Mr. Justice Donohue dismissed the application for an order of prohibition to prevent the hearings before the Ontario Highway Transport Board for an extension of operating licenses of Air Terminal Transport, primarily on the ground that, as the Ontario Transport Board had jurisdiction to issue original operating licenses, there were therefore no grounds for persons or companies to object to the extension of these licenses to seek an order of prohibition against the Board.

*Re Colonial Coach Lines Limited et al. and Ontario Highway Transport Board et al.** (1967) 62 D.L.R. (2nd) Part 4, p. 230.

*An appeal from this decision was dismissed by the Ontario Court of Appeal on May 11, 1967.

Employment and Unemployment In September

Employment decreased by 343,000 to 7,511,000 from 7,854,000 between August and September, following the re-opening of schools.

The labour force, at 7,730,000, was 214,000 or 2.8 per cent higher than in September 1966; employment was 200,000 or 2.7 per cent higher than a year ago.

Unemployment decreased by 28,000 during the month, from 247,000 to 219,000, but was 14,000 higher than a year earlier.

Total unemployment in September represented 2.8 per cent of the labour force, compared with 2.7 per cent in September 1966 and 2.5 per cent in September 1965.

Employment

Employment was higher than a year ago in British Columbia, Ontario and Quebec. In the Atlantic and Prairie regions, employment levels showed little or no change over the year.

At 7,511,000, employment in September showed an increase of 200,000 or 2.7 per cent over September 1966. Employment declines were largest in trade (89,000), manufacturing (79,000) and agriculture (70,000). Non-farm employment increased by 168,000, or 2.5 per cent, and was concentrated in the service-producing industries; manufacturing employment was slightly lower than a year earlier; construction employment was unchanged.

During the year, the number of men employed increased by 122,000 or 2.4 per cent. Women's employment was higher by 78,000, or 3.5 per cent, and most of the increase was among married women.

Unemployment

Unemployment, at 219,000, was 18,000 lower than a month ago and 14,000 higher than in September 1966. Of the total unemployed, 162,000, or about 75 per cent, had been out of work for less than four months. Of the remainder, 29,000 had been unemployed for from four to six months, and 28,000 for seven months or more.

NOTE: The classification of labour market areas, and the summary table titled "Labour Market Conditions," are not included in this issue because the statistical basis for these tables is not comparable with a year ago. Beginning September 1, 1966, all registered applicants were asked to contact Canada Manpower Centres every 30 days—instead of the previously requested period of 14 days—to keep their registrations active. Another factor influencing the comparability of registered applicants is the extension of provisions, such as temporary layoffs, for exempting certain classes of unemployment insurance beneficiaries from registration.

Insurance Registrations And Other UIC Statistics

On July 31, insurance books or contribution cards had been issued to 4,613,684 employees who had made contributions to the Unemployment Insurance Fund since April 1, 1967.

On the same date, registered employers numbered 396,599, an increase of 1,776 since June 30, 1967.

During July, 10,350 investigations were conducted by enforcement officers across Canada. Of these, 8,536 were spot checks of claims to verify the fulfilment of statutory conditions, and 458 were miscellaneous investigations. The remaining 1,356 were investigations in connection with claimants suspected of making false statements to obtain benefits.

Prosecutions were begun in 227 cases, 80 against employers and 147 against claimants.*

Punitive disqualifications as a result of false statements or misrepresentations by claimants numbered 411.*

Revenue received by the Unemployment Insurance Fund in July totalled $31,929,763.26 compared with $36,315,-879.86 in June and $37,490,663.13 in July 1966.

Benefits paid in July totalled $17,743,-009.39 compared with $17,837,292.04 in June and $13,661,091.80 in July 1966.

The balance in the Fund on July 31 was $272,388,344.87. On June 30, it was $258,201,591 and on July 31, 1966 it was $178,948,280.82.

*These do not necessarily relate to the investigations conducted during this period.

Wage Schedules Prepared In August

During August, the Department of Labour prepared 298 wage schedules for inclusion in contracts proposed to be undertaken by departments of the federal Government and its Crown corporations in various areas of Canada, for works of construction, remodelling, repair or demolition, and certain services.

In the same period, 251 contracts in these categories were awarded. In addition, 272 contracts containing the General Fair Wages Clause were awarded by Central Mortgage and Housing Corporation and the Departments of Defence Production, Post Office, Public Works and Transport.

A copy of the wage schedule issued for each contract is available on request to trade unions concerned, or to others who have a bona fide interest in the execution of the contract.

Contracts awarded in August for the manufacture of supplies and equipment were:

Department	*No. of Contracts*	*Aggregate Amount*
Defence Production	126	$1,055,940.00
Post Office	4	71,774.80
Royal Canadian Mounted Police	4	176,655.60
Transport	8	23,756.20

During August, the sum of $5,137.81 was collected from 10 contractors for wage arrears owing their employees as a result of the failure of the contractors, or their subcontractors, to apply the wage rates and other conditions of employment required by the schedule of labour conditions forming part of their contract. This amount is for distribution to the 138 workers concerned.

Women's Bureau

Continued from page 748

employee may be suspended from employment.

The Commission makes some interesting comparisons of the status of a female employee who is absent through pregnancy, and general absence due to illness or injury. It concludes that women have a right to special employment protection because of the unique and temporary character of pregnancy. An employer who, because of business demands, cannot permit the position to remain vacant may be justified in filling it; but the Commission recommends that recall lists of pregnant employees be maintained. An employer is not obliged to pay sick pay for pregnancy on the same basis as illness.

With regard to hiring or bidding on jobs, the EEOC takes the position that preference to a male or female employee must depend on a "bona fide occupational qualification," and the Commission has made a number of significant interpretations regarding "bona fide." The preference may not be based on the traditional employment traits of women, such as higher turnover, greater manual dexterity, and the preferences of co-workers or customers. The entertainment field and apparel modelling are cited as legitimate examples of "bona fide" occupational qualifications.

Claimants at End of July Show Little Change Over June Total

Unemployment Insurance
Pensions and Manpower Section
Dominion Bureau of Statistics

Claimants for unemployment insurance benefit numbered 246,000 on July 31, which was little changed from the figure of 243,000 on June 30, but 50,000 or 26 per cent more than the total of 196,000 on July 31, 1966. The increase over the past year represents 28 per cent for males and 23 per cent for females.

Male claimants accounted for 60 per cent of the total on each of the three dates. The group on claim for from one to four weeks on July 31, however, comprised 66 per cent men; the group on claim for five weeks or more comprised only 55 per cent men. This pattern is typical at this season of the year.

All provinces except Ontario showed a decrease in the number of claimants between June and July. In Ontario, the number increased by 21 per cent, which consisted of 32 per cent men and 8 per cent women. The Ontario figures are not unusual at this time, and reflect temporary layoffs and annual holiday shutdowns in the automotive and related industries. New Brunswick was the only province that recorded fewer claimants from one year ago. The decrease, however, occurred among the males; the number of female claimants increased.

Initial and Renewal Claims

A total of 102,000 initial and renewal claims were filed in local offices across Canada during July, compared with 89,000 in June and 87,000 one year ago. More than 90 per cent of the claims that were reported on the three dates represented separations from employment during the month.

There were 13,000 more claims filed in July than in June. All provinces except Newfoundland, Nova Scotia, New Brunswick, and British Columbia contributed to this increase. The increase in Ontario, however, exceeded the total increase. The changes in the other provinces were small. Generally, there were more claims filed in July 1967 than in July 1966 except in the Atlantic region.

Beneficiaries and Benefit Payments

The average weekly number of beneficiaries during July was estimated to be 180,000, compared with 181,000 in June, and 144,200 a year ago. Benefit payments during July amounted to $17.7 million, compared with $17.8 million in June and $13.7 million one year ago. The average weekly payment was $24.64 in July 1967, $24.56 in June 1967, and $23.68 in July 1966.

A claimant's unemployment register is placed in the "live file" at the local office as soon as the claim is made. As a result, the count of claimants at any given time inevitably includes some whose claims are in process. "Claimants" should not be interpreted either as "total number of beneficiaries" or "total job applicants."

Summary Table

	July 1967	*June 1967*	*July 1966*	*Cumulative data 1967: January to July*	*Cumulative data 1967: 12 months ending July*
			(in thousands)		
Insured population as at month-end	—	4,712	4,512	—	—

Average weekly benefit	$ 24.64	24.56	23.68	25.57	25.24

*Monthly average.

Minimum wage increase urged in Spain

Spain's labour leaders are urging their Government to raise the $1.40-a-day national minimum wage. The appeal was made at a September meeting of the permanent committee of the National Workers Council.

The committee's statement recalled the Government's pledge of a year ago to have annual revisions of the minimum rate. The existing minimum wage was described as "a social injustice."

TUC

Continued from page 746

manufacturers, importers, exporters, financiers and trade unionists—we all have our responsibilities."

The TUC then set aside its complaints about Prime Minister Wilson's economic freeze policies long enough to give the Labour Party a rousing vote of confidence. The delegates' adoption of a resolution reaffirming support for the Labour regime was named by one representative "a partial antidote to some of the poison that has been poured out."

M. B. Seabrook, Union of Shop Distributive and Allied Workers, moved a composite motion deploring the Government's deflationary measures. He said that the decision of Prime Minister Harold Wilson to take overall responsibility for economic affairs showed that, like many trade unionists and others, he was also partly dissatisfied with the Government's current performance. "We entirely reject and resent strongly any suggestion that to be critical is to be disloyal," he said. He had offered the motion, he added, not as an attack but in good faith, as an attempt to get a reorientation of policy.

A further motion called upon the Government to adopt an economic policy with supporting legislation to secure the early abolition of poverty in Britain. It urged the Government to reject the argument that a high level of unemployment was justified.

Britain's trade unions gave cautious backing to the Government's bid for membership in the European Economic Community. The delegates supported a recommendation from the general council "to approve the Government's intention to open negotiations for membership in the Community." A second motion called for guarantees on essential interests before entry. In the short term, said Mr. Woodcock, membership in the organization would be tough; in the long term, it was the only thing that Britain could do. It would have to be made clear that it was fundamental to Britain's entry that there should be transitional periods.

Decisions of the Umpire

Under the Unemployment Insurance Act

CUB 2704

The appellant, who was employed as a rackman at an oil refinery, was suspended by his employer for refusing to handle "hot" products. His appeal was taken as representing also the claims of other employees involved in the dispute.

The refusal to handle products was connected with a labour dispute involving another oil company where the employees, also members of the Oil, Chemical and Atomic Workers' International Union, were on strike. Members of the union had voted in favour of a strike, but no strike date had been set.

Before the strike started, the union demanded that the employer stop supplying petroleum products to the other company, where a strike was in progress. The employer refused on the ground that he had a legal and binding contract to supply the products.

On two consecutive days, first the claimant and then another employee refused to load products destined for the other oil company. The employer temporarily suspended both employees for failing to perform their normal duties. The union then delivered an ultimatum to the employer to the effect that unless the suspensions were rescinded immediately, strike action would be taken that day. When the employer refused, the rest of the refinery workers walked off their jobs, and a picket line was set up.

Before going on strike, the union offered to close down the plant in an orderly manner, but the employer refused the offer, as he was prepared to maintain production. The union responded by setting up pickets at the company's marketing plant, which was a separate establishment. This picket line was later removed by a court injunction.

The employer stated that the marketing division was completely separate administratively from the refinery and that this arrangement was common in the industry. It, too, was negotiating for renewal of a collective agreement with the same union.

Before the strike, the bargaining unit at the refinery included 137 workers. Managerial, supervisory, administrative and technical personnel totalled 53. When the refinery workers walked off the job, these 53 persons took over the operation of the refinery, assisted by 10 persons, such as technical experts and engineers, brought in from various parts of Canada.

An official of the company informed the local office that, before the strike, processing averaged 19,000 barrels of crude oil a day, and that, after the strike, it continued to produce at the pre-strike level. The submission prepared by the insurance officer for the board of referees said in part:

> Various reasons account for this performance. Only services essential to the production process are being performed. For example, of the 137 men on strike, 48 are employed in the maintenance category. A large proportion of the normal maintenance has gone by the board since the strike. Those persons remaining at work are, of necessity, working longer hours, and are maintaining a work schedule of 12-hour shifts, rather than the usual eight-hour shift.
>
> Another important factor is the highly automated nature of the refinery itself. This is a modern up-to-date installation, and has the latest electronic refinements and controls possible. A percentage of the staff is living on the premises, and having their meals there. Some of the personnel are on 24-hour call . . . . For the foreseeable future, the present production schedule could be maintained.

On November 5, the claimant was notified that he had been disqualified from October 17 until termination of the work stoppage, because, according to the Act, he had lost his employment through a work stoppage attributable to a labour dispute.

The claimant next made an appeal to a board of referees, and this was followed by a letter from the union stating that the claimant was appealing on behalf of the striking members, and that his appeal was representative. A majority of the board upheld the decision of the insurance officer.

The case turned on the question of whether or not there had been a stoppage of work at the refinery, within the meaning of the Act. The claimant contended that there had not.

After reviewing the progress of the dispute at the refinery, the board went on to say, "Section 63 is the relevant section of the Act concerning this matter. The important part of the section is whether there was a stoppage of the work attributable to the labour dispute at the refinery. The board has given careful consideration to the phrase 'stoppage of work'. There is no question that production was maintained."

But after going over the various methods by which this had been accomplished, as described in the quotation from the insurance officer's statement, the board said, "The majority of the board is of

opinion that this work schedule could not have kept on indefinitely, and that, although production was maintained, all of the functions of the refinery must be considered in deciding whether there was in fact a stoppage of work. It is difficult to believe that all the supervisory staff could or would have continued working under these conditions for an indefinite period. Accordingly, the majority of the board holds that there was a stoppage of work within the meaning of the Act . . . . There is no question that the work stoppage was attributable to a labour dispute and that the claimant belonged to and supported the class of employees involved in same."

The board accordingly sustained the decision of the insurance officer and disallowed the appeal.

The one dissenting member of the board emphasized that the employer had admitted to no loss of production as a result of the dispute. "It is generally considered as a rule of thumb that, where there is a strike due to a labour dispute, accompanied by a stoppage of work, the stoppage is considered terminated . . . when production and normal operations reach 85 per cent. It is my opinion that on these grounds, the matter before the board cannot be considered a stoppage of work."

The dissenting member went on to link the case with "the broad question of automation and redundancy, as was in fact the main point of contention in this national dispute in the oil industry," and he appeared to think that carrying on production in the plant with a reduced work force might, in some circumstances, become permanent, in which case it was "inconceivable that the [employees] could be denied benefits forever."

In a memorandum, the regional claims officer said that the disqualifications imposed on the claimant had been removed, effective December 13, the date on which the strikers returned to work at the refinery after a new collective agreement had been signed.

The claimant's appeal to the Umpire was based on the following grounds:

- there never had been a stoppage of work at the refinery;
- the board of referees had failed to prove that there had been a stoppage "by either letter or spirit of the Act;"
- "our ability to prove that production and normal activity of refinery . . . was maintained by persons for entire duration of strike;" and
- "statements suggesting production could be maintained indefinitely suggest permanent replacement of refinery employees."

In a statement of observations, the insurance officer pointed out that, considering the amount of maintenance and "other work not immediately essential to maintain the required output" that was left undone during the strike, "considerably more than an appreciable part of the normal work of the refinery" was stopped by the strike. He said also that production was maintained during the strike "through improvised arrangements of a temporary nature, and not by means of permanent rearrangement of the refinery operation nor by replacement of the strikers intended to take away their jobs. On the contrary, the jobs of the strikers remained in existence throughout the duration of the strike, as clearly evidenced by the return of the strikers to work, without loss of previously acquired service and seniority rights as employees, after settlement of the dispute."

The officer cited CUBs 1035 (L.G. 1954, p. 1031) and 1148 (L.G. 1955, p. 848) in support of a statement that "Canadian jurisprudence has constantly held that a stoppage of work means not only the cessation of the worker's labour, but also the cessation or appreciable reduction of the work normally or habitually carried on in the . . . premises where the worker was employed." He also cited CUBs 1682 (L.G. 1959, p. 1324) and 1937, as showing that "Canadian jurisprudence has also held that improvised operations of a temporary nature are insufficient to render the stoppage of work a non-appreciable one."

Considerations and Conclusions

The Umpire said that the appeal was based solely on the contention that since no stoppage of production took place, the board of referees had "failed to prove that there was a stoppage of work by either letter or spirit of the Act."

He said that the "work" at the plant included all of the work normally being done by the total regular staff of 190 employees. It was apparent that the employer could, by the various devices that had been resorted to during the strike, maintain output with a greatly reduced work force. But "a stoppage of work would still exist . . . by reason of the very fact that a considerable amount of the technical and maintenance work normally done at the plant was not being done."

The question to be examined, therefore, was whether "that was the situation in the case before me, and this is a question of fact." After recapitulating the findings of fact of the board of referees in the case, the Umpire said, "Therefore, it cannot be said that a substantial amount of the normal work and normal working conditions had been achieved when the strike was settled on or about December 11, 1965."

In view of the foregoing, the Umpire found that the claimant had lost his employment "by reason of a stoppage of work attributable to a labour dispute at the premises at which he was employed," and that, "in the absence of proof that he was not directly interested in the dispute, he was rightly disqualified from receiving benefit."

In consequence, the Umpire disallowed the appeal, and he added that the decision would apply to all the claimants included in the case.

CUB 2705

This decision is closely related to CUB 2704, so it is not being summarized. Only the main differences will be cited.

The dispute in this case was at the marketing division of the same company whose refinery employees were on strike; but there was no strike at the marketing division. The claimant was one of 13 truck drivers at that division who were suspended when they refused to handle "hot" products from the refinery while the strike there was going on. Of the 61 employees at the marketing division, only two garagemen and a mechanic, besides the 13 truck drivers, did not return to work when the picket line at the marketing division was removed on October 21 in conformity with the injunction. The garagemen and the mechanic had returned to work by November 9, leaving only the 13 truck drivers still suspended. Some 21 other truck drivers did not take part in the refusal to work.

According to statements contained in the decision of the board of referees, the company arranged for loaded trucks to be taken outside the picket line at the refinery, and the marketing division employees were then to take delivery of the trucks. The claimant refused to do so. In order to maintain service to its city customers during the strike, the company hired independent trucks, which were supplied with drivers. The company's own trucks remained idle during a substantial portion of the strike, and the hours of the drivers who did work were adjusted.

The Umpire's reasoning in the case was similar to that in CUB 2704. After citing the decision in CUB 1682, he said that it was "clear that it was not the employer's intention to make this a permanent change in the marketing operation. This is shown by the employer's action . . . in warning the strikers that if they did not return to work . . . the temporary arrangements would, in effect, be made permanent. Conversely, there is no evidence to the effect that the employees' loss of employment was at any time a complete and permanent separation from their employment. In fact, they returned to work."

He held that there had been an appreciable stoppage of work, and he dismissed the appeal.

Canadian Railway Office of Arbitration

Releases Decisions in Five Disputes

Five separate disputes were dealt with by the Canadian Railway Office of Arbitration at a hearing in Montreal on September 11. They concerned: the interpretation and application of three articles of the collective agreement; a steward and crew's claim for rest period pay; an engineer's disobedience; a claim for removal of discipline and compensation for time lost; and the refusal of the company to appoint a foreman for two carpenters.

The arbitrator allowed two claims and disallowed three.

Summaries of the five cases, Nos. 74 to 78 inclusive, follow:

CASE NO. 74

Dispute between the Canadian Pacific Railway Company (SD & PC Department) and the Brotherhood of Railroad Trainmen over the interpretation and application of three articles of the collective agreement.

A steward and his crew were on a train that had been delayed 12 hours and 40 minutes. When they arrived at their home depot, they were asked to report four days later for their next regularly assigned trip. Considering that they had been required to work during normal layover time, they each filed a claim for eight hours at time and one half. The company rejected their claims.

The brotherhood contended that the company's rejection was a violation of an article of the collective agreement, that states:

"A regularly assigned employee called from layover for road service will be paid for time worked during layover at one and one half times the basic hourly rate, with a minimum payment of eight hours. This payment will be separate and apart from his quarterly guarantee. . . ."

The posting had indicated a layover of four days. The train had arrived on June 6 at 6.45 a.m. instead of the time it was due to arrive—June 5 at 5.45 p.m. The brotherhood used the interpretation of "days" as outlined in the Canada Labour (Standards) Code—meaning any 24-hour period —to support their argument that the crew was entitled to layover time estimated at 31 hours and 15 minutes.

They also quoted an article under "Hours of Service," reading "Time will be computed as continuous from time required to report for duty at a designated terminal until released at other designated terminal subject to deductions for rest periods en route and at turnaround points. No deductions for release time less than 2 hours will be made."

The brotherhood protested that the company had digressed from established practice in not specifying layover time in hours and minutes, rather than the undefined term "days."

The company based their argument for non-payment on an article of the agreement reading: "In regular assignments, time worked in excess of the normal Operating Schedule due to late arrival of trains, up to 576 hours in a Quarter effective June 1, 1967 . . . will constitute part of the regular assignment."

They argued that if a regularly assigned employee is scheduled to work 576 hours or more in a quarter, and works additional time because of a late arrival, he would be paid at one and one half his basic hourly rate in accordance with an article that reads: "Time worked in excess of 576 straight time hours . . . will be paid for at one and one half times the basic hourly rate on the first payroll following the end of the Quarter."

The claim submitted by the brotherhood represented a request for time and one half for late arrival, as well as a penalty for loss of layover. The company pointed out that none of the articles quoted at the hearing made any provision for payment of lost layover due to the late arrival of a train.

They also pointed out that before the first article quoted by the brotherhood became operative, layover would have to be started and the employee called to perform road service before his next scheduled reporting time.

The arbitrator said that there was nothing in the collective agreement to prevent the company's describing layover time by the term "days." And after studying the first article quoted by the brotherhood, he was convinced that its purpose was to provide for a call for road service during a layover period. He said also it was clear that the parties had specifically provided for payment for time worked in excess of the normal operating schedule due to late arrival of trains, and that the granting of this claim would result in "a pyramiding of benefits without specific authorization."

He quoted another judge's decision in a preceding case. "If a contract is open to two interpretations and one interpretation involves pyramiding of overtime and the other interpretation does not involve [it], a Board of Arbitration, in the absence of specific wording in the contract, should accept the interpretation which does not provide for the additional penalty payment. . . ."

The arbitrator found that the claimants were paid in accordance with the existing provisions of the agreement.

CASE NO. 75

Dispute between the Canadian Pacific Railway Company (SD & PC Department) and the Brotherhood of Railroad Trainmen over the claim of a steward and crew for eight hours' pay for their rest period.

A steward and his crew arrived on a delayed train and submitted a claim for eight hours' pay for the rest period, 7 p.m. to 6 a.m. Had the train been on time, it would have arrived at 5.45 p.m. on the preceding day.

The company deducted fifteen hours' rest from the total elapsed time—seven hours for the first night, and eight hours for the second night. The brotherhood contended that only seven hours should have been deducted, as this is the amount shown in the operating schedule, and that the company was violating an article of the agreement.

The problem centred on whether the information contained in the operation schedule on rest periods en route would take precedence over what the company claimed was the governing provision in a second article of the agreement.

A review of the operation schedule showed that the crew was required to report for the first train at 10:45 a.m., but that it did not arrive until 10:10 p.m. The crew was under pay for the full 11 hours and 25 minutes of this interval. The schedule also called for 23 hours and 20 minutes for time on duty on the return trip, but because of the late arrival of the first train and the consequent late arrival of the second train, the crew was actually paid for 28 hours, less rest periods en route, in accordance with the first article of the agreement.

The schedule showed only one rest period en route for the first night, but because of the delay, a deduction of eight hours' rest was made for the second night.

The brotherhood claimed that the operation schedules were not as, claimed by the company, "of a general nature," and that they must be specific in all details in order that an employee will know the conditions of the assignment before bidding for it. They contended that, once the operation schedules are assigned, the conditions of the assignments are binding on both the employees and the company.

The article quoted by the company placed no limitation on deduction for rest en route; but in the article quoted by the brotherhood, authority for such a deduction is clearly outlined. It reads: "Where overnight travel is involved, a maximum of eight hours may be deducted for rest between the hours of 10 p.m. and 6 a.m. . . . ."

The arbitrator pointed out that the operation schedule's reference to a rest period of one night was obviously based on the assumption that the train would run on schedule. The question to be answered, he said, was whether there was anything in the article quoted by the brotherhood to provide for an additional rest period if the train is late. "I can find nothing to that effect," he said.

The key words in the article quoted by the company were, "where overnight travel is involved," and the arbitrator said that this is clear language that must prevail over and above anything contained in an operation schedule. He therefore found that the crew were paid in accordance with the existing provisions of the agreement.

CASE NO. 76

Dispute between the Canadian Pacific Railway Company (Pacific Region) and the Brotherhood of Locomotive Engineers over removal of 15 demerits from an engineer's record for failing to follow a superintendent's instructions.

At the official investigation, the engineer said he had train orders that authorized the movement of his train from one terminal to another, but that en route the conductor told him that the crew would like to rest because they had been on duty for 12 hours. The train was then moved to a siding until 7:00 a.m. the next morning. Two overdue trains were expected at the station near the siding.

A superintendent telephoned the engineer to tell him that the conductor had refused to copy a train order to cover the movement of the train to its destination and he instructed the engineer to proceed under a flagging arrangement between the conductor and the dispatcher. The engineer refused on the grounds that without written orders to proceed, the proposed flagging arrangement was illegal.

The brotherhood contended that the company had violated an article of the collective agreement. They said that the engineer did not commit a disciplinary offence and that he was kept from work unnecessarily in connection with the investigation. The company refused to remove the discipline and reimburse the engineer, either for time lost or time occupied in returning to his home terminal.

The brotherhood contended that, under the uniform code concerning the flagging for trains, no provision was made for verbal flagging. Its last paragraph states: "Conductors and enginemen are responsible for the protection of their trains."

The brotherhood referred also to another rule, which states: "Conductors, enginemen and pilots . . . are responsible for the safety of their trains and the observance of the rules, and under conditions not provided for by the rules, must take every precaution for protection . . . ."

In addition, the brotherhood also quoted a third rule that they believed applicable: "In case of doubt or uncertainty, the safe course must be taken." The safe course, in their opinion, was to remain on the siding where the train was fully protected. They further contended that the engineer was brought into the dispute unnecessarily, and that he had not committed any offence, but had carried out his duties according to the rules.

The company contended that the engineer was fully aware that the train order the conductor had refused to copy had been issued to the two overdue trains, and that it gave his train the right to proceed to its objective terminal. In addition, it argued that the engineer was aware that the dispatcher, with the full authority of the superintendent and the chief dispatcher of the division, was responsible for holding the two trains until the train arrived at its destination. Therefore, it was unrealistic to suggest any "doubt" or "uncertainty" or necessity for "precaution."

The arbitrator said that, although insubordination, or failure to comply with a reasonable order from proper authority, must be viewed seriously, there were circumstances in this situation that made the engineer's action justified.

He quoted one of the rules of the Uniform Code that reads: "For movements requiring their use, train orders will be issued by authority and over the signature of the superintendent or designated train dispatchers, and only contain information or instructions essential to such movements."

Another rule he quoted reads: "Conductors, enginemen and pilots are responsible for the safety of their trains and the observance of the rules, and under conditions not provided for by the rules must take every precaution for protection. This does not relieve other employees of their responsibility under the rules."

He said that the company failed to take into consideration the circumstances that created the situation. It was stated that the administrative staff knew about the situation eight hours before the crisis, and that they had done nothing to arrange for the proper movement of the train to comply with the rules.

The arbitrator believed that there was no mischievous intent in the general refusal to proceed as described. He said that it was apparent that all members of the crew had qualms about their own safety, and protection of the company's property. They believed they were placing themselves in an untenable position by failing to have written orders in their possession. The arbitrator pointed out further that, had the crew on either of the two overdue trains misunderstood or neglected to comply properly with the holding instructions, and an accident had occurred, the engineer would have had to depend on verbal instructions to justify his position. This was not the protection contemplated for him under the rule, the arbitrator said. He found that the demerits against the engineer

should be expunged from the record and that, "having been found blameless," the engineer should be reimbursed for time lost as a result of the investigation.

CASE NO. 77

Dispute between the Canadian Pacific Railway Company (Atlantic Region) and the Brotherhood of Maintenance of Way Employees over claim for removal of discipline, and compensation for time lost for 13 extra gang labourers.

Thirteen extra gang labourers were asked by an extra gang foreman to work one additional hour one day and nine hours the next day, but they refused. They were held out of service and subsequently given 40 demerits.

The brotherhood claimed that the men were entitled to "a fair and impartial hearing" as provided under a section of the wage agreement, which reads: "An employee disciplined, or who considers himself unjustly treated, shall have a fair and impartial hearing, provided [that] written request is presented to his immediate supervisor within ten days of date of advice of discipline, and the hearing shall be granted within ten days thereafter." They asked for cancellation of the discipline and payment for the time the men were held from service.

The company pointed out that the 13 gang labourers had been instructed to report for investigation on May 11, but instead of reporting, had appeared for work. When they were not allowed to work, they reported to the roadmaster for the investigation the next day. The investigation was conducted by the division engineer in the presence of the men and their local chairman.

During the investigation, the men admitted that they had refused to work the extra hours. They were then assessed 40 demerits for failing to report for the first investigation and for refusing to work. Five of the men requested, in writing, "a fair and impartial hearing," but were told that they had already received it. The men had particularly objected to the absence of the foreman at the investigation, because they had wanted the opportunity to question him.

The arbitrator believed that the company failed to comply with the requirements of the wage agreement. He said that the request made by the five employees should have been granted within 10 days. The requirement, he said, was mandatory, and it was not up to the company to decide that the previous investigation conducted by the regional engineer was "fair and impartial." When the employees and their representatives had not agreed, their request for another hearing should have been granted.

For these reasons, the arbitrator found that the case had to be remitted to the company to comply with the brotherhood's request for "a fair and impartial hearing." He concluded: "The date for this hearing should be set by the company within ten days from receipt of this judgment, unless the parties mutually agree otherwise."

CASE NO. 78

Dispute between the Canadian National Railways and the Brotherhood of Maintenance of Way Employees over refusal of the company to appoint a bridge and building foreman to supervise certain employees.

The brotherhood claimed that the company violated a section of the wage agreement by refusing to establish the position of a bridge and building foreman to supervise part of the activities at Central Station in Montreal.

The section of the agreement that concerned the brotherhood was the one outlining the composition of a B. and B. gang. It stated that a gang made up of carpenters, bridgemen and bridge and building gang labourers should include a foreman.

The company revealed that only two carpenters were among those employed at the station. They contended that the cabinet makers in the group, although carpenters by trade, were highly skilled craftsmen and formed no part of a B. and B. gang. They further contended that the employees in question did not function as "a gang," but were assigned singly, in pairs, or as required, to scattered locations around the city.

The arbitrator concluded that a foreman was not needed to supervise two carpenters. The provision mentioned by the brotherhood only applied to a bridge and building gang.

The application was therefore disallowed.

Publications Received in the Department of Labour Library

List No. 225

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed by making application to the Librarian, Department of Labour, Ottawa. Students must apply through the library of their institution. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the LABOUR GAZETTE.

"This volume is the second to appear in a series of handbooks of historical statistics designed as companions to the OECD monthly bulletin *Main Economic Indicators*."

The first volume in the series was *Industrial Production, Historical Statistics, 1955-1964*.

Text in English and French.

Income

22. CHERNICK, SIDNEY E. *Inter-regional Disparities in Income*. Ottawa, Queen's Printer, 1966. Pp. 91.

Partial contents: Inter-regional distribution of income. Variations in income components. Sub-regional income distribution. Inter-regional dispersion of real income. International comparisons. Income and population growth.

23. GREAT BRITAIN. DEPARTMENT OF ECONOMIC AFFAIRS. *Prices and Incomes Standstill: Period of Severe Restraint*. London, HMSO, 1967. Pp. [10].

"Presented to Parliament by the First Secretary of State and Secretary of State for Economic Affairs."

On explanation of the need for a standstill on prices and incomes and criteria to be followed in setting a policy.

24. THEOBALD, ROBERT, Ed. *The Guaranteed Income: Next Step in Economic Evolution?* [1st ed] Garden City, N.Y., Doubleday, 1966. Pp. 233.

Each of ten contributors, and each a specialist in his own field, writes about the concept of a guaranteed income from his own point of view.

Industrial Relations

25. GROSS, EDWARD. *Industry and Social Life*. Dubuque, Iowa, W.C. Brown Co., 1965. Pp. xii, 172.

Concerns the social aspects of industrial relations, including such matters as work and leisure, management of industry, industry and the community, career selection, formal relations at work, labour as a social movement, job satisfaction, etc.

26. WITNEY, FRED. *Labor Policy and Practices in Spain; A Study of Employer-Employee Relations under the Franco Regime*. New York, F. A. Praeger, 1965. Pp. 103.

Contents: Blueprint for Spain's labor policy. The Spanish syndical organization. Right to strike and minimum labor standards. Collective bargaining: Spanish style. Evaluation of the Spanish bargaining system. Spain's labor policy: Conclusions.

International Institute for Labour Studies

27. INTERNATIONAL INSTITUTE FOR LABOUR STUDIES. *Bulletin No. 2, February 1967*. Geneva, 1967. Pp. 142.

Partial contents: The planning and cost-benefit analysis of social investments [by] Norman Scott. Towards a framework for analysing the costs and benefits of labour migration [by] Norman Scott. Workers' participation in management [by] Robert W. Cox, Kenneth F. Walker and L. G. de Bellecombe.

28. INTERNATIONAL INSTITUTE FOR LABOUR STUDIES. *International Institute for Labour Studies*. Geneva, 1966, Pp. 20.

The Institute, located in Geneva, was created in 1960 by the International Labour Organization "for the scientific study of labour problems, through research and education." By means of pictures as well as text, this booklet explains the work of the Institute.

Labour Laws and Legislation

29. CANADA. PARLIAMENT. HOUSE OF COMMONS. STANDING COMMITTEE ON LABOUR AND EMPLOYMENT, 1966. *Minutes of Proceedings and Evidence.* No. 1-10. Ottawa, Queen's Printer, 1966.

Georges Lachance, chairman.

Nos. 1 to 4 deal with Bill no. C-2, an Act to amend the Fair Wages and Hours of Labour Act; Nos. 5 to 10 deal with Bill S-35, an Act respecting the Prevention of Employment Injury in Federal Works, Undertakings and Businesses.

30. GEYSEN, RAYMOND. *Jurisprudence du travail (1961-1965) avec notes critiques.* Bruxelles, F. Larcier, 1966. Pp. 687.

Texte en français et en flamand.

L'auteur est Directeur de la "Revue de droit social" et président de la jurisdiction d'appel du travail à Anvers.

31. SALIK, RICHARD L., Comp. *A Digest of Provincial Labor Laws Governing Municipal and Provincial Employees in Canada.* Chicago, 1966. Pp. 107.

Deals with the principal features of legislation governing labour relations in municipal and provincial governments in Canada. It permits comparison of the 10 provinces.

32. SASKATCHEWAN. DEPARTMENT OF LABOUR. *Saskatchewan Labour Legislation.* April, 1967. Regina, 1967. Pp. 118.

37. GALENSON, WALTER. *A Primer on Employment and Wages.* New York, Random House 1966. Pp. 146.

Contents: the labor force. The wage system. The role of trade unions. The supply and demand of labor to the firm. Wages, employment, and inflation. Who are the unemployed? Analytical aspects of unemployment. The attack on unemployment and poverty.

38. ONTARIO ECONOMIC COUNCIL. *Skill Acceleration; Eighteen Growth Companies Explain How They develop Extra Employee Skillpower.* Toronto, 1967. Pp. 84.

Published in association with the Ontario Departments of Education and Labour.

39. PERRY, GEORGE LEWIS. *Unemployment, Money Wage Rates, and Inflation.* Cambridge, Mass., M.I.T. Press, 1966. Pp. 143.

A study of the interaction of wage changes, unemployment and inflation.

40. UNITED NATIONS, DEPARTMENT OF ECONOMIC AND SOCIAL AFFAIRS. *Industrialization and Productivity; Bulletin 10.* New York, United Nations, 1966. Pp. 108.

Contents: Programming data summary for the chemical industry, by Thomas Vietorisz. Programming data for the petroleum refining industry, by Alan S. Manne. Repair and maintenance of machine tools in the developing countries, by Aleksandr S. Pronikov. Inter-regional Conference on the Development of Petrochemical Industries in the Developing Countries. Inter-regional Symposium on Industrial Project Evaluation.

Old Age Pensions

41. GREAT BRITAIN. NATIONAL INSURANCE ADVISORY COMMITTEE. *Report . . . in Accordance with Section 88(3) of the National Insurance Act 1965 on the Question of the Earnings Limit for Retirement Pensions.* London, HMSO, 1967. Pp. [39.]

42. HOLLAND, DANIEL MARK. *Private Pension Funds: Projected Growth.* New York, National Bureau of Economic Research; distributed by Columbia University Press, 1966. Pp. 146.

This study seeks to predict the likely course of the fiscal operations and fund accumulations, between 1966 and 1981, of pension plans of industrial firms, non-profit organizations, unions, and governments (other than federal).

Older Workers

43. NOVA SCOTIA. DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH DIVISION. *Older Workers in the Nova Scotia Economy.* Halifax, 1967. Pp. 51.

"Older workers are defined in this study as members of the labour force over 45 years of age . . ." In this study information is given concerning population, labour force, and characteristics of older men and women in the labour market. Projections of the older worker labour force are given for 1970 and 1975.

44. REGIONAL SEMINAR ON THE EMPLOYMENT OF OLDER WORKERS, HEIDELBERG, 1965. *The Employment of Older Workers; Regional Seminar, Heidelberg, 7th-9th December, 1965; Final Report.* Paris, OECD, Manpower and Social Affairs Directorate, Social Affairs Division, 1966. Pp. 54.

This conference "was a follow-up, on the regional level, of the International Management Seminar on 'Job Redesign and Occupational Training for Older Workers,' held in London from 30th September to 2nd October, 1964." Cf. Introduction, p. 1.

Consists of a final report of the seminar, the concluding address by Solomon Barkin, Deputy to the Director of Manpower and Social Affairs and Head of the Social Affairs Division, OECD, and a paper, *The Problem of the Older Worker in Industry*, by Dr. H. Friedrichs. The seminar considered the situation of older workers in the Federal Republic of Germany, Austria, the Netherlands, Luxembourg, and Switzerland; the adaptation of job requirements to older workers; and, training methods for older workers.

45. U.S. BUREAU OF LABOR STATISTICS. *Job Redesign for Older Workers; Ten Case Studies.* Washington GPO, 1967. Pp. 63.

The study sought to find out cases of job re-design and the workers involved; changes that have been made; and the benefits, costs, and problems resulting from job re-design.

Productivity of Labour

46. BODKIN, RONALD GEORGE. *The Wage-Price-Productivity Nexus.* Philadephia, University of Pennsylvania Press, 1966. Pp. 302.

A revision of the author's doctoral dissertation, University of Pennsylvania.

Partial contents: Income, the price level, and generalized multipliers in Keynesian economics (R. J. Ball, co-author), empirical relationships between wage changes, unemployment, and price level changes. A further examination of the wage adjustment equation. The influence of costs and other factors on price levels. Time patterns of the average product of labor and some full system parameter estimates. Some limitations of aggregative analyses of wages and prices.

47. ORGANIZATION FOR ECONOMIC COOPERATION AND DEVELOPMENT. PRODUCTIVITY MEASUREMENT ADVISORY SERVICE. *Productivity Measurement.* Paris [1955-1966].

Contents: v.1. Concepts. v.2. Plant level measurements, methods and results. v.3. Global measurement of productivity for international comparisons at branch of industry level, an enquiry into the availability & suitability of statistics for this purpose in OECD member countries. Vols. 1 and 2 were issued in 1955 and 1956 respectively by the European Productivity Agency of the Organization for European Economic Cooperation as its Project no. 235; Vol. 3 was published in 1966.

Wages and Hours

48. CHRISTENSON, CARROLL LAWRENCE. *Wage Policy Under the Walsh-Healey Public Contracts Act: a Critical Review*, by Carroll L. Christenson and Richard A. Myren. Bloomington, Indiana University Press, 1966. Pp. 239.

Contents: Origin and content of the Walsh-Healey Act. Relationship of prevailing minimum-wage determinations under Walsh-Healey to fair-labor standards minima. Apparent impact of Walsh-Healey determinations in three industry cases: A. Steel; B. Paper and pulp; C. Rubber tires. Walsh-Healey and the bituminous-coal case. Conclusion: an appraisal.

49. deWOLF, JOHN A. *Wage Movements and Wage Determinants in British Columbia; A Formula for the Mechanical Construction Industry.* "This study was prepared as a joint report for Local Union 170 of the United Association of Plumbers and Pipefitters and Mechanical Industrial Relations Association, and was commissioned as Project 231 under the Journeyman Training and Industry Promotion Fund established in the collective agreement of the two parties in 1964."

The author, a consulting economist, examines wage movements in British Columbia and proposes a wage formula as the basis of a five-year contract agreement between Local 170 of the United Association of Pumbers and Pipefitters, and Mechanical Industrial Relations Association.

50. U.S. WOMEN'S BUREAU. *Fringe Benefit Provisions from State Minimum Wage Laws and Orders, September 1, 1966.* Washington, GPO, 1967. Pp. 112.

Women

51. INTERNATIONAL CONFEDERATION OF FREE TRADE UNIONS. *The ICFTU and Women Workers.* Brussels [n.d., 1965? or 1966?] Pp. 47.

Contains a report on women workers presented to the Eighth World Congress of the ICFTU in July 1965, as well as a program for women workers adopted by the Congress. The program consists of two parts: "The rights of working women," presented in the form of a charter, and "The free trade unions and women workers," a document.

The Canadian Economy

Continued from page 736

compares the problem of providing adequate urban transportation today with that of developing the national transcontinental transportation systems in the past.

With further rapid urbanization, the economic and social costs of urban decay and poor housing are bound to mount sharply unless long-range rehabilitative and preventive measures can be substantially widened and improved, the Council warns. Any acceleration of urban renewal will clearly intensify the already pressing need for a great expansion in public housing. This will require more comprehensive financial participation by senior governments, and increased initiative, experimentation, and integration in overall planning by civic administrators.

The gap between municipal revenues and expenditures has become a nation-wide problem. The Council suggests that municipalities either shift further responsibilities and related costs to higher levels of government, or develop and support local revenue systems so that they are more closely related to both the benefits and burdens of an increasingly complex urbanized society. In either case, the Council predicts, the change can be accomplished only within a comprenhensive fiscal planning framework covering all levels of government.

Canada in the next decade is confronted by the most rapidly growing labour force of any industrial nation. The Council expects the total labour force to exceed 10.5 million persons by 1980, an increase of 3.5 million—or 50 per cent in 15 years.

The employment goal over the medium-term future remains unchanged from that of the Council's *First Annual Review*, which is 97 per cent of the labour force employed, as an average annual national rate.

To absorb the huge labour force increase, and at the same time attain the employment goal, the Canadian economy will have to provide 1.2 million new jobs for 1965-70 and another 1.2 million for 1970-75. The average annual growth of 3.2 per cent in the labour force in 1965-70 implies an average of some 240,000 additions each year, compared with 150,000 a year in 1960-65. The 1970-80 increase is expected to average between 230,000 and 240,000 persons a year.

Women will account for 1.5 million of the total labour force increase of 3.5 million to 1980. By 1980, women will make up about 35 per cent of the total labour force, compared with about 25 per cent at the start of the 1960s. The female labour force grew three times faster than the male labour force over the 1961-66 period.

The other large group entering the labour force will be men under 25. They will account for 250,000 of the 1.2 million increase in the labour force between 1965 and 1970.

The 35-44 age group in the labour force is of critical importance in the evolution of supervisory, managerial and executive talent and leadership in the Canadian economy. This group will grow very slowly up to 1970, and even decrease in numbers from 1970-75. Only after 1975 will this age group begin to grow substantially.

With an upsurge in young people coming into the labour force, and with rising participation in the labour force by women, the portion of the total Canadian population that is actually at work is estimated to rise from 37 per cent in 1965 to 43 per cent in 1980. As this proportion rises, average living standards per capita population will rise faster than would otherwise be the case. Major shifts in spending patterns are implied.

Total Canadian unemployment decreased by about 200,000 over the 1961-66 period. But the decreases were greatest where the unemployment rate had been lowest. The share of total unemployment therefore rose somewhat in the low-income, low-productivity areas of Canada, especially in the Atlantic and eastern Quebec regions.

The basic goal of price stability set by the Council in 1964 remains unchanged. The Council calls for a satisfactory degree of price and cost stability to be held within the limits of the 1953-63 experience. In this period, the average annual increases in consumer prices and in the prices of all goods and services produced in Canada were 1.4 per cent and 2.0 per cent respectively, but with moderate year-to-year variations around these rates. An important condition for the attainment of this goal will be the achievement and maintenance of reasonable price stabilty abroad, and especially in the United States.

Over the 1961-66 expansion, as unemployment fell, price rises accelerated. The GNP implicit price index rose at the rate of 4.6 per cent between 1965 and 1966. During 1966, price and cost pressures eased.

There was an extended period of generally good performance on price and cost stability over the 1961-66 expansion. Only when the previous economic slack had disappeared, and the economy approached close to potential output at a time of rapid expansion in final demand in late 1965 and early 1966, did price increases become persistent and pervasive.

Although demand has moderated since early 1966, with some easing of price pressures since 1966 and some easing of cost pressures in 1967, the economy has remained close to potential. Any early reappearance of substantial total final demand strength would likely produce a rapid re-emergence of marked increases in prices, costs, and interest rates.

There is the clear possibility that strong underlying private demand pressures, accompanied by rapidly rising government expenditures, may exceed the capacity of the economy to accommodate them, and thus result in unacceptably high price and cost pressures over the medium-term future.

The underlying price assumption in the Council's demand projections to 1970 is that the GNP implicit price index would rise at an average annual rate of 2 per cent to 1970. The Council regards this as consistent with the attainment of a satisfactory degree of price and cost stability over the medium-term future. The average annual rate of increase of 2 per cent for the GNP price index implies that some demand components would rise at a somewhat faster rate than the total, and that the rate of advance in consumer prices and in export and import prices would be somewhat less.

The essence of economic growth is the advance of productivity. Overall productivity, the volume of output for each employed person, has been about one fifth lower in Canada than in the United States. Analysis by the Council has shown that the disparity in average educational attainments between Canadian and U.S. manpower contributed significantly to the overall productivity gap.

The gap in productivity levels in manufacturing between Canada and the United States is larger than that for the two economies as a whole. It is wider also than for minerals and forestry, and perhaps somewhat wider than in agriculture and services. On average, net value added for each employee in manufacturing was about 23 per cent lower in Canada than in the United States in 1963. Moreover, the general level of manufactured goods prices is significantly higher in Canada than in the United States. Thus the difference in volume of output for each employee in manufacturing is greater than difference in value. This productivity gap appears to be in the order of one third or more.

This gap reflects, in considerable part, the way in which production is organized; it is not a reflection on the energy, basic ability or enthusiasm of Canadians, the Review adds.

The productivity gap has a significant bearing on the levels of prices of many manufactured goods in Canada. Canadian retail prices for manufactured products appear, on average, to be about 10 per cent higher than those in the United States. The productivity gap affects the international competitiveness of many Canadian producers. It has relevance to the issue of wage parity in manufacturing. It affects the volume of imports and exports. It has a bearing on profitability in many Canadian manufacturing industries. Any substantial narrowing of the productivity gap in manufacturing could help improve the basic competitiveness of Canadian manufacturing, with consequent implications for narrowing income disparities and for improving wage and profit potentials.

Many factors may influence the size of the productivity gap in manufacturing. The range of manufactured products made in Canada does not appear to be much more limited than that in the United States. But this similar range is produced by a smaller number of Canadian plants, and the range of items produced in a typical Canadian plant is usually substantially larger than in the United States.

There is a general pattern of greater diversification of products and typically shorter production runs in Canadian plants. This involves frequent changes and interruptions in production and scheduling. This in turn contributes to less efficient use of both labour and capital, and has a pervasive upward influence on all basic categories of cost for each unit of output.

Greater specialization would contribute to the lowering of costs of all major types, such as material, labour, and overhead. It would make possible, in many lines of production, an increase in output with essentially the same quantity of labour and capital facilities. This would cut labour and overhead costs for each unit of output, and permit similar economies in materials on the basis of comparable developments in firms supplying materials and components.

A major part of the reason for the lack of specialization lies in the existence of both Canadian and foreign tariffs, which have either reduced incentives for, or inhibited, greater specialization. Canada's commercial policy was historically designed to a considerable extent to foster a wide diversity of manufacturing activity in Canada. Tariffs play a role in the higher costs of manufactured products in Canada, contribute in an important way to the development and maintenance of short runs, and in turn increase the production and overhead costs of Canadian producers. The structure of tariffs also indirectly restricts the extent of scale and specialization.

The Council recommends a re-examination of the effects and costs of the tariff. Now that the Canadian economy has grown and developed in many ways, this has become increasingly essential.

It is sometimes suggested that one route toward increased scale and specialization would be to facilitate intercompany agreements to permit more specialized patterns of production between firms, and longer production runs within the plants of various firms. It should be clearly recognized, however, that industrial rationalization may reduce competition within Canada, especially in circumstances in which trade barriers protect producers from external competition, and in which there is already a relatively high degree of industrial concentration in many lines of Canadian manufacturing.

The Council suggests that the route of tariff reduction for manufactured products is the most promising of all routes toward increased specialization. The Kennedy Round of tariff reductions will help provide opportunities for a very substantial expansion in commerce in manufactured products. The Council predicts that this will help provide a basis for greater scale and specialization in Canadian manufacturing.

The Council urges Canadian producers to move quickly and effectively to anticipate the new possibilities. If they do not, these opportunities will be taken over quickly and exploited by others.

Many different aspects of business policies and practices on the part of both labour and management should be under continuous and careful review in the search for better ways of improving the productivity performance and competitiveness of Canadian manufacturing. Industrial development and regional development policies and programs should be carefully assessed in regard to their effects in promoting activities with adequate scale and specialization.

Progress in Canada toward increasing specialization would help to bring about some narrowing of price and productivity disparities between Canada and the United States. This in turn would help to provide an effective basis for the narrowing of the real wage and real income differences that now exist.

The Council devotes some discussion to the "wage parity" issue. A narrowing in real income differences between the two countries is a desirable long-term objective, but an early and widespread pattern of money income parity in manufacturing would undoubtedly create serious problems. Any general parity of wages in Canadian manufacturing with those in the United States, without a substantial narrowing of the historically large and persistent productivity gap, would tend to further increase costs in Canadian manufacturing above U.S. levels. Thus any attempt to achieve a widespread pattern of wage parity in manufacturing without achieving a similar widespread pattern of productivity parity would jeopardize the attainment of other goals, such as reasonable price stability, a viable balance of payments, and an equitable distribution of rising incomes.

At the same time, approximate parity may exist or develop in a few special cases reflecting special conditions, as was indicated in the *Third Annual Review* (L.G., Feb., p. 90). Such situations of wage parity could arise from favourable supplies of natural resources, or special conditions in the markets for either labour or the manufactured product. Obviously, the Council concludes, the suggestions that apply to manufacturing on the average, do not necessarily apply to all individual instances within manufacturing as a whole.

Labour Relations Legislation in 1967

Continued from page 740

tion or organization of which that trade union was a local or a branch will be eligible to represent any of these hospital employees within this one-year period.

Another consequence is that the decertified union, its officers and members continue to be liable to any penalty provided under this Act in respect to offences committed prior to decertification.

Any person who contravenes the Act commits an offence and, on summary conviction, is liable to a penalty for each day the offence continues. A prosecution for an offence under the Act may be brought against a trade union in the name of the trade union, and the trade union can be held liable for the acts of an officer or agent, who is also individually liable.

Except with the consent of the Attorney General, Sections 73 and 74 of the Summary Jurisdiction Act, the sections that give a court of summary jurisdiction the authority to reduce a penalty, or to dismiss a charge, or to grant a conditional release, may not be applied in disposing of a prosecution against a trade union or a union officer under this Act.

A trade union that has been decertified will not be certified again until all fines imposed on the local have been paid, as well as the fines imposed on officers, agents, or employees of the parent union or any of its provincial or regional branches.

Except as modified by this Act, the provisions of the Labour Relations Act will apply to hospital workers and their employers. A union may apply for certification as the bargaining agent for a unit of hospital employees, and conciliation services will be available if there is a stalemate in negotiations. There is now, however, no further step after the report of the conciliation board, as hospital employees are forbidden to strike, and there is no provision in this Act for binding arbitration of a contract negotiation dispute.

Montreal Transportation Employees

A special session of the Quebec Legislature, held on October 20, passed legislation bringing to an end a strike of employees of the Montreal Transportation Commission that had stopped bus and subway transportation for a month.

On the grounds that the strike was endangering the public health and safety, the Attorney General had applied to the Superior Court, pursuant to Sec. 99 of the Labour Code, for an injunction to restrain the strike, and an injunction was issued ordering the striking employees back to work for 80 days. The CNTU, with which the unions concerned were affiliated, sought to appeal the injunction, and it was not effective in bringing the strike to an end.

The legislation required every person who was employed by the MTC on September 20 to return to work and to perform the duties of the position that he then held within 48 hours of the coming into force of the Act.

The MTC was ordered to arrange for the resumption of services and the reinstatement of the employees within 48 hours. No disciplinary action was to be taken by the MTC by reason of the strike or things done during the strike.

Every bargaining agent and every union, federation or confederation to which it belonged or adhered was ordered to take appropriate steps to induce its members to comply with the return-to-work order.

The conditions of employment that were in effect on September were extended, modified by any written agreements made during negotiation, by an MTC offer of September 20, and by the recommendations of Mr. Justice Chevalier who had been appointed to mediate the dispute. Any dispute regarding the application of the agreements, proposals and recommendations was to be dealt with as a grievance under the Labour Code. These conditions of employment were to apply until another agreement was reached by the parties or an arbitration award was rendered, and strikes and lockouts were forbidden for that period.

By an amendment introduced in passage, provision was made for a further period of negotiation between the parties with the assistance of a mediator in an attempt to eliminate or reduce the need for arbitration.

Failing settlement, the dispute was to be submitted to an arbitrator selected by the parties or appointed by the Lieutenant-Governor in Council if the parties could not agree on a selection within seven days. The MTC and the unions that were parties to the dispute, acting jointly, were each authorized to appoint an assessor to assist the arbitrator.

Individual employees, the unions and their officers, and directors and officers of the MTC, would all be subject to severe fines prescribed in the legislation if they failed to comply with it, and the fines might be imposed with or without a term of imprisonment. Prosecutions could only be instituted by the Attorney General. If less than 70 per cent of the employees with respect to whom any of the unions was certified returned to work within 48 hours, the union would be liable to lose its certification on the application of the Attorney General to the Quebec Labour Relations Board.

Transportation services were resumed on October 21, and Mr. Justice Roger Ouimet was appointed on October 25 to assist the parties in their negotiations.

Policemen and Firemen

In Alberta, the sections of the Police Act dealing with bargaining procedures for municipal policemen were amended. Under the amended Act, an obligation to bargain in good faith is placed on policemen, as well as on a municipal council or board of police commissioners. Time limits are now imposed, requiring the parties to commence bargaining within 90 days of notice.

A new provision permits a committee comprised of municipal officers to bargain on behalf of the municipal council or the board of police commissioners.

The bargaining committee for policemen, as before, must be members of the municipal police force in the unit concerned. A new provision permits either bargaining committee to be accompanied by one person as legal or other counsel. The counsel of a police bargaining committee and members of a police bargaining committee, as well as individual policemen, are not allowed to join or remain members of a trade union or other organization that is directly or indirectly affiliated with a union.

Under the amended Police Act of Ontario, a dispute between a municipal police force and a municipality or a board of police commissioners will be referred to a three-member board of arbitration only if the police force is composed of 20 or more members. Disputes involving smaller police forces will be referred to a single arbitrator for settlement. Previously, such a dispute was referred to a three-member arbitration board, if the police force was composed of 10 or more members, and to a single arbitrator if it was composed of fewer than 10.

The amendment to the Ontario Fire Departments Act will provide a method of enforcing decisions of an arbitration board or an arbitrator similar to that in the Labour Relations Act. If the decision of an arbitration board or an arbitrator is not complied with, any party, municipality or full-time fire fighter affected by the decision may ensure enforcement by filing a copy of the decision in the office of the Registrar of the Supreme Court. This action may be taken after the expiration of 30 days from the date of delivery of the decision, or the date provided in the decision for compliance, whichever is later.

Amendments to General Laws

Amendments to the Industrial Relations Act of Prince Edward Island brought the main certification provisions into line with those in other jurisdictions, and provided for the use of industrial inquiry commissions.

Formerly, the Minister of Labour was empowered to certify a union if the Labour Relations Board recommended it. A certification vote was not mandatory but, if one was taken, at least 60 per cent of the employees in the unit who voted must have selected the applicant union as their bargaining agent.

Under the amended Act, the power to certify is now vested in the Labour Relations Board. As before, the Board must be satisfied that a unit is appropriate for collective bargaining and that a majority of the employees are members in good standing of the applicant union. The third requirement now is that more than 50 per cent of the eligible employees in a unit must have selected the union as their bargaining agent, which is the standard in most jurisdictions.

When determining whether or not a unit is suitable for bargaining, the Board is no longer obliged to hold a hearing. Previously, it was compulsory for the Board to hold a hearing, and the employer and a union were entitled to attend and to make representations.

There is no longer any right of appeal to the Supreme Court of Prince Edward Island from a final decision of the Board on a question of law.

Previously, the Minister was empowered, upon application or on his own initiative, to make such inquiries as he deemed fit regarding industrial matters, and to do such things as seem calculated to secure industrial peace and to promote the settlement of disputes. Now the Act specifically provides for the appointment of an industrial inquiry commission, and spells out its rights and duties.

An industrial inquiry commission may be appointed to inquire into conditions in any industry, or investigate a particular dispute or difference between employers and employees. If a dispute or difference already exists, an industrial inquiry commission may not be appointed until a conciliation board has submitted its final report to the Minister.

An industrial inquiry commission is to consist of one or more persons appointed by the Minister, and is to have the same powers of investigation as a conciliation board. If a commission is investigating a particular dispute or difference, it must submit its report within 14 days, unless the Minister grants an extension.

Provision is also made for the appointment of mediators. A new provision states that persons appointed by the Minister to provide conciliation and mediation services are to be paid such remuneration and expenses as he may prescribe.

Following the amendments to the Act, the Rules of Procedure of the Labour Relations Board were revised, and new regulations respecting voting procedures were issued in June. The revised Rules of Procedure state the tests the Board will apply to determine membership in good standing. On the date of the application for certification, an employee must have signed an application for membership and, on his own behalf, paid the initiation fee where applicable, and the equivalent of one month's membership fee as prescribed by the union constitution.

In Nova Scotia, an amendment to the Trade Union Act, in force on August 1, provides that the Labour Relations Board is not required to grant a separate certification to a craft or technical unit if it is included in a bargaining unit represented by another bargaining agent at the time the application is made. Previously, the Board was required to grant a separate certification for such a group if the unit was otherwise suitable for collective bargaining.

New Rules of Procedure of the Ontario Labour Relations Board went into force on September 1, 1966, the same day as the 1966 amendments to the Act providing for the certification of a council of trade unions and empowering the Labour Relations Board to deal directly with jurisdictional disputes.

One new rule provides that, if a council of trade unions applies for certification, it must, at the same time, file the documents upon which it intends to rely to satisfy the Board that each of its constituent unions has vested appropriate authority in the council to enable it to discharge the responsibilities of a bargaining agent.

Other new rules specify the documents that must be filed when a complainant files an application to have the Board settle a jurisdictional dispute. These include a copy of any agreement or understanding between a trade union and an employer as to work assignment, and any decision of a tribunal respecting work assignment.

In Saskatchewan, new conciliation board regulations went into force on March 1.

Under the amended regulations, some of the time limits have been changed. A conflict-of-interest clause has also been added, prohibiting the appointment of any person who has any pecuniary interest in the matter before the conciliation board, or who is currently acting, or who within the past six months has acted, as the solicitor, legal adviser, counsel or paid agent of either of the parties.

A federal Act, proclaimed in force October 1, established the Cape Breton Development Corporation to take over certain coal mining operations on Cape Breton Island and to plan the phasing-out of those operations that are not economically sound. At the same time, it will promote the establishment of new industries.

The works and undertakings carried on by the companies after June 15, 1967 are declared to be works for the general advantage of Canada. Trade unions certified under Nova Scotia legislation as bargaining agents for persons employed on these undertakings will, by the terms of the Act, be deemed to have been certified under the Industrial Relations and Disputes Investigation Act.

Action under 1966 Laws

Some important developments arose out of legislative action taken in 1966. The measures for the resolution of the railway dispute, provided under the Maintenance of Railway Operation Act, 1966, were carried out. Only the dispute of the shopcraft employees was submitted to arbitration.

By the terms of the Act, expired agreements covering the 90,000 non-operating employees of the railways, and the group of 15,000 operating employees involved in the dispute, were revived and extended, subject to the wage increases that had been recommended by the conciliation boards for the non-operating employees. After mediation proceedings with H. Carl Goldenberg, Q.C., the mediator appointed under the Act by the Minister of Labour, agreement was reached by the representatives of each of the three groups of non-operating employees and the operating group; but the agreement with the representatives of the shopcraft unions (set out in a memorandum of settlement dated November 30) was rejected by a vote of the membership.

The issues in dispute with respect to the 22,000 shopcraft employees were submitted to a board of arbitration appointed under the Act on March 21, 1967. The Hon. Wilfrid D. Roach was Chairman, and Mr. Leon Lalande, Q.C., and Dr. Horace E. Read, Q.C., were members. Eight points at issue (demands made by the unions) which were set out in the Maintenance of Railway Operation Regulations, 1966, had to be decided by the arbitrators.

In dealing with the wage issue, the arbitrators held that the appropriate standard for comparison was the weighted average hourly rate of maintenance tradesmen in manufacturing in-

dustries in the 10 major metropolitan centres where the main shops of the railways are located. There was almost parity between this rate as of October 1, 1966 and the weighted average hourly rate of railway tradesmen as of that date.

Given the increases that the bargaining committee had been prepared to accept, the arbitrators found no reason to believe that the increase in rates of maintenance tradesmen in manufacturing in the period covered by the agreement would be such as to outstrip the railway tradesmen's rates. They awarded the same percentage increases (amounting in all to 24 per cent on the basic rates of pay in force at December 31, 1965) as the bargaining committee had agreed to.

The arbitrators also confirmed the skill differential of an additional 5¢ per hour, effective July 1, 1967, and another 5¢ per hour on January 1, 1968 for skilled mechanics, which had been part of the settlement.

On the other items (dealing with the pay period, annual vacations, holidays, employee benefit plans and sick leave), the arbitrators in their award accepted the demands only to the extent that they had been accepted in the November 30 settlement. On one point only, the conditions for bereavement leave, the arbitrators expressed the view that the conditions were too harsh and required a new provision.

The Report of the Royal Commission of Inquiry into Working Conditions in the Post Office Department, appointed in 1965 after the postal strike, was published in October. The Commissioner, Mr. Justice André Montpetit of the Quebec Superior Court, acted as mediator in another dispute involving postal workers, and an agreement was reached on November 15, a few hours before a strike deadline.

The report of the Commission had made numerous recommendations concerning various aspects of administration and policy based on the grievances presented. One recommendation concerned the need for a properly organized system of consultation with employees regarding proposed changes in working conditions.

Dealing with postal employees' complaints of excessive use of part-time and casual employees, the report recommended that the Post Office Department should make constant checks on the utilization of such employees to ensure that they were not hired to fill gaps in the permanent establishment.

One of the terms of the settlement in November was that a joint committee, composed of representatives of the unions and the Post Office Department, be formed to study the recommendations of the Commission and endeavour to find ways and means to implement those that were acceptable to both sides.

The Postmaster General reported in June that a joint body had been set up and had been holding regular meetings. He said that a large number of the Commission's recommendations had been adopted, and that others were reaching the stage of agreement; that a grievance procedure had been developed; and that labour-management committees were to be established in all the staff post offices.

Under the Maritime Transportation Unions Trustees' Act, the trusteeship set up under the Act was extended to December 31, 1967. When he tabled the proclamation in the House of Commons, the Minister of Labour said that the Government had decided that it was desirable to give the trustees a further period in which to complete the objectives they had established as beneficial for the unions and for the maritime industry generally. The additional time would afford the trustees an opportunity to phase out their operations in an orderly way.

The Chairman of the Board of Trustees, Judge René Lippé, and the other two members, Charles Millard and Joseph Mackenzie, agreed to continue to serve during the extended term.

In Saskatchewan, the arbitration board provided for under the Essential Services Emergency Act, 1966, to deal with the dispute between the Saskatchewan Power Commission and the Oil, Chemical and Atomic Workers' International Union was established and made its award on May 2. The arbitrators awarded a 3-per-cent increase from June 1, 1966 to September 30, 1966, and a 5-per-cent increase for the year that commenced October 1, 1966.

Industrial Inquiry Commission

Grievances of 190 longshore foremen at British Columbia ports were the cause of a strike in November, 1966. These are a type of supervisory employee whom the companies regarded as carrying out management functions. As part of the terms of settlement on December 8, the Minister of Labour agreed to appoint an industrial inquiry commission under the Industrial Relations and Disputes Investigation Act to examine the foremen's grievances.

A three-man inquiry commission was set up on December 15 to investigate the causes that led to the strike, and to make recommendations designed to prevent such disputes in the future. It was headed by Mr. Justice C. Rhodes Smith of the Manitoba Court of Appeal. The report of the Commission was received on March 23.

On the question of the status of the foremen under the Act, the report suggests that the duty of deciding whether persons are to be classed as management or employees in labour relarions should, as the only sensible course, be left to the labour relations board to decide, as it is under the present law. There should not, in the Commission's view, be any appeal from the proper exercise of the Board's discretion. It is always open to the Board, when any new application is placed before it, to uncover distinctions that would lead to a different view of the status of the foremen.

Whatever their status, the Commission held that the foremen had legitimate grievances, and that a positive approach to their solution was required. It accordingly recommended a grievance procedure in which the first step would be that a longshore foreman submit his individual grievance in person to his employer. Where there is more than one foreman of the same company having the same grievance, they could present it as a group directly to their employer. If the grievance is not settled to the satisfaction of the foremen concerned, they should have the right to submit it to arbitration in a manner spelled out in the recommendation.

Inquiries and Studies

During the past year, the system of labour relations and the legislation governing it have been subjected to scrutiny by various bodies that have been given the task of carrying out inquiries and studies to lay the groundwork for decisions by governments and legislatures as to necessary changes.

In New Brunswick, the Report of the Select Committee of the Legislature established in 1965 to study the New Brunswick Labour Relations Act was tabled in the Legislature on April 5 by the Minister of Youth and Welfare, the committee chairman. The 86-page report made 31 specific recommendations, a number of which were based on provisions in effect in other jurisdictions in Canada.

One recommendation was that a grant be made available to the University of New Brunswick for the creation and maintenance of a continuing labour-management study committee.

On the question of coverage, the report recommended that the Act be made applicable to professional employees other than professional engineers. The only other exclusions would be agricultural workers employed on farms where fewer than three were employed on a reasonably continuous basis.

A clarification of the definition of employers of woodsworkers was also recommended. The Act should be amended

to declare the limit holder to be an employer for purposes of the Act, except where the limit holder advised the Labour Relations Board of the bona fide contractors cutting on his limits, in which case the contractors named therein would be deemed the employers.

Unfair Labour Practices

Several recommendations concerned unfair labour practices. According to the report, both unions and employer groups thought that the Board should be authorized to investigate complaints of unfair labour practices, and to issue cease-and-desist orders, including orders requiring reinstatement in employment with compensation for lost wages, such orders to be enforceable as orders of the Supreme Court of New Brunswick.

The committee recommended that legislation similar to Section 65 of the Ontario Labour Relations Act be adopted, with the addition of a clause requiring supporting documents to be included when an order was filed in court. It further recommended that offences under the Labour Relations Act be punishable under the Summary Convictions Act, and that the consent of the Board to such prosecutions not be required. The committee was also of the opinion that, where prosecutions for unfair labour practices are to be processed at public expense, such prosecutions should be undertaken by and at the discretion of the Department of the Attorney General.

According to the report, briefs from both employer and employee organizations requested the committee to take steps to improve the arbitration section of the Act. The committee recommended a new arbitration provision, including a model arbitration clause that would be deemed to be included in any collective agreement lacking such a clause.

Other features of the proposal include: provision for the setting up of a board where the parties fail to do so; a requirement that the arbitrator render his decision within a reasonable time; and authority for the arbitrator to summon witnesses, administer oaths, enter premises and question employees. The award of an arbitrator would be made enforceable by filing it with the Registrar of the Supreme Court. The proposal also contemplates review of the question of arbitrability by the courts.

The committee would also add a new section providing for final and binding arbitration of contract negotiation disputes affecting municipal firemen. Firemen would be forbidden to strike.

Referring to the question of legal status of unions, the committee stated: "It would seem reasonable that where a group has the power to injure another economically, it should be required to accept the responsibility for restitution when damages result through the illegal use of such power." The committee said that provisions similar to those in Section 46A of the Manitoba Labour Relations Act should be added to the New Brunswick Act, declaring unions to be legal entities for the purpose of suing and being sued.

The committee believed that, if trade unions and employers organizations were to be declared legal entities capable of suing and being sued, steps must be taken to define the type of picketing which is permissible or, conversely, the types of picketing which are not permissible. It recommended that a section similar to Section 3 of the British Columbia Trade-unions Act be added with whatever modifications were necessary to conform to the New Brunswick legislation. A further recommendation would require authorized picketers to carry identification provided by the union. Unauthorized picketers would be subject to a fine of up to $500 or to imprisonment for up to three months or both.

The matter of injunctions in labour disputes the committee considered to be one of the gravest issues in Canada today. It said that the principle that a person suffering irreparable loss or damage is entitled to immediate relief until the matter can be settled in the courts is so evidently fair that it is difficult to believe it will ever be completely abolished, even in labour disputes. It was also aware that an *ex parte* injunction, granted for a maximum period of five days as provided for in New Brunswick law, can wreck the aspirations of a union that is on a legitimate strike.

Believing that its previous recommendations with regard to picketing would assist materially in reducing the number of instances in which application will be made for *ex parte* injunctions, it recommended that the Act be amended to require 24 hours advance notice of intent to seek an injunction.

The committee considered the problem of jurisdictional disputes serious enough to warrant the establishment of special procedures. It recommended that jurisdictional disputes be referred to the Labour Relations Board in the manner prescribed in Sec. 66 of the Ontario Labour Relations Act.

The committee did not make recommendations relating to public employees, because Dr. Saul Frankel had been appointed as a royal commission to study labour-management relations in the New Brunswick Civil Service, and in publicly financed hospitals and schools.

Dr. Frankel's report was also completed and presented to the government during the summer. It recommends a collective bargaining system for the public services of New Brunswick containing the basic elements that are normally found in general labour relations legislation. The system would be governed by a Public Services Labour Relations Act administered by an independent board.

The role of the employer would be assigned to the Minister of Finance as Chairman of the Treasury Board with respect to government services; to the province as represented by the Minister of Education, for public schools; and to the province as represented by the Minister of Health, for hospitals. Representatives of school trustees might assist the Minister of Education in carrying out the responsibilities of the employer in a collective bargaining relationship, and representatives of the Hospital Association, or of local or regional hospital boards, might assist the Minister of Health. For government corporations, boards or commissions, the executive officers would be the employer.

Recommended Procedure

The procedure recommended for resolution of disputes where the parties might not be able to reach agreement involves several steps. First, after being notified by one or other of the parties, the chairman of the independent board would declare that a deadlock exists. He would next require the employer to indicate whether he would be willing to submit the dispute to arbitration (by a tribunal which would be provided for in the legislation).

If the employer was not willing, it would be open to the employees in the bargaining unit to authorize strike action if they saw fit to do so. If the employer was prepared to submit the dispute to arbitration, the board would direct the representatives of the employees to conduct a vote of the employees, in which they would be asked to indicate if they wished to authorize referral of the dispute to the arbitration tribunal, or to authorize strike action.

If a strike were authorized, a period of at least 7 days should elapse before a strike may be declared, and during that period it would be the duty of the chairman of the board to consult with the parties on the means to maintain operations and services that are essential for the well-being and security of the public.

The Ontario Royal Commission of Inquiry into labour disputes (the Rand Commission) began its first public hearings

in Toronto on January 10. The focus of the inquiry is upon the use of strikes, cessations of work, lockouts, picketing, demonstrations and boycotts, whether lawful or unlawful, in labour disputes, and upon the use of injunctions in relation to these actions.

At the beginning of the hearings, the Commissioner stressed the importance of these issues in the broader question of how to reconcile the conflicting desire for individual freedom, the maximum satisfaction of material wants, and an individual's relationship to his society in line with the underlying assumptions of democratic government.

He asked for the benefit of the experience of all those presenting briefs, and for a free expression and exchange of views. Many briefs have been received and hearings have been held in the major centres of Ontario. In the spring, the Commissioner travelled to Australia to get a closer look at the labour relations machinery in that country.

In September, 1966, the Prime Minister announced that the Government would establish a Task Force to look into the question of labour disputes, and to recommend changes in current laws and procedures. A Task Force under the chairmanship of Dean H. D. Woods was established in the fall of 1966, with terms of reference that call for a comprehensive examination of the state of industrial relations in Canada, with particular reference to the problem areas that have appeared over the past few years.

In addition to a substantial program of research, the Task Force is holding meetings with national bodies such as central labour organizations, employer associations and government departments at both the federal and provincial levels. It has visited the United States and some European countries and has invited briefs and submissions from interested persons and organizations.

Consultative Bodies

Labour-management consultative bodies have been established in three more provinces.

On April 25, the Minister of Labour of Ontario announced that the Government had decided to proceed with the establishment of a new body, to be known as the Ontario Union-Management Council, with a constitution and terms of reference as suggested by a committee of labour and management that had been meeting under the chairmanship of Dean Woods. Dr. John Crispo, Director, Centre for Industrial Relations, University of Toronto, was appointed chairman of the council, and labour and management representatives have been named.

The Minister said that this council would give labour and management an opportunity of working together to develop new means of accommodating their varied interests. Even more challenging was the opportunity it would afford the parties to examine their responsibilities to the public interest in the light of our generally accepted social and economic goals.

He warned, however, that the council would not be a short-run panacea for labour and management difficulties. Its real impact, if it succeeded in establishing a solidly based place for itself in the Ontario industrial relations picture, might not be felt for some time.

A labour-management committee was established in British Columbia in 1966, with a view to encouraging more meaningful communication between labour, management and Government. It is composed of the Deputy Minister of Labour, W. H. Sands, who acts as the chairman, Dr. J. T. Montague, Director, Institute of Industrial Relations, University of British Columbia, who is vice-chairman, and ten other members equally representative of labour and management.

A labour-management council was also established in Prince Edward Island. In November, the Minister of Labour announced that Rev. Malcom McCuaig, Minister of Kirk of St. James, Charlottetown, had been appointed chairman. The Minister said the council would serve as a forum for the discussion of labour-management problems. It would study existing labour legislation and make suggestions for new legislation. It would also study labour-management problems in other parts of Canada, and recommend and carry out educational and informational programs.

B—Labour Income

TABLE B-1—Estimates of Labour Income, by Industry

This table was not received in time for inclusion in this issue. It will reappear in January.

Tables C-1, C-2 and C-4 are based on reports from employers having 20 or more employees in any month of the year; at June 1967, employers in the principal non-agricultural industries reported a total employment of 3,675,841. Table C-3 gives estimates of total employment, by industry divisions, for the provinces and Canada, derived from the survey of establishments employing 20 or more persons and from a sample survey of establishments employing less than 20 persons. Tables C-5 to C-7 are based on reports from a somewhat smaller number of firms than Tables C-1, C-2 and C-4. They relate only to wage earners for whom statistics of hours of work are also available, whereas Tables C-1, C-2 and C-4 relate to salaried employees as well as to all wage earners in the reporting firms.

D—Manpower Division

The reorganization of manpower activities under the Department of Manpower and Immigration has led to a number of administrative changes which have, in turn, altered the significance of D—Table statistics about employment placements and unfilled job vacancies.

The result is that valid comparisons with previous periods are not possible on the basis of these statistics. Accordingly, their publication is being suspended.

New statistical series are being developed to give more significant information about persons using the services of Canada Manpower Centres. The results will be published as they become available.

E—Unemployment Insurance

Unemployment insurance statistics emanate from the operations of the Unemployment Insurance Act, and relate to persons in contact with the Unemployment Insurance Commission, either as contributors or claimants. The data are compiled in the Unemployment Insurance, Pensions and Manpower Section, DBS, from information supplied by the UIC. The source for Tables E-1 to E-4 is *The Statistical Report on the Operation of the Unemployment Insurance Act* (Cat. No. 73-001). For further information regarding the nature of the data see Technical Note, page 675, October issue.

TABLE E-1—Estimates of the Insured Population under the Unemployment Insurance Act

End of	*Total**	*Employed*	*Claimants*
1967—June	4,712,000	4,469,200	242,800
May	4,655,000	4,373,900	281,100
April	4,746,000	4,253,700	492,300
March	4,750,000	4,206,200	543,800
February	4,681,000	4,129,200	551,800
January	4,684,000	4,152,100	531,900
1966—December	4,633,000	4,209,600	423,400
November	4,591,000	4,324,700	266,300
October	4,521,000	4,336,700	184,300
September	4,528,000	4,363,100	164,900
August	4,577,000	4,389,800	187,200
July	4,512,000	4,316,000	196,000
June	4,500,000	4,318,700	181,300

*Commencing March 31, 1967 agricultural workers are included as coverage was extended to certain workers in this industry April 1, 1967.

TABLE E-4—Benefit Payments, by Province, July 1967

Province	*Weeks Paid**	*Amount of Benefit Paid*
Newfoundland	19,209	477,324

*St. John's index on the base June 1951 = 100.

NOTE: Indexes above measure percentage changes in prices overtime in each city and should not be used to compare actual levels of prices as between cities.

Statistical information on work stoppages in Canada is compiled by the Economics and Research Branch of the Canada Department of Labour on the basis of reports from the Manpower Division, Department of Manpower and Immigration. The first three tables in this section cover strikes and lockouts that amount to ten or more man-days. The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the union directly involved in the disputes leading to the work stoppages. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included. For further notes on the series, see page 676, October issue.

TABLE G-1—Strikes and Lockouts, 1962-67

Month or Year	Strikes and Lockouts Beginning During Month or Year	Strikes and Lockouts in Existence During Month or Year: Strikes and Lockouts	Workers Involved	Duration in Man-Days: Man-Days	Duration in Man-Days: Per Cent of Estimated Working Time
